The reduction of supply and the raising of the standard of quality are not the only means by which the future of the industry may be improved; they are uncertain methods and may prove to be impossible of working. There are others which for years have persistently manifested themselves in spite of want of encouragement, nevertheless they continue to be unconsciously ignored. Outside markets are no mean factor in determining the prices of tea in Calcutta. They have absorbed no less than 50¼ per cent. of the total offerings on this market and they have come to stay.

Calcutta has been made the dumping-ground for commonest teas, odds and ends, and for practically the entire supply of dust made and the free expansion of our trade with new markets has consequently been handicapped. An indication of their strength and the persistent nature of their demand is that, notwithstanding this drawback and also the fact that the Calcutta market has been meagrely supplied, the increase in export to places other than the United Kingdom reaches the respectable total of 16 millions or 17 per cent. in six years.

These figures are remarkable, and if such progress is made under adverse circumstances, it is unquestionable that this branch of the trade is capable of astonishing development if only encouraged by a more liberal and suitable supply. At the close of the season the unexecuted orders for new outlets in this market totalled about 10,000 packages.

These various demands deserve more appreciation than they get from growers. They should be recognized by them as the means of bringing about a healthier working of the trade, as in reality they are, and it becomes a duty not only to impress upon them the urgent necessity for encouraging their growth, but to demonstrate the reasons for doing so.

It does not seem to be realized that Calcutta has a multitude of interests and is practically the distributing centre for the world, all these interests are working against each other to secure tea,—and it is palpable that the more numerous the competitors the better it is for the seller—while London has practically but one demand to supply, that of home consumption, the trade outside this accounting for a very small proportion of the dealings.

Not only this, but with the crop of India, Ceylon, China, Java, Travancore, and other minor sources of supply the selection in London is spread over about 300 millions. In Calcutta, the dealings are confined to about 50 millions only; the buying power is therefore more diverse in its constitution, and more concentrated in its field of operations and under such circumstances the advantage to the seller, is obvious. The following statistics show unmistakably the strength and drift of these demands, the relief they have afforded London, and the effect they have had on the value of tea on the two markets.

	1894-1895. Millions.	1899-1900. Millions.	1900-1901. Millions.
Received in London	115	149	161
Exported from London ...	3¾	8½	* 10½
Average price in London (up to March)	9·95	8·35	7·33
Sold in Calcutta	43	50	49¾
Exported to outside markets	9	22	25
Average price in Callcutta (for season)	9½d.	7¾d.	6⅞d.

The above figures also explain the cause of the congested state of the London market and the possibilities there have been of avoiding it during recent years. It will be seen that supplies have been poured into London and have increased from 115 to 161 millions during the period under review, and the off-take in exports though improving has only expanded from 3¾ to 10½ millions On the other hand the supply in Calcutta has increased form 43 to 49¾ millions only, while the off-take in exports to new markets has risen from 9 to 25 millions. The outside buying power has, therefore, advanced from 3¼ per cent. 6½ per cent. in London, whereas in Calcutta it has advanced from 21 per cent. to 50¼ per cent.

It will be seen from these convincing figures that our new outlets have received little or no support, for while they have steadily *increased* their business in Calcutta the supply to meet it has *decreased*. The inference is obvious. Calcutta is starved and London glutted, and much tea finds its way to the wrong market.

The effect on prices is also shown, and it is particularly marked in a comparison of the last two seasons. Calcutta with its overwhelming proportion of common tea shows a drop in its average of 8 pie (equal to rather more than ¾d.). London with practically all the fine tea from India shows a fall of 1d. to the end of March, and it is likely to decline still further between now and June, as there are heavy holdings of low-price tea yet to come on the market.

Further indication of the retrograde movement in regard to the handling of the crop and the fostering of new markets is disclosed by the following figures:—

	1894-1895. Millions.	1900-1901. Millions.
Total crop	127	187½
Proportion of crop sold in Calcutta	43=34%	49¾=26½%
Proportion of Calcutta sales absorbed by outside markets ...	9=21%	25=50¼%

Thus, outside demands have taken 177% more tea during the above period and yet supplies to meet it have only increased 51½%; or taking the actual crops (which have increased from to 127 to 187½ millions) there is an *actual decrease* of 7½% in the proportion given to the Calcutta market to meet this extensively increasing trade.

In addition to the requirements of outside markets there is another very important demand to be satisfied in Calcutta, *viz.*, that of direct buying by the large home distributing houses. In accounts for a very appreciable proportion of the quantity sold in Calcutta, and as the teas thus bought do not appear in Mincing Lane, it is still a further ready means of affording relief to that over-stocked market. In 1896, from the June to December, 266,000 packages of Calcutta-bought teas were re-offered in London. In 1900, during the same period, only 130,000 packages appeared. The difference of over 130,000 packages is accounted for in a great measure by the increase in direct business between the distributors and the Calcutta market; heavy warehouse charges being thus avoided, the Calcutta buyer is in a position to pay a price proportionate to the charges he saves to the benefit of the producer.

Taking into consideration therefore the benefits and drawbacks which exist, a scheme for improving the position of growers, which would be most likely to prove successful, may be outlined as follows:—

Restrict outturn by a system of more careful plucking and thus assure not only *a smaller supply* but one of *better quality*.

Stop extensions; and deal separately with areas in course of development, otherwise the effect of a 10 per cent. reduction on gardens in full bearing *may be negatived* by the yield from "new tea."

Encourage relief where it *already exists* by liberally feeding new markets through Caluctta. This is a certain remedy and is ready at hand. The demands are firmly established in the Calcutta market and their strength and possibilities of much greater expansion are evident. On last year's working the buying power of all demands outside that for the Mincing Lane market is represented by 60 to 70 per cent. of the total offerings in Calcutta.

Endeavour to force consumption *in India itself;* the natives in some parts of the country are large tea-drinkers, and others will follow if opportunities are given them. There is plenty of ground well worth exploiting which will in time account for an appreciable off-take.

We have dwelt at length on this subject, as we believe it to be one of paramount importance. As Ceylon increases her business with new markets, so, in like proportion, is the supply and selection in that market increased by producers. Why should India continue to do the extract opposite? So surely as more tea is sold in Calcutta so surely will the off-take for new markets be increased. Here is a case for distribution of supply, where the Indian Tea Association, following the example of its kindred Association in Ceylon, might well lift up its voice. Every effort is being made to open out markets, yet when the buyer wishes to come to Calcutta he is informed that already there is not sufficient tea sold on this market to go round.

The distribution of the crop from Calcutta as compared with the previous two seasons has been as follows:—

	1900-1901. Millions.	1899-1900. Millions.	1898-1899. Millions.
To United Kingdom ...	161	149¼	133¾
„ Colonies	10½	8½	6¼
„ America	4½	6	3¼
„ Other outside markets ...	10	7¾	8¼

As already remarked, the above figures show satisfactory progress with the exception of those for America, which is due to speculative buying of China tea early in the season in anticipation of disturbances in that quarter. The interruption, however, is only temporary, and an appreciably larger export may be looked for during the ensuing season. The appearance of Russia in the list is a welcome addition to our new market; it has been a steady buyer throughout the season.

The quantity taken by outside markets from Calcutta sales has amounted to 25 millions, which is equal to 50¼ per cent. of the total offerings. Last year the proportion was 44 per cent. and the year before 36¾ per cent. Comparative details are as follows:—

	1900-1901. Millions.	1899-1900. Millions.	1898-1899. Millions.
Total quantity sold in Calcutta ...	49¾	50	49
Percentage of above exported to the Colonies...	21¼ %	16½ %	13 %
Percentage of above exported to the America	9 %	12 %	6¾ %
Percentage of above other outside markets...	20 %	15½ %	17 %

The above figures merely confirm the preceding remarks regarding the vital importance of outside markets to the welfare of the industry and the urgent necessity of supporting them.

The Duty question has engaged the attention of the trade during the past twelve months. The increased tax of 2d. per lb., which came into force in March last year, has undoubtedly done much harm, and whatever arguments may be brought forward in support

*Approximate.

of the measure from a theoretical point of view, there is no getting over actual facts and figures which unmistakably show that the trade has suffered seriously.

Consumption has been severely checked at a time when it has been of vital importance to force it, and the cry of over-production might never have been heard had the impost remained at 4d. per lb. It is only natural that a sudden and violent advance of 50 per cent. in the duty-value of an article of universal consumption must do considerable harm to a trade, especially when that enhancement takes the form of a tax payable by those engaged in forcing its use. Last year it was seen that this branch of the trade was suddenly transformed into an excited community, and the extravagant eagerness to secure tea and remove it from bond was productive of incalculable injury to the industry; the re-action came as a result of the locking up of enormous capital for an indefinite period, and was evidenced in the half-hearted and entangled working which lasted for so many months.

A happier state of affairs was reasonably expected after Christmas, but no sooner had the trade recovered from one disorganisation, than it received another shock from rumours of a probable further addition to the duty this year.

In comparison with kindred products, tea is not only taxed unfairly and is made to contribute more than its share towards the revenue of the country, but the duty itself is out of all proportion to its value; a large percentage of the crop is now taxed to the extent of 150 per cent. of its value, and taking the average price of all Indian tea for the season it is taxed 80 per cent.

The scheme for regulating weekly offerings in London, which was virtually on its trial has during the past season fallen through, and the effects of an unequal distribution of supply have again been apparent. The necessity of insuring a more uniform supply is fully recognised by importers, and it is unfortunate for the industry especially during the past season that more strength of purpose was not shown in dealing with this drawback. It is an absolute impossiblity for the home trade to handle the enormous weight of tea, which at times spontaneously finds its way to the London market, the supply is out of all proportion to the demand and the importer's anxiety to realise, results in the forcing down of prices. The question should again be brought forward, and the working of the scheme should go back further than holding tea in London to growers, who should contrive to bring about a system for regulating the *forwarding of supplies from the country of production.*

The Calcutta branch of the Indian Tea Association has resolved to set aside a portion of the available funds for the purpose or pushing the consumption of tea in India; arrangements are being made to employ agents in various parts of the country, and as the scheme is to be thoroughly worked through the proper channels, it will doubtless prove a success.

With a view to increasing the demand for new outlets it has been proposed to levy a cess corresponding to that in Ceylon for the purpose of advertising Indian tea in various parts of the world. A similar fund has been in existence for several years, and it may in some measure have been useful in promoting a demand, but for better results would undoubtedly be obtained if, instead of devoting so much of the available funds to expensive forms of advertising in prospective countries, they were utilized in such a way as would induce the flow of supplies in such directions through proper and healthy channels.

Every buyer in Calcutta has an outside market constituency, and the inducement offered might take the form of a bounty, payable out of the funds to shippers of teas bought in Calcutta. Let a percentage, on the public sale cost of the teas, be made over to the shipper on production of *bonâ fide* certified invoices and others supporting documents.

It is not now necessary to spend money in *creating* demands, as they are already here, and only want encouragement, and this would be yet another sure means of forcing trade and affording relief, and it would be immediately responded to.

As it is, the system of spending money in opening new markets, while at the same time starving their source or supply, continues. The one policy is apparently being suffocated by the other.

During the past season there has been some discussion regarding the various kinds of packages now being used. The trade at home and also in the colonies and other markets, as a rule, object to some of the latest patterns of patent packages, and sales have been consequently affected. There seems to be no doubt that the ordinary wood package, with corner pieces and tea lead cannot be improved upon, and is best suited to the requirements of the trade generall With corner pieces, this package is strong and can be easily repaire and it undoubtedly carries the tea best as regards freshness an general condition.

As regards the outlook and prospects for the future, it may b said that the position is almost entirely dependant upon the attitud of growers during the ensuing season. The remedies for dealin with the present depression are in their hands, and they have only make it evident that they are determined to curtail outturn, impro the standard of quality and devote more attention to the deman for new outlets, to bring about more prosperous times.

There are agencies at work which may tend to check any im mediate response, foremost amongst them being the heavy clea ances from bond recently made, and the consequent restriction the free use of money.

About 35 millions over and above the legitimate requiremen for consumption have been recently cleared; the proportion Indians appears in delivery figures and is therefore misleading it does not represent movement from stock into consumption. Th bulk of it still remains in stock, held by distributors, and simila to last year, this great weight of tea must for some little tim affect trade to some extent during the process of working it off.

At the same time it must be borne in mind that these clearanc hold a very different position of value to the excess taken out bond last year. They were brought at the lowest point touche and stand in at a fully 30 per cent. lower cost, and the market h since been noticeably firmer.

The outlook, therefore, is not so gloomy as it would seem; smaller crop of improved quality is in view, outside markets a ready to respond to a more liberal supply, and it is to be hope that even if a reduction in duty may not be secured, there will b no enhancement.

Exchange is still a severe handicap to growers, and the appr ciated value of the rupee is responsible to some extent for the present position. The question has been dropped, but the burde nevertheless exists and asserts itself all the more during th present troublous times through which the industry is passing.

Calcutta, *April*, 1901. } Carritt & Co.

NOTES FROM BRAZIL.

(From the *Brazilian Review.*)

Exchange.—*March 2nd*, 1901.—Ninety days' Bank rate on Lond opened on Monday the 25th, at 11d, rose to 11 3/4d. this morni and closed this evening at 11 23/32d.

Whatever it may be that is working the rise, as to which opinio vary immensely, there can be no question whatever that it is neith healthy nor advantageous. A few daring speculators may, perha make money by it, but most, even, of them will be left again if th attempt to push things too far as they were last year. A rise 1 11/16d. or over 17% in a month leaves no time for the adjustme of prices, is ruinous to trade and fatal to the stability that t country is so sorely in need of. Moreover no movement that is n founded on economic conditions, can be lasting and, though the is unquestionably an immense improvement, it is not and cannot for some years such as to support a much higher rate of exchan than that now current. As to the reason of the rise, opinions a very various and contradictory. At both Santos and São Pau the feeling is, unquestionably, bearish, the rise being there attribut almost wholly to speculation. Here opinion is divided, two Ba managers, for example, assuring us that the movement is chie speculative, facilitated by the stringency of money; whilst t others maintain with equal confidence that it is the legitimate effe of the excess of the supply of bills over demand. On the one ha we were assured that produce bills are barely enough to satis current demand, and on the other that the rise was the result heavy sales by Santos and Pará.

When such authorities differ so fundamentally in the appreciati of a phenomenon that must come under their peculiar attention, is likely that some factor or factors must be in operation know to some but not to others.

It seems probable that apart from a possible natural tendency improvement, the syndicate that are said to be operating fro

ew York and Paris for a rise in coffee, expectations of which are unded almost entirely on an anticipated rise of exchange, are lling exchange as has been reported. Local speculation has cer-inly heightened the effect, but if the rate were to be maintained ly by these sales, the reaction could not be long delayed. So long, owever, as outsiders are willing to sell and carry their purchases, ere are no reasons why exchange should stop going up at all, ecause the supply of bills thus artificially supplemented, would be excess of actual requirements. Sometime or other the reaction ust come, although if our surmise is right as regards the nature the selling, it may be put off perhaps for months. The same ndicate operated last year realising coffee and exchange in July. n the course of a day or so the Bank balances will show if our pposition is correct.

Coffee.—Sales of coffee were again very heavy, 236,000 bags at io and Santos as against 201,000 for the corresponding week last ear. The value of shipments during the week ending March st was £471,557 as compared with £458,368 for the corresponding eek last year. During the month of February the value of coffee hipped here and at Santos amounted to £1,170,576 as compared ith £1,085,214 last year. In view of the enormous stock in hand, nterminable appearance of the present crop and prospect of heavy rrivals of new crop in June, it is quite possible that the value of onthly shipments may be maintained on an average of over 1,000,000. However prejudicial and unhealthy the immediate osition may be, it is undeniable that everything points to another henomenal rise in exchange which may probably leave in the shade he performances of last year. It will, of course, be followed by the nevitable fall and ruinous liquidations that could only be avoided ere there an institution strong enough to control the rate by buying eavily when it goes up, and selling when it comes down again. As here is none the sooner we back to specie payments the better!

Santos, March 1st, 1901.—During the past week the market was generally firm, easing off on Wednesday in consequence of weaker ews from New York, but advanced again on Thursday and Friday. Dealers met the demand fairly and transactions in consequence were large, but rapidity of the rise in exchange prevented any improvement in currency prices to the serious prejudice of regular business.

Quotations for "superior" were 5$600 to 5$900, "Primes" 300 reis better, "Goods" 200 to 300 reis and "Regular" (Nos. 8 and 9. New York types) 400 to 600 reis below.

Enquiries were mostly for "Superior" and good medium qualities, "Peaberries" being neglected.

Europe bought reluctantly on the basis of 32s. 6d. to 35s. for "Superior" and 34s. 6d. to 36s. 6d. for "Primes." but buying on account of the speculative so called "metal syndicate" of New York continued active for an average of n. 5 at 71/ 4c to 79/ 16c, other demand from that quarter being slack.

Receipts during the week were very heavy but now show a tendency to diminish. The weather is now bright and clear and, should it continue, will ensure an early crop.

THE FEBRUARY COFFEE MOVEMENT IN THE U. S.

During the past month coffee, says the *American Grocer*, has been under speculative influence, with Lewisohn Brothers the principal operators. They claim to have faith in coffee, and believe they can dispose of their purchases at a profit. One of the firm says: "We believe we shall secure a greater return for our money than if we invested in ordinary ventures which bring but 3 or 4 per cent. dividends. What we have bought we may not sell for two or three years. In no way can our investments unfavorably affect the local coffee trade."

With the heaviest supply in sight the world has ever known—a visible supply equal to six months' requirements—there is not much ground upon which to justify an advance, unless, as claimed, it is based on a big advance in Exchange, which is likely to be still further increased.

Probably the trade will revert to its old tactics and buy coffee for nearby requirements only. As a rule, most attempts to unduly raise the cost of coffee, or any other great staple, results in failure. The history of the coffee trade for the past twenty-five years is marked by financial wrecks caused by too much of the bean "which comforteth the heart and aideth digestion," but ruins the speculator.

The February deliveries of coffee were light and below the monthly average for the preceding seven months.

The following statement shows the movement and general position of the article:

	Bags.	Bags.
Stocks, February 1, 1901—		
United States	797,167	
Europe	3,950,758—	4,747,925
Receipts during February—		
United States	576,360	
Europe	613,990—	1,190,350
Total supply, March 1 ...		5,938,275
Less stocks, March 1, 1901—		
United States	953,031	
Europe	3,917,637—	4,870,668
Deliveries, February—		
United States	420,496	
Europe	647,111—	1,067,607
Deliveries, February, 1900—		
United States	435,481	
Europe	708,346—	1,143,827
Decrease as compared with February, 1900		76,220
Deliveries (United States and Europe), February ...		1,067,607
Do. do. do. January ...		1,328,216
Do. do. do. December ...		1,180,838
Do. do. do. November ...		1,281,638
Do. do. do. October ...		1,340,059
Do. do. do. September ...		981,198
Do. do. do. August ...		917,608
Do. do. do. July ...		1,219,058
Total for eight months, 1900-1901		9,316,222
Do. do. 1899-1900		10,487,496
Decrease as compared with 1900-1901 ...		1,171,274

The February deliveries in the United States consisted of 333,080 bags of Brazil; 87,416 bags of all other sorts.

The visible supply of the world on March 1, 1901, was 7,276,668 bags, against 7,217,925 bags on February 1 (an increase of 58,743 bags), and 6,447,936 bags on March 1, 1900.

The visible supply on July 1, 1900, was 5,840,561 bags, so that in eight months it has been increased 1,436,107 bags.

The total receipts at Rio and Santos for the first eight months of the trade year were 8,487,000 bags, against 7,799,000 bags for the same time the previous year, and 6,891,000 bags in 1898-99.

Trading in options on the New York Coffee Exchange was heavy, the sales reaching a total of 724,500 bags. The lowest price for options was 5·40 cents for February and March; the highest, 6·75 cents for March, 1902. Spot coffee, No. 7 Rio, fluctuated between $7\frac{1}{2}$ and $7\frac{7}{8}$ cents.

COFFEE CULTURE IN QUEENSLAND—No. 6.

Mr. Howard P. Newport writes in the *Queensland Agricultural Journal* a sixth paper on this subject, dealing specially with

PICKING

He says in the last article of this series, I wrote, by special request, on "Pulping and Curing"; this article, also by special request, is therefore out of its natural order, which should have been immediately before Article No. 4.

The age of coffee is generally reckoned from the time of planting out in the field, for a plant may be anything from a six-month-old seedling to a three-year-old stump, as will be seen on reference to my chapter on "Nurseries" (No. 2, published 1st February, 1900, *Queensland Agricultural Journal*, Vol. VI., p. 120); and, though a few months may be gained with a well-grown stump plant at times, a tree does not really begin its business in life until it is planted in the field where it is to remain.

Coffee takes three years to bear its maiden crop, as a rule, and with bad cultivation or neglect (*vide* "Root Growth of Coffee Plants," *Queensland Agricultural Journal*, 1st November, 1900, Vol. VII., p. 214) it may take longer. In this country, however, coffee is somewhat precious, and the maiden crop is frequently obtained

in less than the usual three years. The climate not being so dry, and the soil richer and more retentive than in most countries where coffee is grown as a staple, the showers about the time of blossoming (come to beknown as "blossoming showers") are not such an inexorable necessity in this country. The moisture in the soil is, in most cases here, sufficient to ensure the opening and setting of the blossom even if no rain has fallen for some little time. This results in an absence of the loss, so frequently occasioned in other countries, by the burning of the blossom and failure of a portion of each blossoming to fructify or "set," thus ensuring not only a regular crop but a much larger one in proportion to the amount of blossom.

Plants put out in January in North Queensland will frequently blossom in December of the next year or the following January, and ripen a small crop in July or August—that is, in from two years and six months to two years and eight months from the time of planting. In well situated localities I have known coffee to bear after late planting when two years' old, but such early bearing is always a strain on the trees and very dangerous. Any tendency to bear at so early an age should be discouraged, and here in Queensland, even in the third year, it is advisable to disbud from the green wood (*see* article on "Disbudding Young Coffee").

About December or January, the time varying a month or more in different localities, the coffee-tree will give indications of blossoming again. In the axils of the leaves or the eyes of the branches, from the youngest piece of new wood to the old stem, small buds will make their appearance. At first only the minute leaves or brakts (?) will be seen enveloping the bud proper and attached to it by a coating of wax that will always be found to cover the buds of the coffee plant. This wax appears at first as a light-yellow or brown ball at the end of the bud, and its use is to protect the delicate young bud from heat or cold; in hot weather the wax forms a thin coating over the bud and saves it from being burnt by the heat of the sun, and in cold weather cakes quite hard and saves it from the effect of a sudden dropping of the temperature—in either case, of course, only within limits.

So far the buds of leaf or wood and of blossom are indistinguishable, but as it grows the white of the blossom bud soon becomes evident, and about this time it will split and disclose from three to five (usually four) distinct blossom-buds; occasionally the bud will be found thick and double, and will early disclose three or four sets of four buds each. As it continues to grow, it stands out like small thorns in all directions, and the blossoms will individually grow to a length of from a-half to 1 inch before opening, earning for themselves the technical term of "spike." This spike will, in dry countries, when nearly full size, stand for several days and sometimes weeks, but will not open without rain. After rain it opens promptly in from eight to ten days, according to the amount of fall; in this country however, for the reason already given, it will frequently open and set without waiting for the showers, and herein lies one of the secrets of the heavy crops that Queensland can produce per acre and per tree as compared to the other countries.

The sight of a coffee estate in blossom, especially when well kept, is one that needs an artist to describe, and once seen is never forgotten. The small, white, star-like blossoms quite lose their individuality in the immensity of the whole, and no prettier sight can be imagined than the ropes of perfect white entirely hiding the brown wood, set off by the gorgeous dark-green leaves of the coffee. Blossom has scarcely ever been known to open in the day-time; a little patch here and there, especially under shade, may do so, but it generally opens between 2 and 5 o'clock in the morning, or just before or at daybreak. The sight of a whole field in blossom is one, therefore, that breaks on one almost as a surprise first thi in the morning, and the scent, which, though scarcely discerni in any one little blossom, becomes a delicate fragrance in the appreciable at great distances and too strong in the field to pleasant.

The size of the individual blossoms will be found to vary c siderably, and it was at one time thought that the size of the be varied accordingly; but this has been proved a fallacy, as the sm blossoms have been shown to produce as large a bean and berry the larger ones. The scent will vary, too, being much strong some seasons than others. This has not been accounted for y but the strength of the scent has a very marked effect on the s ting of the blossom by attracting insects, butterflies, bees, flies, e which can, of course, detect it further off than human beings, a flock to the scene in numbers. Although coffee is hermaphrod and able to fertilise itself, these insects materially assist in process. Frequent infertilisation tends to deterioration of sample, and is not so effective or general. A good strong sce therefore, and consequent presence of the insects, will make a ve marked difference in the output.

The blossom will begin to fade in twelve hours or so, but a go blossoming will last—that is, will continue to open more spike ea day for three days or so. While the blossom is open all work the field must be stopped, for not only are the insects interrupt in their work, but the blossom itself, being very delicate, is eas knocked or rubbed off. The short time while the blossom is op is, perhaps, the most anxious time for the grower. An untim shower of rain means a great loss by damping the pollen a hindering fertilisation, or even knocking off the blossom altogeth and strong wind may shake the blossom off before it has time to s

In very dry weather the blossom is not so large, as a rule, bu dry month or two before blossoming generally means a good setti Ideal weather, while the blossom is open, would be a bright su shiny morning after a shower of rain the evening before with gentle breeze.

As a rule, in coffee, there are from two to four blossomings abo ten days or a fortnight apart. In Queensland there are genera more. This is unnatural, however, and it is the grower's obj to reduce the number of blossomings in favour of heavier on which can be done to a great extent by handling and pruning.

As the blossom sets, the petals will, as a rule, fall away from calyx and hang on to the end of the pistil; when this is freque and regular, it is generally considered a sign of good setti Another method of judging is to turn the branch up and look underside of the very young berries three days or so after blossom has faded; those that have not set will appear yellowi while the properly fertilised ones will be a healthy and brig green colour.

After this, the young berries swell gradually and take some sev to nine months to ripen; the most dangerous stage of their being when about the size of peppercorns, when very dry weath or any accident to the roots, may cause them to wither and fall.

The berry should grow steadily until of full size, when the ker will "set" or change from a milky soft matter to a jard bluish see after this the pulp or fruit of the berry will ripen, turning fron bright green to yellowish, and then red. Occasionally, berries v turn from green to red with hardly any appreciable period of yell but those that ripen unevenly or ripen at the tip, will generally found to be "light," or have imperfectly formed beans. Wh quite ripe, the coffee berry is about the size and shape of a cher and not unlike one in colour also, so much so that the term "cherr has been taken into general use as denoting the berry at this sta of its growth.

When to Pick.—To wait until the berry is a perfect and bright all over, or what is known as "dead ripe," is quite unnecessa It might seem the only commonsense way of picking fruit, but coffee it is not so. Coffee culture may, in a general way, be class as a species of fruit culture, but it has this great difference, that cultivation to produce this fruit, the seed only is required. It also a fact that, just so soon as and no sooner than the seed is fu formed and full-grown, the fruit round the seed begins to ripen, a by this time it will be possible to separte it by squeezing. Beari in mind that the fruit part, or pulp, is the part we throw away a that the seed will not grow any more once the berry ceases to green, it is obvious that the time to pick is when the berry begun to change colour, and the seed can be easily sqeezed out fr the pulp between the finger and thumb. If picked green,

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

mount of pressure will separate the seed, and if put through a ulping machine in this state, some of the green pulp will ither be chopped off, or the berry be cut in two, such cut eans, subsequently turning green, or copper-coloured, from their ontract with the metal of the machine, and discolouring and poiling other beans in the sample. Green berries must, therefore be avoided. In picking in the field some attention must be iven to this matter, but it will be found impossible to avoid a ew green berries; some will fall in by accident and must go hrough, but carelessness in this respect will often account for a arge amount of loss.

On the other hand, over-ripeness must be avoided also; it will ften take only a few hours of sunshine to turn a dead-ripe herry to an over-ripe one Coffee will never naturally be a purple ed; if it is so, it has become over-ripe—that is fermentation as set in under the outer skin. This has the effect of discolouring the parchment and spoiling the appearance of the sample, nd if allowed to go on too long will also discolour and spoil the lavour of the bean through the parchment skin. In very wet veather, if the cherry is not gathered in good time, some will be ound to split when dead-ripe, and either drop to seed or drop off ltogether. This splitting discolours the parchment, too, and very effort should be made to get the crop in before much can ake place. In very dry seasons a little will be found to dry on the rees in spite of careful and regular picking. This cannot be voided, but should be a very small percentage. This dry crop hould not be put through the machine with the ripe, but picked eparately if possible, dried as it is, and subsequently mixed with he "tails." The time for picking being just so soon as the crop hows red on the trees it is not safe to leave it much longer, and, nce red, there is no fear of it not separating properly in the pulper. Of course each berry cannot be tested by feel, but the grower will very soon, by testing a few, be able to tell by sight when it will pulp. It is obviously to the advantage of the grower to get he crop off the trees as soon as possible: Firstly, to get it cured nd away; secondly, to save the strain on the trees; thirdly, to dmit of the subsequent berries ripening quickly, as well as having more sap to fill out with; and, fourthly to give the tree as much ime as possible before and strength to blossom again.

An estate on which the berries are allowed to ripen too much seldom pays, for not only does the picking cost more, but it drags out its weary length to the detriment of everything after it, until, he blossoming season coming round again, the tree can make but a poor show under the circumstances. It is often of great advantage to "strip"—*i.e.*, in the last round of picking to take of every berry whether green or ripe, and to subsequently sort out and pulp the ripe stuff and dry the other in the skin adding it to the dry cherry, of which there is always some in a coffee crop. This does not necessarily mean all loss either, as the strippings dry dry quicker and better green than cherries will, and make good second-class coffee when cleaned.

How to Pick.—The picking is generally considered, especially by those who don't grow coffee, a formidable task and an insurmountable difficulty in the cultivation of coffee. There is no getting away from the monotony of steady picking, but, if properly set about, a great deal of the monotony is removed and a great deal more work can be got through. In choosing, as has been done to a great extent hitherto, only the dead-ripe, it can be understood how much time is wasted in selecting and leaving, while if all that is sufficiently red to admit of pulping is taken off at the one time, half the trouble and cost is removed at once for the cost of picking depends a great deal upon the quantity available at the time of picking.

In pulling off the cherry, if each is picked with the finger and thumb separately and from above, a very little can be gathered in the day, especially if a billy-can is carried in one hand, as I have seen done, and only one hand used for picking; 50 lbs. of cherries is in this way made a hard day's task. For quick picking a small bag should be tied round the waist or hung round the neck, which can be held open by a bent piece of wire if desired, and both hands used for the gathering. If the hands are held together, and the picking always started from the middle of the tree outwards, it will be found that it is comparatively easy to pull off the beans with the thumbs, or first fingers and thumbs, and to drop them into the palms of the hands thus held together. In this way a double handful of cherry will be quickly collected, and is easily deposited in the bag at the waist or chest by one natural movement, before the hands are stretched out again to pick along another branch. In this way 200 lbs. and more will not be found a heavy task for one day's work. The bearing that pruning has upon the cost of picking can now be seen. In looking into the matter of expensive picking, or the small quantities gathered, hitherto in Queensland, I find that in all instances the trees were unpruned, and in most were matted and thick if not tall and out of reach. The crop from a tree having its branches regularly and systematically arranged can be got in in half the time of that from a tree that needs one hand to hold the branches back, a contortionist to get at the crop, or a step ladder to reach it.

Systematic pruning previous to the cropping means not only easier and quicker picking, more crop, better sample or quality—*i.e.*, bigger berries—but a more systematic ripening, thus again materially reducing the cost of gathering. It will be readily seen, therefore, that the picking must of necessity cost more on a badly cultivated than on a well-worked estate.

Ordinarily there should be as many distinct pickings over the estate as there were blossomings, but when the blossomings are close together, when ripe it is difficult to distinguish between the different settings. Five to seven times round the estate, with ten days to a fortnight between the beginning of each round, should get the crop off. The first is a small pick gathered from a few trees that are in favoured situations, and ripen their crops specially quickly, and, coming only from a few trees here and there, is called a "fly-picking." The third and fourth pickings will bring most of the cherry into the sheds. Systematic work in picking is as necessary and useful as in weeding or any other work, and if the estate is regularly picked over, line by line, from one end to the other at first, the subsequent ripening will be more regular and more easily dealt with. At present in Queensland, it will be found necessary to pick more frequently than once a fortnight, perhaps, and, many cases, eight or ten times round the estate will be necessary, but this can, in time, be very materially reduced.

With attention to these points, it will be found that a wage of from 20s to 30s. a week could be made at 4lb to the 1d. by a fair ordinary picker, except for the first or "fly-picking" or so cheap picking, however, cannot be expected from trees that not only offer every obstruction to the picker, but produce small berries at the same time from want of cultivation. Some attention to this important branch of field work and methodical procedure will not only remove the apparent formidableness of the task, and the grower surprise himself at the amount he can pick, but a very marked improvement will very soon become evident in the sample of his coffee.

THE DUTY ON INDIAN TEA.

The Secretary of the Indian Tea Association (London) has addressed the following letter to the Secretary of State for India in Council:—

My Lord, I am directed by the Indian Tea Association, London, to address you on the subject of the late enhancement of the Import Duty upon Tea, with a view to your urging the Chancellor of the Exchequer to reduce the Duty to its former level of 4d. per lb. The industry, which this Association represents, though supported by many millions of British Capital, is carried on in India, and is thus, perhaps, outside the sympathetic consideration of the Chancellor of the Exchequer. Indian interests are, however, especially within your Lordship's cognizance and protection and the Association venture to hope for your sympathy and assistance in the present highly critical state of the Industry. That Industry has brought wide and unhealthy wastes under cultivation. It supports several hundreds of thousands of native labourers, and it makes a material contribution to the Land Revenue of the Empire of India. It holds an important position in Northern Bengal and Southern India and is the very backbone of the well being of the Province of Assam. Moreover, after some vicissitudes it has proved financially a success. The Industry for a considerable period, prior to 1897, showed a steady prosperity. It was found to return to English investors, regular, and in some cases liberal, dividends. This prosperity naturally attracted further capital, which was employed in making additions to the area under tea. These extensions were, perhaps, in some cases unduly large, but they would have had no serious effect upon the well-being of the Indian Tea Industry, but for the

occurrence of two grave events. The first of those events was the action taken by the Government of India, by which the exchange value of the rupee was fixed at about 1s. 4d. Without entering into the question of the effect of this action on the country generally, I am desired to point out that the policy adopted has undoubtedly resulted in heavy loss to the Indian Tea Industry. The artificial enhancement of the rupees has in regard to tea greatly increased the cost of production, and has thereby reduced the margin of profit to an extent which can hardly be conceived. But for the very serious increase in the cost of production, caused in this way, producers would now be able to accept with small risk of loss the low prices of tea at present ruling. The second event was the addition last year of 2d. per lb. to the Duty, which is proving most injurious to the producers of Indian Tea. The increase in the duty cannot fail in one of two things; it must either, by an increased price exacted from the consumer, check consumption, or, if not paid by the consumer, it must come out of the pockets of the producers. The result so far appears to be that the increase has materially checked the regular expansion of consumption, and at the same time thrown upon producers the payment of a large share of the additional Duty. These two events have so seriously affected the Indian Tea Industry—the first by raising the cost of production, and the second by reducing to the producer his net price—that, coming as they do on the top of the increased production, they have brought the Industry into such straits that at the present moment but few tea properties can be carried on without loss.

It is hardly necessary to point out to a Statesman how much the failure of a large proportion of the Indian Tea Industry is to be deprecated. The public revenues, both of Assam and Bengal, are much interested in the prosperity of tea, and if, as seems probable, many estates must be closed up, the distress to the labourers employed on them will be very great. Moreover, I am to urge upon your Lordship's consideration that, both for the United Kingdom, where capital is ever seeking for new channels of employment, and for India, where capital is greatly needed, it would be a mistaken policy to allow the one Indian Industry, into which private capital has flowed freely from this country, to be crushed in its hour of weakness and difficulty by the addition of heavy State burdens. The Association desire to draw attention to the very heavy percentage which the Duty on Tea now bears to the wholesale price of the article. In 1881, the average price of Indian Tea in London was 1s. 5d. per lb., the Duty being then 6d. per lb. (about 35 per cent). In 1891 the average price was 10½d. the Duty being 4d., or about 38 per cent. During the current season the average price has been 7⅓d, and at the present moment it is about 6d, while the Duty is also 6d. or 100 per cent. on the average price. Large quantities of tea are now being sold at less than 4d. per lb., the Duty here being 150 per cent. further point to which the Association respectfully venture to draw your attention. While agreeing with the Chancellor of the Exchequer in thinking that 'a very large class of the population who do not pay income-tax, who do not consume alcohol and do not smoke' should contribute towards the expeuses of the South African War, they do not consider it to be equitable that tea alone, of the commodities used by that class of the people of England, should be singled out for an increase of Duty. It seems to the Association that there are other commodities more capable than tea of bearing increased taxation—cocoa, coffee, and sugar for instance. The Duty on cocoa, the consumption of which has largely increased of late years, varies between 1d. and 2½d. per lb. for different qualities, that on raw cocoa being 1d. The quantity of raw cocoa entered for home consumption in 1879 was 10,111,526 lbs. as against 37,750,000 lbs. in 1900, showing an increase of 270 per cent, while during the same period, the consumption of tea rose from 160,500,000 to 249,750,000 lbs. being an increase of 55 per cent. only, The Duty on coffee, which has an average value of 8d per lb., is 1½d. per lb., or only 25 per cent. of the Duty on Tea, with which article it competes as a beverage. Sugar at present contributes nothing to the Exchequer, but a Duty of even ½d. per lb. which could hardly be felt by consumers, would realize, it is calculated, about £6.750,000. My Association have endeavoured to show in this letter that the increased Duty has struck their Industry heavily at the very moment when, from other causes, it was least able to bear up against such a blow. They now venture to pray your Lordship to press upon the Government the serious nature of the crisis in which the Indian Tea Industry is involved, and the disastrous effect upon it of the continuance of the present high rate of Duty.

PLANTING IN DOMINICA.

The Administrator of Dominica has furnished a Ceylon planter with a series of answers to a number of questions that have been addressed to him by various correspondents on the subject of planting in Dominica

He adds that, as the distances are not long in Dominica, Crown land can be purchased for 10s an acre, payable by instalment. There are one or two partly developed estates for sale, but a large price is being asked. The first comers will naturally get the pick of the land that is being opened up by the new roads. Dominica has never suffered very severely from a hurricane, and the effects of a West Indian storm are frequently exaggerated for various reasons. Mr. Gordon Fowler, an ex-Ceylon planter, who started a coffee estate there about three years ago, is so satisfied with his results that he has increased his holding, during the last year, from 300 to 1,100 acres. His coffee is magnificent, and there is a complete absence of blight.

NOTES ON DOMINICA FOR INTENDING PLANTERS.

1. *Best route from England.*—By Royal Mail from Southampton. Leaves every fortnight. Fare £25 single, £40 return. Voyage lasts 13 days. Can also go by Scrutton's line cheaper, but a good deal longer, also *viâ* New York.

2. *Hotels and their Charges.*—There is one hotel in the town of Roseau, suitable for bachelors. Terms 8s a day.

3. *Pensions or Boarding Houses and their Charges.*—Several kept by ladies, very comfortable and moderate terms. Miss Pemberton's and Miss Shew's specially recommended.

4. *House Rent.*—Vacant houses are at present scarce. Rents vary from £30 to £60 a year.

5. *Cost of Living.*—A bachelor living on his own plantation, of careful habits, need not spend more than 30s to 40s a week on house keeping. A great many spend much less, as they raise their own poultry, sheep, pigs, vegetables, and fruit. Fish is very cheap and plentiful.

6. *Servants' Wages.*—Female servants get from 3s 6d to 5s a week. Men from 4s to 6s a week, and are usually not boarded.

7. *Prices of Horses and Mules.*—Ponies cost from £10 to £20. Mules average £20. Donkeys 30s.

8. *Horse Hire.*—Six to eight shillings a day.

9. *Horse keep per Month.*—From 30s to 40s.

10 *Can Harness and Saddlery be obtained in the Country?*—They can be obtained locally, but it is better to get them from England.

11. *Is there any Shooting? If so, where and of what does it consist?*—Pigeons (Ramier), Doves, Parrots, Opossum, Agouti, and Wild Pig, are fairly plentiful, but shooting in Dominica is not sufficiently good to make it a special object of a visit. A week can however be very pleasantly spent in the forests with a gun.

12. *What is the best Rifle or Gun for the Country?*—An ordinary fowling piece.

13. *Can Ammunition and Sporting Requisites be obtained in the Country, and where?*—They cannot be obtained locally of good quality, but everything can be got from Barbadoes in a few days.

14. *What is the Import Duty on Guns and Cartriages, and what other Restrictions are there in the Import of Guns and Dogs?*—10s a piece. No restrictions on dogs. Long haired ones are not very suitable. Fox terriers thrive best.

15. *Is there any angling? If so, what kind and where, and what baits are used?*—The rivers are well stocked with fish, principally mullet. Local Grasshoppers make the best bait.

16. *Amusements, Clubs, etc.*—The Golf Links 9 Holes, are very sporting and are managed by a Club. There is also a Tennis and Croquet Club. A Social Club House is about to be built. Cricket is also played.

17. *Are there good Roads, and are any fit for Cycling?*—Very large works are being undertaken on the Roads, and bridle paths are being turned into Cart Roads. There is a good road round the Island with branch tracks leading up the Valleys. The sum of £15,000 is now being expended in making a central trunk Road which is intended to open up the very fertile lands that lie behind the seaboard. The Island is rather too mountainous for easy cycling, but owing to the improvement in the roads now being carried on, several bicycles have recently been imported.

18. *Is the Climate healthy, and what is the best Time to visit the Country?*—The climate is very healthy, especially in the mountains. Temperature rarely excessive. Rainful varies from 60 inches to

) inches per annum, according to locality and altitude. No ecial outfit is needed, ordinary English summer clothing does y well. A Terai hat is useful, also strong leather boots. All dinary articles can be purchased locally at moderate prices. The st season to visit the Island is from November to May; but any- e intending to take up and plant Crown lands, that are covered th forest growth, should commence operations early in the year, as to get a good "burn" during dry weather.

19. *Amount of Capital necessary.*—An intending planter should be supplied with *less* than £1,000. With this Capital he might rchase a block of 300 or 400 acres of Crown lands. He might clear d plant 20 or 25 acres the first year, and ten additional each suc- eding year. A cottage suitable for a bachelor could be built ally, by using native timber and shingles, for something under 5. Sufficient furniture could be purchased for £25. After the st year, the planter ought to begin to make some money out of atch-crops," such as early vegetables, bananas, tobacco, etc. neapples yield a crop after 20 months, and their cultivation gives ge profits. Vanilla and coffee bear in three years. Limes and anges give good crops at four years. An acre in cocoa, five years, l, ought to yield from six to nine cwt. of beans per annum, and e price, during the last 20 years, has averaged over 60s a cwt. inidad cocoa fetches over 90s a cwt., and there is no reason why e Dominica product, if properly cured, should not be equally luable. Nutmegs are of slow growth, but the value of their yield very high. The cultivation of ramie-grass has lately been com- enced in Dominica, and promises much success. There are vast eas particularly suited to rubber, and the "Castiloa" is found to ive admirably. In fact, the most eminent authorities on tropical riculture have given the opinion that owing to its diversity of l, rainfall and altitude Dominica offers remarkable advantages the profitable culture of almost every sub-tropical product. ere are good shipping facilities to the markets of America and the ited Kingdom, and an increasing demand for all its products.

20. *Supply of Labour.*—The local supply is provided by the oured inhabitants of the Island, and is fairly abundant. The ld hands require to be dealt with tactfully. There is a considerd- le influx of labourers from the Sugar Islands further north, and 1899 these immigrants numbered over 1,700. In the event of ry large demands arising for an increase of labourers, it is pro- ble that coolies would be imported from India.

21. *Danger from Hurricanes?*—Dominica has been remarkably e from hurricanes for very many years. The last severe storm curred in 1883, but did comparatively little damage. The very cidented configuration of the Island would probably prevent any olesale destruction of growing crops, and there is really very tle danger to be apprehended from hurricanes in Dominica.

22. *Insect Pests?*—The Island is very free from noxious insects. me trees in some localities are troubled by a borer, but the mage done is, so far, not serious. Great care is taken, to guard ainst the importation of plant diseases from abroad. There are venomous snakes and mosquito curtains are rarely used in the untry districts.

23. *Crown Lands* v. *Old Sugar Estates?*—The whole of the coast nds, right round the Island, are occupied by old estates which, r the most part, once produced sugar but are now planted with cao, limes, and fruit. Very few of them are for sale, and it is a gnificant fact that it is almost impossible to buy, for a reasonable gure, a plantation that is already yielding a large crop of either cao, limes, or fruit. The returns from these products are too luable to be parted with save under force of circumstances. The own lands comprise about 120,000 acres, and occupy the whole the centre of the Island. They are undulating, well-watered, d covered with a magnificent forest growth. The soil, in most aces, is remarkably fertile, and no fertilisers would be necessary r many years. In these virgin lands there are practically no eeds, and the continual tillage required on old plantations would largely avoided.

The felling, clearing and burning of the forests is usually done native contractors, and it has been estimated that the clearing, aining, and planting of an acre of virgin land costs in the first ar, between £4 and £5.

The "Imperial Road" which is now being constructed through large section of Crown lands, opens up two large "spheres" of il, and will soon render available some 30,000 acres. In one cality, the land varies in altitude from 3,500 feet to 1,000 and this act is principally suited to the cultivation of high-grade coffee, nutmegs, oranges, rubber, and early English vegetables; cacao, limes, vanilla, and pineapples are believed to be better adapted to lands varying from 500 to 1,000 feet, and the best conditions are to be found in the Layou Valley.

24. *Instruction in Agriculture?*—The Curator of the Botanic Station and the Agricultural Instructor are always ready to afford all assistance in their power, but it should be clearly understood that the Government will assume no responsibility for the success or otherwise of any settler. An intending planter should carefully follow the work that is being carried on in the sample cultivations at the Botanic Garden, and he would gain much valuable information. The planters in Dominica are very friendly and hospitable, and any new-comer with proper recommendations would be welcomed and assisted by them. It would be advisable for any inexperienced person not to decide upon the purchase of land until he shall have stayed some weeks in the Island. He will then be in a position to judge for himself of the merits and prospects of various cultivations, and be able to decide upon the nature and locality of the soil which would best suit his purpose. The return fare to Dominica is only £40, and a month's expenses in the Island could easily be restricted to £20. For an outlay of £60, a single man could most pleasantly spend a couple of months in making a voyage to Dominica and back, and there is every reason to believe that, having once seen that very beautiful and promising Island, he will develop a strong desire to identify himself with its progressive fortunes.

For further information concerning Dominica, see "Report on the Agricultural capabilities of Dominica," by C. O. Naftel, late Inspector of Estates in Ceylon. This pamphlet is published by Messrs. Eyre & Spottiswoode, East Harding Street, Fleet Street, and costs 9½d. It contains a good map of the Island and a large amount of valuable information concerning the cultivation of various products that are suited to Dominica.

TEA SEASON, 1901.

J. writes in *Capital*:—

The abnormal drought now obtaining over most of the tea districts looks as if nature was going to solve the question of reduction of crop, which seemed to defy human ingenuity to find a way out of, that did not bristle with difficulties; indeed whatever scheme was propounded, it was immediately combated as impossible; and a nostrum for the disease seemed as far off as ever until this drought set in, and now many of the districts will probably find, before the drought is over, that 5 to 10 per cent. of plant is dead; and it is a much more severe remedy than any of the proposed nostrums, for it means cultivating an area all giving 5 to 10 per cent. less yield, and which must continue for ever and ever for no matter how vacancies are filled in they never yield the same as original plant. Indeed, it is a question whether putting out new area to the same extent does not pay better, as from this the tea in cup is much stronger and the yield greater and earlier per acre—possibly double. We cannot say that we agree with Sir Patrick Playfair in his utterance that a fine dry cold weather was followed by a good "vintage," in fact we have always been led to believe the opposite. The human subject, when it has undergone a period of training, calculated to give it the opportunity of exerting its best effort, cannot long undergo the system without deleterious effects to its constitution. In the same way exactly is the tea bush effected, and season 1901 will not, we are afraid, be noted as a good vintage year, but it is possible, as in 1898, that it may be followed up by an extraordinarily favourable cold weather, and the vintage of 1902, like that of 1899, be of extra good quality and strength; but let us hope, if such be the case that the lesson of 1900 will not be repeated, and leaf of any kind plucked, foisted on the market. If our columns are looked back through in 1899, it will be found we sounded a word of warning and were somewhat taken to task by several of our contemporaries for even hinting, that it was not a good thing for the industry that such a prosperous year had succeeded a disastrous one, but that it would have been better for the industry generally had it had one or two more seasons like 1898, and our prophetic words have been more or less true, and we hope that the lesson taught will not be lost sight of; but, we are afraid, if an abnormal yield and good vintage came to pass in 1902, that the hope that springeth eternal in the human breast would be too much for the planters, the agents, and proprietors, and the

lesson now being seriously taught would be forgotten, and the dream often dreamt had come true, that the halcyon days often had come round with the swing of the pendulum of time. There are a number of economic problems now seriously interesting to those most intimately connected with the industry, that would go to the wall, were our words to come true, instead of being persevered with, as they should be, and a golden opportunity was lost at the last general election when the cry of a free breakfast table might have had some effect, notwithstanding the enormous increase of expenditure due to the Transvaal War. Now that the Government are secure for another septennial period, we are afraid that any attempt to lower the duty would be like the voice of one crying in the wilderness and attended with the same results. There is little doubt many subjects, which ought to, do not engage the attention of the Indian Tea Association, but now that there is a vigorous Chairman, and Vice-Chairman at work, we wonder they do not apply themselves to the question of freights and reduction of passage money for planters and their families. Shipowners complain of a high price paid for coals last year, but say nothing of the fine freight rates they were receiving. There have probably never been more remunerative rates for shipping than have obtained during the last two or three years, which is reflected by the shipping reports and dividends earned by the different public companies, and yet in face of all this a 10 per cent. addition to passage money is quietly accepted. Why do not the Tea Association in London and Calcutta put a stop to the present bondage of tea proprietors, and give notice to end the contract with the Conference liners, and let Calcutta, like Colombo, be a free port. There is any amount of tonnage knocking about in search of employment, and the carrying of Indian and Ceylon tea is so much run after that it would insure good competition, and might be carried remuneratively at 10s. to 15s. a ton less than that now paid. There is little doubt the opening of the Chittagong Port should have a tendency to breaking the present scandalous bondage of tea garden. This is practically now in view. Besides this there are many other economic problems which might just now be solved by unity, if such could be ever counted on, in this distressful industry.

COFFEE IN THE SURMA VALLEY.

The Indian Planters' Gazette's correspondent writes :—

Given suitable soil and shade there does not appear to be any reason why coffee should not grow and pay as well in the Valley of the Surma as elsewhere. But suitable soil and shade must be the very first consideration. As we mentioned in our issue of the 16th, the yield per acre in South Sylhet has not as yet been made public. Now we learn that this cannot be done, for the simple reason that the most of the land planted has been put down with the Liberian species 10′ by 10′ apart and the spaces between filled up with Arabian as a catch crop. Under the circumstances it would be difficult, if not impossible to give a definite estimate of what may be reckoned on per acre. We have advocated, when putting down fresh plant, to introduce the best Jamaica procurable, as the finest of this is now quoted on the London market at 125s. per cwt. Of course it is possible, we may say very probable, that the species which brings a top price when grown in Jamaica might turn out an entirely different berry if grown in South Sylhet. Given the soil and climate, elevation is now looked upon as only a secondary consideration. Formerly it was found that coffee was better flavoured when grown at considerable elevations above sea-level. But the fact was generally lost sight of that on the highest elevations the most suitable flavouring soils, as a rule, were to be found. Coffee of any species when grown upon strong alluvium naturally will not, as a matter of fact does not, produce such a well-flavoured berry as when it is grown upon soil which, to a certain extent, is composed of humus. The Liberian berry has been recently described as a heavy enough bean but wanting in flavour; but we have been, assured that when this species is grown upon a light laterite, which has been under forest, it has even a superior flavour to a great many of our Arabian growths, which are famed for their flavour. The flavour of the Liberian bean, even when grown upon alluvial land, is said to be improved so much when kept in the parchment and thoroughly seasoned, that it compares very favourably with good Arabian. Be this as it may there is no doubt about all the species improving much in flavour by keeping the beans in the unroasted state. Botanists, it would appear, have enumerated about sixty species of the genus cof and these are spread over various countries in both the East and Western hemispheres. According to a well known author most of these must be mere varieties resulting from accident soil, climate or cultivation, produced subsequently to the natura ing of the plant, for we know that all the coffee trees now gr in America and the West Indies are the progeny of one pl introduced in the year 1714, and yet botanists have individ ised no less than sixteen species in Brazil alone and nine Peru, whilst in the East Indies we have seven, and Africa credited with five. Among the Indian species at least one, Bengalensis Roxb., is a native of Sylhet and in former times u to be cultivated in Bengal. But all the species most valuable economic or commercial purposes are confined to Africa, or ar African origin. So intending growers of the flavoury berry South Sylhet have a large enough number of species to cho from to suit their soil and climate. The choice of a suita species is by no means the least important thing to be taken i very careful consideration. Although the present season's l drought is by no means normal, and cannot be taken as the aver of the South Sylhet climate, still it must be always borne in m that such a spell will be experienced from time to time. Th are species, if not varieties, of our finest coffees which st drought and certain conditions of soil and sunshine be than others. A writer recently accounted for the Arabian spe standing the drought better in South Sylhet than the Liber because the latter was essentially an ever-green tree, and that Arabian was either deciduous or otherwise according to clim soil and general environment. Although this may be to a cert extent quite correct, we would point out that there are cert kinds of coffee which stand sunshine much better than others are more productive when exposed than they are when shaded. the other hand, again, there are kinds which will not thrive at unless they are grown under shade. We are inclined to th that a moderate shade, that can be thinned when necessary, wil found to be a *sine quâ non* to successful coffee culture in So Sylhet. We wish the pioneers of this and other industries in t district every success. Coffee is by no means the only prod which is being tried. Some of them already give promise of coming very important staple products, which will not be limi to the Surma Valley, and we hope to be enabled to congratul the district of South Sylhet upon being in the very forefron success, as it certainly deserves to be for its tropical agricultu enterprise.

THE DUKE OF CORNWALL AND THE CEYL PLANTERS.

The presentation of the address of the Planters' Association t place at Kandy, shortly after noon on April 13th, in the Pavilio

The Planters' Association was represented by Messrs. Edw Rosling (*Chairman*), A. C. Kingsford, Joseph Fraser, W. D. Gibb E. Hamlie W. and F. Tatham, Patterson, Jas. Ryan, Major P Bliss, St. G. Carey, T. Farr, H. and E. Webb, J. Whith W. D. Bosanquet, H. J. Vollar, A. Coollingwood Smail, F. We ham, W. Sinclair, J. G. Crow, C. Ryan, Alderson Smith and Anderson.

THE ADDRESS.

Mr. Rosling read the address. It was presented in the fam gold and gem casket which Messrs. D. F. de Silva & Co. sen last year's Paris Exposition, and was on vellum. The text printed in black and gold with the initial letters in purple, rounded by an ornamental border illuminated by hand. Typ Ceylon scenes were embodied in this border, with flag trophies, in the centre at the top was the enlarged crest of the Associat with its motto "*Unitas salus nostra.*" The wording of the addr was as follows :—

To His Royal Highness the Duke of Cornwall and York.

May it please your Royal Highness,—We, the Planters' Asso tion of Ceylon, beg, on behalf of the Planting Community, to o Your Royal Highness, and Her Royal Highness, the Duchess Cornwall and York, a most loyal and hearty welcome to Kandy, Capital of the Planting Districts.

We feel that the great occasion which draws Your Ro Highness to the Southern Hemisphere and has created for us

portunity of receiving this gracious visit, will serve to knit, en closer than before, those ties of love which we all bear to our vereign and our Mother-Country, and will enhance our feelings pride in the magnificent Kingdom and Empire inherited by His ost Gracious Majesty King Edward the Seventh from Her late ajesty Queen Victoria, whose memory we shall ever revere.

Had time permitted a visit to Nuwara Eliya and the higher anting Districts, we have no doubt Your Royal Highness would ve been interested in the evidence of the great extent of the dustry which we represent.

We trust, however, that Your Royal Highness may carry away ne but pleasant memories of your stay in the island, and that you ll accept our assurance that in this small but loyal community ere is no more loyal body of men than the planters.

THE DUKE'S REPLY.

His Royal Higness said in reply:—

One of the most pleasant memories of my visit to Ceylon, nine- en years ago, in company with my dear brother, is the loyal and thusiatic reception accorded us by the planters of this Colony. he same kindly spirit has been displayed towards the Duchess d myself on this occasion; and we sincerely thank you for your arty welcome, and for the loyal statements expressed in your ldress. In 1882 the great tea cultivation was yet in its infancy d Ceylon planters were still engaged with one hand combating e disease which threatened their staple, coffee, and with the other eking for new products to replace or supplement it. To add to ese difficulties came a serious financial crisis; but this combina- on of misfortune was faced with that intelligent resource, and ith that pluck, patience, and determination which have ever aracterized the planters of Ceylon. It is owing to these qualities at your products have won the high position in the markets of e world which they have enjoyed. I feel sure you are fully alive the necessity in these days of keen competition of maintaining e same high standard of skill and energy for keeping and extend- g the position you have secured. I much regret that at the resent time your prospects are not so bright as usual. I earnest- trust that this depression is but temporary; and I shall watch ith interest for an early revival of prosperity, which you so well eserve. I thank you for the language in which you refer to the mportant mission with which I have been entrusted by my dear ther, and for your wishes that it may serve to knit even closer e ties of affection which bind together the Empire over which is Majesty rules. I shall not fail to convey to him your expres- ons of loyalty and attachment to his throne and person, and of our reverence for the memory of our late beloved and universally ourned Sovereign.

MARKET REPORT.

[*Per Mail advices of 29th March* 1901.]

COFFEE.

The London Commercial Record says:—A continued feeling of ulness exists in this market and the public sales drag on in a onotonous manner. Even fine qualities are not exempt from the ecline in prices, which varies from 2s to 3s per cwt. for the week. ast India has been particularly under the influence of the prevail- ng flatness and a large proportion of the supplies at auction were ithdrawn for want of adequate offers. At the reduction a fair mount of business was transacted in Costa Rica and Central merican descriptions. The market for "futures" has been strong- r and prices rose 1s per cwt., principally on moderate receipts nd a rise in Exchange closing, however, below this improvement, May delivery being 32s 3d, September 33s to 33s 1½d, December at 3s 7¼d, March (1902) at 34s 3d.

London ...	Santos ...	May delivery	... 32s 3d.
New York	... No. 7 Rio...	,,	... 5·60 cents.
Hamburg...	... Santos ...	,,	... 32 pf.
Havre ...	... Santos ...	,,	... 39 francs.

The public market will close on Wednesday next for the Easter ecess and re-open on the 11th proximo.

Auction supplies to-day consisted of 40 cases 990 bags East ndia, 92 bags Jamaica, 297 bags Salvador, 529 bags Mexican, 701 ags Hawaii, 431 bags Costa Rica, 590 bags Guatemala, 264 bags Nicaragua, 1,826 bags Santos. The sales went off without new eature; demand quiet and prices about unchanged.

At the Dutch Trading Co.'s public sale, held on Tuesday, in Amsterdam, 15,804 bags were offered and sold; good ordinary Java realised 32½c against 31½c valuation, and 30½c last sales held in Rotterdam. The following are some of the particulars:—

Lying in Amsterdam.

March	27...	5·50	5·50	5·60	5·65	5·75

TEA.

Indian.—Auctions were about on a par with the previous week, *viz.*:—43,200 packages against 43,800 packages and 33,600 packages at the corresponding time of 1900.

The improved enquiry recently noticeable has continued, and prices for useful and fine liquoring descriptions as a rule were in favour of sellers. Common to fair grades, with mixed and stalky leaf, were difficult to dispose of unless at comparatively low rates, but others marked a firmer tendency. Fine and finest were well competed for and high figures were in some instances paid, among the best being—Assam, Pabbajan Co., B. O. P. 5s 2d and 2s 6d Samdang Estate, D. D. T. Co., B. P., 2s 7d, B. O. P. 2s; Hansura Estate, D. D. T. Co., B. O. P. 2s 2½d; Beesakopi Estate, D. D. T. Co., B. O. P., 2s 1¼d; Cinnamara Estate, Jor. T. Co., O. P., 1s 11½d, and Deamoolie Co., B. P., 1s. 11¼d per lb.

For 33,700 packages on Garden Account 7⅛d per ld. was obtained, versus 7¾d per lb. for 28,400 packages and 9¾d per lb. for 17,700 packages in the two preceding seasons.

In the month the following have been printed for importers:—

1901.	1900.	1899.
181,000 pkgs.	123,300 pkgs.	127,500 pkgs.

Making to date 1,463,000 packages of the 1900 crop which have passed the hammer contrasted with 1,437,000 packages and 1,396,000 packages to the end of March in the similar periods of 1899-1900 and 1898-1899.

Ceylon.—The quantity offered amounted to 24,000 packages opposed to 24,700 packages on the Tuesday before and 25,600 packages a year ago.

This market has benefited considerably by the better quality placed on it lately, apparently owing to finer plucking on many estates so that the assortment brought forward was more varied, and relief afforded to the fair and good kinds which were before in superabundant supply. Common hardend fractionally and from 5d per lb., upwards, quotations for both leafy and broken sorts were often appreciably above those current for the same lines in prior invoices. For fine Pekoes, Orange Pekoes, and Broken Pekoes irregularity was observable in the biddings, but choicest lots were in demand. Annexed are a few of the top results:—Henfold Estate, 113 packages, 11¾d; Delmar Estate, 113 packages, Diyanilakelle Estate, 105 packages, and Meria Cotta Estate, 55 packages, 11½d; Ferham Estate, 121 packages, and Holmwood Estate, 64 packages, 11¼d per lb.

The average is rather over 7d per lb. On the 21st instant it was barely 6¾d per lb., and 7⅜d per lb. twelve months back.

Catalogues issued in March comprised:—

1901.	1900.	1899.
111,500 pkgs.	*77,600 pkgs.	92,900 pkgs.
(Avge. 6¾d per lb.)	(Avge. 7½d per lb.)	(Avge. 8⅞d per lb.)

Java.—Only 360 packages were submitted which went off well but do not call for any special comment.

The undermentioned were printed in the course of the month:—

1901.	1900.	1899.
5,700 pkgs.	*7,200 pkgs.	3,900 pkgs.
(Avge. 6⅛d per lb.)	(Avge. 6¼d per lb.)	(Avge. 7¾d per lb.)

Deliveries.—The clearances of all Tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 26th March, 1901 ... ... 14,766,461 lbs.
Do. do. 1900 ... ... 30,676,453 „

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India ...	38,343	4,810	43,153
Ceylon ...	22,857	1,151	24,008
Java ...	362	—	362
Total ...	61,562	5,961	67,523

Also 1,096 packages from second hands.

*During one week no sales were held, dealers being engaged with clearances at Budget time.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Ja Tea Report, dated March 29th, 1901, says:—

Quantity brought to Auction in London from 1st June to da

	Indian.	Ceylon.	J
	Pkgs.	Pkgs.	P
1900-1901	1,502,082	1,091,373	5
1899-1900	1,503,327	1,007,923	5

43,831 *pkgs.* Indian
24,868 „ Ceylon
362 „ Java
} Total 69,961 packages were offered in public auc this week.

The export of Indian and Ceylon Tea from the United King last year shows that considerable progress has been made in sev different markets; had it not been for the depression in N America, exports would have shown a still greater increase.

Germany and Russia have both taken considerably larger q tities. South America is now becoming an important consume both Indian and Ceylon Tea, and the detailed figures show w satisfactory progress has recently been made.

† S. America. * Probably the bulk of the Tea exported to Germa was for Russia.

RESTRICTION OF OUTPUT.—A Circular has just been issued by the dian Tea Association urging upon Planters the importance of ving their adherence to the proposal of the Indian and Ceylon ssociations for restricting the output.

INDIAN.—With a generally strong demand the market showed mness, competition being especially keen for all better class as, of which there is a fairly large proportion in the Autumn op. Averages:—"Doom Dooma T Co. Samdang," 1/4¾; "Pabbojan Co.," 1/4¼; "Amal T Ests. Lattakoojan," 1/2.

Week's average of Tea sold on Garden Account 1901, 34,183 pkgs., . 6·95d. 1900, 28,755 pkgs., av. 7·64d.

Total Tea sold on Garden Account 1st June, 1900, to date, 1,244,384 kgs., av. 7·32d. 1900, 1,180,593 pkgs., av. 8·31d.

CEYLON.—The sale was again comparatively small, and prices owed a distinctly firmer tendency, common Teas being occasionly dearer, while choice liquoring kinds showed a distinct advance quotations. Quality continues to show improvement. Averages:—"Henfold," 11¾d. "Ang. Cey. & Gen. Delmar" and "Diyalakelle," 11½d.; "Ferham," 11¼d.; "Talawakelle," 11d. Average r week 7·08d. against 7·39d. in 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 331,788 kgs., av. 6·52d. 1900, 304,860 pkgs., av. 7·57d.

JAVA.—The few Javas brought forward were all of direct import. ompetition was strong, prices showing asome what dearer market.

Bank Rate 4 per cent. Exchange on London, three months' sight:—alcutta 1/4 3/16. Colombo 1/4 7/32.

COCOA.

The market is not very active, Ceylon remaining especially flat. t auction on Tuesday 4,586 bags were brought forward, and 2,100 ags sold—Guayaquil at 1s decline, other growths showing no hange. Of 1,317 bags Trinidad catalogued 920 bags sold at about aluations—fine 70s to 71s, middling to good 67s to 69s. Only 5 ags Grenada were offered; they realised 60s to 62s. 12 bags ominica realised 60s 6d to 61s, 6 bags St. Lucia 61s, and 5 bags amaica 60s 6d. Of 1,213 bags Guayaquil 560 bags sold at a epreciation of 1s per cwt., *viz*, common Caraquez 63s to 63s 6d, winter rriba 66s. 37 bags Puerto Cabello mostly sold at 120s for fine layed. 353 bags Haiti realised 62s to 62s 6d for fermented, and 8s to 59s 6d for grayish red. Of 280 bags African 30 bags sold at 3s. Of 63 bags Java a few lots sold at 35s to 40s for garblings nd broken. Of 1,176 bags Ceylon only 170 bags sold—fine bold nd medium red 90s to 95s, common to ordinary small and medium ls to 66s, and small, 54s 6d to 57s 6d. 110 bags Caracas and 3 ags Seychelles retired.

PEPPER.

BLACK.—The market has been dull in tone and value is lower in all positions, but at the close there is steadier feeling. About 100 tons Singapore have been sold during the week—at 6d for fair on the spot, at 6 3/32d for February-April shipment, at 6⅞d down to 6 1/16d March-May, at 6 3/32d for April-June, and at 6 5/32d down to 6⅛d for June-August. At auction on Wednesday, 60 bags Singapore retired at 6⅛d per lb. *To-day*, quiet and no sales in Singapore reported.

To arrive, business done in Tellicherry at 54s 6d to 54s per cwt. c.i.f. delivered weights continental ports, per April-May (s).

WHITE.—Very little business done. Sales of fair Singapore on the spot at 9d, and of fair Penang at 8⅜d. For arrival no sales reported.

At public sale on the 27th instant 17 cases Singapore were bought in at 10¼d to 10½d. per

GINGER.

COCHIN.—Only 99 bags ordinary rough Calicut were brought to the hammer, and these, in the absence of demand, were bought in at 35s per cwt.

JAMAICA.—In excellent request, and the whole of the 459 barrels offered sold at higher prices. Fair to good bright washed realised 47s 6d to 60s, low middling to middling 40s to 46s, common 35s to 38s 6d per cwt.

JAPAN.—123 bags dark slightly limed bought in at 38s per cwt.

CINCHONA.

The N. V. Vriesseveem cinchona-bark department at Amsterdam report the shipments from Java to Europe from January 18 to March 24 at 1,083,000 Amsterdam lbs., and the total from January 1 to March 24 at 2,073,825 Amsterdam lbs. The above figures do not tally with those of the Nederlandsche Veem monthly shipments, and are thought by many not to be correct. At the drug-auctions 11 bales of good bright flat broken Calisaya sold at 1s for sound and 11½d to 11¾d for damaged. One seron of broken Loxa quill sold at 1s 2d, and 4 serons of Huanoco ditto at 6¾d per lb.

QUININE.

The market has been very quiet this week, and prices are easier again in second-hands. After being firmer in the early part of the week, the spot price has declined to 1s 3d, with a small business thereat. August delivery has sold at 1s 3⅜d to 1s 3¾d per oz. Buyers generally are waiting the result of the Amsterdam bark-sales to-day, at which the quantity offered was larger than anticipated. It will also be noted that the average percentage of quinine in the manufacturing-bark has improved on this occasion.

FOR PRIVATE SALE.

Mount Graham Coffee Plantation.

Cairns, N. Queensland.

The Plantation is situated on the banks of the Russell River, about Thirty-five (35) miles from Cairns, and within Three (3) miles of the proposed Terminus of the Mulgrave Tramway. It comprises

160 Acres Freehold
100 Acres Unconditional Selection.

The Improvements consist of

Comfortable Dwelling House
Numerous Kanaka Outhouses,

Also

25 Acres of Coffee in Full Bearing
Coffee Pulping Machinery, etc.

The crop coming on now looks well, and should produce quite Twelve tons by April next.

As an Investment this Property is well worth consideration. The crop of Coffee now coming on should be value for quite £800.

The Trees are all being well cared for, and the Property can be taken over as a Going Concern.

In addition to the clearing planted with Coffee, there are about 100 acres of Scrub felled.

The quality of the Soil cannot be surpassed, and the Property will bear inspection.

Splendid Water Supply. Age of Coffee 5 to 10 years.

Terms and full particulars on application to

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 3rd proximo. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

Coorg.

POLLI BETTA, *23rd April.*—*Weather*—Severe thunder-storm passed over the district on night of 8th. Over an inch of rain in parts. There has been little rain hereabouts since, though heavy rain has fallen in other parts. The atmosphere is surcharged with humidity. Yesterday 40 cents. of rain fell. *Crops.*—The season would have been another good one if there had been the wood on the trees. There will be good outturns in individual cases. *Labour*—is plentiful for the time of year. *General Health*—Fair.

Munzerabad.

April 23rd.—*Weather*—Unbearably hot in the middle of the day though somewhat mitigated by a strong West wind. *Works*—Manure and borer. *Health*—Fair. *Labour*—Abundant. *Plant diseases*—Borer is very strong this year; there are also many complaints of much wood going blind.

THE INDIAN TEA ASSOCIATION.

THE Indian Tea Association has changed its "official year," consequently its last "annual" report refers to a period of only ten months, *viz.*, from 1st March to 31st December, 1900. In some respects it is a more interesting report than usual to tea-planters in Southern India. Some of the points referred to are of direct interest to them, and we are glad to say that the bonds of fellowship between tea-planters in the North and their brethren in the South have been drawn closer, and are likely to become still more close. It must be acknowledged that planters in the South have not yet co-operated heartily with the Indian Tea Association in the matter of providing funds for the purpose of pushing Indian Tea into foreign markets. Some have, and a majority have expressed

their willingness to submit to a compulsory cess for the purpose of raising funds to be expended with this view. But the American and Foreign Market Fund of the Indian Tea Association still receives all too little practical support from the generality of South Indian tea-planters. Indeed, support from planters throughout India shows a falling off. As against Rs.1,05,000 in 1899-1900 only Rs.1,00,000 was received by the Indian Tea Association in 1900-01. Yet there was never greater need than there is now for energy and "push." Tea needs to be popularised in many countries, to be vigorously pushed in others; and this cannot be done without liberal expenditure. Unfortunately, the need for expenditure of this kind is always most clearly visible at times, like the present, when prices are low, demand slack, and the position of the industry unsatisfactory. It is specially disheartening also, at the present time, that circumstances should have so shaped themselves that there is a chance, if not a probability, that all the special efforts made at the Paris Exhibition to popularise Indian Tea in France may be neutralised by the action of the French Government.

On the other hand, planters may fairly assume a large amount of the credit due to those who have persuaded the British Government not to enhance the present tax on Tea. They are also taking steps to develop the demand for tea in India, where a large consumption may yet be worked up. They are manifesting an ever-increasing appreciation of their just claims, and the manner in which this has been expressed of late compares very favourably with some of the less successful representations made in former years with regard to very similar points. In regard to the 1-lb. draft agitation in London they have little to congratulate themselves upon; nor much more in respect to the small concession gained in respect of bonded warehouse charges in London. On the whole, however, they have begun to realise their strength as a body: the strength that proceeds from unity and union, the strength that is only attained by combination. More than this, they have learnt, or are learning, to abandon time-worn grooves and adapt themselves to the requirements of the times. All this is shown in the report under review, a careful study of which is commended to every tea-planter in India. They have already achieved much, and however little this may be in comparison with their aspirations it is all in the right direction, it is all encouraging, it is all an incentive to fresh effort along similar lines of progress. The position of tea-planters is not a very pleasant one as compared with what it was a few years ago. The position of the Indian Tea Association has improved and has been strengthened, and what this body has done for planters in the past is likely to appear small before the record of what it will have achieved by the time another five or ten years, at most, have passed.

On its own account, aided by the Local Government, it has engaged an Agricultural Chemist for the investigation of questions connected with the cultivation and manufacture of tea. It has been allowed to avail itself for a time of the services of Dr. Geo. Watt, the Economic Reporter to the Government of India. Through its influence a European Entomologist has been appointed to take charge of the Entomological Section of the Indian Museum, and to give attention to both Economic and Agricultural Entomology. These are among a few of its greater achievements, but even by its minor work alone it has earned the confidence of all engaged in the Indian Tea industry. The Association is a truly representative body, it is vigorous, its range of vision is comprehensive, its actions are, on the whole, well conside Hence the value of its annual report to planters. Every p shows what strenuous efforts have been made to gauge o advance the position of the tea industry; and we venture assert that the Association's power for good is stea increasing. There are always men ready to assert that Association of the kind is "a one man show" or "a C mittee show" and who by their very abstinence from an ac part in its affairs help to increase the risk of its becoming But few planters who read the report now under notice fail to see that the Indian Tea Association has prove powerful protector and promoter of their interests. become still more powerful, it needs greater support and m active co-operation than it receives at present.

BRAZILIAN COFFEE.

Although in the matter of currency the Brazilian cof planter has a great pull over his competitors in India, his is by no means free from troubles. Even in regard to c rency he has had cause for anxiety of late, for there has b an unaccountable rise in the milreis, and this has reduced currency prices of his coffee. Labour supply is short If prices do not improve, there may be labour enough; if prices make it worth the while of all planters to pick th crops there will be a scarcity of labour for the purpose. prices and the milreis stand now, it is said that a great ma planters will let their crops rot rather than spend more the picking than they could hope to regain by the s Although, therefore, a good deal has been said about enormous crop that is expected, it cannot be safely cal lated upon until actually market. Last year the gr reduction in currency prices caught Brazilian planters *a* they had gathered their crops, and they had no recourse to sell. This year circumstances are very different, and ma a planter who sees a fine crop in prospect must be ful bitter reflections on the possibility and even the probabil that he will have to let it rot on the trees. We can imag no greater trial of a planter's temper than this. The Brazil coffee-planter may yet repeat in his own, the history of t mythological celebrity—Tantalus.

PROPOSED TEA EXCHANGE IN LONDON.

Several attempts have been made lately to arrange for sale of Tea in London without estate or case marks. Hithe every effort has resulted in failure, and we are by no me convinced that this is not just as well for the tea indust However, on February 7th a private meeting of dealers a their friends was held at the London Chamber of Comme and the following resolution was passed:—"That in opinion of this meeting there appear to be many advanta in a Tea Exchange, and that the following gentlemen appointed a Committee to draft a scheme, including a finan programme and a set of rules and bye-laws for considerat and approval:—Messrs. Bryans, Cruickshank, Rutherf and Bois; Messrs. Long, Lloyd, W. T. Wilson and Thompson; Messrs. Lecky, Smith, Appleton and Brook A set of rules sixteen in number was drafted, and the me randum and articles of association were drawn up. intention was to start a Tea Exchange, after the fashion i small way of a Stock Exchange. According to the Lon

correspondent, a fair estimate of the members of the Exchange is given as :—

Growers and Importers, etc.,	about	...	80
Brokers	,,	...	40
Dealers and Blenders	,,	...	80
Warehouse Keepers	,,	...	15
			215

The expense of running the Exchange is put down at £3,500 per annum, but against this is the saving effected by not using the present public sale-room, estimated at £1,400. Thus the net expense is £2,100 per annum. The details given are not sufficient to enable us to weigh the scheme in the balance. That growers should join it shows that *they* think there is money in it ; but the same may be said in regard to dealers and brokers. If there is any idea of arranging for operations in "futures," the new move is, viewed from the planters' standpoint, blunder. Experience has proved that, on the whole, transactions in "futures" tend much more towards a depression of prices than towards their enhancement. In any case, it would appear probable that whenever rubbish is offered, if any ever is, under the new scheme, the chances of tracing it home to the culprit who put it on the market will be greatly diminished. Moreover any estate that has already achieved a good reputation for its mark is likely to be very chary of abandoning the prestige attaching to its mark, the outward and visible sign of its real merit.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

On 18th April, 1901, the General Committee of the Indian Tea Association (Calcutta) issued their Monthly Return of Sailings and Daily Customs Entries of Tea from Calcutta, and also a Return of Exports of Ceylon Tea for four years up to 1st April, 1901 :—

NOTES.

India's Tea Exports.

186 million lbs.

The total of Indian tea exported, for the year ending March 31st, was

Samoa.

Vanilla and Kola are said to promise well in Samoa, and Rubber, it is thought, should also succeed.

Coffee.

The total production of coffee for the season of 1901-1902 is estimated by the four leading brokers of Rotterdam at 16,677,000 bags.

Coffee in London.

Telegraphic advices, dated 23rd instant, state that present stock is 19,191 tons. Fortnight's landings, 3,800 tons ; Deliveries, 2,400 tons.

Java Coffee.

The latest estimate of the private Java coffee crop is 170,000 piculs Java and 110,000 piculs Liberian, as against an outturn of 360,000 piculs Java and 95,000 piculs Liberian last year.

Some Brazilian Figures.

The *Rio News* says : "In the ten years ending December 31, 1899, the State of Rio de Janeiro exported 749,425,837 kilos. of coffee, against 1,165,698,152 kilos. in the previous ten years. The decrease was 371,272,315 kilos."

Coffee in Samoa.

In his annual report for 1900 the British Vice-Consul, Samoa, reports : —Coffee has been a failure. I learn that even the hardy Liberian coffee introduced a few years ago is now suffering from the same disease that destroyed the Mocha and other varieties.

* It is understood that the bulk of this tea consists of transhipments for the United States and Canada.

Darwin and Tea. At the last meeting of the Chartered Bank, the Chairman congratulated the Indian Government on setting aside the profit on coinage and said that the survival of the fittest seemed the only solution to the rivalry between Indian and Ceylon tea, unless it was generally agreed to reduce picking for two or three years.

Tea in the U. S. The *American Grocer* states that the amount of tea in warehouse on January 31, 1901, at all points, was 54,881,219 pounds, of which 35,463,192 pounds were held in New York, 9,362,076 pounds in Chicago, and 5,337,857 pounds in San Francisco. At the same date in 1900 the total was only 45,702,913 pounds.

Tea and the Budget. Sir M. Hicks-Beach referred to tea in his Budget speech as follows:—Tea is already taxed 75 per cent. of its value, and is the produce, mainly, of India and Ceylon. It is a crop in which our own fellow-subjects at home and abroad are deeply interested; and the trade, largely owing to over-production, is by no means in a satisfactory condition.

A Present to Royalty. In response to an inquiry, H. R. H. the Duchess of Cornwall and York, while in Ceylon, consented to receive a present of a small case of tea from Mr. S. P. Jeffery on behalf of Sir Thomas Lipton. The tea was grown and specially plucked from Dambatenna estate, and the case was to be sent to the "*Ophir*" for the use of H. R. H. the Duchess—*Toujours* Lipton.

The "Resting" of Tea. It is argued in a Colombo paper that, provided the jât is fairly good and the climate not too dry, the "resting" of tea is undoubtedly beneficial, but the only instance adduced in support of the assertion relates solely to *young* tea. How about *old* shrubs? If planters mean to "rest" their young shrubs that are not in bearing, we do not quite see when the reduction of output is to come in!

"High" Tea in Ceylon. One of a crop of "Specialists" recently raised by the *Ceylon Observer* writes:—"I consider for the last six months as far as Dikoya and Dimbula are concerned, we have had an exceptionally good season for tea, and although finer plucking has been resorted to, I should doubt if the crop was any less than in previous years. We have had no really dry weather, and I do not think that we need fear any big rush in the rest of April or in May."

"Prune Coffee." A corporation has been organized in San Jose, Cal., to manufacture prune "coffee," to take the place of tea and coffee. The beverage is to be composed of 70 per cent. prunes and the remainder of cereals, and absolutely free from coffee, chicory, extracts, or chemicals. Vouchers for the new beverage it can't be distinguished in taste from real coffee. Alre banana "coffee" is on the market and is sold in large quan ties. It is pronounced a great success.

In Letters of Red. Mr. James McGuane, the Mana of the Boston branch of the "Sala Tea Co., last week, says the *Canadian Grocer* of 22nd ultir did the largest business in the history of the branch, and was so elated over it that his report to head-quarters Toronto, was in large letters of red. Mr. McGuane, was, it will be remembered, married a few weeks ago, presented the other day with a handsome tea service by firm and its employés. With a helpmeet and a silver service, an increased trade is only what might be expecte

Amsterdam Bark Market. Further particulars have arri of the last cinchona auctions held Amterdam, and show that the bark was divided as follows *Succirubra*, 116,913 kilogrammes; *Ledgeriana*, 444,662 k grammes; *Hybrid* and other kinds, 63,405 kilogrammes. the total thus formed, root bark formed 99,567 kilogramm The exports of Java bark for March were 864,000 Amsterd lbs., against 650,000 Amsterdam lbs. last year, and 927,(Amsterdam lbs. in 1899. The total for the two months 2,591,000 Amsterdam lbs., against 1,894,000 Amsterdam last year, and 2,016,000 Amsterdam lbs. in 1899.

Coffee in Cochin. During 1899-1900 there were coffee estates in Cochin, compris an area of 8,502 acres. Of the cultivated area, 3,699 ac were under mature and 417 under immature plants, as agai 3,451 and 219 in the previous year. The total yield coffee during the year was 489,740 lbs. or an average 132 lbs. per acre of mature plants, as against 220 lbs. in previous year. The number of persons permanently employ on the estates throughout the year was 646 and the avera number of temporary hands was 1,240. The amount of qu rent due from the estates was Rs.12,719, which with arrear of Rs.600, made a total of Rs.13,319, of which a s of Rs.12,494 was collected, and Rs.375 written off, leavi a balance of Rs.450 at the end of the year.

The London Market. Latest mail advices regarding London market deal with the we just before Easter, a time when the "holiday feeling" is up all classes. As a consequence there is nothing much to learnt from the reports that have come to hand. In sta articles, such as coffee, sugar, tea, cotton, pepper, clov etc., little or nothing of importance occurred, only in a few the smaller markets belonging to the spice and drug tra a little activity was maintained with difficulty. In spic ginger displayed a better tone, owing to a sudden dema for cut descriptions on the part of Continental buye Several hundred packages, mostly consisting of poorly native sorts, have been taken out of the market, which prompted prices to harden and has lent a more promis aspect to the market.

The London Tea Market. Messrs. Gow, Wilson & Stan report in a cable dated 18th insta that the market generally is steady, and that the market medium liquoring Pekoes and broken Pekoes as well as

TO THE DEAF.

A rich lady, cured of her deafness and noises in the head by *Dr. Nicholson's Artificial Ear Drums*, gave £5,000 to his Institute, so that deaf people, unable to procure the Ear Drums, may have them free.

Address—No. 989 D, THE NICHOLSON INSTITUTE,
Longcott, Gunnersbury,
London.

[w. 26-5-00—26-5-1901.]

mmon Pekoes and broken Pekoes is also steady. The price fair liquoring Ceylon Pekoe Souchong is 5½d and the erage price of Ceylon tea sold on garden account this week as 7¼d (half a farthing down)—as against 6¼d and 7⅜d spectively in the corresponding week last year. Reuter ports that the tone of fine qualities of Ceylon tea is steady d others are firm. Pekoe Souchongs are quoted at 4¼d and e average for the week at 7⅜d as against 7d quoted for dian tea. 32,000 packages of Ceylon tea were offered for le, of which 30,000 were disposed of; while of the 33,000 ckages of Indian tea offered, 30,000 also found purchasers.

ina Tea shipped to Canada.

The *Canadian Grocer* says :—The exports of tea from Shanghai and Yangtsze ports for the season 1900-901 to February 11, have been as follows: To Great ritain—Total to date, 8,483,390 lbs. black and 3,394,957 do. reen; corresponding date last season, 10,407,178 lbs. black nd 3,384,086 do. green. To United States—Total to date,),396,043 lbs. black and 13,619,705 do. green; corresponding ate last season, 5,393,179 lbs. black and 14,373,236 do. green. o Canada—Total to date, 845,158 lbs. black and 945,319 do. reen, against 459,031 lbs. black and 1,000,670 do. green last eason. Export of black tea to Russia direct and Russian Ianchuria, 39,220,000 lbs., as against 28,810,000 lbs. to corresonding date last season; export of green tea to Bombay, 896,000 lbs., as against 1,254,129 do. last season; do. to atoum, 4,326,000 lbs., against 4,722,600 do. last season.

offee in London.

The Santos receipts have at last shown some signs of falling off, and, s expected, remarks the *Produce Markets' Review*, quotations consequence hardened, the advance being as much as 1s. er cwt. Yesterday, however, they were again too heavy, nd prices fell back 3d to 6d without attracting much busiess. The demand at the auctions has remained slow, upplies continuing heavy. Importers have again shown a esire to meet the market, and values have accordingly given ay, notably for bold Costa Rica and Guatemala for export, hich had been in strong demand and relatively much dearer han the medium and small sizes. These latter have not shown uch change, though prices were generally irregular, and, in me cases, about 1s cheaper. Only smaller supplies of East ndia have been offered, and these have met with little emand and were difficult to dispose of; in fact a large proortion had to be withdrawn, though sales have since been ade at better prices than were offered at the auctions.

eylon Green Teas in Canada.

One of the fruits of the efforts that have been put forth to open up a market in Canada for Ceylon green as is, says the *Canadian Grocer*, to be seen in the fact that very wholesale house in Toronto is now handling these teas. f course, the quantity is relatively small in comparison with eylon black teas and Japan green teas, but the significance that so many houses are now dealing in them, whereas a w months ago only one teapackage firm dealt in them. nother significant fact is that during the last few weeks eylon green teas have begun to figure in the Toronto market eports, while brokers can be seen "drawing" them in the mple-rooms of the wholesale houses, something quite nusual. The following is a copy of a letter, dated March 7, ceived from H. Head, Cloyne, Ont., by the "Salada" Tea o.: "Kindly send me another 60 lbs. of 'Salada' Ceylon green tea as soon as you can, as I have only 5 or 6 lbs. left. Your tea has given great satisfaction. It sells very fast; and it is one of the very best teas I ever drank."

The Reduction of Output scheme.

The Indian Tea Association (London) announce that a sufficient number of Indian concerns have agreed to reduce the output by 10,000,000 lbs., conditional on the decision of Ceylon respecting its 8,000,000 lbs., which is now awaited. The *Ceylon Observer* makes the following ungracious comments upon this news :—"India has for once stepped out and passed Ceylon in its serious, practical facing of the problem of overproduction. 'A sufficient number of concerns' has agreed to reduce their output. Meanwhile Ceylon Companies—16 of them, locally, yesterday and to-day—are variously voting they will and they won't do likewise. The trade here seems to be against voluntary *direct* reduction. But we have yet to see whether the local 'I-go-not-and-afterwards-he-wents' will not effect more to the advantage of the tea industry, by finer plucking and careful manufacture than the 'I-go-sir-and-he-went-not-s' of our Indian brethren, with their simply reduced outturn apart from the question of manufacture or coarse plucking." It should be remembered that India's undertaking to reduce output is conditional upon the Ceylon men falling into line.

The Depression in Coffee.

The principal depressing factor has been the movement of the Brazil crop. The receipts at Santos have been unusually large for the season of the year, running considerably in excess of general expectations. The continued full movement of the crop, taken in connection with the fact that the receipts at Rio and Santos to date are 8,893,000 bags, and that the receipts during May and June, owing to an expected early movement of the new crop, are expected to amount to 750,000 bags, leaves little room for doubt that the receipts for the crop year, July 1, 1900, to July 1, 1901, will reach 10,000,000 bags. The advices received from Brazil quite generally are of the opinion that the yield from the growing crop will be in excess of all previous records. The four Dutch brokers in their circulars issued at Rotterdam at the close of February estimated the next Rio crop at 4,000,000 to 4,250,000 bags and the next Santos at 7,250,000 to 7,750,000. This large prospective supply of coffee, together with present large visible supply, naturally has a tendency to make many of the trade pessimistic as to the future of the market so far as prices have been concerned, and there has been comparatively little force to the buying power.

Colombo Tea Sales.

The first tea sale after the Easter holidays was held on the 9th, when about 18,896 packages, equal to about 1,512,546 lbs., were offered. The quantity was the largest offered so far this year, the previous big sale being on the 4th January, the first sale after the holidays, when about 18,227 packages, equal to about 1,401,630 lbs., were offered. The sale passed off with active competition at generally firm but irregular rates. There was considerable Russian competition. Prices generally were far above London. A merchant writes to a Colombo paper: —"The large tea sale yesterday made many feel it would pass off flatly and at lower rates; but thanks to the Russian buyers, there was excellent competition and prices were good all round. For years I have maintained that Russia would

be a far better market to exploit than America, the Russians being large consumers, close at hand, with excellent shipping opportunities, but our old friend Rogivue had hard work to get even a moderate grant from the 'Thirty Committee.' Mr. William Mackenzie's day is past. Ceylon wants a younger man who will live and travel through the country, and not try to work the oracle for six months in the year from a comfortable chair in London."

The Position of Ginger.

The whole position, the future of ginger, would appear, remarks the *London Commercial Record*, to be hinged on the movement of Jamaica Ginger. Had it not been for the large supplies of this description, the present position of our market would be a totally different one to what it is. Jamaica ginger has been the millstone round our neck ; its weight and low prices have frightened bull speculators, who, having regard to the favorable position of Indian sorts, appear ready to take up the article, and good and profitable business would have been the result. As it is, the season in India has practically closed for want of supplies, and the entire business done on arrival terms will hardly exceed 100 tons, a very poor result, indeed, compared with the large quantities which used to be contracted for in former years. We had become accustomed to look for some movement in ginger every season, but this year business has been confined to the Indian dealers and planters, who, it appears, have been operating against one another, much to the discomfort of the dealers, who, following a bear tactic, have been cornered, and will, no doubt, have to pay the piper for their rashness, unless, indeed, the hope expressed in some quarters be realised that some stocks are held back by planters with the view of squeezing prices still more. Whatever those stocks may be, they will, we fear, not alter the general conviction that the crop has turned out smaller than anticipated, that, in fact, it will be the smallest for many years past. It will take about one year before the next new crop makes its appearance, consumers will, therefore, do well to look after their stock, for it is not unreasonable to suppose that prices will experience a considerable advance, especially if the Summer should prove a hot one.

GENERAL ARTICLES.

THE NEW CEYLON TEA PAVILION IN PARIS.

A Paris lady resident writes to the *Times of Ceylon* :—

A flutter of excitement has been noticeable among the fashionable Parisian Tea Rooms by the appearance of a new Ceylon Tea Pavilion, which opened this month in the heart of the gay capital. This clever enterprise is strongly supported by Mr. R. V. Webster, whose interests are cleverly managed by Mr. Van Allen, his chief agent in France. The salon is unique for artistic charm and distinction, together with comfort and accommodation, for the fitting up is all that could be desired. Chang and the Cingalese boys, sent over by Mr. Webster, add a picturesque note to the refreshing surroundings of variegated green tapestried walls, dadoed with mahogany, and white-ash panels. From behind tall palms and floral decorations, and on an ingeniously arranged balcony, a Tsigane orchestra renders captivating music which is highly appreciated by the elegant *habituées* who congregate *en masse* to sip the delightful beverage known to Parisians as "Quaker" tea. This modest, but cute, little "Quaker" is well represented, for he appears in silver on the spoons and forks; whilst his well-known figure decorates all the tea pots and cups. Success has undoubtedly crowned this new tea salon, which is now a *rendezvous* for all notabilities in the social world of Paris. Beautifully dre Parisiennes meet their friends daily at this charmingly arran tea pavilion and show their appreciation by giving tea par among their friends. At the entrance a prettily carved wood d is banked up with packets of teas and two large glass cases dis rare specimens of "silver tips." It is extraordinary how the of this tea increases daily. These packets guarantee the Fre public securing pure Ceylon tea and are a safe-guard aga mixtures that are being sold under the title of Ceylon tea. Cer dealers had been taking advantage of the popularity of the Cey Court Tea during the Exhibition to push inferior teas. Parisi may not yet have acquired the excellent knowledge of a "tea tast but they certainly know when the flavor of the beverage they d is pleasant and Mr. R. V. Webster will be known as the man has helped them to appreciate good tea. The opening day was affair of social elegance when the graceful *movements* and q service of the Cingalese boys charmed all the guests to whom t presented bouquets of flowers. Notably among those present w the Baronne Rothschild, the Comte and Comtesse Sessmaisons, Comtesse de Lesseps, the Baronne de Ziegesar, the Comtesse Frise, Dr. Thyssin, Comte Constantin, M. and Mme. J. Porges a a whole host of all that Paris counts among its most elegant m daines. Mr. and Mrs. Van Allen are both energetically inter ing themselves in a manner that can only end in a complete succ for the Ceylon Tea Pavilion in the Rue Caumartin, whilst Mr. R. Webster's re-appearance is only needed to make those pres imagine themselves once more in the Exhibition grounds.

TEA GROWING AT BATOUM.

Mr. E. P. Willesford, who recently quitted Ceylon Batoum, there to show the Russians how to compete with Spicey Island in the growing of tea, has sent in a lett dated 18th March, 1901, to the *Times of Ceylon*. We ta the following extracts :—

We arrived at Odessa on the evening of the 28th Januar 19 days out—and landed next morning after the troops had dis barked. I was met on board here by a young gentleman who is act as my interpreter on the estate—he is an Austrian, born Moscow, and has spent some years in America and a few month England and speaks English well. He was kindly sent by Mr. Pop the proprietor of these estates, to assist me on my journ After a couple of days in Odessa, where I had to get some warm clothing, we took steamer down the North Eastern Coast of Black Sea calling at many ports, including Sevastopol and Ya in the Crimea: from Novorosisjk to Batoum the weather was foggy, we had to lie to, and sound foghorn and bell constan several times. At 1 p.m. on 5th February I landed at Batoum, drove out to my new home. Mr. Popoff owns three estates in Caucasus near Batoum; the principal one, Prevolnoyer, is wh I live. It is about 2 miles drive from Batoum—the hills, wh are very similar to those in Ceylon, run down close to the sea— house is situated on the top of the highest, overlooking a F and with the whole of Batoum and a long line of sea coast to north of it below. My interpreter lives with me, and there two rooms in the house reserved for Mr. Popoff's use when visits. The factory is on this estate. About 2 miles further inl is another estate called Zawatnoyer, and the third estate, Otrad yer, is reached by rail (station on the estate) 8 miles from Bato Out of 15,950 tea bushes brought by Mr. Popoff from China, Jap Ceylon, Himalayas, Assam and Java, only some 2,760 are alive; but there are on the three estates a total of plants put to end 1896 equal to 17 acres, and in 1897, 24 acres—taken at 2, to the acre—there are now in all about the equivalent of 185½ ac planted. After I had thoroughly gone over these three est I proceeded to Moscow—a day and night by steamer and 52 ho by train—to interview Mr. Popoff. I found the cold *too terri* in spite of the fur coat Mr. P. was good enough to lend me! estate matters, as conducted in Ceylon, were most thoroughly g into with a view to the introduction of such changes in working might be suitable here. It was decided that no new cleari should be opened this year, but that the existing area should worked up to a better state than at present. We were delayed gale on our return journey to Batoum. The hill sides are terra and the banks of the terraces turfed—from a distance this

a very untidy appearance—the levels of the terraces are dug two feet deep and planted, the flat land is also dug in a similar way and every root and stone removed. There are two large glass houses for germinating seed. At the present moment we are expecting from China 665 maunds of tea seed! which, planted 4′ by 4′ would, if all germinated, require nurseries to the extent of 81½ acres including drains, etc.!! and there are now *three* millions seedlings in nurseries. They tell me they have found pruning a mistake, and before last Winter only cut off the *ends* of each branch with scissors. The flush is now coming on, but has been delayed this year by the cold weather; in about a fortnight I hope we shall begin plucking and it will be my duty to give the order for this work to be carried out. My especial duty is the manufacture of the tea. There is a good factory—*all* iron, withering loft above with jute hessian tats—it was built by Messrs. "Sirocco" Davidson, who also supplied all the machinery, *viz.*:—12 H. P. steam engine, roller, dry tea sifter and equaliser, ditto cutter and equaliser, oxidizer, downdraft sirocco, packer, machine for compressing pillules and hydraulic press for tablets, and electric machine. Also, Chinese hand sieves, pans, chulas and winnowers. It is lighted by electricty; there is a telephone from the factory to the office and thence to my house.

Each of the estates is worked by a head-gardener with an assistant, the labour being Turks and Grozines—all *men*. The office and financial part is managed by a gentleman with an assistant, the latter being also a dispenser. A weekly meeting of the three gardeners, the book-keeper and myself takes place, when the work being, and to be, carried out is discussed, it being necessary for each of us to visit the three estates weekly. At these meetings we air our opinions and pass them on to Mr. Popoff, who decides what is to be done. Should the others differ from me on what I consider a vital point I am to write or wire to Mr. P. direct.

The crop will be only some 12,000 lbs. of tea this season, as I have advised husbanding a great part of the estate.

I called on the British Consul here, Mr. Patrick Stevens (Badminton Club), who was very civil. He showed me samples of Indian *green* teas which he says are largely consumed in the Asiatic provinces. (By the way, I am still in Asia!) On the 1st instant I entered in my diary that I thought it would be long, if ever, before Indian or Ceylon teas (black) ousted Chinas in Russia, for the reason that they do not lend themselves to the customs of the peoples, as does the China tea; and Mr. Stevens used to me almost identically the same words. The Russians like *very* weak tea, *very* hot, and *plenty* of it at a sitting, many times a day. The China article is put into a teapot with only a little boiling water and kept on the top of the Samovar (or urn) where it is continually "drawing," a little only of this is poured into a *tumbler*, which is filled up with boiling water from the Samovar, two or more lumps of sugar are added and generally a slice of lemon—it is *rare* to see milk used—the teapot is replenished with a little boiling water on the old leaves continually. This method cannot be carried out with Indian or Ceylon teas as, after the five minutes' "drawing," it begins to cool and it would oe difficult to make it in sufficient quantities for their constant use. Indians and Ceylons are nicer with milk than with lemon. The poor classes drink an immense quantity daily, *very* weak; and they could not get milk.

INDIAN TEA SEASON OF CALCUTTA, 1900.

Messrs. J. Thomas & Co. have published the following review of tea season of 1900:—The season which has just closed may be said to be without a parallel in the annals of the industry. Never within our recollection has the range of prices fallen so suddenly to such an abnormally low ebb, more especially as regards the lower grades; and it would be impossible to depict a more disastrous year for those who are concerned in the welfare of the trade. It would appear that the unfortunate result is more or less to be attributed to over-production or in other words, quantity at the expense of quality; at the same time it must not be overlooked that a considerable increase of area came into bearing, and under somewhat favourable conditions the outturn was greater than was originally estimated. In consequence of the war in South Africa and other unforeseen complications, the Chancellor of the Exchequer found it necessary to impose an increase of duty of 2d per lb. now representing almost 80 per cent. of the *ad valorem* value, which must at once appear to be an unreasonable tax. The result of this burden has seriously affected the position of the industry, inasmuch as the producer has suffered from the enhanced levy, and not the consumer, as presumably predicted by the Imperial Government. We have had during the season to deal with a crop of 187½ million pounds, which shows an increase of 12¾ millions as compared with the figures of the previous year. The market opened on May 18th, somewhat later than usual, owing to unfavourable weather and severe hail in most of the manufacturing districts, which will explain to some extent the poor quality of the early produce. Towards the end of June, an improvement was noticeable and continued until the month of September, when undoubtedly the later arrivals appeared to represent a coarser style of plucking. There was, in consequence of the trouble in China, an increased demand for the commoner grades, which, however, after a few weeks, subsided. The closing sales were marked by a decline in prices for all undesirable classes whereas, anything possessing attractive quality met with ready support. During the past season 587,000 packages have been sold here against 565,874 packages in 1899, and 575,683 in 1888.

With common kinds selling at an almost unprecedentedly low range, every inducement was offered to these markets, and it is gratifying to note that full advantage was taken of the opportunity. It is now evident that Calcutta has become an increasing centre for distribution, and it is to be regretted that further supplies, suitable for the requirements of Outside Ports, were not offered on this market. This would doubtless have relieved the congested state of Mincing Lane, and many shipments would presumably have found a better field. It is a striking feature to find that out of a total of 587,000 chests sold in Calcutta, no less than 294,000 representing 50 per cent, have been exported direct to outside sources, while the remaining 293,000 packages were dealt with for shipment to the United Kingdom.

Colonies.—The result of the trade during the past season shows the satisfactory increase of about 20½ per cent., and it is pleasing to observe that beyond taking a large proportion of ordinary tea, there has been an improved demand for the better descriptions.

America.—It is to be regretted that there has been a small falling off in the shipments to the United states, which may perhaps be accounted for by heavier exports from China.

Bombay.—The trade with this City and Central Asia is still more satisfactory. The figures denote improvement of nearly 50 per cent., as compared with the previous year. Towards the close of the season a considerable expansion took place, and it is a matter of regret that there was a shortage of the classes suitable to fulfil the requirements.

Sundry Ports.—It is a noteworthy feature to find that shipments to these destinations have made the substantial progress of 30 per cent. over last year, which has to some extent been assisted by the Russian demand. The crop was generally below the standard. The early manufacture from Assam did not possess the usual useful characteristic, and it was not until the season had advanced that any marked improvement was apparent. In the Dooars and Terai the outturn was as a rule, poor, owing probably to coarser plucking though a few Dooars' Gardens resorting to a finer system produced some very stand-out invoices, which met with keen attention. Darjeelings compared well with the previous crop, the second flush in many instances produced really fine quality, which was also marked at the close of the season.

Cachar and Sylhet.—The production was generally irregular and dissappointing and a further decline in prices for teas from these districts was only arrested by the substantial support received for Bombay and other local requirements.

Freights to London.—£1-15-0 per ton of 50 cubic feet. To Australia—£2-10-0 per ton of 50 cubic feet. To New York—$\$\frac{1}{2}$ per ton of 40 cubic feet.

It is to be regretted that a more reasonable arrangement as regards freight could not be arrived at for the United States and Canada, more especially the latter, where the trade is hampered by the abnormally high charges.

Local Consumption—Has now become a feature of considerable importance. It has been forciby brought to our notice that the natives of this country are developing a taste for tea, and in this City and neighbourhood many new tea shops have been opened. The Calcutta Indian Tea Association is giving this matter its best attention, a special Sub-Committee has been formed, and every effort will be made to augment local consumption. If the closing

remarks of H. E. the Viceroy, when speaking on the Assam Bill, were carried into effect this would be a practical solution of the present difficulty from which the industry is suffering. With regard to reduction of output they say: It is evidently necessary that some practical method should be adopted to curtail the crop to a certain extent and thus save the critical position of the industry. With the London programme before us, an earnest endeavour should be made by planters generally to enforce if possible a keener and more vigorous supervision in all the different phases of manufacture which, if carefully adhered to, would ensure more satisfactory results, and thereby restore the trade to its hitherto sound position. If these views be carried into effect, the output would, as a natural consequence, be considerably reduced and fall in with the universal feeling of the trade. While the Tea industry is over-burdened with a heavy duty, coffee and cocoa, the two principal beverages competing with tea, are only encumbered to a small extent, the duty being 1½d and 2½d per lb. respectively, the intrinsic value of all three beverages being, we believe, much about the same. About 85 per cent. of the tea imported into the United Kingdom is the produce of British subjects, whereas coffee and cocoa are mostly the produce of Foreign countries. The Tea industry it would appear is made to contribute an eighteenth part of our fiscal income, *i.e.*, nearly £6,000,000 out of £108,000,000 and a fourth part of the whole customs revenue namely, £6,000,000 out of £24,000,000. The result of this is an increased consumption of coffee and cocoa in the United Kingdom at the expense of tea.

We wish to reiterate the following points:—All Pekoes suitable for Bombay and the Gulf should be packed in chests of not less than 90 lbs. each. Dust should be packed in a half-chest of 70 lbs. The only marking necessary on a chest is—(*a*) Garden Mark, (*b*) Grade of Tea, (*c*) Number of Chest, (*d*) Nett Weight.

We would further remark that it is a great convenience in handling tea in Calcutta to have all chests numbered consecutively from the beginning of the season irrespective of grade. The general feeling of the trade here is in favour of the old-fashioned wooden chest, with good lead and corner pieces.

SOME NOTES ON TEA.

The Produce Markets' Review of March 30, 1901, says about Indian teas.—The market continues to show considerable firmness, and there has been a well sustained inquiry for most grades. A much larger proportion of the quantity brought forward has consisted of the better descriptions, from which the trade bought freely, and consequently last week's prices have been well supported. Most of the Assam growths show marked improvement in quality, more so than at any period of the season, and as the market is closed in Calcutta, and in view of a much restricted supply later on, values for these have shown a hardening tendency with a further upward movement in the majority of cases. That there is a good demand for the medium and better class teas is evidenced by the sustained inquiry for them practically throughout the past season, which is a proof that the extra duty imposed and consequent higher retail price has not affected the consumption, which now reaches 6 lbs. per head of the population. The movement on foot by the producers to restrict the output for the coming season, if practicable, would no doubt be beneficial, inasmuch as it would curtail excessive supplies. There is another important matter, *viz.*, the more equal distribution of the different grades by producing a larger percentage of those kinds for which there is the greater demand. It has often occurred that growers have rushed from one extreme to the other, and this stood out conspicuously in the past year. For instance common teas in the previous season were high in price, and very little was then procurable under 6d., while for the year now closed there has been a preponderating quantity of these kinds, resulting in a serious fall in values. To unduly curtail, therefore, the production of the lower kinds by indiscriminately increasing the output of the better teas would be unsound policy, and what is required is that growers should take into consideration the requirements of this market, and this in these days of rapid communication is easily obtainable, and should be acted upon. The public sales comprised 43,381 packages; there was an active demand throughout, and in most cases prices generally favoured sellers.

THE FORMATION OF ALKALOIDS IN CINCHONA TREES.

The objective of the extensive system of cinchona cultivation n prevailing in India, Java, and other tropical countries is the pr duction of cinchona bark containing the largest possible amount alkaloids, since it is to the presence of the latter substances th the bark owes its useful properties. At various times methods increasing the yield of alkaloid have been suggested, such as sha ing the stems of the trees from the direct action of the sun, b these have been, as a rule, based on preconceived motions of t *rôle* played by the alkaloid in the life history of the tree, and we not the result of any real investigation of the conditions und which these bodies are produced by the plant.

This defect has now been remedied by the results obtained Dr. Lotsy, of the Java Cinchona Gardens, in the course of a seri of investigations into the mode of formation and the occurrence alkaloids in two species of cinchona, *viz.*, *succirubra* and *ledgeria* Several papers giving an account of this work have appeared Dutch periodicals, but recently a *résumé* in English has be published in the *Bulletin de l'Institut Botanique de Buitenzorg* (N 3, 1900), from which the following particulars have been taken.

In commencing his work the author subjected each part of t tree in turn to micro-chemical examination for the presence of t characteristic cinchona alkaloids, and, as a result, was able demonstrate the existence of these substances in certain cells every portion of the plant. Thus, in the leaves no alkalo occurs in the epidermal layer of cells, or in the veins, but t fleshy part of the leaf invariably contains in its constitue cells a certain amount of alkaloid. In a similar manner, the ste even in its earliest stages, contains alkaloid, but only in t inner layers, never in the epidermis or in the large wood vesse found in adult trees. In the root a precisely similar con tion of things is found, and so also in the petals and other pa of the flowers. In general it may be stated that the alkaloid occu only in the tissue known to botanists as the *hypoderma*, *i.e.*, in t part of the plant where the building-up and breaking-do processes which constitute plant metabolism are most active. the youngest parts of the plant, such as the tip of the stem a under the root cap, where no differentiation into tissues has beg no alkaloid is found.

These observations afford an explanation of the phenomen that the first bark obtained from a cinchona tree is always rich than that of succeeding crops. This is due to the fact that t bark first formed is produced by the drying up of hypoderm tissue, of which each cell contains alkaloids, while the seconda bark produced by continued activity of the cork cambium contai in addition to hypodermal cells, best fibres which contain alkaloid.

A peculiar feature of the distribution of the alkaloids is th they never occur in the sieve-tubes, which are associated with t conveyance of the albuminous products of the plant.

The second part of the investigation deals with the method formation of the alkaloid. Since the leaves of plants are main concerned in the production of starch and albumen which serve f their nutrition, it was highly probable that here also alkaloids we produced, but the evidence already existing strongly negativ this view. Thus, Howard (*Quinology of the East Indian Plantatio* 1869, p. 14), found that leaves of *Cinchona succirubra* contained on ·11 per cent. of total alkaloid, while Broughton, in 1870, found pe centage varying from ·0041 to ·019. In a specimen of leaves e amined by De Vry in 1896, a larger amount was found, *viz.*, ·162 p cent., but this was amorphous alkaloid only. As pointed out Dr. Lotsy, however, a mere estimation of the amount of alkaloid co tained in the leaves gives no reliable answer to this question, becau it is quite possible that the alkaloid as soon as formed is transport towards the stem; consequently the author adopted a somewh different procedure, of which the following short account may given. A leaf of the tree under investigation was selected and c into two, longitudinally, and on one side of the midrib, while st attached to the tree. The smaller half so removed was examin micro-chemically for its content of alkaloid, while the portion st on the tree was allowed to remain during a day or night, as mig be necessary for the particular experiment then being carried o when it also was removed and its content of alkaloid determined the same manner.

A large number of observations carried out in this way showed at, under normal climatic conditions, a leaf accumulated alkaloid ring the day and emptied itself during the night by allowing the kaloid to be transported towards the stem. It was also observed, wever, that this normal removal of the alkaloid from the leaves es not occur under adverse conditions, such as are found in exemely cold or foggy weather. These climatic influences also have nsiderable effect on the amount of alkaloid formed during the y. That the alkaloids are transported from the leaves to the stem the plant was clearly proved by keeping cut leaves both in the ght and in the dark, when it was found that the amount of alkaloid mained unchanged, even after a month. It was also found that npty cut leaves were capable of producing alkaloid when placed stimulating liquids such as dilute solution of ammonia. The thor concludes the report of the results of his long-continued instigations with some interesting remarks on the probable methods synthesis employed by the plant in the formation of the cinchona kaloids, but these are too technical for reproduction in the present stract Attention may, however, be drawn to the bearing which ese results ought to have upon cinchona cultivation In the first ace it should be noted that since the useful alkaloids are formed the leaves of the plant, then in the selection of varieties for cultiation care should be taken to obtain those having a good foliage, oth with regard to quantity and size of leaves formed. The author ates that this plan has been generally adopted in recent years in e Java cinchona plantations, with excellent results. Further, it ould follow that any method of cultivation which tends to inease the hypodermal tissue in the plant should yield bark conining an increased amount of alkaloids, and so one would expect etter yields from *pollarding* than from ordinary growth.

COFFEE PLANTING IN BRAZIL.

We extract the following notes from a letter to the *Ceylon bserver* from the pen of Mr. Henry Cottam. Indian Coffeelanters will certainly be interested in reading what a Ceylon an has to tell them about the greatest coffee-producing ountry in the world. Mr. Cottam says, *inter alia* :—

Four and a half years ago the group of Coffee Estates known as ne Dumont Company changed hands and the French proprietor sold ut to the London Company who paid the enormous sum of *one illion eight hundred thousand pounds* for the property. It was ne general

OPINION IN BRAZIL

hat Dumont sold out for a good price and that it would take the ew Company all their time to work the estates to pay, as they were aken over in bad order and during the past four years required a beral expenditure to keep down the heavy weeds and grasses (*for Brazil grows weeds*) and labour is very expensive. Chiefly Italian nd Spanish families engage themselves as "Colonials," working by ontract if married and possessing a family. The single men work s daily labourers called in Brazil "Comarádos"; their pay is from ·50 to 3 milreis (a mil means one thousand, therefore the milreis vould be 1,000 nickel coins). Paper money is used in Brazil and

EXCHANGE

s always rising and falling; three years ago the milreis were down o 5d. English money and last August went up to a shilling. One f our contractors who planted and cultivated eighty thousand rees was recently paid of and doubled his money by the rise in Exchange. On the other hand the officers of the company, who are aid in gold, stand to lose money in Brazil as the purchasing power n stores of the milreis never changes; and one Officer or Superinendent of a section had his pay raised fifty pounds, yet he had to raw on private money to meet expenses. This was brought to the otice of the company in England and they refused to increase the alaries of the Administrators or Superintendents. The consequence s they are all very much dissatisfied. The necessaries of life are much

DEARER IN BRAZIL THAN IN CEYLON,

nd not of such good quality; beans, rice, and corn are the chief rticles of food used by the labour.

It is an old time custom in Brazil to allow the Italian and Spanish Colonials to grow their own crops of rice, beans, corn, manioc, obacco, arrowroot, and sweet potatoes between the rows of coffee; the result of this is impoverished soil, short crops of coffee and a large percentage of dead trees.

However, there is no remedy against this evil; for the European labourers and their wives and children must live; and, in addition to growing food stuffs in the coffee, they keep an immense number of goats, pigs, cows, and horses.

Hard-working families make money and save sufficient to return to Italy and Spain. Others, who fall sick and get into debt, have an exceedingly rough time of it on the coffee estates of Brazil.

ON THE GREAT DUMONT ESTATE

there were about 5,000 (five thousand) people, including women and children; of the above 5,000 perhaps 1,000 men would be obtained as contractors and daily labourers. There are 13,000 (thirteen thousand) acres of coffee under "cultivation," that would be about 13 acres to one man to keep in order and harvest the coffee crop. This

BARBAROUS SYSTEM OF STRIPPING THE TREES

with the crop in all stages of ripeness, wasting the green coffee, because scarcity of labour prohibits more than one round of picking, is the ruin of Brazil; and much of the crop is trodden into the ground by men and horses. Another "eyesore" in Brazil is the old crop hanging on when the new crop sets its blossoms.

The trees suffer fearfully from over-bearing. The crop ripens in April, May, June, and July. The gathering is hardly begun and the estates must be cleared of grass and weeds. The weeds are ploughed into the ground with a considerable quantity of coffee dropping off the trees with every shower of rain.

Thousands of pounds worth of coffee are lost every year in Brazil through estates not being ready to secure their coffee crops before the heavy rains set in. The planting of food crops throws everything into arrears and the fields must be cleaned up before the stripping commences; no wonder the prices of Brazilian Coffee are always so low in the London market when the green coffee is mixed with the matured.

THE PRUNING, TOO, IS BARBAROUS,

five or six trees in a hole, some of them ruthlessly chopped down with an axe, trusting to the judgment of an Italian farm labourer as to which should be taken and the others left. I have seen fine trees killed and four or five long fishing rods left for next year's crop. One of the most ghastly sights to be seen is a "*pruned*" field of coffee in Brazil.

There is little or no chance of any improvement being made in the "*cultivation*" of coffee in Brazil, for practical experience is at a considerable discount. "*Nigger driving*" from daylight till dark, the old slave-bells only ringing for meals in the field and work from sun-rise to sun-set and such a long trudge back to the Colonial barracks. *Slavery is supposed to be abolished!* But in Brazil there are *white slaves*. I have known them work 18 hours out of 24 and in some cases hoe the coffee by moonlight to keep clear of debt and get out of Brazil and return to Italy. And what is it all for? To enrich a few individuals, non-resident.

BRAZIL WILL ALWAYS BE A HARD COUNTRY TO LIVE IN.

There is no enjoyment of life there for an Englishman and only men who have led a hard life could endure life in Brazil.

The Dumont Company has not got a practical coffee-planter in their employ; some of them had never seen a coffee bush until they went to Dumont.

The Dumont Company get their goods from the Army and Navy co-operative stores and their "Amazame" does a good business with the employees. Another great advantage on Dumont is the

THIRTY-FIVE MILES OF RAILWAY

promptly despatching stores to the different sections of the estate and to the Colonials.

The making of the railway has much improved the value of the property since it was purchased from Dumont. Accidents have occurred through the sparks from the engines falling on rubbish-heaps and coffee has been burnt as well as buildings. A great fire took place shortly after the completion of the new factory. All the newly-put-up machinery for pulping and curing coffee with a considerable quantity of coffee undergoing the process of curing was burnt with the buildings in one night—a very bad thing for the shareholders of the company in the second or third year from the starting of the company. The coffee crops have steadily increased

during the past three years. Thirty-two thousand cwt. from 13,000 acres only works out 3 *cwt. per acre*—a mere maiden crop in the palmy days of coffee-planting in Ceylon. The twenty or thirty per cent. of vacancies were supplied, and now the young trees three and four years' old are cropping heavily, particularly on "Aqua Vermilia" (red water) and "Moreira" the section on which the writer was employed.

If the weather and other circumstances are favourable.

THE CROP THIS YEAR

will be a very large one, but the young trees, unless relieved of their heavy crop of berries, will die out or take a rest from bearing for two or three years. Prices are likely to go down, owing the Brazilian crop expected being unusually large this year, fifteen thousand hundredweights being spoken of as under the estimate. Labour will be very short indeed, through the rise in the value of the milreis. The Italians drew their money (Brazilian) and turned it into gold and as they are obliged to give notice to leave the estates before being paid off, many will remain in Italy. The Government of Brazil had lately discontinued giving passages to intending imigrants; consequently the Dumont Company were obliged to send an officer from Dumont to recruit Italian labour.

There are

TWENTY THOUSAND ACRES OF FOREST LAND AVAILABLE FOR COFFEE

planting belonging to the Dumont Company, but the *five millions* of coffee trees now under "cultivation" will take them all their time to manage with labour daily getting scarcer and dearer. There are some "*smart*" Directors in the company, particularly the one who visited Brazil and reports occasionally on Dumont. He ought to go there again and try and give the anxious shareholders a dividend; they have waited very patiently for the past five years and ought to get a fat one this year. I should take a small gang of practical coffee-planters from Ceylon with good digestions and not afraid of ghiggars, ticks, and Bèrne-flies—to say nothing of the dear little mosquito (the writer had extracted during four years in Brazil *no less than* 200 ghiggars from underneath every toe-nail of both feet.) The Portuguese. Brazillans, Italians, and Spaniards called it a recreation on Sunday to dig them out of each others' feet. Of all the vile insects on earth, the Bèrne-fly is the worst. She

LAYS HER EGGS INSIDE YOUR FLESH

and hatches three very ugly insects an inch long with three rings of bristles round the body and sharp nippers. They take about six weeks to develop under your skin; then commence to turn somersaults just when you want to go to sleep after a hard day's work in the sun.

The natives of Brazil adopt a novel way of extracting the brute when full-grown; they tie on a piece of raw pork and the Bèrne come sout of your skin and takes a header into the piece of pig skin.

Eighteen took up their lodgings in the plumpest parts and it was very interesting to stick a little nicotine from an old pipe into their nest, then out they would jump; but some were so fat they had to be screwed out and great was the relief.

Ticks were very plentiful in the grazing grounds and we often got covered with them when out at night, fighting with the bush fires on our boundaries and trying to save our fences and gates from destruction.

I had a

VARIED EXPERIENCE WITH SPECIMENS OF BRAZILIAN ENTOMOLOGY

and I have brought back as a trophy the nine rattles of a large rattlesnake I killed in my coffee. His chum came to look for him next day and was duly killed—snakes are very numerous and the ones most frequently found in the coffee were the rattlesnake and the black and red-coral snake.

"There are snakes in the grass" in human form of every nationality and an Englishman little knows what is in store of him in that nigger country. The more polite the people are, the greater the injury they are likely to inflict. There is much to write about Brazil after four years in the coffee districts of São Paulo. My first Estate was called "Vista Alegre" (cheerful view). Mr. W. the proprietor took me round to see some of the large Coffee Fazendas. This district between San Carlos de Pinhal and Colonia was much cooler than the district of Reberu eu Prato (Black River) where the Dumont Estate is located.

CEYLON TEA MEMORANDA FOR 1900.

Messrs. Wilson Smithett & Co. write :—

Two principal causes have conduced to render the season u review a disappointing and unsatisfactory one to producers g rally. In the first place the conviction which prevailed at the c mencement of 1900 that the Government would include tea in articles selected for extra taxation in their War Budget, caused unwonted amount of speculative duty payment, which not severely taxed the financial resources of the London dealers paralysed trade to a great extent during the Spring and Sum months, but also gave an artificial character to their earlier tran tions, and rendered it very difficult to gauge the extent development of the *bonâ fide* trade demand, on account of the la invisible stock which had been thus created. In addition to abnormal state of affairs, a heavy flushing season in the ea months of the year, and later on the belief that the effect of the crease in the duty would be to augment the demand for the cheap tea, resulted in a decided over-production of common leaf both Ceylon and India; although the supplies from Ceylon shewed c siderable diminution for a short while during the Autumn, heavy imports of tea from India, chiefly of markedly inferior quali which eventually resulted in a crop of that leaf, shewing a furth substantial increase over that of the previous year, contributed t serious accumulation of a class of leaf too poor to satisfy the dema —always large—for an acceptable standard of "good common" t

The average price for all Ceylon tea sold on garden account 1900 was 7·25d. against 8d. in 1899, and 7·78 in 1898.

Although the fear entertained in our "Memoranda" of last ye that we were once more in danger of over-production, has unfortu ately proved too well grounded, we would on the present occasi deprecate too gloomy and pessimistic views with regard to t future. The over-supply, under which we have laboured during t past year, does not appear to be attributable so much to the fa that too large an acreage is at present under cultivation in Ceyl and India—although it is hoped that the present state of affairs w check extensions in the latter country—as to the various caus which have led producers to rely upon the apparently exhaustle demand for common tea. The competition of distributors at ho had culminated some years ago in the establishment of what popularly known as the "shilling canister," with the result th there was an almost constant demand for "tea for price;" this, unnaturally led planters generally to consider that quantity rath than quality was the object to aim at—a policy well in accord wi the necessity for economic reforms engendered by a few seasons less remunerative working, and which led to a considerable redu tion in the cost of plucking. It was, also, generally expected this market last year, and the idea probably extended to produce that the effect of the increase in the Tea Duty would be to still fu ther increase the demand for the cheapest tea. The largest blende however, who for long had had good reason to be dissatisfied with t small margin of profit accruing from the "shilling canister," saw favourable opportunity of abandoning it as far as possible, and at the increased price of 1s 2d it would not be likely to hold out t same attraction to the householder as at the round figure of "o shilling," they agreed to discontinue active advertisement of th blend, and to concentrate their energies on pushing a rather bett class blend at 1s 4d per lb. We cannot profess to regret the d appearance of a packet which was of little benefit to anybody, a can only hope that the current low rates for common tea will n result in its reinstitution.

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, oth have no effect, and none do good. Sugar and water, or a little glycerine, gi relief when the throat is inclined to be dry; this applies to persons whose thro are affected by the weather. About a third of a teaspoonful of Condy's Fluid a tumbler of water, if used as a gargle every morning, will clear the throat a brace up the uvula, which, in some singers, is so long that it interrupts the pu emission of the voice, and introduces a grating undertone, while it also tends make a tremolo on the upper notes."—*The Idler*, February, 1900.

When producers realise that the staple demand is no longer ntered in the poorest leaf for "price," we may reasonably expect at extreme economy in plucking may give place to a policy more accord with the ability to take the flush at a younger and suffiently mature stage, and that a stop will be put to the export of a ass of tea which can only be compared to that common China, the te of which, whilst facilitating and accelerating the development the Ceylon tea industry, was at the same time a warning to ritish producers.

Whilst earnestly endorsing any measures that may conduce to this sult, we would not lose sight of the demand for an adequate pply of "good common" black leaf with useful liquors, such as e low country districts are so well able to supply, and which may e in some danger of being overlooked in the reaction that will oubtless set in.

At the commencement of the current year the critical position of e Indian and Ceylon tea industries compelled the serious attention producers, and meetings were convened to consider the pressing roblem of supply, on the solution of which not merely the prosrity but the very existence of these industries depends. The dian and Ceylon Associations proposed remedies of a somewhat rastic nature, remedies which did not fail to provoke criticism om those growers whose manufacture during the past year had en of such a character as to, perhaps, benefit rather than suffer the over-supply of too common leaf. The amended scheme ecently submitted, for the acceptance of producers at large, seems owever to disarm to a great extent, if not entirely, the not unatural criticism to which the initial proposals gave rise. For if ose producers, who have so much reason to be dissatisfied with st year's working, resolve not merely to limit their plucking area is year, but also to pluck a smaller quantity and a better quality leaf per acre, there will, in the ensuing season be a considerable rger proportion of good tea, which will enter into competition ith that class which constituted the good tea of last year. For is reason it will be to the advantage of those, who had the field ore or less to themselves, last year in this respect, to pluck still ner and produce a class of tea beyond the competition of the improved quality which should ensue from more careful manufacture the classes below. In short it appears to be not only desirable ut essential, that in the coming season manufacture, from the west to the highest classes, should be raised to a higher level of uality in the leaf plucked. The prices obtained last Autumn for ally fine tea, which for a few weeks then found so ready a market, roved the capacity of the home trade to pay good prices for the st tea, and we believe that, were it not for the almost unconscious ut steadily increasing tendency to pluck the leaf at an older and ss succulent stage, many of the former "crack" marks would still realising prices more on a par with those prevailing in the rlier years of the industry when Ceylon found its way to the ont by its well earned reputation for quality.

The imports of Ceylon Tea into the U. K. during 1900 were 3,600,000 lbs. in excess of those of the previous year, and amounted the heavy total of 115,323,000 lbs., against 101,701,000 lbs. 1899.

The deliveries did not mark the same ratio of increase, but home nsumption shewed the satisfactory expansion of 7,300,000 lbs.—2,470,000 lbs. having paid duty, against 85,138,000lbs. in the revious year.

The re-exports to all parts, except to the United States of America, arked a normal development, the total amounting to 13,755,000 lbs. gainst 12,144,000 lbs. in 1899.

The direct exports from Colombo to other countries than the nited Kingdom shewed a remarkable expansion during 1900, aving reached 34,340,000 lbs., against 25,946,000 lbs. in 1899 and 3,930,000 lbs. in 1898.

Green Tea.—The enterprise and resource of Ceylon planters have cently been engaged in the endeavour to counteract the results over-production by an effort to compete with the demand for pan green teas in America and Canada. While fully sharing e belief that a satisfactory equivalent to Japan green teas in leaf d liquor may meet with a gradually expanding measure of suc-ss, we cannot but express the opinion that the experiment should of a tentative character only, and that if the manufacture of reen tea in Ceylon and India should assume the proportions hich have been suggested, the new departure will fail in its ject. It has been very evident lately that the demand for Ceylon ack tea in America has been gaining ground, and for several years past the efforts of planters to push their black teas in the West have met with considerable success; whether it is desirable to manufacture to an important extent a class of tea which has a most limited outlet in any other market, and which will undoubtedly experience considerable difficulty, in competing at anything like remunerative rates, if the present bounty should be withdrawn, with the distinctive Japan greens which for so long have found favour in America and Canada, remains to be proved. The majority of the green teas from Ceylon which have lately come under our notice have been too yellowish a green in leaf, and of too pale a lemon colour in liquor; the leaf should be of as black a green as possible, and the liquor a fairly deep canary yellow in tone if the aim is to supersede Japans.

In a few cases the averages were either maintained or increased, but the quantities auctioned this year were considerably less; this, however, may be due to part of the crops having been disposed of locally, *e.g.*:—

	1900. Abt. lbs.	Av. price per lb.	1899. Abt. lbs.	Av. price per lb.
Diyanilakelle ...	119,000	10⅜d	128,000	10¼d
Duusinane ...	365,500	9½d	403,000	8⅝d
Excelsior ...	141,000	10¾d	155,000	9¾d
Glenlyon ...	202,000	9⅜d	272,000	9¼d
Ingestre ...	188,500	10d	193,000	9¾d
North Cove ...	89,500	9½d	92,500	9⅜d
Park ...	123,000	10⅝d	175,000	10⅜d
Sutton ...	78,500	11¾d	142,000	9½d
Troup ...	136,500	9⅜d	160,500	8⅞d

Turning to the results in the different districts, we observe that the greatest falling off in values realised has, on the whole, occurred in the medium elevations where the teas were not remarkable for any very distinctive characteristics. It is noteworthy that the Kelani Valley with an increase of 2,000,000 lbs. shews only ½d per lb. decline in the average value realised, the same as Dimbula with an increase of 1,250,000 lbs. The low-lying district of KALUTARA, however, has suffered the most; with no increase in yield the average shews a decline of 1·15d.

While an examination of the results we have summarized this year unfortunately reveals a marked decline in values generally, there are numerous instances to shew that where quality was well sustained and "stand-out" teas produced, the average price realised was maintained and in many cases increased, and that not infrequently with a substantial increase in the out-put. The very first mark on our list—Diyagama—the only estate which has turned out over 1,000,000 lbs. of tea, furnishes a remarkable example of the success attending a careful maintenance of a satisfactory standard of quality. As other instances may prove of interest, we have selected, as under, some of the most noticeable whose averages have either been well supported or actually increased:—

	1900. Abt. lbs.	Av. price per lb.	1899. Abt. lbs.	Av. price per lb.
Amherst ...	182,000	9⅝d	125,500	9½d
Albion ...	128,000	9d	106,000	9d

NOTES ABOUT SPRAYING.

"Spray! Of course I am going to spray, says a writer in the *American Agriculturist*. It is the only insurance policy I carry on my crops." This was the expression of a prominent fruit grower recently at the Ct pomological society's meeting. Never in the histroy of American horticulture was spraying so extensively practised as to-day. Conditions have been changing so radically during the past few years, fruit growers and truckers have found it absolutely necessary to spray regularly for the destruction of insect pests and fungous diseases. As this question is of such prime importance at this time, we give a general outline of the methods for spring treatment. From time to time we will follow this article with seasonable suggestions, so that those interested will be kept posted in advance at all times as to the best methods for spraying and mixing the materials used.

It is necessary first to know specifically for what the spray is applied. After this has been determined the grower should look in advance somewhat so as to enable himself to prepare the proper equipment to meet any emergency that may arise later. There are several prime factors to be considered; one of the most important in which peach growers are interested is that of peach leaf curl and brown rot of the fruit. Spraying in this case should be conducted as soon as possible before the buds begin to open. The first sprayings are applied for the destruction of the dormant spores of fungous diseases and to prevent further infestation.

It is now conceded by the largest peach growers that they can spray to good advantage while the peach trees are dormant to check the spread and dissemination of both the leaf curl and rot. J. H. Hale, the Ct and Ga peach grower, is now spraying his extensive Ga peach orchards, consisting of about 250,000 fruiting trees. This is, without doubt, the largest spraying operation ever undertaken in this country. The experience of many Ga peach growers last year was such that they know it is now necessary to spray regularly to check the brown rot and other diseases. Mr. Samuel Rumph sprayed last year about 120,000 peach trees, the results of which were very encouraging.

WHAT TO SPRAY FOR.

Beginning with the peach, the rot and curl are first to be considered and in such cases the trees should be sprayed first while they are thoroughly dormant, with a 3-8-50, 4-5-50, or 5-5-45 formula. That is, in making bordeaux mixture, 3 lbs. of blue stone and 8 lbs. of good stone lime are used for each 50 gals. of water, or 4 lbs. blue stone, 5 lbs. of lime to 50 gals. of water. The first formula was used last year by Samuel Rumph in his Ga orchards, the second formula given is now being used by Mr. Hale in his orchards, while the last named is generally recommended for the leaf curl. It must be borne in mind, however, that the last two formulæ should not be applied when the tree is in full foliage. The Rumph formula can be used when the trees are in full foliage without injuring them in the least. Mr. Rumph sprayed some of his trees last year five times with this solution and thoroughly kept the rot under subjection.

The first spraying of apple should be made, if possible, before the buds open, using the ordinary 4-6-50 formula. The second spraying should be made shortly after the blossoms fall, with the same solution, adding this time 4 oz. paris green to each 50 gals. of material. Repeat spray seven to ten days later, according to weather conditions. If very rainy, a fourth application may be required. This treatment will destroy both the codling moth and various fungous diseases. The first and last may be omitted during very favorable seasons.

The same general treatment given for apples can be applied to pear orchards, but as a rule it is hardly necessary to spray before the buds are open. In addition to the bordeaux spraying for fungous diseases, the pear psylla must be considered, and a kerosene emulsion diluted with water 15 times is used in the spring about the time the leaves unfold. Plum trees can be sprayed with the same formula used for apple and pear. This spray will have little or no effect upon the so-called plum curculio. This insect is kept in check by shaking or jarring the trees after the fruit is set, at intervals of from three to five days, catching the beetles in sheets or in an apparatus constructed for this purpose, known as the curculio catcher.

Strawberries can be sprayed to very good advantage for checking strawberry leaf blight with the 3-6-50 formula. Cabbage can be best treated for the destruction of cabbage worms with paris g and land plaster, used as a dust and applied with any good a ratus. Mix at the rate of 1 lb. of poison in 100 lbs. land pla The harlequin cabbage bug is not destroyed by this material, the kerosene emulsion or soap solution must be used. It also be concentrated on kale, used as a trap crop, pla in the vicinity of cabbage fields. Hand picking of the p is very effective. Both the blight and insects on potato be controlled by the same spray, using the 4-6-50 formula, and paris green. Plants should be kept well covered with the mixt The dust method can be used for insects; but not for blight.

HOW THE BORDEAUX IS MADE.

Bordeaux mixture is easily made, the amount depending on size of orchards and fields to be sprayed. Ordinarily, two bar are secured, and a stock solution is made and kept on hand. If 4-6-50 formula is used, take 8 lbs. of blue stone and suspend i basket or bag in 50 gals. of water and thoroughly dissolve. T 12 lbs. of good stone lime is thoroughly slaked in a tub and pou into the other barrel containing 50 gals. Both solutions make gals. One barrel of blue stone water and one of lime water of gals. each. This stock solution will keep indefinitely, and wi ready to use, stir each solution thoroughly, and with two pails equal capacity dip same quantity from each barrel and pour th at the same time into a third barrel or tub, or into the sprayi apparatus. The solutions will thoroughly mix as they fall a form a good quality of bordeaux ready for use. They should be mixed and allowed to stand any great length of time bef being used, as the material deteriorates. As a rule it is not nec sary to add the paris green to solutions for spraying dorma trees. In all cases where trees are in foliage, or where small pla are sprayed, the paris green should be added at the rate of 4 oz. each 50 gals. bordeaux In each barrel of the stock solution 4 of paris green should be added. Mix the paris green with enou water to make a thin paste, add more water and pour directly i the materials, thoroughly stirring before using.

It is not necessary at this time to make kerosene emulsi according to the old troublesome formula, as there are upon t market several good mechanical devices for mixing kerosene a water in the proper proportions for ordinary spraying.

APPARATUS NECESSARY.

The appliances necessary will depend entirely upon the conditio and the size of the orchard or field to be sprayed, and each grow must select an equipment for himself to meet his own deman There are so many kinds of good sprayig machines on the mark it is difficult to say that any particular one is better than anoth

TEA, ETC., AT THE PARIS EXHIBITION.

Our present subject appears a little belated, yet the follo ing extracts from Mr. J. A. Renton's report are not witho interest :—

In September and October of 1899 I advertised in the Ceyl papers that space would be reserved for private exhibitors packet and bulk teas. I had been urged to make up my o packet teas and sell them at some depôt in Paris, if t sale was not permitted at the Exhibition. I felt that as neith the Planters' Association nor the Thirty Committee were a tradi body, that though such a course would be perfectly feasible duri the Exhibition, yet after it was over there would be no firm business agency to carry on the sale of my particular brand, t Planters' Association being unable to sell the brand or ma (specially adapted for the Exhibition) to any one particular fir I therefore was in hopes that private individuals or firms wou come forward and establish depôts in Paris, with stands at t Ceylon Court, and run the chance of effecting sales. Only t three firms abovementioned availed themselves of the opportuni Unfortunately, Messrs. Lipton, Ltd., were only prepared at fi to book orders for blends of Ceylon with China. Without expre ing any opinion as to whether or not this was the best means introducing Ceylon tea to the French public, I felt that in an E hibition where Ceylon, and pure Ceylon tea only, was supposed be exhibited, it would not be right to allow blends of Ceylon t

be sold, or orders booked. Messrs. Lipton, Ltd., agreed to with-aw their blends and sell pure Ceylon tea, but it was not until ne that they were able to commence sales. The exhibit made the Co-operative Tea Gardens Co. and the Maravilla Co. was especially attractive and handsome one, and their exhibits, mbined with that of Messrs. Lipton, Ltd., have been the most werful aid (so far as exhibits in the Ceylon Court went) in help-g us to impress the general public with the importance of the ylon Tea Industry. There is, of course, no question that the a House and the sale of tea in cup has been by far and away the ggest factor in bringing Ceylon tea before the notice of the neral public, and that the great success which this institution s had has enabled us to secure a splendid advertisement for ylon tea without the help of any of the exhibits of the Ceylon urt. At the same time, the neat little packets exhibited in a zen different kinds of wrappers by the two first-named companies, ok greatly with the public and were a most efficient factor in troducting Ceylon tea: I felt very grateful that I could refer tending purchasers of Ceylon tea to the depôt established by ese two companies in Paris, in the first instance. In a short ne the sale of Ceylon tea in the Exhibition was commeneed, and ntinued to the close. I feel certain that if the Co-operative Tea ardens Co. and the Maravilla Ceylon Tea Co. had not made this hibit of pure Ceylon tea in packets, Messrs. Lipton, Ltd., uld not have followed suit, but would have stuck to their ends. I should then have been obliged to make up packet teas of y own, for the time being, or else allow intending purchasers to without being able to get Ceylon tea in the Court. I wish it to clearly understood that the sale of Ceylon tea in the Court has ver been sanctioned by the authorities. When these Companies w other articles being openly sold in all the other Courts, and at tea was sold in Japan and Russia, the Co-operative Tea Gardens . commenced selling at their own risk, and Messrs. Lipton, Ltd., llowed suit after a time. On two occasions they have been arned to desist by the British Royal Commission, and on one occa-on by the French authorities, but they have gone on and taken e risk. In addition to their exhibit of fancy tea in tins, Messrs. ipton, Ltd., made a very attractive exhibit of coffee and cacao.

Tea Factory.—Only one of the models was exhibited; the other as placed on the top of the Tea House, there being no room for it the Court.

THE TEA HOUSE.

The completion and furnishing of the Tea House caused a great al of extra work and worry. The contractors had departed from e original design; the terrace or first floor should have been sur-unded by an open balustrade, instead of which a dead high wall d been built. Although a roof was shown on the plan, we had to ovide an awning and blinds at our expense, and, owing to the ight of the wall, the floor had to be raised. Kitchen and counter ace was insufficient, even although two additional rooms were ilt on to the kitchen. The interior of the building was nicely rnished and decorated by Miss Parkinson and Mr. Webster. he walls and pillars were covered with photographs of Ceylon views d scenery. The Tea House has had a success which exceeded all y anticipations. We had to provide two more urns, and in June d July to increase our seating accommodation until it came up 500 from 300.

We served in	May	...	12,955	pots of tea
Do	June	...	22,351	,,
Do	July	...	24,141	,,
Do	August	...	19,312	,,
Do	September	...	25,009	,,
Do	October	...	30,489	,,
	Total	...	134,257	in six months

N.B.—A pot contains two cups of tea.

The above does not include the teas given gratuitously to the embers of the Ceylon Commission or their friends. I attribute his success to the following causes:—*First*, to the goodness of the rticles; the tea was very carefully made and poured (after five inutes' infusion) into an urn, heated by hot water. *Secondly*, to he Sinhalese boys, with their rapid and civil waiting. We had to ngage waitresses in addition to the boys, but there is no doubt hat the boys were a great draw. I want to take this opportunity f expressing my appreciation of their very good and excellent ehaviour during the whole time of their stay in Paris. *Thirdly*, to some lady friends, journalists, and to others, who from the very first have assisted us by advertising both the merits of our tea and the attractions of the Tea House. In the Summer most business was done between 4 and 7 o'clock, but in the Autumn, especially at the end of October, the rush was always between 3-30 and 5 o'clock. The Tea House was kept open till 11 o'clock p.m. till August, after which it was closed at 8 o'clock.

AWARDS.

I acted as British Juror in Section 3 of Class 39: coffee and cacao. I am glad to say I was successful in obtaining an award of some kind for each exhibitor in this class. Although the number of the exhibits sent were few, yet the total quantity was sufficient to occupy three times the space they did, had we been able to obtain more room. I saw a grand prix was given for the best exhibits from other countries in this class, and I made an effort to get one for a Ceylon exhibitor. The jury awarded it to Messrs. Lipton, Ltd., mainly on the ground of the excellence and variety of their Coffee exhibit. The French Official Catalogue for this class contained the names of only three exhibitors—Badulla, Haputale, and Northern District Planters' Association. The jury very kindly, and without hesitation, accepted my amended list of twelve individual exhibitors. At the same time it is a matter of regret that the official English Catalogues, from which the French were made, were not more carefully compiled in the first instance. The omission of individual exhibitors' names occasioned me a great deal of trouble with the juries in Classes 59, 41, and 63 (Tea, Spices, Non-edible Agricultural Products, and Mines). . . . .

Tea and Spices.—I am not quite so satisfied with the awards obtained in this class. The Official Catalogue contained only the names of the various District Associations, no individual estates or companies being included. The jury in this class was not nearly so complaisant as the jury in Class 39, an official application had to be made to the French Administration before the amended list of exhibitors could be accepted. Out of 37 exhibitors in commercial black and green teas, 26 awards were made; but no awards have been given to fancy teas or commercial teas in packets. I am exceedingly sorry the fancy teas shown by the Co-operative Tea Gardens, Messrs. Lipton, Ltd., Kintyre, Pedro, and Hatherleigh estates, did not obtain extra and special awards. I think that the packet tea exhibit of the Co-operative Tea Gardens Co., and the Maravilla Co. should have obtained a very high award. I drew the attention of the jury to the golden tip tea kindly presented by Neboda, Taprobane, Mipitiakande, Deaella, Newton, and Middleton estates for covering the pillars; but as I could not say they were exhibitors in the proper sense of the word (their names not appearing in catalogues) they obtained no recompense. Had I known how awards were given to "collaborateurs," I should certainly have brought their names forward under this category. A grand prix was given to the Planters' Association of Ceylon for the collective exhibit of tea. The jury proposed, in the first instance, to award the grand prix to myself on behalf of the Association. I declined to accept the suggestion, and pointed out that it should be given to the Association only.

I understood from the jury that they would give awards to the cardamom exhibits from the Duckwari, Forest Hill, and Mausakande estates. I was sorry to see when the official list was published that no awards had been made. On an appeal to the Superior Jury a gold and two bronze medals have been obtained for these exhibitors as "collaborateurs," but these cannot be regarded as equivalent to a reward for their exhibit, as their names did not appear in the first official list. In Class 41 I was successful in obtaining a gold and two silver medals for the three cinchona exhibits. I noticed after the Official List of Awards was published that several awards had been given to "collaborateurs" from Ceylon. I much regret that the possibility of obtaining awards in this way was not brought to my notice. Had I been aware of it, I should have applied for special awards for Mr. Webster, Miss Parkinson, and Messrs. Burnham and Dupré. The two former have done much to lay out the tea exhibits and get the Tea House ready. The two latter, who acted as salesmen for Ceylon teas in the Court, are as much entitled to awards as Mr. Hayward's salesman and saleswoman, to whom bronze medals have been awarded. Mr. Davidson has applied for and obtained silver medals for Mr. Webster and myself as "collaborateurs." The application for Miss Parkinson was refused. I am much obliged to Mr. Davidson for interesting himself especially on our behalf, but I have never made any claim for any personal reward for work done in connection with the Exhibition, as I have

all along understood that it was a rule of the Exhibition that members of the Jury were "*hors concours*" even as "collaborateurs."

I may add that I learn that most of the French chocolate manufacturers assert that the Ceylon variety does not suit them; but the leading import houses here think that our cacao has much improved. It was the importations of more than ten years ago that created a bad impression. At any rate, the samples shown at the Exhibition were much admired, and a bigger trade ought to be done At present all the imports are from Guayaquil, Venezeuela, and Trinidad.

India-rubber.—I have had many inquiries for this article. I hope the day will come when it will enter largely into the list of exports from Ceylon.

Cinchona.—Quinine manufacturers would like to have Ceylon bark again, but at cheap rates. There is little hope of this wish being gratified There seems to be every prospect of an improvement in the price of quinine, and we may hope that the cultivation of cinchona will be resumed in Ceylon to a moderate extent.

As regards *tea*, we have made a good beginning, and I am in hopes that Ceylon tea has come to stay. It is not the Exhibition only that has helped us in making it known, but the extensive advertising and personal canvassing of the trade, both wholesale and retail. This report deals only with the Exhibition: my full report on the work in France will follow at the end of the year; but I feel we have done mere than awaken a mere passing interest in Ceylon tea. Those people who have had it in cup like it, and I trust the taste will grow. It must never be forgotten that France is not a tea-drinking country; and even if we oust China teas by degrees, this will only mean a consumption of 1½ million lbs. What me must seek to aim at is to spread a taste for tea amongst the labouring classes and *bourgeoisie*.

I have omitted to mention that, apart from the Ceylon Court and Tea House, we had our tea on sale in cup in fifty-two restaurants and cafés in the Exhibition. I do not think that, with the exception of Slaters' Restaurant, much tea has been sold at these cafés, but as all these restaurants displayed placards, "Ask for Ceylon Tea," the advertisement was an excellent one.

I ought not to omit to add that all through the Exhibition I have worked cordially and harmoniously with the Indian Tea Representative. We have been of mutual benefit to each other, and though rival, our relations have always been friendly.

EXCESSIVE TEA-DRINKING.

LADY JEUNE WRITES AN EXTREME ARTICLE.

The *Daily Telegraph* of the 9th March contained the following special article by the accomplished Lady Jeune .—

There is a new and sudden terror added to the troubles of housekeepers in these days, one that was unknown to mistresses of long ago, and was not among the catalogue of misfortunes which dogged the footsteps of our mothers and grandmothers. In those days servants may have been stupid, impatient, idle, or careless, but they were strong. They ate, slept, and lived well, and if they suffered from any indisposition it was one which usually could be explained by the fact that they had a generous appetite. Nothing could be healthier or more vigorous than the servant of those days: bright-eyed, rosy-cheeked, and buxom, she was the embodiment of health. Then food was coarse, often insufficient, and their sleeping and living space was wont to fall short of the number of cubic feet of fresh air which in these days of scientific sanitation is considered necessary to maintain a sound constitution. One well remembers what the servants' sleeping accommodation used to be generally a garret in the roof, or a cellar below stairs, frequented by rats and blackbeetles, and a place of horror, calling up a shudder at the very thought. They worked much harder than our domestic helpers of to-day, their outings were fewer and much shorter, and yet in spite of all these drawbacks they were robust and healthy-looking girls.

Now-a-days, alas, few of the young women in domestic service appear to be strong, and they are constantly suffering from weakness and want of blood. This, however, is a very general complaint in all classes, and every girl, high or humble, seems to be compelled to take iron in some form or other. Only after this tonic has been taken for months, or even years, do they appear to regain something of good health and sound appearance. So far as the upper classes are concerned, it is very difficult to say whence t mysterious complaint arises. All girls are liable to it, at any a and in any locality. It might, perchance, be the result of living towns, but that in the country, with the breath of heaven blowi from every quarter, one comes across pale, heavy-eyed, listl girls. There is no explaining reason of bad or unwholesome fo or indifferent nourishment, and to no one cause can one attribu the fact, unless it be that mothers of to-day are not so strong their own parents were. It may be in their case that the ner exhaustion of modern life has tended to enfeeble the constitutio of the women of England, and thus the deterioration of their ch dren's health may be partially accounted for, but one may puz in vain to probe into the real cause of the widespread anæmia to-day among the higher classes.

In less exalted ranks it is far easier to go to the direct source of t complaint, which is undoubtedly due to the excessive quantities strong tea they consume daily. Nothing has more seriously inju ed the health of women of the working-classes than the cheape ing of tea. I have no hesitation in saying that it is the consta drinking of strong tea which makes the women of our toili masses delicate and their children anæmic, for not only do the latter inherit that weakness from their mothers, but become ev greater sinners in this direction than their parents. It may wondered whether the housekeeper or mistress of an average e tablishment has any idea how often their servants drink tea in t course of the day, or of the strength of what is imbibed. Just in their own homes, they put the teapot on the hob and let it sta there from morning till night the stuff itself being a stewed co coction. They drink tea before breakfast, at breakfast, at elev o'clock, after midday dinner, at tea time, and sometimes ev before going to bed, the tea being so strong as to be almost poiso ous. One of the constituents of tea, as everyone knows, is tanni and that taken in the quantities consumed by our servants is a solute destruction to the digestion, so that none of the wholeson food they take is properly assimilated, with results of ill-nouris ment, bloodlessness, want of breath, and weakness. One after a other in a large house-hold fails, and if one takes the trouble inquire it will be found that they have all been living on strong te

Tea is, of course, a mild sort of stimulant, and for the mome refreshes and pulls them together. They know nothing of t effect it has on their health, nor do they believe the warnings th are constantly sounded in their ears. When China tea was t only description procurable, the quantity that could be imbib was much less. Moreover, it was not nearly so potent as t Ceylon and Indian tea which has taken its place, nor did it conta so much tannin, and, consequently, people could drink it wi greater impunity. In every well-ordered household the quanti of tea per head is regulated, and if that amount were adhered the mischief would be lessened. Nearly every servant, howeve buys tea over and above her allowance, so that there is no check the habit. We take every precaution that our women servan should be sober, and yet we allow what is quite as bad as dra drinking to go on unnoticed. The effect of drinking tea in t quantities and of the strength indulged in by nearly all o domestics is really a very serious matter, and every head of household should make it her business to find out its extent, a stop it as far as she can. One cause of the increase of tea-drinki is the custom of giving beer money, instead of, as formerl allowing a certain quantity of beer per head, and it is a consta occurrence when engaging a servant for her to mention that s does not drink beer. No doubt that is true, but as a substitute s takes tea, which, in the quantity she consumes it, is much mo harmful than beer.

At this moment experienced housekeepers could put their finge on dozens of girls who are unfit to remain in their situations fro this cause, and unless some stand is made against it the numbe will go on increasing. If the strong tea is stopped, the remed works like magic, and strength and colour are soon regaine because food nourishes, and the blood ceases to be impoverishe Inquiries from any doctor practising among servants will bear o these contentions, and it is well that the attention of all mistress should be directed to them. Coffee and cocoa are not only harmle but nourishing, and can always be kept ready. The evil is, perhap even greater in the kitchen than in other departments of the hous owing to the heat in which cooks and scullerymaids have to wor and these beverages are as easily prepared there as tea. It ma seem, perhaps, a small matter in itself, but it deserves attentio

the habit is really undermining the health of our servants all er Great Britain.

A MORAL IN A TEA-POT.

The following "ditty," based on the foregoing article, appeared, signed, in the ensuing issue of *Truth*:—

Thanks! Thanks! Lady Jeune for the warning you give
In your article strong and impressive
'Gainst that drinking of tea
Which has now come to be
In our homes, so you tell us, excessive.
That there's "Death in the (tea) pot" you do not assert,
But at least it contains Death's first cousins,
For anæmia is there,
You are bold to declare,
And dyspeptic disorders in dozens.
Alas! for the cup which the Poet declared
While it cheered would inebriate never!
For it now, to our cost,
Has its innocence lost—
Its good character's blasted for ever!
There is only one chance for us now, so you say,
If we'd hope to hysteria's shock shun:
We must cease to imbibe
What you sternly proscribe
As a tannin-pervaded concoction!
Quite so, Lady Jeune, for this protest of yours
There is but a too adequate reason;
We admit that your plea
Against too much strong tea
Is an apposite word in due reason.
But this isn't all—of a much wider kind
Is the protest that we'd be commending;
We should like to repress
All those sorts of excess
To which we too surely are tending,
For excess, without doubt, is the fault of the age—
In our craze for persistent variety—
Of our doings there's none
That is not overdone—
Moderation's unknown in Society.
At the pace we now live at who stays to recall
The wise maxim derided as olden?
Who's content, as a fact,
Or in word, or in act,
With the "mean" that is aptly called "golden?"
Many things that we do in themselves may be good,
And as harmless we well may compute them
If they're moderately used;
It is when they're abused
That we into sore dangers transmute them.
'Tis excess that imparts such a savour of risk
To "Pekoe-ing" and eke to "Souchong-ing;"
'Tis excess night and day
Makes us fall a weak prey
To the craze of perpetual "Ping-Ponging!"
'Tis excess that amusement to torture can turn—
"Bridge" will serve as an awful example;
Or, recall, if you please,
Those depressing "Book" Teas
As a yet more significant sample.
'Tis excess to a mild little flutter at "Bac.'
Can convey a too scandalous flavour;
'Tis excess can impart
To what's meant to be "smart"
Quite a vulgar and "half-worldish" savour.
What excess can effect at St. Stephen's we know—
All kinds of abuses permitting,
It can turn a fair man
To a blind partisan,
And all night keep the House sadly sitting;
It can zeal misdirect, it can wholly pervert
An innocent aim and intention:
It can Irishmen lead
So to duty exceed
As to bring about wholesale suspension.
All we do, we repeat, in these days is o'erdone:
Artists lay on their colours too thickly;
And so restless are we,
All the doctors agree
That we travel too much and too quickly.
We live at a pace which no leisure allows
For so dreary a duty as thinking;
And the books that we read
Try our nerves (we concede)
Like that tea we're excessively drinking.
And what of those restaurants—known well to fame—
Where the *Gourmet* may dine in his glory?
Ask their managers—eh?
But they'd send you away
With a well-nigh incredible story!
The account of what Midas absorbs at his meals
Would seem to you more like a fable.
You with wonder would gasp,
As your minds sought to grasp
All his pleasures (so-called) of the table.
And the more you inquired—why, the more you would hear
Of profusion in dinners and dresses.
The more you would find,
If to search still inclined,
That o'er all things the trail of excess is.
Aye, it follows the bride as she walks up the aisle
Through a priceless lace veil faintly smiling;
And it walks by the hearse
With an ever-filled purse
Costly wreaths on the dead freely piling.
At dinner it sits by the side of the host,
It spreads too profusely his table;
It o'er does day by day
The persistent display
That he makes in his garden and stable.
Excess is, in short, a disease widely spread,
It's an irksome and wearisome fetter;
Excess is the rage—
The key-note of the age,
And the sooner we change it the better!

DISTRICT ASSOCIATIONS.

INDIAN TEA ASSOCIATION.

Extracts from Abstract of Proceedings of a Meeting of the General Committee of the Indian Tea Association (Calcutta) held on 16th April, 1901. PRESENT:—Mr. H. S. Ashton (*Chairman*), Mr. A. Tocher (*Vice-Chairman*), and Messrs. H. C. Begg, H. W. Boyd, W. Holder, and R. Magor.

Considered a letter, dated 29th March, from the Honorary Secretary, Kangra Valley Planters' Association, respecting the proposal to despatch a caravan of 32,000 lbs. of tea to Persia, which was referred to in the Proceedings of the Committee meeting held on the 12th March. In this letter it was stated that the date of despatch had been changed from June or July to September, as it was understood that the former months were unsuitable for travel and trade in Persia. It was added that contributors of tea would be required to subscribe a sum equal to 4 annas per pound on the quantity sent, to cover the expenses which would be incurred. The latter would include the salary of an Agent who would travel with the caravan and who would be expected to sell the tea to the best advantage, and to establish agencies at different places.

An enquiry was also made in the letter as to whether the General Committee could afford any help in the way of advancing the funds necessary to cover the expenses which would be incurred in connection with the caravan. As security for the loan the control of the tea would be put into the hands of the General Committee.

After discussion the Committee decided to inform the members of the Association of the alteration in the date of despatch of the caravan; and also of the terms and conditions under which tea could be contributed. They regretted, however, that they were unable to comply with the request for financial assistance owing to

the limited nature of their funds. The Kangra Valley Planters' Association was to be informed accordingly.

Considered a letter, dated 26th March, from Mr. H. Percival Hodgson, Chairman of the United Planters' Association of Southern India, respecting the possibility of sending Indian tea into Russia by the overland route. Mr. Hodgson stated that he understood there was a strong prejudice in Russia in favour of land-borne teas; and that such teas realised higher prices than sea-borne teas. Major Chenevix Trench, H. B. M. Consul at Seistan, had learned from the Russian Vice-Consul at that place that Indian teas sold in Calcutta at 14 annas per lb. compared favourably with China teas sold in St. Petersburg at 4 roubles per lb. It was further the opinion of the Russian Vice-Consul that if such Indian teas could be sent overland to Russia they would soon take the place of China teas in the market. In view of these statements Mr. Hodgson suggested that the General Committee should make enquiries as to (1) the route by which Indian tea could be carried to Russia; (2) the time the journey would probably take; (3) the probable expenditure—duties, &c; (4) the name of a reliable Russian firm to whom tea could be consigned; (5) the style of packing which would be most attractive; and (6) the best time for the tea to arrive in Russia.

The Committee had forwarded a copy of the letter to Mr. E. G. Foley, their Agent, travelling on the Persian frontier, and has asked him to make the necessary enquiries. They now decided also to send a copy of the letter to Colonal Yate, C.S.I., C. M. G., the Agent to His Excellency the Governor-General in Baluchistan, and to ask if he could give the Association any information and assistance in the matter.

Considered a letter, dated 30th March, from Mr. J. M. Korb of Kalimpong respecting the proposed introduction of Indian tea into Tibet. In the Proceedings of the last Committee meeting it was stated that Mr. Korb had ascertain that the Tibetan wool-traders, whom he had asked to carry tea into Tibet, had declined to do so. They had stated as the reason for their refusal that they feared punishment at the hands of Llamas. The Committee had asked Mr. Korb for further particulars; and he now replied that the merchants were forbidden by the Llamas and officials to take Indian tea into Tibet. They feared they might be fined or beaten if they disregarded the order.

The suggestion that the tea should be made over to the wool-traders had originally been made by the Government of Bengal; and the Committee now decided to inform that Government of the result of their attempt to act upon it. An enquiry was also to be made as to what assistance Government could afford in the way of opening out the trade.

A draft circular, to all members of the Association, containing the rules in accordance with which the bounty on green teas would, if offered, be allotted during the coming season, was approved. The circular was not, however, to be issued until the decision of the industry respecting the proposal to restrict production was made known.

NATURE AT HER BEST.

We love Nature! Our regard for her, with her sweet and varying moods, is undying, and our love such that it is beyond the art of man to quench. The promise of Spring is one great message of Hope. The fragrant breath of Summer whispers "Paradise"; the mellow touch of Autumn's hand ripens recollection; and crisp, biting Winter brings merry, ringing laughter, and rosy cheeks.

But of all, Summer is most dear.

It was in Summer that Tennyson found Rose, the gardener's daughter, "standing in a porch of roses." "Who had not heard of Rose, the gardener's daughter?" asks the poet.

Why did he not also find a gardener's wife, of rosy cheeks, whose buxom figure might tread with us down the ages as a picture of what a gardener's wife might be—not a woman "languid and weary," whose plaintive cry is that "every little duty is a trouble, and takes all the joy out of life."

Such women there are, even "gardener's wives," like, let us say, Mrs. Martha Herriott, whose very words we have written above. Who continues thus: "Morning, noon, and night, my head was racked with pain; often for days together I scarcely got a moment's freedom from it. Sometimes, when the attacks were very severe, my left eyeball became quite shrunken and small, and my head would swell right across the top. The pain I suffered then was intense; I cannot properly describe it, but shall never forget it as long as I live. I consulted the doctor and tried all kinds of medicine recommended by my friends, but, until I commenced taking Mother Seigel's Syrup, got no real benefit from anything.

A happy illustration is given us now of Nature quickly changing from decay to health, "for" continues Mrs. Herriott, whose address is, 24, John Street, London Road, Sheffield, "after taking it a short time, I felt much better, and the improvement continued until I was *free* from pain. Mother Seigel's Syrup completely cured me.

"When I am tired and worn out, after a hard day's work, nothing so soon revives me as Seigel's Syrup. It seems to strengthen every part of the body, and is, indeed, a splendid tonic."

That was in the summer of 1900. And *now* Nature is herself again! Life is gladness indeed

We love Nature as she is portrayed in the fields and flowers, but we ourselves, who are part of Nature, must be in perfect health to be in harmony with the countless beauties around us.

The keynote of contentment is good digestion, and Seigel's Syrup awakens into life, by its nutritive and medicinal properties those dormant digestive organs of the dyspeptic.

He or she can then say, "Nature is at her best."

MARKET REPORT.

[*Per Mail advices of 5th April* 1901.]

COFFEE.

The London Commercial Record says:—There is no improvement to report; where any change has taken place it has been in favour of the buyers, with the exception of colory small East India which sold readily at higher prices. The public market closed yesterday for the Easter holidays and will not re-open till Thursday, the 11th April. No important alterations have occurred in "future" but the tone is quiet at the close and prices are slightly easier; yesterday May delivery sold at 32s, September at 33s December at 33s 6d, and March at 34s per cwt. No auctions to-day.

Rio Exchange 1s $1\frac{1}{32}$d, previous day 1s $1\frac{1}{16}$d.

HAVRE, *April* 3.—Good average Santos April opened steady $38\frac{3}{4}$f. and closed steady at $38\frac{3}{4}$f., May opened at 39f. and closed 39f., September opened at $39\frac{3}{4}$f. and closed at $39\frac{3}{4}$f., Decemer opened at $40\frac{1}{4}$f. and closed at $40\frac{1}{4}$f.

HAMBURG, *April* 3.—Good average Santos March opened steady $31\frac{3}{4}$pf. and closed steady $31\frac{1}{2}$pf., May opened at 32pf. and osed at $31\frac{3}{4}$pf., September opened at 33pf. and closed at 33pf., ecember opened at $33\frac{1}{2}$pf. and closed at $33\frac{1}{2}$pf.

NEW YORK, *April* 3.—Closing prices of No. 7 Rio were as follow:—

	Mar.	April.	May.	June.	July.
pril 3...	5·55	5·60	5·65	5·75	5·80
pril 2...	5·55	5·60	5·65	5·75	5·80

TEA.

INDIAN.—The quantity brought forward was lighter amounting 35,800 packages compared with 43,200 packages in the week efore, and 35,100 packages a year ago.

There was again a good demand for all descriptions except low ommon, particularly those with brownish and reddish leaf which emained somewhat neglected. Prices on the whole shewed little hange, but the tendency was upwards for attractive parcels. everal desirable invoices from well known Assam Gardens elicited risk competition.

For 29,500 packages on estate account $6\frac{3}{4}$d per lb. was obtained ontrasted with 8d per lb. for 30,600 packages in the preceding eason.

Deliveries in March were 12,926,000 lbs., which following after early $31\frac{1}{2}$ million lbs. in February may be considered satisfactory, ut the statistical position has been so interfered with by the Budget scares in both this and last year that statistics are isleading.

CEYLON.—Auctions were on a similar scale to that of the Tuesay before, *viz.*: 24,600 packages *versus* 24,000 packages and 28,000 ackages twelve months since.

An improved enquiry prevailed for useful kinds, both Leafy and Broken, from 4d to 7d per lb, and for many of the lots which ossessed better flavour an advance of from $\frac{1}{4}$d to $\frac{1}{2}$d per lb. was ecorded. Pekoes and Orange Pekoes over the above were also ell supported, but medium to fine Broken Pekoes and Broken Orange Pekoes passed very irregularly, some being withdrawn, as ffers were below limits. Choicest parcels as a rule fetched ull rates.

The average is $7\frac{3}{8}$d per lb. On the 28th ultimo it stood at rather more than 7d per lb., and $7\frac{1}{2}$d per lb. in 1900.

JAVA.—In the absence of public sales there is nothing to report.

Deliveries.—The clearances of all Tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 31st March, 1901 ... ... 17,363,058 lbs.
Do. do. 1900 ... ... 32,666,399 ,,

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	28,719	7,102	35,821
Ceylon	22,799	1,814	24,613
Java	—	—	—
Total ..	51,518	8,916	60,434

Also 589 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated April 4th, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1900-1901	1,538,872	1,116,852	52,038
1899-1900	1,534,248	1,035,841	50,559

36,790 *pkgs.* INDIAN
25,479 ,, CEYLON
— ,, JAVA
} Total 62,269 packages were offered in public auction this week.

Deliveries of Teas from London warehouses are still misleading owing to the large quantity cleared in anticipation of an addition to the Duty.

The market closed for Indian Tea on the 1st, and Ceylon Tea on the 2nd inst. The next sales will be held respectively on the 15th and 16th instant.

INDIAN.—Anything possessing quality continued to sell with strong competition, all useful liquoring Teas being readily disposed of at firm rates. On the other hand where liquors were indifferent, the market showed some slight irregularity. Closing invoices are now being freely sold, 137 having been brought forward to date against 147 during the same period last year. The official telegram gives exports to the United Kingdom for the second half of March as 209,000 lbs. against 100,000 lbs. during the same period last year, making the total from 1st April to end of March 162,022,000 lbs. against 148,792,000 last year.

Week's average of Tea sold on Garden Account 1901, 29,287 pkgs., av. 6·57d. 1900, 30,859 pkgs., av. 7·93d.

Total Tea sold on Garden Account 1st June, 1900, to date, 1,273,671 pkgs., av. 7·30d. 1900, 1,211,452 pkgs., av. 8·30d.

CEYLON.—With a comparatively light sale demand was good for all descriptions, useful liquoring Teas occasionally being a trifle dearer, although some of the better Broken Pekoes showed no actual advance, taking into consideration the improved quality noticeable. The official wire gives exports to the United Kingdom for March as 8,000,000 lbs. against 10,500,000 lbs. in the same month last year; making a total from 1st January to the end of March 29,000,000 lbs.; it also estimates the quantity for the current month at from $8\frac{1}{2}$ to 9 million lbs.

Average for week 7·35d, against 7·43d, in 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 356,379 pkgs., av. 6·58d. 1900, 330,954 pkgs., av. 7·56d.

JAVA.—Javas were not represented; the first sale after Easter will be on the 18th instant.

Bank Rate 4 per cent. Exchange on London three months' sight:—Calcutta $1/4\frac{3}{16}$. Colombo $1/4\frac{7}{32}$.

COCOA.

There is no material change in market conditions. Auctions on the 2nd instant presented 7,310 bags, of which about 3,250 bags sold, the only movement in prices being in the case of fine Grenada which was rather dearer. Of 1,807 bags Trinidad catalogued 580 bags sold at 67s to 69s for middling to good, being valuations. Of 2,525 bags Grenada, 2,070 bags were placed at 64s 6d to 66s for fine red, 63s to 64s for fair to good and 61s 6d to 62s 6d for very common to common, which rates show a slight appreciation in the fine grades but unchanged for others. 27 bags Dominica realised 61s to 64s 6d for common to fine. 49 bags Colombian brought 71s to 75s 6d. Of 219 bags Samana only one lot sold at 56s. Ceylon is still pressed for sale but without much result, demand being very poor; 1,048 bags were catalogued and about 400 bags found buyers, superior bold red 100s, fine bold and medium 90s 6d to 93s 6d, fair to good ditto 77s 6d to 85s 6d, good to fine small 66s to 70s 6d, common to ordinary medium 58s to 64s 6d, pickings 53s to 56s per cwt. Privately 6d to 1s decline accepted for Trinidad, about 500 bags selling, including fine at 70s 6d. 175 bags Bahia sold at 65s, and 1,000 bags Guayaquil—grey to reddish Caraquez 63s to 64s 6d, winter Arriba 68s to 70s, and summer at 80s per cwt.

PEPPER.

BLACK.—There is very little business passing on the spot, but prices are firm at 6d per lb, for fair Singapore. For arrival more activity stimulated by the very small shipments, and rather higher prices paid—March-May (s.) $6\frac{1}{8}$d to $6\frac{5}{32}$d, May-July $6\frac{1}{8}$d, and June-August $6\frac{3}{16}$d.

Nothing offered at auction on Wednesday.

To-day 25 tons Tellicherry sold for arrival at 54s c.i.f., and 25 tons at 53s 9d c.i.f. April-May shipment London.

A fair quantity of Singapore sold at 5 3/32d for fair.

The shipments of Black Pepper for the month of March, compare as follows:—

	1st-half.				2nd-half.			
	1901.		1900.		1901.		1900.

Cayenne.—4 crates yellow Nepaul bought in at 1s per lb.

GINGER.

Cochin.—Considerable expansion has taken place in the volume of business this past week, and values have risen; short crop reports and the Continental demand are the cause. Medium and small washed rough sold privately at 36s 6d to 37s 6d, small native cut at 45s to 46s 6d, small cut and trimmed 48s, medium native cut 50s. Under the hammer 56 cases 500 l were offered of which 20 cases 20 bags sold—small and med cut at 47s 6d, small and medium very rough dark, slightly li 35s per cwt.

Jamaica.—Continues in good demand at a further advance o per cwt. 744 barrels were offered and all sold, as follows:—fai good bright washed 50s to 61s 6d, low middling to middling 43 to 49s, common to good common 39s 6d to 42s, Rhatoon 35 38s per cwt.

CINCHONA.

The Amsterdam correspondent of the *Chemist and Druggist* wri on April 1, that the N. V. Nederlandsche Veem cinchona-bark partment estimate the shipments from Java to Europe dur March, 1901, at 875,000 Amsterdam lbs., against 650,000 Amsterd lbs. and 977,000 Amsterdam lbs. for the corresponding period 1900 and 1899. The total shipments from January to Ma have been:—

	Amsterdam lbs.		Amsterd lbs.
1901 ...	2,623,000	1897 ...	1,350,0
1900 ...	1,906,000	1896 ...	2,073,0
1899 ...	2,025,800	1895 ...	1,862,0
1898 ...	2,356,000	1894 ...	1,873,0

QUININE.

A good speculative business was done last Thursday and Frida after the Amsterdam bark sale, and the receipt of news of sma shipments from Java for March. The transactions included sp at 1s 3 1/4d to 1s 3 3/4d; May at 1s 3 5/8d to 1s 3 7/8d, and August 1s 4d 1s 4 3/8d per oz. This week, however, practically no business ha been done in secondhands, and prices are easier, with sellers June delivery at 1s 3 3/4d, and August at 1s 4d. At the auction quinine in Java to-day the bulk of the offering was disposed of a an advance of 11 per cent., the average price paid being 22 3/4f against 20 1/2fl. at the previous auction. The American brand (P. W.) was advanced to 34c. last week, but other makers still quot 32c. German sulphate from makers is unchanged at 1s 4 1/2d.

(Average for all India 6·57d., April 4th.)

Coorg.

Polli Betta, 30*th April*.—*Weather*—Rain almost every day during the past week. Pleasantly cool now. Coffee is freshened up and is putting on good growth. *Works*—Manuring and borer. *Crop*—The last blossom had favourable setting weather, but unfortunately there was not much of it. *Labour*—plentiful. *Health*—Fair.

THE DATE-PALM.

Bye-products have been freely brought to the notice of tea and coffee planters in Southern India, but if any one of the many that have been named has been cultivated successfully, the reaper of the benefit has kept his success decidedly dark. On the whole, there has probably been more hard cash spent in the acquirement of experience than profit earned as the result of enterprise. Yet this is by no means a good reason why such enterprise should cease. One of the chief difficulties is that gentlemen who advocate the claims of particular products do not state sufficiently clearly the habitat and the requirements of such plants, the conditions under which they chiefly flourish, and many other details essential to the making of a correct estimate of prospects. As a rule, some scientific or quasi-scientific individual draws up a recommendation intended for people in the district in which he is working or writing. They, knowing the local conditions, etc., are able to form a sound judgment as to his suggestions. Some newspaper scribe afar off gets hold of these, and without knowing these conditions calmly reiterates the suggestions with respect to a district or a country wherein climate, temperature, labour conditions, etc., are widely different. The result—temporary *kudos* to the scribe,

expensive experience to the experimenter who acts upon his suggestions. And then, the man who thinks he has a grievance *howls*. If there be one who has really benefited by the advice given him, he, nine times out of ten, lies low, for fear lest any manifestation of content on his part might stimulate his brother-planters to follow his example, thus increasing competition with the natural result of increasing the risk of prices declining.

For instance, the Conservator of Forests, South Australia, has warmly advocated the claims of the date-palm to the favourable notice of agriculturist on the interior of that colony. It does not follow that the date-palm would thrive in India, nor are sufficient details regarding atmospheric conditions given to enable us to assert that there is a strong probability that this palm would do well in particular parts of India. Still, there are sufficient indications in this country that the cultivation of the date-palm deserves consideration, and while several of the planting districts in Southern India offer no inducement there are a few where the date-palm would probably repay the planter's care. It is described as "an example of extraordinary fruitfulness." We are informed that "next to the cocoanut it is unquestionably the most interesting and useful of the palm tribe." It can draw nourishment from the scorching sand, and scarcely less burning airs of heaven, and the brackish waters beneath the soil, which are fatal to all other kinds of vegetation ; it retains its verdure fresh in the glare of a pitiless sun ; it provides the grower with beams and coverings for his huts ; cordage for the harness of his horses and mules ; fruit to satisfy his hunger. The Italian relies on his vine, the Polynesian on his cocoanut, the Arab on his date-palm. The habitat of the date is North Africa, Arabia, Persia, Egypt, Nubia, Syria, and it does not go farther east than the mouth of the Indus. It is indigenous in the ' anary Isles ; wanting in the south of Senegal, and it no longer appears in oasis of Darfur, between the 13th degree and 15th degree of latitude. The Zone in which it grows well in general is that between 35 degrees and 19 degrees north. According to LINK, it flowers freely in the south of Europe, as in Sicily, the Morea, and the south of Spain ; and also bears fruit there, though this is not sweet. In Sicily it still grows at 1,700 feet—namely, at Aderno and Trecastagne on Etna, but it probably does not bear fruit on this island. It needs 5,100 degrees Fahr. of heat accumulated during eight months for the date to ripen its fruit perfectly. If the sum of the heat be less the fruits set, but they do not grow to their full dimensions ; they also remain bitter to the taste, and lack much of the sugar and albumen, to which they owe their nutritive properties. The mean temperature of the year in the Sahara averages from 68 degrees to 76 degrees, according to the locality. The heat commences in April, and does not cease till October. KEITH JOHNSTON's "Physical Atlas" gives the temperature in Summer and Winter as—July, 81 degrees to 86 degrees ; January, 52 degrees to 61 degrees ; mean temperature (annual), 68 degrees to 76 degrees. Biskra, the celebrated date-growing district in North Africa, is in latitude 34 degrees 51 minutes, altitude 410 feet ; it faces towards the hot tropical south, and is protected by mountains on the north side. It has an annual mean temperature of 68·5 degrees. (January 50·2 degrees, July 89·8 degrees.) The thermometer seldom sinks in the cold season more than 2 degrees below freezing point, and the date can endure 6 degrees of frost. The neighbourhood of the sea is unfavourable to the production of good da The general altitude of the central districts of North Afr where it thrives, is 600 feet to 2,000 feet ; the date p also grows in some Egyptian oases from sea-level to 600 f The lower portions of the rivers Euphrates and Tigris Turkey are from sea-level to 600 feet. The amount of ann rainfall requisite for the best dates is from 5 inches to inches ; for those of inferior qualities, from 10 inches 25 inches.

It may be thought that all this does not lend m encouragement to the idea that the date-palm can be succ fully grown in India, but the fact remains that it is gro in some parts. Although the date requires a hot, climate, yet its roots must have access to moisture. A though it is essentially a tree belonging to desert regio yet it is confined to the oases in these deserts where wa is found. It flourishes in rainless countries, but only wh there is moisture in the soil, either naturally or produced irrigation. MEYEN, in his "Geography of Plants," sta that a sandy soil suits the date best ; and SONNINI, saw growing in the sands in Egypt as well as in the more fer parts. It will luxuriate even in saltish soil, and the wa for its irrigation may be slightly brackish. Brigade-Surge BONAVIA says that, on the whole, it thrives best in san granitic, schistic, and calcareous soils. The northern half Arabia, which is an important centre for date culture, granitic. As to the virtue of dates:—They contain m than half their weight in sugar, but there is a fair amou of flesh-forming material present as well dates without stone, contain in 100 parts :—

Water	... 20·8
Albumen	... 6·6
Sugar	... 54
Pectose and gum	... 12·3
Fat	... 0·2
Cellulose	... 5·5
Mineral matter	... 1·6

The pungent rigidity of the foliage protects the date fr encroachment of pasture animals ; hence it can be left witho fencing or hedging. Professor TRYON, Government En mologist, Queensland, from whose writings we gather t chief facts stated above, considers that conditions in lo Queensland are favourable for date-palm cultivation. Wou it not be worth the while of some planters in India—say, Mysore,—to make an experiment?

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S.

Tea Trade with Persia.

The Secretary of the Indian Tea Association (Calcutta) h issued a copy of a memo. drawn up by the Kangra Vall Planters' Association with regard to the caravan carryi 32,000 lbs. of tea which it is proposed to send through fr Quetta to Meshed. He invites attention to the terms a conditions stated in the memo., in accordance with which t will be received from gardens. The date of despatch of t caravan has been changed from July to September.

CARAVAN OF TEA FOR PERSIA.

At a meeting of the Planters of the Kangra Valley held Palampur on the 15th March, 1901, the following resolutions w passed:—

That a caravan of tea consisting of not less than 32,000 lbs. n

despatched to Persia *viâ* the Nushki route in accordance with H. M.'s Consul suggestion (*vide* H. B. M's Consul for Seistan's rrespondence with the Kangra Valley Planters' Association, ngra Tea Association and others).

Time of Despatch.—The caravan should start early in September 01, an earlier date not being recommended by the Consul, the onsoon being considered unsuitable for transport and trade

Agent and Terms.—Mr. T. J. Greensill of Bunoorie Tea Estate to engaged as travelling agent on a salary of Rs.300 per mensem, d travelling expenses to conduct the caravan of 100 or more mels carrying 32,000 lbs. or more of tea from Quetta *viâ* Nushki, d to sell the consignment to the best advantage in the markets North Persia, also to establish agencies, etc., for future trans- tions. Commission on sales (gross) to be allowed to the Agent at e following rates up to Re.1/ per lb., 2½ per cent., above Re.1/2 Re.1/8 per lb. 3½ per cent., over Re.1/8, 5 per cent.

Tea required and Mode of Contribution.—*Black tea* well twisted un- oken Pekoe leaf with tip; *Green tea* hand-rolled finest, China unpowder style similar to ordinary Kangra Valley make. Samples be obtained from the Honorary Secretary, Kangra Valley anters' Association, shortly on application. Those wishing to nd tea from this district must give notice of the amount they are lling to contribute and send samples of the same at as early a te as possible. The samples will be examined by the Committee the Kangra Valley Planters' Association whose decision as to eir suitability or otherwise must be accepted. A subscription ual to four annas per lb. on the amount contributed will be re- ired from every contributor, this being the estimated requirement cover Agent's salary and expenses for six months. Tea from e Kangra Valley must be sent to a *central factory* before the 1st ptember. It will then be bulked by Mr. Greensill and repacked. he Manager of the Bundla Tea Company has offered his factory r this purpose, charging only actual cost offered and labour sup- ied by him; no charge will be made for use of factory or machin- y. If, in the opinion of the Committee of the Kangra Valley anters' Association, the tea supplied from any Estate be consider- so inferior to the samples previously accepted from that Estate as be detrimental to the remainder if bulked with it, the Committee ay refuse to accept such tea and the same shall be removed by e owners at their own expense, no claim of any description being ssible against the Committee of the Kangra Valley Planters' ssociation. No contribution can be included for which the sub- ription at the rate of four annas per lb. has not been paid to the onorary Secretary, Kangra Valley Planters' Association. The bscription will be returned if the tea be not ultimately despatch- . *Packing:* black tea must be packed in uniformly sized white ood, lead-lined, hooped cases. The exact measurement of the cases hich will contain 80 lbs. nett) will be intimated later by the onorary Secretary, Kangra Valley Planters' Association, to those plying for information. Green tea must be packed in bags and ll be bulked by Mr. Greensill in Palampur.

Teas from other districts should be bulked for each district if ssible, as it would be found inconvenient were the Agent obliged handle a number of different sorts of tea. The same conditions mentioned for Kangra Valley teas must be accepted by outside ntributors subject to such modifications only as may afterwards agreed upon. These teas should be sent direct to Quetta ldressed to Mr. T. Greensill, Agent, Kangra Valley Planters' ssociation, before the 10th September. Other particulars on plication to the Honorary Secretary, Kangra Valley Planters' ssociation, Palampur.

Every contributor binds himself, when sending tea, to the terms this circular.

The Agent will go with the consignment from Quetta *viâ* Nushki Seistan and Meshed, also to other places in North Persia. The onorary Secretary, Kangra Valley Planters' Association, is now communication with bankers in Persia enquiring the facilities r the remittance of money to India. Account will be kept for the aravan's expenses by the Honorary Secretary, Kangra Valley lanters' Association, and deposits on account of the same will be dged with some bank in Lahore. The proceeds from the Kangra alley portion of the consignment (which being posted) will be vided proportionately among the contributors in the Valley, those om outside contributions will be kept separately and remitted to eir different owners which accounts can be closed. Reports of e progress of the caravan will be periodically circulated if possi- e to those concerned.

COFFEE IN DISTANT LANDS.

XXVI.

Jamaica.—Mr. Robt. Thomson, in a letter to the *Times* during last year, quotes paragraphs from his paper published in a Foreign Office Report in 1895 (Misc. Ser. 370, Columbia). He states in his report that coffee cultivation in Columbia yields a larger profit than in Jamaica. He assigns several causes, *viz.*; land at a nominal cost, cheap and abundant labour, exchange in planters' favour, and larger yield per acre. The bulletin of the Botanical Department, Jamaica, says:—All these causes are more than sufficient to account for a large profit. He might have added abundance of land with virgin soil and suitable climate, which would fully account for the larger yield. He, however, appears to think that "one of the chief elements of success must be assigned to the systematic interplanting of shade trees with the coffee." Elsewhere he alleged that another reason for the low price of Jamaica coffee is the want of careful preparation. I under- stand. although he does not make it clear, that he is only referring to the coffee of the peasantry. It is, however, hardly fair to compare without discrimination the coffee industry in the two countries: in Columbia it is carried on by capitalists on large estates, whereas in Jamaica the bulk of the coffee is grown by peasants on small holdings. Mr. Thomson refers to extension of cultivation. In my Annual Report for 1892-93 I dealt with the desirability of the exten- sion of cultivation chiefly by large landowners, and pointed out that the circumstances operating against increase in cultivation were scarcity of labour and want of roads which also enhance the cost of production and putting on the market. At the present time and with the price of coffee so low, it is rather the improvement in cultivation and in the curing of coffee of low altitudes than any extension that is desirable. Mr. Thomson states that in Columbia at an eleva- tion between 5,000 and 6,000 feet, no shade at all, or only light shade is required; and between 3,000 and 5,000 feet he recommends certain leguminous trees, Erythrina and Inga. He is in error in stating that "British colonial coffee planters have in the main ignored the application of shade to the coffee." In Jamaica, as well as in Columbia, the coffee tree at highest elevations does not need any shade, but on the contrary it wants all the sun it can get; and if for some reason, such as the proximity of forest land inducing cloud, there is a deficiency of direct sunlight, the coffee berries do not ripen, and cultivation is a failure. At somewhat lower altitudes a slight shade is necessary, at any rate during the hottest part of the year. Jamaica coffee planters in the Blue Mountains use the West Indian Cedar which is a light shade at a good height above the coffee, the trees being bare of leaves during the winter months. In Manchester at still lower elevations the light shade of the Trumpet tree is made use of, and shade of some kind is quite universal at this and all lower elevations. In fact, so far from shade not being used, I have frequently

TO THE DEAF.

A rich lady, cured of her deafness and noises in the head by *Dr. Nicholson's Artificial Ear Drums*, gave £5,000 to his Institute, so that deaf people, unable to procure the Ear Drums, may have them free.

Address—No. 989 D, THE NICHOLSON INSTITUTE,
Longcott, Gunnersbury,
London.

[w. 26-5-00—26-5-1901.]

pointed out cases where the shade not being used, I have frequently pointed out cases where the shade used is too dense, favouring the growth of fungus pests. There is no need of direct attention to the employment of shade in general, but there is need for careful inspection of the kind used and its effects in different localities, and for directions about the adoption of shade trees more suitable than many of those at present in use. But the proper use of shade is only one item in an immense number of agricultural operations of which the peasant proprietors are completely ignorant, and have no opportunity of learning, unless instructors are sent amongst them, not to lecture, but to demonstrate by actual work in their fields.

Queensland.—The *Queensland Agricultural Journal*, writing about Coffee on the Clarence, remarks :—Many persons who have grown coffee in the South of Queensland have affirmed that it will only prove remunerative in certain favoured localities, such as the Buderim Mountain and parts of the Blackall Range. Others go so far as to say that coffee cannot be profitably grown anywhere south of Mackay. The Clarence River is very far south of Brisbane, yet we learn from the farmer and Grazier that Mr. John Ball, of Chatsworth Island, has been most successful with his coffee crop this year. His last crop returned 1,694 lbs., which sold at 1s. to 1s. 3d. per lb. This year the crop is expected to amount to something like 6,000 lbs. Mr. Ball has mastered the manufacture of coffee of the highest quality, and finds a good demand for it. His trouble is to secure sufficient quantities of beans. In reply to inquiries made of Mr. Holmes, a planter in Fiji, Mr. Ball has been informed that, owing to unsatisfactory prices offering in Sydney for the Fijian bean, the growers there were abandoning coffee-growing. Mr. Holmes forwarded Mr. Ball some seeds of the Liberia coffee, which is a sturdy-growing tree with deep tap root, and which bears a larger berry than the ordinary Arabian variety. In Fiji, even at the extremely low prices (3d. to 5d. per lb.) paid for the beans, this variety returned 4s. 7d. per tree. Mr. Ball finds that he can pay 10d. a lb. for good beans. His harvesting is done by lads, who are able to earn 15s. a week at the work.

Sarawak.—The *Sarawak Gazette*, remarking on a recent visit of H. H. the Rajah to the Matang Coffee Estate, says :—

His Highness the Rajah, accompanied by Mr. R. Shelford, visited this estate during the past month for two days and thoroughly inspected it.

The estate, which is now worthy of the name, occupies a space of about 650 acres and is nearly all planted. The coffee is of different ages, but in three years the whole will be in bearing, except that which will be planted during next year. This will be some 80 acres, and when it is done the estate will have reached its maximum size. A correct survey of the whole estate is now being made by Mr. H. B. Crocker.

The manager reckons on turning out 3,000 pikuls in one year when the estate is in full bearing and this at a moderate computation should give about $60,000. There are now two hundred and fifty coolies at work, costing about $1,500 monthly.

A new store, with washing vats, crushing machine, and oil-engine for working the crusher, will have to be made or ordered within the next eighteen months; the cost of this should not exceed $5,000.

His Highness the Rajah was very satisfied with the state of all the coffee, but especially with the younger plants which are coming on evidently with strong roots. Scar a yellow leaf is visible anywhere. A fair show of coff on the older trees and there is a fair amount in store.

Spain.—The cultivation of coffee for commercial purp is, according to the United States Consul at Malaga, abou be undertaken for the first time in the Province of Mal at the little village of Campanillas, some five miles from capital. Don Quirico Lopez, a rich wine merchant of Mala will begin by setting out from 20,000 to 50,000 coffee pl on his plantations there. As long as Cuba and Porto R were Spanish possessions, the cultivation of coffee in peninsula of Spain was forbidden, but under present co tions the Government interposes no objection. Senor Lo has already made some experiments and is convinced t coffee can be advantageously grown in this province elsewhere in Andalusia. Others who have examined question claim that there is not sufficient humidity in Andalusian climate. Cuba and Porto Rico formerly suppl Spain with nearly all her coffee, paying the Governmen consumption tax of 60 pesetas per 100 kilograms ($9·60 220·46 pounds) on all coffee entering the Peninsula. present the import duty on coffee is 140 pesetas ($22·40) 100 kilograms from all countries except from the Spani island of Fernando Po, and Spain's supply last year ca largely from Valparaiso and other South American por Coffee from Fernando Po pays a duty of 105 pesetas ($16·8 per 100 kilograms.

NOTES.

New Season's Tea. Samples of new season's tea arriving in Calcutta, and are said be of satisfactory quality.

Tea and Coffee. We publish interesting Proceedin of the Central Travancore and South Mysore Planting Associations. Upon these we sh probably comment in our next issue.

Coffee in Nyasaland. On another page we give an int esting account of coffee-planting Nyasaland, by M. Lionel Decle. There are some obvio blunders, but in spite of these what M. Decle says is w worth reading.

Tea in Cochin. There was only one tea plantatio comprising an area of 12 acres, in t Cochin State during 1899-1900. Tea has practically ceased exist on the Nelliampathies, and there was no manufactu during the year.

The British Tea Duty. The resolution re-imposing t Tea Duty has been adopted in t House of Commons by 221 against 130 votes. An amen ment of Mr. Redmond to reduce the duty to 4d. was rejecte Sir Michael Hicks-Beach said that he was aware of the co dition of trade in India, but regretted he was unable to redu the duty this year.

Ceylon cries off. With reference to the moveme to restrict the production of Briti grown tea, the General Committee of the Indian Tea Associ tion have received a telegram from London to the effect th

has been found impossible to obtain the adherence of a fficient number of Ceylon tea concerns to reduce the Ceylon :turn by eight million pounds.

---

w and then: a Contrast.

The *Ceylon Observer* remarks :—We have seen the Tea Sales lists of a Ceylon proprietor for February, 1900 d February 1901. In the former his "Pekoe Souchongs" e described as of "poor quality," but they sold for 6d a lb. the presen year (February), the London report is "sweet voury teas," but all the same they realised 3d a lb. !

---

e Green Tea Problem.

On the 27th March Mr. Mackenzie despatched the following cablegram om New York—"Green prospects are more favourable." This nouncement was not supported by the experience of the trade Ceylon at the time; but recent issues of the *Canadian rocer* show evidences of increased attention, as many as even wholesale houses offering the new make in a single ue.

---

e Nyassaland Coffee Co., Ltd.

A general meeting of this Company was held at Colombo on 27th ultimo and it was resolved: "That in the inion of this meeting the Company should be wound up d liquidators appointed, and the Agents and Secretaries be thorised to issue notices to the shareholders calling meetgs to give effect to the above." Mr. E. R. Waldock conded.

---

ffee in Burma.

The *I. P. G.* states the coffee crop of Mr. de Souza's plantation near ıung-nguon, the border of the Karen district, has been mpletely destroyed by blight. There would seem to have en a regular epidemic of plant disease in that corner of ırma in the past season. The Karens raise large quantities the berry, which is garbled and cleaned by the American ocess, finding ready sale locally.

---

dustrial Development.

A Company has been formed in England, with the title of India evelopment (Limited), for the purpose of engaging in and omoting various commercial and industrial enterprises in dia, and for the purpose of acquiring, amongst other things, rtain interests in undertakings connected with the growth, anufacture, and refining of sugar, and the manufacture of lling stock and work in connection with railway equipment, c. The share capital is £500,000 in shares of £1 each, the esent issue consisting of 300,000 shares at par.

---

ffee in Spain.

The United States Consul at Malaga, Spain, states that Don Quiri- Lopez, a rich wine merchant of Malaga, intends setting t from 20,000 to 50,000 coffee plants on his plantation ere. Señor Lopez has already made some experiments and convinced that coffee can be advantageously grown in this ovince and elsewhere in Andalusia. Others who have amined the question say that there is not sufficient humidity the Andalusion climate. Practical experiments on a large ale will be made, and the result is awaited with great terest.

---

the Indian Frontier.

Mr. Foley, who suggests supplying Indian tea on the Kashmir and Punjab Frontiers, the tea being compressed into small bricks, has interviewed General Sir R. C. Hart, who received the suggestion favourably. Mr. Foley thinks a million pounds will thus be consumed. He addressed a letter to the Private Secretary of the Viceroy on the subject and has received a letter from Capt. Webb Ware, urging him not to remain at Quetta but to go on to Meshed, taking Seistan and Birjan *en route*. He carries eight hundred pounds of tea, sorted in tins, and loose samples.

Coffee under Shade.

It is cheering, says the *Ceylon Observer*, to have the following report from a well-known Passara planter :—"If only men had planted coffee under judicious shade, we should not have been bothered in Uva very much by tea over-production. I have coffee growing here as vigorously under shade as it was a quarter of a century ago." Our contemporary remarks :—"This is probably on or near to Mr. C. B. Smith's estate of Mousagalla, the first clearing on which we saw burned off by old Thomas Wood in 1865! The soil and lay of land were all that could be desired. Pity there are no suitable reserves on which to try coffee under judicious shade now.

How "Fine Plucking" works towards Reduction of Output.

A proprietary planter reports to the *Ceylon Observer* his experience of the fine plucking he introduced this year on his estates—medium elevation —thus :—

Crop reduced	30 per cent.	
Cost of tea increased	10 to 15	„
Price got for tea increased	50	„

Our correspondent is, says our contemporary, a believer in and supporter of the "rest" scheme; but surely with a 30 per cent. reduction, "fine plucking" is a more effectual means of reducing output? And the best of its working, is that it pays.

Quinine in Italy.

A copy of a new law regulating the price of quinine in Italy, has just been signed by Victor Emanuel III. The law, No. 505, is dated December 23, 1900, and consists of ten clauses. Clause 2 lays down the price at which quinine shall be sold to the public in gramme-tubes as 40 centesimi (3·8d.) for the hydrochlorid, and 32c. (3d.) for the sulphate or bisulphate. The detailed regulations are not yet issued from the Government printers, but are promised "shortly." The new law is meeting with considerable opposition from the Italian pharmacists, and it may be some time before the public will benefit by the reduced prices. The price at which quinine is at present sold in Rome is $5\frac{3}{4}$d. for a gramme of sulphate, or $9\frac{3}{4}$d. for the hydrochlorid.

Eccentric Taxation.

Sir Howard Vincent lately gave notice that he would ask the Chancellor of the Exchequer "if he is aware that, of the over-sea goods brought into the markets of the United Kingdom, only 6 per cent. are charged a toll or duty on behalf of the public revenue, and that these latter, amounting to 32,000,000*l.* in 1890, paid a duty of 80 per cent., one-half being raised on articles of food not producible in Great Britain and Ireland, and paying $47\frac{1}{2}$ per cent. *ad valorem* duty, and the remainder on tobacco, paying 253 per cent. *ad valorem;* and whether in the coming Budget he will endeavour to readjust this unequality, and to enlarge the area of indirect taxation,

giving a perference to Empire products, and admitting bread, stuffs and raw materials free."

Mr. E. E. Green.

We heartily congratulate the Ceylon Government Entomologist who is the first to be awarded the "Barclay Medal" of the Bengal branch of the Royal Asiatic Society. The late Surgeon-Major Barclay, of the Indian Medical Service, contributed to science some most valuable work on various Fungi. His untimely death at the early age of 39 was a severe loss to science in the East, and it was felt that some suitable memorial should be instituted so that the influence of his example and work should be kept alive. Hence the "Barclay Medal" which is to be presented annually to the investigator in Biology in India and Ceylon who has done the most valuable work. The first award, as we have said, has been made by the Council of the Society to Mr. E. E. Green, F. E. S., Government Entomologist, Ceylon, for his work on the insects of India and Ceylon.

"The Adulteration of Food Products."

This is the title of United States Senate Document No. 141. It is a digest of the testimony taken before the Senate Committee on Manufactures, together with a digest of the laws of the United States and of the several States and Territories relating to food products. Much of the testimony given before the Committee was *ex-parte*. Some notoriety-seeking parties, whose testimony is of little value, posed as experts. Many witnesses were special leaders. In some cases it seemed impossible to get the testimony of experts in the manufacture and handling of food products before the Committee. Thus far, the testimony submitted is far from conclusive and is insufficient to base intelligent legislative action upon. There are many physiological questions connected with food adulteration that ought to be settled before a National pure food law is enacted.

The London Tea Market.

The last special telegram to Colombo from Messrs. Gow, Wilson & Stanton reports that the market generally is weak, and that the market for medium liquoring Pekoes and Broken Pekoes shows a slight decline, while the market for Common Pekoes and Broken Pekoes is also weak. The price of fair liquoring Ceylon Pekoe Souchong is 5½d and the average price of Ceylon tea sold on garden account this week was 6⅞d (three-eighths of a penny down)—as against 6¼d and 7⅜d respectively in the corresponding week last year. Reuter reports that the demand for Ceylon tea is generally poor ; and Broken Pekoes are in buyers' favour. Pekoe Souchongs are quoted at 4¼d (same as last week) and the average for the week at 7d (⅜d down) as against also 7d quoted for Indian tea. 33,000 packages of Ceylon tea were offered for sale, of which 28,000 were disposed of ; while of the 25,000 packages of Indian tea offered, 22,000 found purchasers.

Ceylon Green Tea in Toronto.

The *Canadian Grocer's* Toronto letter, dated 28th March, 1900, says : —The firmness on the price of good flavoury Indian and Ceylon teas with point is still the feature of the market. Advices from abroad say these teas are in demand everywhere. On the local market there are practically none to be had. Low-grade Indian and Ceylon teas are still low in price, but they are not to be had on the same basis as they were a short time ago. During the past w one importing house tried to duplicate an order for a l grade tea, but the holders cabled that they could not ac unless ½d. higher was paid Representatives of shippi houses report that there has been quite an inquiry during past week for Ceylon green teas. Said one broker : "Cey greens in first hands which a month ago were going beggi are now almost exhausted, so great has been the deman late. We have had to rebuy and pay a profit in orde fill wholesalers' orders which came in. There will b distinct shortage until the teas now afloat arrive."

Coffee in the New World.

An interesting statistical report coffee for 1900 compiled by Arn Schramm, of New York, gives the following : Total arriv of coffee at New York during 1900 were 342,274 bags Maracaibo, 41,404 La Guayra, 8,035 Coro, 64,745 Savani 172,301 Mexican, 204,739 Central American, and 20,9 Jamaica. Following differences between average of 19 ye and receipts for 1900: Maracaibo, 31,017 bags more ; Guayra, 75,627 less ; Coro, 540 less ; Savanilla, 33,386 le Mexican, 56,121 more ; Central America, 23,062 less, a Jamaica, 3,191 less. Stocks on December 31, of follow years, follows : Maracaibo, 1900, 38,354 bags ; 1899, 7,32 1898, 30,488 ; 1897, 37,800 ; 1896, 19,000 ; 1895, 47,2 La Guayra, 1900, 4,039 ; 1899, 187 ; 1898, 4,866 ; 18 400 ; 1896, 1,600 ; 1895, 3,700 ; 1894, 1,001. Coro, 19 3,499 ; 1899, 450 ; 1898, *nil ;* 1897, *nil ;* 1896, 150 ; 18 3,000 ; 1894, 300 bags. Savanilla, 1900, 12,384 ; 18 6,222 ; 1898, 21,885 ; 1897, 20,800 ; 1896, 12,000 ; 18 21,000, and 1894, 3,619 bags. Lime as a Fertiliser.

A writer in the *Queensland Agricultural Journal* remarks that ma of the heavy black soils of that colony would be immense benefited by an application of lime. Lime in itself is very little value as a fertiliser or as a direct agent in suppl ing plant food ; still it exercises a beneficial influence up the land by rendering many of the latent fixed plant foo available. It is a mistake to apply a large dressing of lime one time. A little and often is the correct thing. Experimen carefully carried out, and results noted, prove that 25 bush per acre is ample when frequency of applications is observe Like every other ingredient, lime requires to be handled wi judgment. It must be borne in mind that lime sinks in the soil. It is, therefore, unwise and unnecessary to hur it by ploughing it in it should be sprinkled over the surfac and lightly harrowed in. It must also be remembered th lime in its caustic state (quick-lime) exercises a very powerf influence, both physically and chemically, upon the so And it should always be applied in this state, and harrowed in as soon after the application as possible. Lim should always be slaked with water in preference to any oth agent, water being the quickest means of breaking it dow All other methods are too slow, and admit of too much ca bonic acid being absorbed, thus changing the lime back in carbonate, which is practically the form it assumed prior being burned.

GENERAL ARTICLES.

IDENTIFICATION OF VARIETIES OF CACAO.

In answer to "Pod's" enquiry, Mr. Carruthers has been ood enough to supply the following explanation :—

'The identification of the varieties of *Theobroma Cacao L.* is like ie identification of varieties of other cultivated plants, a matter hich varies considerably with the expert who observes them, and Ceylon so much crossing takes place, that it is not possible to lassify" all fruits as "Forastero" or "Criollo."

Many pods contain seeds of the distinctly criollo character, *viz.*, hite cotyledons when cut and roundish in shape as well as other eds with the Forastero purple-coloured cotyledons and longer in ape. It is impossible to give a varietal name to such pods and ey may be produced by a tree having the habit and characters sociated with Forastero or those recognised as Criollo.

In a large number of examinations, weighings, and measurements f pods from trees of both varieties, I have not as yet found the ean weight of seed contained to be distinctly greater in either f the two varieties generally grown in Ceylon. The diagrams—f pods not typical of either variety—were published to show the nwisdom of trusting to external characters, in valuing the fruit, he exact commercial value depending as it does on the quality of he individual seeds, and their preparation for the market. This as not considered; that is another and a most important question

TEA REFORMS.

"J" writes in *Capital* :—

For some time the various economies that might be brought into e in these hard times in tea has been engaging our attention and e intend referring to them in detail. It is no use attempting to mbat such drastic reforms as the abolition of the 1-lb draft when e whole trade was up in arms against it, so that unless there is reater unanimity amongst growers the scope of reform must be mited to such measures as will give the least offence. Lately we eferred to the matter of freight, and in this, we believe, there is reat room for improvement. Then, again, we hear of various tempts to lighten the package and send home tea in place of wood, ut we doubt much the success of attempting to make $\frac{1}{4}$" planks do e duty of $\frac{1}{2}$" planks, not that $\frac{1}{4}$" wood would not carry well enough, ways provided the wood was of first class quality, but all or early all the jats of wood in India are of such short grain that we oubt the feasibility of any thing of this kind, when the wood is ot obtainable. Even the very best jat of timber available are ort in the grain and consequently very brittle, and we say without ar of contradiction that a quarter inch plank will not bear the rain and knocking about that a tea chest undergoes in transit and e loss will not be compensated for by the gain in carrying capacity. t the most the increased capacity would not amount to 5 lbs. per est, so that the amount per ton would be 45 lbs., as 9 chests are ckoned to the ton by the Conference liners. We cannot look, en, to this as a great saving, but whilst dealing with the box, ere is one point which, if insisted on unanimously, might be of reat benefit to the industry, and that is the doing away with the eighment of the empty package, and this, we think, might be ffected by united front. Who benefits by it? So far as we can see nly the *bonded warehouses.* His Majesty's customs can gain othing, as no duty is levied on the empty package but simply on s contents, and there seems no doubt that if a united effort were ade this ancient and antiquated custom might be got rid of. So ar as one can see then, proprietors of the bonded warehouse are he people to attack ; the customs officers have hitherto been redited as the stumbling block, but we consider this is merely a lind to throw the blame off the proper shoulders. Meantime of a ackage of tea weighs 29 lbs. 15 ozs. the duty is payable on 29½ lbs Who gets the 7 ounces, if not the bonded warehouseman? And, if his is added up it comes to a very nice little sum during the 12 onths. The *cutcha* package, as sent out of every factory, has lways from 2 to 4 ozs extra tea put in to prevent short weight, ut the box may shrink, and nearly always does to a certain extent, o that if the shrinkage exceeds 4 ozs. another half pound goes nto the wherehouse coffers. In addition any one who has visited the warehouses can see for himself how carelessly the work is done, and how on a damp, foggy day tea is allowed to lie about exposed to damp, and, at the end of the weighment, a considerable surplus comes out, due to the moisture absorbed by the tea. There would be fewer complaints as to poor quality if tea were bought and sold on the nett weight, and only a few packages turned out to check such. It stands to reason that tea must go off when lying exposed to the cold clammy damp atmosphere at Home. As a contrast think of the time, care and trouble our planters take in packing it in the factories prior to despatch. If such care and pains are necessary on a factory, how can it all be discounted at the London end without injury to a sensitive article of produce like tea. Cheesy and tainted teas have been the cry against certain steamer lines last year. Is it not possible that this taint was contracted otherwise than on boardship? Several of the steamer lines, not formerly mentioned, have during last year been accused of improper stowage, and that the tea had through this carelessness on their part got tainted, but it appears strange that these accusations should have been sprung upon them in a year in which prices were so depressed that every one was glad to shift his responsibility to another man's shoulders. It will no doubt be a lesson to the steamer lines, but we consider such complaints to have a very grave bearing on the industry and one which the Tea Association should thoroughly sift to the bottom, and endeavour, if possible, to find out if these claims are well founded, or they are the emanations of a diseased brain searching for an excuse to shift responsibility. If the case is clearly proved against the steamer companies by all means get them to correct these ways of stowage, but if they are ill founded and untrue, it gives the steamer companies a strong excuse for keeping up tea freight. So far as we can go ourselves every endeavour was made to find out from the captain of the steamer in question all particulars which went to prove that stowage was the same as usual, and no obnoxious cargo in close proximity to the so-called damaged tea, and everything pointed to the claims having been put forward on account of dull market; but this is only surmise and it proves that it is necessary for the Indian Tea Association to watch its own and shipping company's interests and to verify complaints or otherwise on their own behalf and all concerned in tea.

THE VIRTUES OF COFFEE.

We have been critised in some quarters, says the *Spice Mill*, for having printed last month, at considerable length, the opinion of medical men who believe the use of coffee may be attended with a good deal of danger. We certainly did not indorse this particular view of coffee, and our comments in the article in question should have made this clear. We understand perfectly well that the public at large is greatly influenced by any statement about foods, which comes from a reputable physician, and that the mere printing of his statements is likely to hurt traffic in any food condemned by them, no matter with what editorial disclaimer these statements appear. The *Spice Mill*, however, is not for the general public. It aims to interest manufacturers and traders who handle particular lines of food merchandise, and it presents facts and opinions of all sorts about this merchandise without regard to their value as advertising trade talk. Anybody who handles coffee ought to be interested in hearing what is said about coffee at a meeting of the New York County Medical Association, whether the doctors' opinions are such as to make people drink more coffee or less. The dealer needn't be disturbed unless he thinks that the doctors' discussion is only an underhand bit of advertising arranged for by some of the coffee substitute people. If an active, trained physician really thinks he has noticed cases of nervous disorders which are produced, or aggravated, by coffee drinking, it is not only proper for him to say so to his brethren, but it is decidedly interesting to everybody in the coffee business to hear all the honest discussion which results. If the use of coffee is not sometimes abused, if coffee is such a good thing that it can't be abused, it will have to be set apart in a little niche of its own, for none of the other good things in this world are free from danger when their use is not regulated by intelligent temperance.

The coffee merchant wants to see more coffee used, of course; he wants coffee to be preferred to other beverages, but he doesn't urge his friends who are using two cups of coffee a day to increase it to 20. And since, besides being a coffee merchant, he is also an honest

citizen, with the welfare of the whole community at heart, he doesn't want anybody, friend or foe, to drink 20 cups of coffee a day, or any other amount which for that particular individual is excessive. He wants the truth to be known about coffee by all the people, and a proper use of coffee to be indulged in by all the people.

Now, the best of it, for the coffee merchant's business interest, is that coffee is an article which will stand any amount of investigation. The more it is examined, and tested. and used, the more good things people find to say about it. When one doctor starts telling about possible dangers, a dozen answer by telling of positive benefits. No other article used as a beverage has been so well tested by all the people, with such wholesome results, and no dealer need be afraid of any amount of honest talk about the actual effects of coffee on the human system. To enable more people to get really good coffee at a fair price, is a line of business effort which includes as much philanthropy as may go with any mercantile enterprise.

NYASSALAND.

The Daily Telegraph Commissioner, Mr. Lionel Decle, writes:—

This territory of the British Chartered Company owes its importance as a Colony to coffee planting, which is yearly assuming more importance, and Nyassaland coffee is of so superior a quality that it commands the highest price on the London Market, where it has fetched treble the sum paid for Brazil coffee. There are in Nyassaland about 10,000 acres of land

UNDER COFFEE,

all of which is not, however, in bearing; and the last crop is estimated at 1,100 tons, an enormous amount if one considers that the plantations only date from ten years back. The industry traces its origin to Mr. Buchanan, a Scotch gardener attached to the Blantyre Mission, who brought out from Scotland a coffee plant, and it is almost exclusively from this single plant that all the millions of coffee trees planted in the country have come. Land can only be procured now either from private holders or else from the Government. Uncultivated land can be purchased from the former at prices ranging from half-a-crown to 10s per acre, and from the Government at 5s to 7s per acre. Land under coffee ranges from £7 to £20 per acre for estates of 200 acres or more. An estate was recently sold for £6,000. It consisted of 300 acres of land under coffee, with 1,700 acres of forest land, with houses, buildings, and machinery. All the planters with whom I have discussed the subject seem to agree upon the point that a small plantation of 150 acres will pay better if thoroughly cultivated than a plantation of 300 acres or more, on account of the labour conditions and of the difficulty of securing sufficient skilled assistance. Under this heading are included planters, sowers, and pruners, as well as carpenters and bricklayers. Most of the skilled labour is supplied by the Ya and in a smaller proportion by the Atonga tribes. Unskilled labourers consist chiefly of Angoni from districts west of Lake Nyassa, and also of a few Angoni from Portuguese territory near Lake Shirwa and of Atonga, a tribe inhabiting the western shore of Lake Nyassa. This

LABOUR QUESTION

is a difficult one to solve, as the time when workers are chiefly required by planters, from November to March, is the very time when natives are reluctant to leave their homes, where they are wanted to cultivate their own fields. Unskilled labourers are paid at the rate of 3s. to 4s. a month, and skilled men get from 5s. to £1; but while the former come from long distances, the latter usually live in the villages forming part of the estates. Planters calculate that they require an average of two labourers per acre of cultivated land, so that 20,000 men are wanted to do justice to the land now under cultivation. Lack of assistance is the planter's incessant cry, and all of them greatly fear that the high wages paid in Southern Rhodesia may divert there the labourers, and cause a rise in the pay, which would kill the coffee industry. Planters, I think, exaggerated the danger, and I doubt whether the proposed railway from the south will cause a serious exodus of natives towards Southern Rhodesia, provided, however, that the planters treat their people better than they have done so far. Until now, it has been customary to allow the labourers, in addition to their pay, one yard of calico, equivalent to 3d, per week, for their food, but the natives within a radius 200 miles from Blantyre will not sell food for calico. To obt food the plantation labourers have to work on Saturday afterno and on Sundays in the gardens belonging to the natives of villages surrounding the plantations on which they are enga and in exchange for such work they receive a few cobs of c on which they have to subsist for the remainder of the week. their own country such people are accustomed to eat meat, and c of corn are not sufficiently nourishing for them so that the nati who go to work on the plantations usually return to their coun in a state of semi-starvation. Sufficient rations would mean to planters only an extra monthly expenditure of one per head, so long as labour does not cost more than five shillings per mon all told, plantations must pay handsomely. Most of the

PLANTATION LABOURERS HAVE TO WALK FROM FOUR TO SIX HUNDRED MILES

to come from their homes to the coffee-growing districts, and much to return to their country. On the way they usually suf from scarcity of food, and most of them are more or less exhausted the journey, so that they cannot perform the amount of work wh they might otherwise do. If the planters combined together t could easily get their men brought by steamer at a cost of t shillings and sixpence per head, which for four to five months' wo usually supplied by these men would increase their cost by sixpen per month. If this were done the present scarcity of labo would soon cease to exist, and the danger of its being divert south would not arise. At present the people who come to wo for five months in Blantyre are away nine months from th homes, so that none of them return to work two years in succe sion. The high wages paid in Rhodesia do not constitute t attraction one would think to the Nyassaland natives. Mo of those who have been to Salisbury, where they earned fro one pound to thirty shillings a month, have returned witho a penny, and they complained that everything was so expensi that they had been unable to save anything of their wages. must also be noted that these people do not care to go so far aw from their country among other natives, whose language they do not speak and whose habits are quite different from their ow Many planters, led by an irresponsible rag published in Blantyr make a great fuss over the Administration allowing natives leave the Protectorate. They forget that the Administration h no power to prevent individuals from leaving the country. Ever thing legally possible is done to discourage them. For instanc when a man applies for a pass to go outside the Protectorate he mu first show that he has paid his hut-tax, and must satisfy th Collector that he has made provision for the support of his wife, a family during his absence. But more cannot be done. Stringe regulations have been issued prohibiting the engagement by labo agents of natives to work outside the Protectorate, and in order help the planters the Administrator has gone so far as to allow t natives to go and work in Blantyre, the first month's wages bei collected by Government to cover the payment of the year's hut-ta From Central Agoniland alone 9,000 natives went down to Blanty last year on those terms. To close the subject, I can only say th as I have shown, the planters hold the remedy in their own hand to avoid the present scarcity of labour and to prevent the exod they fear, and if they do not adopt it they will only have themselv to blame for the consequences.

FOUR YEARS IS THE TIME REQUIRED

for coffee to bring returns. Trees begin to bear at the end of thr years, but a full crop is only gathered in the fourth year. I ha tried to obtain estimates of the cost of a plantation, but no plante seem to agree as to figures. Some calculate that, until coffee h been brought into bearing, £12 will have been spent on each ac of land under cultivation, about £3 per year, the cost of lan buildings, and machinery, not being included in this calculatio After coffee has begun to bear, the cost per acre is estimated at 2 to £2 per acre, to which must be added the cost of portera and transport to London and the salary of European assistant one man being sufficient to look after 300 acres; but above th amount an extra assistance is required for every further 150 acre The returns vary considerably, according to the quality of the so manuring, and other causes Some gardens only give 1 cwt. p acre. while others have produced as much as 7 cwt. The avera return may be calculated at 2½ cwt. per acre, which, even at t present low price of coffee, ought to pay well. At the price of £ per ton coffee should yield a profit of £40. The cost of portera

om the plantations to the navigable portion of the Shiré River ries from 30s to £2 per ton, according to the distance; and 50s r ton is charged by the transport companies for the carriage by eamer to Chinde at the mouth of the Zambesi, whence the freight London comes to £3 per ton, or a total of about £7 10s. As I ve already said, Nyassa coffee fetches the highest price on the ondon market, where it has been sold for as much as £114 per ton. ne of the difficulties planters have to contend with in this part of e world is the impossibility of borrowing money locally. Want capital and lack of credit would prove fatal to most of them if ey met with two successive unproductive years. Fortunately for em, no leaf disease has yet made its appearance among Nyassa ffee, but there is an insect—a kind of bug, of the ladybird species which causes spotted berries. If, however, they are collected in ne, no great damage is done to the coffee. Early rains are the st for the plants, which require altogether about fifty inches of in. Another difficulty planters have to meet is that of finding itable

EUROPEAN ASSISTANTS.

any of the young men who are sent out here are unsuited to their rk. To be really useful an assistant should possess a good deal practical knowledge; he should be able to show natives how to ke and burn bricks, understand something of carpentering, d have had some experience in the management of animals. oung men having had some practical training on a farm are ually the most useful. It is true that they generally lack the owledge of book-keeping, which is one of the duties they have to rform. Assistants on plantations receive from £150 to £200 a r, with a house. Fifty pounds are sufficient to cover all their penses. But their life is not a pleasant one. They are most of time alone, and even supposing that they should have a neighur within ten to twelve miles, their only means of conveyance is machilla, a hammock carried by natives, a slow and disagreeable de of locomotion. Horses are most expensive and difficult to , £40 being the average price paid for a horse. Natives do not derstand them, and there is the risk of their dying of the dreaded rse sickness, besides the impossibility of taking them to any trict where tsetse fly is found.

There is one thing planters urgently claim, and which I have g advocated as well for Rhodesia as for Nyassaland. This is creation of a

PUBLIC LABORATORY,

which would be attached a public analyst and an experimental m. On such a farm experiments would be carried out in all the ferent cultures under an able specialist, planters being able to d manures and soils to be analysed, and coffee to be tested and ued. They should be able to send their assistants or to go themves to be taught the cultivation and curing of coffee, tobacco, tea, l other products likely to suit the country. From this institui planters should be able to get an expert to examine their ate, to advise them as to the most suitable methods of improving m, and, from time to time, the superintendent of this institution ld publish in the Government *Gazette* any information likely prove of use to the planters. To open such an establishment uld mean an original outlay not exceeding five to six hundred nds, and to keep it going would cost less than £1,000 per num. The greater portion of this expenditure would be covered the fees paid by the planters, and I am sure that none of them uld object to paying six pence per ton on the coffee exported m their estates, if the money were used to cover the cost of intenance. In addition to the plantations, the most important de of British Central Africa is india-rubber, a trade which has en an extraordinary extension within the last few years. While 1897 the exports of india-rubber amounted to £1,000 only, they l reached £10,000 in 1898. Most of it comes from the west coast Lake Nyassa, but unfortunately, the natives gather it in so eless a fashion that unless proper supervision is exercised by the horities all the plants will soon be destroyed. I am told that ps have already been taken to avoid such a result. I will now try sum up in a few words

THE PROGRESS WHICH HAS BEEN ACCOMPLISHED

ce I came here in 1893. Magnificent roads have been built, the st absolute security has been assured throughout the Protector, a regular administration has been established in the remotest tricts, where justice is rendered exclusively by Europeans, very has been completely wiped out, the facilities of communiion have increased in a remarkable way, and their cost has considerably decreased. Coffee-planting has passed from the experimental to the practical stage, and the cost has been greatly reduced. Last, but not least, the whole Protectorate has been put in direct telegraphic communication with the Cape and Europe, a result entirely due to Mr. Rhodes, without the cost of a single penny to the British Central Africa Administration. I have absolute faith in the future of the country, and I do not share the views expressed by many people as to the precarious state of the coffee industry. The railway from Lake Nyassa to the coast, a thing of the near future, will give a fresh impulse to coffee-planting, and reduce the cost of transport; and if it causes a small exodus of local labour this will be fully compensated by the increase of facilities it will give the natives to come and work on the plantations. It will also relieve the strain now existing on the local resources of labour, so much of which is absorbed by the transport of goods to and from the Shiré River. The Tanganyika Railway will give a fresh impulse to the opening up of Northern Rhodesia, and when the federation of South Africa is an accomplished fact, Northern Rhodesia and the British Central Africa Protectorate will naturally be included in that great movement. The Protectorate will soon be as ripe for self-government as Southern Rhodesia, so long as it does not stand isolated as it now does, but as part of a system, and its only hope for such a result lies in the prospect of becoming a portion of the Great Federation of the South. This ought to give fresh and increased vitality to the country, and fittingly crown the great work so brilliantly inaugurated by Sir Harry Johnston and continued by Mr. Sharpe, who has successfully performed the most difficult of tasks in showing himself able to carry the weight of the heavy legacy left to him by his distinguished predecessor.

THE TEA PROSPECTS IN ASSAM.

A Dibrugarh correspondent writes to the *Indian Daily News*:—

So far as we have gone up here, "the season" has been what may be conveniently designated as completely upside down. January and February were dull and sunless throughout. March on the contrary was dry, mild and exceptionally warm. So warm and foreign was the sun towards the end of the month, that all vegetation was rudely awakened from its Autumn repose and brought forward at a rapid rate. Scarcely any rain fell throughout the month, and what little did fall was rendered useless by the strong evaporating power of the sun's rays. Strong cold north winds, accompanied with slight showers of chirely rain, was the predominating feature of the weather during the first part of the present month. Since then we have been having fierce thunder storms nightly, followed on by cold sunless days. On the night of the 18th we experienced a regular hurricane, accompained with a deluge of water, while the noise of Heaven's artillery overhead was rather more than alarming. On the whole, it was a night not to be forgotten in a hurry. The dawn of day showed up the havoc which the hurricane had done in its wild fury in the vicinity of the lines, or thatched houses of any kind; the ground was strewn with sungrasos to the depth of some inches, and woe befall any line which had been weighed in the balance, and found wanting in the way of thorough repairs—over they went crash and the luckless owners had to seek shelter elsewhere from the cold pelting rain and merciless hurricane.

A few of the monarchs of the forest, whose heads were too heavy for their lower extremities to support against such a violent onslaught, were rudley torn from the support afforded them by mother earth, and hurled headlong crashing on to the bosom of their great supporter; others that were found with the canker worm gnawing at their hearts were snapped clean across. Broken branches green shoots, tattered and damaged leaves bestrewed the ground for a considerable distance in the near neghbourhood of large forest trees.

The tea-bushes suffered little from the fury of the gale, owing no doubt to the fact that they are not what we may term heavily clothed yet, but if they did not suffer from the wildness of the weather they have certainly done so from the check which they received from the mildness of it. The prolonged drought and excessive mild warm weather, experienced throughout the month of March, stimulated the bushes to such a state of rapid activity

which could only have been maintained by a liberal supply of moisture from above and a continuance of the same mild atmosphere conditions.

That this was not accorded us has already been shown and the result is that the tea-bush is now at a standstill, and its numerous enemies, such as red spider, green fly blights etc., are having a very good innings. Red spider is exceptionally bad on hybrid bushes, and is spreading rapidly on the indigenous variety, and the worst of this pest is that if it gets a strong footing at the commencement of the season it clings with tenacious persistency to the ground, thus gained right throughout the season.

Our only hope is in a prolonged spell of mild forcing weather combined with an evenly distributed and copious rainfall. The recent heavy drenchings which the bushes have been exposed to ought to have washed a tremendous lot of them off, but their multiplying powers are so strong that there is no getting away from them.

Much was expected in the way, of cures for pests and blights, from the scientific expert who was pottering about for a considerable time up here last year, but "œ's me for Prince Charlie," I am afraid we are going to, be allowed to go on expecting to no purpose, all that I have ever seen from his pen—and I read most of the planting periodicals—was the description of one of our cures for thread blight, a cure which has been applied to that particular blight by some of our leading planters for years. Thread blight is a disease with which we are quite capable of coping without the assistance of an expert. Why "even I myself" (and under the correction of bragging be it spoken) succeeded in completely eradicating this blight from a plot of land on which over 25 per cent. of the bushes were effected. How I managed to wipe it off the slate would, however, be "far too long a tale to tell" in this article; I may, however, hark back to it on some future occasion.

It is an ill wind that blows nobody good, and possibly the pests and blights of Assam, combined with the abnormal drought which planters have been experiencing down south, may go a long way in helping to solve the vexed question of over-production.

We have all got a touch of selfishness located somewhere in us. although we do not exactly care to air our selfish views in print; still if something natural, although not exactly usual—in the form of a mixture of pests and blight or a prolonged drought were to step in now and settle the question of over-production without the aid of man—the few I am sure who escaped unscathed would be inclined to look upon the phenomenon as an interposition of Providence to save the occasion and solve the problem.

RUBBER IN MEXICO.

The following description is given of a method of preparing rubber in vogue among the Mexican Indians:—"On taking over charge of this (Hacienda) last August, I found scattered through the coffee fields some 25 or 30 rubber trees (*castilloa elastica*) of different ages and sizes and all much the worse for barbarous tapping in years past. Some Indians asked me if they might tap the trees on shares, and considering them of no value I allowed them to do so. They proceeded leisurely to work and in a few days brought me to the house three old kerosine oil cans of rubber milk and an armful of a jungle creeper called by them '*Amole bejuco*' but which I have since had identified at Kew as *Ypomœa (colonyclion) Bonanox L.* They asked for an old soap box and proceeded to pound the creeper with a stone, putting about double handfuls of the crushed creepers into five gallons water, they then poured some five gallons rubber milk into the box and two gallons or so of the water, stirred it for a moment or two and in less than 10 minutes took from the box a slab of white rubber 34 by 16 by 6 inches, poured away the water left and proceeded as before until they had four large slabs of rubber. These they split in two and hung in the sun, and in a day or two it turned black. The nett result of rubber was 53 lbs., which sold in Vera Cruz for 95 cents. (say two shillings) per lb. or $50 35.100. Had I employed my own peons to do the work at 62½ cents. per day, the cost of producing the rubber would have been about $6-25 silver. In a regular rubber plantation of course it would have cost a little less, as these trees were scattered about.

FRUIT-GROWING EXPERIMENTS IN QUEENSLAND.

A very valuable and interesting report has been forwarded the Secretary for Agriculture in Queensland by Mr. S. C. Vol Assistant Instructor in Fruit Culture, Department of Agricult The following extracts will doubtless interest many of our reader

You will doubtless remember that the late frosts of last Spr did very serious damage to all of our fruits, as some of th occurred just at the blossoming time, and others when the fruit setting or had actually done so.

Of course against a trouble of this kind we are practically pow less, especially in the Downs country, where most of the land considerably exposed.

However, in spite of this drawback, we had a sufficient setting fruit to give us a decent idea of the capabilities of the place also of the district; and I think I am not going too far when claim for the Westbrook Orchard that it has shown itself capa of producing as fine a quality in many lines of fruit as can be produ in any part of Australia. This being so (and I think it is corre we surely have something on which to congratulate ourselves.

Before dealing with the later fruits, I desire to give a sh account of the apricots, nearly all of which were of splendid s and quality. I give date of ripening, as showing what of constitutes special value for catching an early and comparativ bare market. This is a very significant point in our work, wh we remember what, indeed, must never be lost sight of, *viz.*, value of our experimental work to the growers throughout country who are intended to profit by such operations. I wo also like to say here that it is a matter for strong regret that few of those who are engaged in fruit culture ever take the trou to visit our State Orchards with a view of getting what may pr very valuable information to them. I do not remember to h ever met one of the local men at the Westbrook Orchard. Stil consider that it is only a question of a little time when they feel obliged, in their own interest, to pay attention to our doing

APRICOTS.

Red Masculine.—Ripe 15th November, size small; quality fair, incli tos plit, crop prolific. The defects of small size and tendency to s were due mainly to the facts. (1*st*) that the rain came too late to al any real benefit to such early fruit, the best rain only coming in Novemb and (2*nd*) that when the rain did come a sudden rush of sap occurred, wh was more than the hitherto stunted fruit could stand. Under be conditions this fruit should improve.

Sardinian.—Ripe 15th November, small to medium, very pale s white flesh; quality very fair, ripened sound.

Royal.—Heavy crop, first picking 30th November; size not quite up mark, being too early to benefit fully by rain; split a good deal when r came, later fruit improved considerably in size. Yielded fifty cases off row of twenty-eight trees.

Oullin's Early Peach Apricot.—Ripe 30th November, size good, flav very good; a good cropper, but ripens a little too much on one side fi making it a trifle awkward for packing unless picked at a certain stage

Luizet.—Ripe middle December; size medium, quality moderate.

St. Ambroise.—Ripe same as last; size medium, quality splendid.

Mansfield's Seedling.—Ripe Christmas, size good; fruit solid and of g quality.

Large Early.—Ripe Christmas; only a few fruit, quality good averag

Alsace—Ripe Christmas, a good cropper so far; size, general quali and flavour all good

Angoumois Hative.—Ripe Christmas, good cropper; fruit strong bulky, and apparently a good packer; quality good.

Warwick.—Ripe Christmas, medium size, quality good; fruit strong firm.

Royal George.—Ripe Christmas, early; a large, flat, and somew lopsided fruit; very free on stone, and of delicious flavour.

Campbellsfield's Seedling.—Ripe Christmas, early; a large flat cot, on stone; a good dryer; flavour very good indeed.

Kaisha.—Ripe Christmas, a few very large showy fruit; strong an good quality.

Moorpark.—Ripe well before Christmas and up to New Year; a fair c but would have been better in a good season; nearly all great fruit of g quality, a pleasure to handle, and took well in market; a lot of these w fancy-wrapped.

Hemskerke. Same as Moorpark.

Blenheim.- Ditto.

Our marketing was mainly in Royals, Moorparks, Blenheims, Hemskerks, as we have full rows of them. The others, with the except of the Alsace, of which we have a row coming on, are all in pairs or

ly of each variety, for the purpose of proving their suitability for the ace and district and their general qualities. We have a few others, which ve yet to come into fruit.

Peaches.—A limited list of these have come into fruit this season but that list there is something which I consider of the highest value.

China Flats.—Experimental only; ripe New Year; moderate fruiting ly; fair size and quality for the sort, but I do not place a high value on ese.

Governor Garland.—Ripe 1st December; a beautiful peach; medium size, t rare good quality.

Alexander.—Ripe 4th December; like last.

Foster.—Ripe early in January; a great peach of high commercial value; ze splendid; quality splendid; a good packer.

Lady Palmerston.—Ripe early in January; one of the very best; size od; quality really superb.

Globe.—Ripens on through January; a vigorous grower; good cropper; ze really extraordinary; quality fine; a great marketing peach.

Muir.—Ripens same as above; great peach; finest dry peach in the world; llow outside, and in quality good; also a good marketing fruit.

Shanghai.—Ripens about with the last, perhaps a little later; great ze; good useful peach for either cooking or dessert; quality good; a good opper.

Robert Stewart.—A seedling from the last peach apparently, evidently of ne same type, ripens a little later, not quite so big, but a very pretty fruit f fine quality, and very good flavour; prolific. Next season this list hould be very much increased, and I hope them to bring under your notice ther valuable varieties.

The enormous advantage gained by wrapping and packing as we ave done can be at once seen by comparing, as I did, our own fruit fter its journey with other fruit sent and packed in ordinary cases. Every peach in our lot would open out fresh and firm, with no ruises; the others were often so much bruised as to be unfit for sale.

FRUIT FLY EXPERIMENTS.

Last year, at Westbrook, we only had an odd fly or two; this year ve have had, altogether, through the season, a good many. Next ear we will probably have more, for the simple reason that no ufficient check is put on its increase by the numbers of people in he surrounding district who grow fruit, either for their own use r for sale.

We must, therefore, defend ourselves against the carelessness f the general run of growers; more especially the man who calls imself a farmer, and grows wheat, or milks cows, or keeps sheep or a living, but at the same time keeps a small lot of fruit-trees o bear their annual crop untended and unchecked, and breed their nnual brood of fly at the same time. However, in self-defence, and or the benefit of the growers as well, we have carried out experiments this season, to a certain extent only, with netting on the rees as a preventive for the fruit fly. Our experiments come short f what could be wished, for the simple reason that we had not a ull crop of fruit on any of the trees covered, and on many of them ery little.

My original purpose was to cover the tree, and, in the event of ts proving a success, to report on (1*st*) the cost of the netting and ther material used, and (2*nd*) the value of the crop thus kept ree from fly.

It would then be a simple matter to say whether it would pay r not.

Not having the full crop of fruit, I cannot give the exact information needed, but I can go a long way towards it.

I can state here that which I am pleased to be able to state, *viz.*, hat the netting does keep the fly out, and so saves the fruit.

Out of quite a number of peaches which I covered, I failed to ind a single maggotty fruit. The fruit under the nets was allowed to stop on the trees until some of it went rotten ripe, fell off into the net, and gradually dried up, but there was no sign of maggots or of the rot which always accompanies them.

First of all, fruit-growers should bear in mind the quality of the fruit we have already produced, and note that that quality will command the highest prices. Our sales this year show from 10d. to 1s. per dozen for these peaches; they should consider also the fact that it does not matter what quality or quantity of fruit they may grow if the fruit-fly gets properly at it; they will go down in the market, supposing they get there at all. In other words is means getting the best for a little outlay on the one hand, against getting nothing practically on the other.

Now, at Westbrook I covered, at a cost of 3s. 6d. to 4s., treet capable of bearing comfortably three cases of fruit, which is to-day worth 5s. per case. That gives 15s. less, say 4s., or 11s. worth of fruit, which is quite satisfactory. Next season, if the crop is a full one, I hope to get at the exact value.

In the case of some of the plums I covered, I am satisfied it will pay, as 10 to 12 yards of netting cover a tree capable of bearing quite a case of fruit worth 2s. 6d to 3s., the netting costing 10d. to 1s.

The beauty of this is that it enables a grower to guarantee his stuff, and you have none of the sickening loss which occurs where the fly gets a free hand. Nothing in the world could have been prettier or better than the peaches I gathered under the nets at Westbrook; and when I sent them away to one of our buyers, a wire came back asking for more.

Still, in carrying out these experiments I found the thing had its drawbacks, and that difficulties cropped unexpectedly oftentimes. In some points I have changed from the original method followed, and I think, effected some improvements which make the whole thing so much cheaper.

It was at first intended to try covering the trees by means of a light timber frame made from pine battens run down to small sizes, over which the net was to be stretched and tacked on.

The very first attempt over decent-sized peach-tree convinced me that this process would just about cost double what one could afford, and I dropped it. The next step was to consider putting the nets over the trees without any other support. We did this without any difficulty so far as putting it on was concerned, but we were bothered next by details such as fastening and closing the nets. The material is in 6-feet widths, and it takes a little cutting to prevent too much waste.

I followed up the plan adopted in South Africa of fastening and closing the nets with safety-pins; I also tried joining two widths for larger trees by sewing together with a machine. I tried these first with a tape on each side to give a grip, and then successfully with only one tape. This answered very well so far as it went, but we still had the sides to fix with safety-pins. A little exposure to wind seemed to unsettle the nets and make them gape between the pins, and foliage used to poke out here and there, although in pinning we double-folded the two edges together. As a little time went on we got more wind, often very strong, for at Westbrook it is nearly always blowing hard, and this had the effect of making the nets gape still more. We had to keep going round re-pinning and fixing, until I began to think it would not do one wanted something better still. I got over the difficulty by using bagging twine and pack needles not only for repairs or refixing, but also for joining lengths together at first.

I used to stretch two double-widths together right along the veranda, draw them tight, and sew together with the twine in half hitches about 6 inches long A man can get over this very fast. Then I rolled the stuff up, carried it out to the trees, and cut off as required.

After drawing the prepared piece of net over the middle of the tree it is generally easy to fix the sides by stitching down, and the beauty of the stitching is that it hardly gives a bit. The net is gathered at the bottom, and tied round the trunk. Although this netting is so thin and weak in appearance, it is wonderful what it has stood at Westbrook. Weather conditions have included everything from a gentle breeze to a violent gale, with rain and hail, and yet the nets have nearly all stood it out. A few of the first put on frayed out in the tops; one or two tore away a little, but nothing to speak of; and I reckon trees can be covered by the stitching process so that they will stand nearly anything. A more severe test will surely never be needed than what occurred at the Hermitage on 2nd January, when trees were uprooted and buildings blown away. Yet the nets I had put on the apple-trees stood the test, with exception of two, and they did more, they saved the fruit underneath from the hail so that there was hardly a mark on it.

On the Downs one of the greatest troubles is putting on the nets, because you rarely get a time when the wind is not blowing strongly, and it makes the netting fly all over the place. In districts where calmer conditions prevail, trees could be covered at a rapid rate. On the downs it is a slow process.

The nets have more or less of a rasping effect on any fruit which is on the outside of the tree, but I do not think the loss would be very serious from that cause.

Only in the case of our young apple-trees am I afraid of the fruit rubbing off, or damaging; and with them the trouble is that some hang on the ends of limbs, often two and three together, and when the heavy winds blow they simply get hanged about, and there is no escape.

DISTRICT ASSOCIATIONS.

SOUTH MYSORE.

The Annual General Meeting of the above Association was held in the Munzerabad Club, Saklaspur, on the 29th March, 1901.

The following gentlemen were present :—

Messrs. J. G. H. Crawford (*President*), G. Anderson, F. Norton, T. Hunt, W. Galiff, C. Cherry, J. Woods, H. Sladden, J. H. Robinson, W. L. Crawford, A. R. Park, R. Taylor, G. Harris, Capt. Fostor, and J. Aird (*Honorary Secretary*).

Messrs. Scott, Fowke, and Pittoch were present as visitors.

The Honorary Secretary read the following Annual Report, which, on the motion of Mr. Harris, seconded by Mr. Hunt, was passed and adopted :—

Gentlemen,—The past year has again been a most critical one in the history of our industry and I am sorry to say that the improvement which took place in prices last year has not been maintained. The prices so far advised from London for this season's crop have shown a very depressed market and limited demand except for coffee of the finest quality. Crops have however been generally good, and this, along with the decreased expenditure instituted on most estates, will help to tide us over the present critical time, and until things mend, as we are informed they must by those most competent to form an opinion on the subject. Our labour requirements have, as a rule, been fully met, and the decrease in coolies' wages instituted during the year on most Estates has been accepted by our maistries and coolies without demur—they apparently recognising that they must share in the bad times along with the employer. Prices of food stuffs in the local bazaars at one time during the year touched almost famine prices, but even then we found that the cooly was earning considerably more than a living wage and happily rates have again fallen to almost their normal level.

Agricultural Chemist.—Dr. Lehmann, the Agricultural Chemist with the Government of Mysore, made a tour through this part of the District in October last and delivered an instructive lecture at the Munzerabad Club on "Experimental cultivation." Dr. Lehmann's work has, I believe, been much retarded by the want of a suitable laboratory, but I understand that this has now been provided and I have no doubt that he will shortly be in a position to furnish us with scientific information of the utmost importance to our industry.

U. P. A. S. I.—Our Association was ably represented by Mr. J. A. Harris, who, at considerably personal inconvenience and at very short notice, agreed to attend the meeting at Bangalore in August last. I refer you to the published report for further information as to the subjects discussed.

New Labour Act.—I have no information as to when the proposed Act may be passed and come into force.

Roads and Communications—*Arsikere-Mangalore Railway.*—Sanction for the construction of the railway has so far as I am aware not yet been obtained, but I am informed on reliable authority that the re-survey instituted last year has shown the project to be much more feasible than the former and original survey promised and I hope that we may shortly hear of the project having been duly sanctioned.

Anjur Ferry.—No steps have as yet been taken to provide a bridge at this important crossing and during last monsoon the antiquated ferry arrangements were still in force and continued as a source of the greatest danger to the lives and property of the travelling public, which I am sure must appeal to the sympathies of the Government of Mysore which has otherwise done so m for the communications of our District, more especially after t lamentable accident which happened in Coorg last year.

Ossoor-Gonebide Road.—I am informed that sanction for the c pletion of this road (2nd section) at an estimated cost of Rs.54,(has been granted, but that no special allotment is to be made Government on account of the work. This it is proposed to proc with *gradually* and with such sums as the District Fund Bo may annually be able to provide. I am also informed that t grant for this year is Rs.2,000, a sum which is of course utte inadequate to meet the requirements of the case, as at the pres rate of progress we cannot hope to see the completion of t important project within the next 25 years.

Post Office.—At the request of several members I have ma complaints as to delay and non-delivery of telegrams, lette papers, and registered articles, but cannot say that I have obtain more than the stereotyped reply to the effect that the matter w be enquired into. A serious breakdown in the arrangemer took place during the past monsoon—the mails from Hass arriving on many occasions hours after the scheduled time.

Harbour on West Coast.—This important project is now receivi the consideration of the Government of Madras. Our Associati would like to see the harbour constructed at Mangalore so as tap the proposed Arsikere Mangalore Railway.

Marriage of H. H. the Maharajah of Mysore.—An address of congratulatory nature was presented by our Association to H Highness the Maharajah of Mysore on the occasion of his marriag and the thanks of the Association are due to Mr. W. L. Crawfo who, assisted by Mr. Graham Anderson, so ably represented us the interesting occasion.

Visit of His Excellency the Viceroy to Mysore.—As the U. P. A. S. could not see its way to adopt our suggestion that an address fro that body as representing all planting interests in Southe India should be presented to H. E. the Viceroy on the occasi of his recent visit, our Association, acting in conjunction with th of North Mysore, resolved to present one, but it was then fou that owing to the delay necessitated in obtaining the decision the U P. A. S. I the time remaining to His Excellency and t important nature of our proposed address did not permit of H Excellency the Viceroy receiving same, as to give an adequa reply would have necessitated much reference to official co respondence. The address has however been enclosed in a silv casket and forwarded through the British Resident for priva submission to His Excellency and not for the favour of a rep but to show our appreciation of the honour done to the Provin of Mysore by its having been included in His Excellency's tour Southern India.

Closer Union of North and South Mysore Planters' Association. At our last extraordinary General Meeting, as you are aware, resolution approving of a closer union between the North Myso Planters' Association and ours was passed, and the resolution has, am glad to say, obtained the approval of the northern body, and is proposed by that Association that a meeting of the Executives both should be held at an early date at Chickmaglur to discu matters of mutual interest.

Coffee-stealing.—I have heard of one or two cases occurri during the past season in the District and where detected the have been suitably punished.

New Markets for East Indian Coffee.—This subject has engage the earnest attention of all planting Associations in Southe India and, as you are aware, it was resolved by this Association its last extraordinary General Meeting to give its best considerati to any scheme which might be evolved at the next meeting of t U. P. A. S. I. and I sincerely hope that some such scheme, whi would meet the requirements of the case and have the support of least the great majority of coffee planters in Southern India, m shortly be forthcoming.

Retirement of Sir K. Sheshadri Iyer.—It is with the most extre regret that I note the announcement of the retirement of Sir Sheshadri Iyer from the Dewanship of the Province. The gre advance made in the general prosperity of the State and t development of its resources will stand as lasting memorials of h remarkable ability, enterprise, and Statesmanlike qualities. I a sure you will all join with me in wishing him in his retireme that peaceful and unclouded happiness which he has so well earne

---

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throat are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

he accounts are laid on the table and show a balance cash in d of Rs.365-10-9.

have to place my resignation in your hands and would beg to nk the President and members of Committee for the assistance y have accorded me in carrying on the work of the Association ing the past year. My especial thanks are also due to Mr. ham Anderson for the many occasions on which he has placed benefit of his valuable advice and long experience so readily at disposal.

n conclusion, I would beg to congratulate all holders of land in sore on the termination of the suit instituted against Mr E. M. yfair for the possession of his Huldi Estate. The decision of the er Court struck a blow at the law of Registration which we ked upon with the greatest consternation, and now that this ision has been reversed on appeal our most sincere sympathy till due to Mr. Playfair for the long, trying, and expensive litigation ch he has gone through.

I am, Gentlemen,
Your most obedient Servant,
J. AIRD.
Honorary Secretary, S. M. P. A.

Election of Office-bearers.—Mr. G. H. Crawford was re-elected esident and Mr. F. Norton, Honorary Secretary, with the follow- Committee:—Messrs. Graham Anderson, A. R. Park, G. Harris, L Crawford, and T. Hunt, and Messrs. Aird and Playfair in iting—and it was decided that representatives to Dusserah and P. A. S. I. be left to the above Committee by selection.

Business.

Ir. G. Anderson read the address presented to H. E. the eroy referred to in the Annual Report. A discussion took ce regarding the position of a harbour on the West Coast, which . Harris thought should be left to the experts—but it was pointed by Mr. Anderson, that if the claims of Mangalore for a harbour e not pushed, the chance of the construction of the Mangalore ikere Railway line would be adversely affected.

rench Tariffs.—The President suggested that a letter be written the U. P. A. S. I. asking the home authorities to again approach French Government on the subject of Tariffs; this was em- ied in a resolution by Mr. Harris, seconded by Mr. G. Anderson gave a *resumé* of what had been done by France, and carried. Ir. W. L. Crawford speaking in support of it.

ew Markets for E. I. Coffee.—Mr. Harris said that in connection h this subject, he thought the scheme proposed by Mr. Langdale uired clearing up. He would like to know if Mr. Langdale was ng to buy in the open markets, and would planters share in en- ced rates obtained by retail prices. He also thought that Mr. gdale's commission of 10/ a cwt was a high one, but pointed that until further information was forthcoming it would be in- isable to say no benefits would accrue from the scheme. He ught a coffee shop in Paris to push the sale of E. I. Coffee would oubtably do good, and suggested that a traveller might be ointed. He urged upon all present to support the following olution, which was seconded by Mr. Norton:

"That members be asked to subscribe to a Fund for the blishment of new markets for coffee, at the rate of four annas each cultivated acre of coffee, and that they commit their inter- into the hands of a Sub Committee consisting of four members e chosen to-day, who shall draw up a memorandum of their views, shall elect one of their number to act on a select Committee of the planters of S. I. should such be appointed."

nswering a question from Mr. Hunt, Mr Harris said that about 70,000 per annum could be collected if all supported the resolu- . Mr. Anderson pointed out that the Wynaad Association ned to find some objections, and that Government objected to ect an assessment of this nature—he suggested that the Merchant nces of Madras be invited to attend a meeting called to discuss the ter, and to give the benefit of their advice.

he meeting went into Committee for a free discussion on the ject, in which Mr. Woods gave some interesting information as ards warehousing, stocks, rent, etc.—and the matter remained *in u quo*.

oads.—Mr. W. L. Crawford proposed:—

"That this Association urge the Hassan District Fund Board epresent to Government the difficulty they have in finding funds for the upkeep of the District Fund roads, and would suggest that the Government come to the aid of the District Fund Board, with money from the Provincial Fund to enable it to complete several urgent works, one of which it should especially draw attention to, *viz.*: the Archudy-Chickanhully Road."

This was seconded by Mr. Sladden and carried unanimously. The President made some remarks on the suitability of Hassan for the permanent location of the Sessions Court, and the meeting unanimously resolved:—

"That this Association emphatically endorses the remarks made by the President, relative to the permanent location of the Sessions Court at Hassan, a station eminently well suited to the convenience and well-being of his Honor the Judge and the general public, by its geographical position outside the malarial rainy zone."

Rates of Coolies' pay.—Mr. Norton suggested that rates should be fixed for the whole District, and Mr. Park thought it should be left to groups of estates.

Game Preservation.—Mr. Hunt spoke to the meeting on this subject, and said that the Association had for many years agitated for a "Game Act," and with a view to preserving game, pending a Game Act, a meeting had been held on the 21st March, at which various resolutions were passed (which he read) and he now asked all present to support the new "Mysore Game Association." This was agreed to *nem. con.*

Mr. Harris proposed a vote of thanks to the retiring Honorary Secretary for the able and complete way he had carried out his duties.

This terminated the meeting.

CENTRAL TRAVANCORE.

Extracts from Proceedings of the Quarterly General Meeting of the above was held at "Glen Mary" Bungalow on Saturday, the 13th April, 1901. PRESENT:—Hon'ble Mr. G. L. Acworth (*Chairman*), Messrs. R. S. Imray (*Vice-Chairman*), H. D. Deane, Buxton Laurie, F. Bissett, H. J. Blandford, E. Latter, D. McArthur, E. W. Williams, G. A. Rutter, and W. H. G. Leahy (*Honorary Secretary*). *Visitor.*—Mr. A. J. Ferguson (*Assistant Superintendent, Travancore Police*).

Honorary Secretary having read notice calling the meeting, the minutes of last meeting were taken as read. The Chairman then addressed the meeting as follows:—

GENTLEMEN,—I am sure you will expect me in opening this meeting to allude to the great calamity that has befallen the Empire, since we last met together, in the death of our beloved Queen. How great that loss is, we have even yet hardly had time to realize. No words of mine could do justice to the exalted character, the high sense of duty, the splendid example to prince and peasant alike of our late Queen. These have been better spoken elsewhere and far more eloquently than I am capable of, but you will agree with me, that not merely the British Empire, but the whole world is the poorer for our loss.

Gentlemen,—The thing that occupies our minds for the moment to the exclusion of almost everything else is the present crisis in the Tea Industry, and I fear it is a subject that is likely to give us cause for reflection for some considerable time to come. Various schemes have been brought forward to alleviate the depression, the most notable being the Rutherford-Rosling scheme, *i.e.*, the abandoning of 10 per cent. of our acreage for two years. This your Committee has uncompromisingly rejected, and I do not doubt you will endorse their action. To my mind there are several sound reasons against so backward a policy, but I will only enumerate one or two of them. The principal reason is, that it is utterly wrong from an economic point of view, and would merely lead to a temporary and artificial inflation of prices. This would mean the re-introduction of teas from the Far East and the giving up by ourselves of such foothold as we have acquired in foreign markets. Again, the scheme is manifestly unjust. Tea estates are not philanthropic or charitable

institutions, and there is no reason and can be no reason, why a concern paying 10 per cent. at present prices should forego this advantage to bolster up a weaker neighbour, who is making a proportionate loss. A further reason is, that the scheme would set free 10 per cent. of labour on every Estate and would enable the remaining 90 per cent. of each Estate to be so highly cultivated as to more than counterbalance the loss in yield from the abandoned portion, so that our last state would be worse than the first. I could go on multiplying instances, but should merely weary you. There are four methods in my opinion of overcoming the present critical state of affairs They are (1) the compulsory cess, (2) which hinges on the first, the opening of new markets and more particularly the fostering of a taste for good cheap teas among the natives of India, (3) the reduction of the British Import Duty and an equalisation of taxation on tea, coffee and cocoa, all great rivals to each other, (4) the cessation of the idiotic manufacture of rubbish, which can remunerate nobody and merely damns our reputation in the eyes of the world. But first and foremost is the compulsory cess and to attain this no effort should be spared. South India, barring I believe 115 acres in the Nilgiris, has gone solid for the cess, and let us pray that the North will do the same. In so gigantic a country as India, where the distance between the most Southern and the most Northern Tea Districts is as great as that between Naples and St. Petersburg, voluntary combination is almost an impossibility, and it is only by the assistance of Government that adequate funds can be raised. I am at a loss to understand the argument of the Lieutenant-Governor of Bengal, that assistance from Government would be so unusual as to be out of the question, unless planters are unanimous or practically so. Is it not a law for the welfare of all communities, that the less must give way to the greater? Again, are we to go on working always on the same lines? Are the wheels of Government never to move out of one old groove? The fixing of the Rupee at 1/4 was a most unusual, I may say a most unprecedented piece of legislation, but it was done. The Government of Bengal is now subsidising the Indigo planters and actually providing them with funds out of its own pocket. I do not say the Government is wrong, quite the contrary: I am delighted to see Government recognising a great industry in difficulties, but subsidies from the British point of view are unusual. I hold that, if seventy-five per cent. of the planting community are in favor of the compulsory cess, considering it necessary for the salvation of the greatest British Industry in the East, that cess should be imposed, and with so enlightened and sympathetic a Viceroy as Lord Curzon, I feel almost confident we shall get it. Lord Curzon has shown his appreciation of our difficulties in his attitude as regards the Assam Labour Bill, and if this cess question is brought to his notice, I cannot but believe he will stretch out a hand to us. We do not ask for one pie from Government, we only ask the aid of Government to enable us to tax ourselves as a means of helping ourselves in our misfortunes. Once having the cess we should agitate for the reduction of the British Import Duty, and by placing the matter fairly before the electorate, I am convinced we should ultimately secure redress. Eighty-four per cent. of tea consumed in Great Britain is British grown: ninety-four per cent. of sugar consumed is foreign grown and bounty fed, but tea is now taxed cent. per cent. of its value, whilst sugar goes free. Is there any country in the world except Great Britain that would act in so unjustifiable a manner? The injustice is really startling, and it is quite extraordinary how long it has been complacently submitted to. Once secure a reduction in the Duty, and you will see an enormous increase in consumption in the British Isles. There is no reason why it should not rise to 7 lbs. per head, as in Australia, and, were this so, the cry of over-production would cease. But we must not forget our local markets, and it is our duty to do all we can to exploit them. Your Committee has suggested that we lay aside ten per cent. of our teas for this purpose in the coming season, and I hope you here in General Meeting will confirm this. The method of exploitation is a matter for future discussion, but Mr. Deane's suggestion in his letter to *Indian Gardening and Planting* is in my opinion the best yet evolved. No doubt the Indian Tea Association will assist us, if it has the funds, and with a compulsory cess there would be no difficulty in that respect. Gentlemen, I have held you long enough on this subject, though I feel much has been left unsaid. I should also much like to criticise some of the arguments for the ten per cent. reduction scheme brought forward at the recent General Meeting of the Ceylon Planters' Association, but neither time nor your patience will admit of this. I am, however, very sorry to see from the accounts of that meeting in the Press, that the planters have voted for the retention of the Ceylon Im Duty. For my part I consider they do not know their own inter Nothing could be of greater benefit to planters and merchants in Ceylon than a great central Eastern Market at Colombo. port would probably become one of the greatest distributing cen in the world. It is idle to talk of the shutting out of rubbish, Ceylon has shown that she can equal even China in the produc thereof. To turn to our own local matters, cart rates and ro the latter as always, are our two burning questions. The cart st has happily ceased and a most foolish strike it was. The rate are now offering are as a matter of fact more favourable on the w than the old ones, and though Estates near the Ghaut are pa rather less than heretofore, those at a distance are paying consider higher: in fact, taking it all round, the carters are rather bette than heretofore. As regards roads, I most sincerely trust, that, that we have a new Chief Engineer, we shall see something of also that he will give us an occasional visit in the rains, when th are at their worst. We have suffered much in the past, no much from want of money being spent on our roads as from foolish and unprofitable way in which that money has been sp Gentlemen, I must apologise for detaining you so long, but urgency of our case is my excuse, and I am of opinion that as m publicity as possible should be given to the fact, that we are bur with eagerness to help ourselves, if only Government will len its countenance.

Import duty on foreign grown teas.—Proposed by Mr. H. D. De and seconded by Mr. R. S. Imray: "That this Association do on the Government of India the immediate necessity of puttin Import duty on foreign teas." Carried *nem. con.*

Mr. Deane in an able speech pointed out that his resolution intended to protect our local markets in India, which were fast b captured by Ceylon, who in 1899 sent ½ million lbs. of tea (mostly marked by Estate's name), and in 1900, 1½ million lbs., selling s at very low prices, which was prejudicial alike to India's and Ceyl interests. It was very unfair that Ceylon teas were admitted free India, whereas India had to pay 4 annas per lb. for the same privi of selling her teas in Ceylon. A certain section of Ceylon plan supported India in its claim for reciprocity. Mr. Deane remarked that as an alternative to his resolution, India would be satisfie Ceylon removed her Import Duty.

Cart Licence.—Proposed by Mr. H. D. Deane, seconded by Buxton Laurie: "That the Dewan be again asked to sanction a licence of a nominal value to enable all cart owners to be traced and also as a means of estimating traffic more correctly than is at sent possible." Mr. Deane reminded members that this conces was asked for before, but that greater importance was attache granting of same now, as the traffic was increasing by leaps and bou and had a cart licence ordinance existed, the District would not been put to the inconvenience of a cart-strike, to which it had recently subjected. Carried *nem. con.*

Plucking Tea.—Proposed by Mr. R. S. Imray and seconded by Buxton Laurie: "That this District adopts the suggestions of Committee with regard to plucking." Carried *nem. con.*

Local sales Tea.—Proposed by Mr. R. S. Imray and seconded Mr. H. D. Deane: "That this District do exploit India (especi Madras Presidency) with ten per cent. of its yield, or dispose of sam some other means than sending to London Market, and that a Commi be appointed to discuss details." Carried *nem. con.* The exis Committee and Messrs. Deane, Latter, and McArthur were appoin

With a vote of thanks to the Chairman, the meeting termina

MARKET REPORT.

[*Per Mail advices of 12th April* 1901.]

COFFEE.

The London Commercial Record says:—Public business, suspe ed during the Easter recess, was resumed yesterday, when supp to a fair extent were offered. The tone of the market gener was flat, and of the East India catalogued about two-thirds were posed of at decline of 2s per cwt., the remainder meeting with adequate offers. The moderate quantity of Costa Rica and Cen American was chiefly disposed of at easier rates. The market "futures" has been dull and prices are rather lowest; yester May delivery Santos sold at 31s 3d to 31s 4½d, September at 32 to 32s 4½d, and December at 32s 9d per cwt. Auctions to-

ffered 3,166 bags East India, 10 barrels 19 bags Jamaica, 1,143 ags Costa Rica, 61 bags Salvador, and 695 bags Guatemala. A ull market and a good deal bought in (especially East Indian) in ne absence of demand. Costa Rica steady. East Indian in favor f buyers. We quote:—

ondon ...	Santos ...	May delivery	... 31s 3d.
ew York	No. 7 Rio...	,,	... 5·45 cents.
amburg...	Santos ...	,,	... 31¼ pf.
avre ...	Santos ...	,,	... 38¼ francs.

Imports, Deliveries and Stock of Coffee in London are as follows:—

April	10...	5·45	5·50	5·55	5·65	5·70

TEA.

The public market is closed, and private sales have not been of great importance. The quantities of Ceylon and Indian so far advertised for auction next week are very small.

COCOA.

No auctions have been held this week, but a fair quantity will be brought to the hammer on Tuesday next. Privately little or nothing done, the few sales reported including Trinidad at 68s, Caraquez Guayaquil at 64s, and Winter Arriba at 67s per cwt.

PEPPER.

Black.—For arrival buyers are more anxious to operate in Singapore than of late and some 150 tons have been sold, at a slight enhancement—near at 6½d, March-May 6⅛d to $6\frac{5}{32}$d, April-June $6\frac{5}{32}$d, May-July at $6\frac{3}{16}$d, June-August $6\frac{3}{16}$d, and July-September at $6\frac{7}{32}$d, whilst on the spot fair has realised 6d per lb. Penang is neglected.

White.—Towards the close some animation has been observable and about 100 tons sold on the spot—Singapore at $8\frac{15}{16}$d to $9\frac{1}{16}$d for fair and Penang at $8\frac{5}{16}$d per lb. To arrive 40 tons Ponang sold at higher prices—June-August shipment at 8½d to $8\frac{7}{32}$d; Singapore, April-June has buyers at 9d, and June-August at 9⅛d per lb.

To-day prices are dearer. Of white 60 tons Penang June-August sold at 8⅝. Of Black sales on the spot at $\frac{1}{16}$d for fair Singapore; 50 tons sold for arrival at 6¼d April-June, and $\frac{1}{32}$d over for May-July.

GINGER.

Cochin.—The advance recently established is well maintained, but, naturally, the volume of trade passing this week has not been great. Medium sized Native cut has sold at 50s, small cut at 46s 6d, rough Calicut Sorts at 38s, and medium and small washed rough Cochin at 37s 6d per cwt.

QUININE.

There is no business to report in the second-hand market this week, and prices are nominal at 1s 3½d per oz, for spot, 1s 4d for August delivery. At the Java quinine-auctions on April 3, the result of which was reported in last week's issue, 3,600 kilos, were offered, of which 3,100 kilos. were sold. The next auction to be held there will be on May 15.

TEA AND COFFEE.

It is good to see that both tea and coffee planters in Southern India are alive to the needs of their respective industries. At the quarterly meeting of the Central Travancore Planters' Association on the 13th ultimo the Hon'ble Mr. G. L. Acworth, who presided, delivered a stirring speech, mainly in support of the suggestion that a compulsory tea-cess should be levied for the purpose of raising funds to push Indian tea. Central Travancore shares, we are glad to say, our views as to the proposed cessation of output; it advocates improvement of quality, and the abolition of "rubbish." Mr. Acworth expressed the opinion that there were four methods of overcoming the present critical state of affairs, *viz.* (1) the compulsory cess, (2) which hinges on the first, the opening of new markets and more particularly the fostering of a taste for good cheap teas among the natives of India, (3) the reduction of the British Import Duty and an equalisation of taxation on tea, coffee, and cocoa, all great rivals to each other, (4) the cessation of the idiotic manufacture of rubbish, which can remunerate nobody and merely damns our reputation in the eyes of the world. He added:—"But first and foremost is the compulsory cess, and to attain this no effort should be spared. South India, barring I believe 115 acres in the Nilgiris, has gone solid for the cess, and let us pray that the North will do the same." The time is ripe for pressing this matter. The Government of India—for that matter, even the British Government—is actuated less now-a-day by a belief in economic theories than in the practical, the practicable, and the expedient. The Government of India has shown by the "countervailing" sugar duties how far it is prepared to wander from the paths of the Free Trade theory. The Government of Bengal is actually subsidising the Indigo industry. These facts justify strong pressure in regard to

the proposed tea-cess, always provided that a very strong majority of tea-planters concur in representing to the Government that such a cess is a necessity.

As regards Coffee, a similar cess has been suggested, and the project appears to be gaining favour. The Shevaroy Planters' Association has gone "baldheaded" into this matter. The South Mysore Association hesitates and discusses, but will, we trust, eventually vote "Aye" and carry the North Mysore Association along with it in a united representation as to the advisability of the scheme suggested in the resolution moved at the Annual General Meeting on 29th March last :—"That members be asked to subscribe to a Fund for the establishment of new markets for coffee, at the rate of four annas for each cultivated acre of coffee, and that they commit their interests into the hands of a Sub-Committee consisting of four members to be chosen to-day, who shall draw up a memorandum of their views, and shall elect one of their number to act on a Select Committee of all the planters of S. I. should such be appointed" There was a savour of "sarkusm" in Mr. Anderson's suggestion that "the Merchant Princes of Madras" be invited to attend the meeting called to discuss the matter, and to give the benefit of their advice ; but we are convinced that nothing sarcastic was intended. It is years since Madras nurtured in its bosom a Europeon Merchant Prince, but doubtless the merchants of Madras could, and would, help planters to take steps to resuscitate their arsenic industry. It is useless, however, to discuss methods or schemes unless funds are to be forthcoming. No scheme for the development of Home or Foreign markets can possibly be worked without expense. Hence the need of a coffee cess, whereby the necessary sinews of war may be provided.

It is a great misfortune that the necessity for what we may fairly term "special advertisement" is always most keenly felt in times of depression, when the means requisite are most restricted. This applies to the tea and the coffee industries alike. When there is a "boom" planters take their profits thankfully and spend them, generally, right royally. The reaction comes and finds them all unprepared to provide funds even for the admirable purpose of developing the industries upon which they rely. In this and some other respects a parallel may be drawn between the two industries under reference ; but in many ways their conditions are widely different, and the course of treatment to be adopted in the one case would be by no means suitable in the other. What appears to us to be most needed is cheap capital. In the coffee industry more especially men cannot for the most part rely entirely on their own capital ; in the tea industry few can do so beyond time of shipment. They may raise their own crops with their own money, they may even manufacture and pack and place at port of export ; but they cannot finance the supplies until time of sale and receipt of proceeds in India. Hence to a large extent they are dependent upon their Coast agents, and while this lasts they cannot be regarded as quite free to push their goods in any market that may appear to them promising. They need something after the character of a combination for the purpose of raising capital in England on low terms and joint responsibility. They need complete freedom as to the placing of their goods upon the market, upon any market. It is on this account that no small scheme for the opening up of Foreign markets can hope to succeed ; it is because of this that the 'lions in the path' are formidable.

BOARD OF TRADE RETURNS.
March, 1901.

The following figures are taken from returns issued by the British Board of Trade to show the Imports, Consumption, and Exports of the undermentioned articles for the three months March 31 in the present and two previous years.

Coffee.—There is a very pleasing increase of home consumption, and exports have held their position fairly well, but the rapid expansion of imports has more than balanced this, and stocks on March 31st, 1901, were 20 per cent. higher than at the corresponding date in 1899.

——		1899	1900.	1901.
Import ...	cwts.	279,551	289,049	370,217
Home Consumption	,,	66,696	93,136	102,401
Export	,,	122,874	133,083	131,463
Stock	,,	382,000	362,000	456,000

Cocoa—(Raw). The remarkable way in which cocoa has improved its hold upon the taste of the people is again slow. In spite of a falling off in exports and an increase in imports, stocks are reduced, as home consumption has been much larger.

——		1899.	1900.	1901.
Imported ...	lbs.	15,091,912	18,769,889	16,280,062
Home Consumption	,,	10,082,277	12,371,572	16,795,606
Export	,,	3,439,631	2,585,180	2,292,702
Stock	,,	18,556,000	16,606,000	13,982,000

Cocoa—(prepared). Imports are creeping up but cause no accumulation of stocks, as demand evidently continues steady.

——		1899.	1900.	1901.
Imported ...	lbs.	1,403,302	1,709,122	2,094,562
Home Consumption	,,	1,538,302	1,565,294	2,046,142
Export	,,	274,080	211,147	206,572
Stock	,,	853,000	205,000	170,000

Tea.—Again a much larger supply and a big increase in stocks. The falling off in consumption appears, but the figures relating to this are not very reliable, as March is a month in which deliveries are apt to be largely influenced by dealers' expectations as to the coming budget.

Tea.		1899.	1900.	1901.
Import ...	lbs.	57,864,462	73,110,318	80,437,621
Home Consumption	,,	64,025,830	94,975,574	96,193,060
Export	,,	7,946,691	12,467,454	11,536,340
Stock	,,	82,692,000	76,099,000	94,156,000

TO THE DEAF.

A rich lady, cured of her deafness and noises in the head by *Dr. Nicholson's Artificial Ear Drums*, gave £5,000 to his Institute, so that deaf people, unable to procure the Ear Drums, may have them free.

Address—No. 989 D, The Nicholson Institute,
Longcott, Gunnersbury,
London.

[w. 26-5-00—26-5-1901.]

RAMIE.

Under the title of "La Ramie, *culture, préparation, utilisation industrielle*," the *Revue des Cultures coloniales* has issued a verbatim report of the International Congress of Ramie, held at Paris in June and October, 1900. It was a meeting of ramie specialists: colonial planters, inventors, manufacturers of decorticators, spinners, weavers, etc., and a great deal of information was collected in regard to various points connected with ramie cultivation, preparation, and manufacture. The discussions that occurred threw light on various details, and the report before us would be of very great utility even if it gave nothing more than the speeches delivered and the discussions conducted at the Congress. It contains more than this, and not the least interesting feature is an introduction by M. Maxime Cornu, the eminent Professor of the Museum of Natural History at Paris. This practically forms a summary of the proceedings of the Congress. The book before us may be regarded as giving just about all the information that is available and is worth having about a product in which a good many people are now interested. The price is 4 francs, and the book can be obtained at the offices of the *Revue des Cultures coloniales*, 44, rue de la Chanssée-d'Antin, Paris.

PLANTING IN GERMAN EAST AFRICA.

In his report for the year 1900 the British Vice-Consul at Dar-es-Salaam says that **Agave.**—Nearly 600 acres have been planted with Mauritius agave hemp (*Fourcroya gigantea*), and a field railway has been constructed. At the present time some 20,000 leaves, producing about 750 lbs. of dry fibre, are cut and cleaned daily. The fibre goes through the process known as breaking and scutching, the woody stem or boon being cracked and broken up by means of a simple rolling machine. After the bruised leaves have been left in soapy water for one night, they are well rinsed in fresh water and then placed in the sun. When dry, as much as possible of the broken wood is shaken out, after which the fibre is beaten by rotating wooden paddles, by which means the remainder is removed. It is then pressed and formed into bales weighing 2½ cwts.

Vanilla.—There are three vanilla plantations near Bagamoyo. Two, Kitopeni and Shambesi, belong to a private company, the third to the Roman Catholic Mission. In the two former are 30,000 vines, each of which bears on an average 20 pods annually. During the drought of 1898 half the vines died. To prevent a recurrence of such a catastrophe the plantations are now irrigated, the water being fetched a distance of about two miles in pipes. The flowers are fertilised artificially, and the vines are not allowed to grow more than 6 or 7 feet in height. The pods are cured by the wet treatment and are dried in an oven, a temperature of 120 Fahr. being maintained. Some are also sun-dried, being wrapped up in woollen cloth. The trees planted for shading purposes are *Pithecolobium saman* and *Albizzia lebbek*, and as a prop *Jatropha curcas*. Labour is cheap, 3d. a day being the price usually paid.

The vines belonging to the Mission are said to be less productive. The price obtained for 1 lb. of vanilla (from 30 to 50 pods) ranges from 1*l*. to 3*l*.

Bread-fruit.—A trial has been made by the Mission with the bread-fruit tree which has answered admirably.

Coffee, etc.—32 estates have been opened by various German planting companies and private persons in the Hinterland of Tanga and Pangani, and in the highlands of Usambara. About 25,000 acres are under cultivation, 7,500 acres having been planted with coffee, a like number with cocoanut-palms, and 3,250 acres with hemp. Experiments are also being made with ramie, vanilla, cardamoms, Ceará rubber, grape vines, sideroxylon trees, cinnamon, cocoa, and tea. Cotton and tobacco have, so far, proved a failure. There are over 5,000,000 coffee shrubs of the Mocha variety (*Coffea Arabica*), one quarter of which are now in bearing. The plantations are situated at an elevation of from 3,500 to 6,000 feet above sea-level. The soil of Usambara appears to be particularly suited to the cultivation of coffee, and the plants come into bearing at two years of age. *Albizzia Lebbek* and *A. Moluccana* are generally used as shade trees, but neither is considered very satisfactory. In some of the estates the shrubs are not shaded at all. Up to the present no signs of sunstroke or canker have been observed.

Hemileia vastatrix broke out in some of the gardens in 1895, and has since made its appearance, on one or two occasions. The planters do not, however, consider it a very serious matter, and after the leaves have been plucked and destroyed, the diseased plants recover. Considerable damage is, at times, done by beetles and field bugs. Very little manure has as yet been used; but the German East Africa Company is following the example of the Guatemala coffee-planters, and a mixture of bone meal, sawdust, rotten coffee husks, and lime has been found a good substitute for animal manure which is wanting.

On several of the estates the berries are pulped by machinery (Walker's or Gordon's). Fermenting vats and drying-houses have also been built. Each tree is said to bear on an average ½ lb. of parchment coffee per annum. The price obtained for the first and second qualities, which are sent to Hamburg, averages 75s. per cwt. Inferior coffee is sold locally or in Zanzibar, and fetches about 28 rupees (37s. 4d.) per cwt. In the following table is shown the total amount of coffee exported from German East Africa since the plants came into bearing:—

Date.	Quantity. Cwts.
January 1 to December 31, 1895	700
Do. do. 1896	500
Do. do. 1897	1,470
Do. do. 1898	2,670
Do. do. 1899	1,020
Do. September 30, 1900	1,220

It is believed that next year's crop will be heavy. About 500,000 Liberian coffee shrubs have been planted. The price obtained at Hamburg is, however, not sufficient to pay for the cost of transport, and the gardens are for the most part being allowed to go to weed.

Vanilla.—Three or four small vanilla plantations have been started. The largest, on the banks of the Mkulumuzi River, was flooded a few months ago, and most of the vines were lost.

Cardamoms.—The cultivation of cardamoms has been taken up by two or three companies. A sample was sent to Germany at the commencement of the year, but the price obtained (56s. per cwt.) was disappointing.

Grape Vines.—10,000 grape vines were planted last year at an altitude of 4,500 feet. They are growing well, but a rust has been noticed on the leaves.

Sideroxylon.—These handsome and useful trees (the

"djohor" of Java) are being planted extensively to mark the garden boundaries.

Cinnamon.—Cinnamon is to be found in many of the estates. A sample which was sold in Zanzibar a few months ago fetched 70 rupees (4*l.* 13s. 4d.) per cwt.

Cocoa.—No soil has yet been discovered suitable for the cultivation of cocoa, but there exist a few trees in several of the coffee plantations.

Tea.—Tea grows well; up to the present, however, it has only been planted in small quantities.

Labour.—A very important factor in the cultivation of coffee, etc. is, from the planter's point of view, the labour question. The natives of the Tanga and Usambara districts are of little use as workmen, and labourers are usually recruited in the towns of Pangani and Bagamoyo, and in a lesser degree, on the banks of the Rufiji River. Wanyamwezi and Wasukuma are preferred. It is customary for the men, who receive from 9 to 14 rupees (12s. to 18s. 8d.) per month without food, to bind themselves for six months. There are probably between 3,000 and 4,000 native workmen on the various estates. Asiatics are no longer employed.

A private company has opened a small plantation at Lindi, and a little Liberian coffee is grown near Mikindani.

COFFEE.

The letter from Messrs. W. H. Crossman & Brother which we publish to-day deserves the closest study on the part of coffee-planters in India. It is not a cheering or a comforting letter. The remarks about Brazilian exchange will come as a surprise to many. As to increase of consumption, there is a clear warning that such increase can only be gradual. Moreover, we are informed that it can only be "proportionate to the increase of population of civilized countries." The one means of working prices up lies in a reduction of Brazilian crops, and Messrs. Crossman evidently do not think that Brazilian planters are likely to take active steps to bring this about. To a certain extent, what purport to be facts are given in support of opinions expressed. Still, a good deal of the letter comprises opinions pure and simple, and opinions that could, generally speaking, only be met by opinions, not upset by a display of facts. That Messrs. Crossman have been often right in the past, is no indication that they are right now. Nevertheless, their remarks, as we have said, deserve very close study.

NOTES.

Hawaiian Coffee. Hawaii exported 345,151 pounds of coffee from July, 1900, to the end of February, 1901.

Brazil's Crops. Brazil coffee producers are too much for speculators, says the *American Grocer*. The present crop is likely to beat all records.

Indian Tea Exports. The April exports of Indian tea for the United Kingdom were 195,555 lbs. For the corresponding month of last year they amounted to 431,993 lbs.

Java Cinchona. The exports of Java bark for the first half of April were 455,000 Amsterdam lbs., against 275,000 Amsterdam lbs. last year, and 585,000 Amsterdam lbs. in 1899.

Digestive Tea. There is a gentleman in London who commends certain tea he offers as "digestive" and,—to give the word more point, perhaps—offers his tea as "sold by chemists only."

Tea in the U. S. Imports of tea in February were 3,405,037 pounds, of which 2,359,162 pounds came from China. Total imports for eight months ending February, 78,794,023 pounds, against 72,634,852 pounds for same time in 1900, and 57,923,252 pounds in 1899.

Tea Exports from Ceylon. Estimated shipments for April, 1901, were 8½ to 9 million lbs.

	lbs.
Total shipments for April, 1901	9,000,000
Do. do. do. 1900	8,924,218
Do. do. do. 1899	8,284,687

[Estimate for May, 1901—9 to 9½ million lbs.]

Warrants. An attempt is to be made to introduce the use of warrants for coffee and other produce deposited in licensed warehouses at the Rio and Santos Customs and at the Central Railway designated for that purpose. They will be issued under direct guarantee by the Government for safeguarding and preservation of the goods.

Java Coffee. Advices, dated 30th March from Batavia state that the Padang auction sale of coffee went off as follows: Interior, 45·73 guilders per picul, against 50·58 guilders on December 31; Mandheling, 75·50 guilders, against 76·50 guilders on December 31; Ankola, 60·50 guilders, against 71·56 guilders on December 31; Ayer Banjies, 59·50 guilders, against 62·50 guilders on December 31; Painan, 40·50 guilders.

A Boer Tea Planter. The *Times of Ceylon* says:—We hear on reliable authority that negociations have been entered into for the purchase of a tea estate in Haputale for a rich Boer, who will prefer to remain in Ceylon for some years after the close of the war to returning to his own country. This, doubtless, is one of the prisoners-of-war whom Reuter mentioned a few days ago as desiring to settle down with his family in Ceylon.

An Earthly Paradise. Mr. J. M. Lobb, who was for many years with the firm of W. G. A. Lambe & Co., Toronto, and who recently entered the employ of Rodewald & Heath, Colombo, Ceylon, writes to The "Salada" Tea Co. from Colombo under date of March 3, as follows: "This country does indeed strike one as an 'earthly paradise,' but it is a trifle warm." In other words there is just a suggestion of "the other place" as well as of paradise!

Reducing the Tea Output. The *Ceylon Observer* writes:—A planter remarking on a London editor writing about the Ceylon men reducing their output, adds:—"They are all doing it; but they won't bind themselves to do it."—Exactly: it is almost a case exemplifying Holy Writ!—"Son, go work to-day in the vineyard.—I will not;—but afterwards, he went." And yet, scarcely that; for, finer plucking and reduction of output has been the order of the day for the past three months.

Brazil. The *Correio*, of S. Carlos do Pinhal, S. Paulo, is seeking to stem the tide of the next crop by declaring that in that municipality it is

estimated at half a crop. It won't do, says the *Rio News*; there is too much testimony on the other side. It is stated that in the district of Jacutinga, Minas Gerges, the coffee crop this year will be extraordinarily large. This is the general situation throughout the coffee region, the rains having contributed immensely to the growth of the berry.

Cinchona.

The Board of Trade Returns of Peruvian Bark for three months of this year, compared with two previous years are as follows:—

	1901.	1900.	1899.
IMPORTS.			
Cwts.	9,729	13,019	6,671
Value	£23,964	£27,934	£13,038
EXPORTS.			
Cwts.	6,237	10,113	8,945
Value	£16,131	£25,500	18,639

Reduction in Output.

The following circular was recently issued by the Secretary of the Indian Tea Association (London):—"I am desired by my Committee to inform you that the adhesions to the above scheme on the part of India exceeded the minimum quantity required, *viz.*, ten million lbs. Some of the local Companies have fixed their meetings to consider the subject for the 18th and 19th instant. The final results for Ceylon cannot be received for a few days yet, but it is expected that the stipulated quantity of 8,000,000 lbs. will be made up."

Coffee in London.

The *Produce Markets' Review* of 13th ultimo says:—Public sales were resumed yesterday after the Easter recess, and the quantity offered was not excessive, consisting principally of East Indian and Costa Rica. Prices were somewhat irregular, fine qualities commanding high prices, and less desirable sorts being occasionally easier; on the whole, however, the market may be described as steady, with values maintained. The receipts in Santos are still considered too heavy for the time of year, and "term" quotations are about 9d lower than a week ago. The Brazilian exchange is fully maintained, and is to-day quoted 12¼.

The Indian Tea Crop.

The following telegram with reference to the tea crop in the various districts has been despatched by the General Committee of the Indian Tea Association here to the Committee of the Association in London, *viz.*—*Assam.*—Owing to generally unfavourable weather leaf is backward. *Cachar.*—Weather throughout the districts is favourable generally. Outturn to end of last month is stated to be 70 per cent. under last year. *Sylhet.*—Rain is much wanted generally. Owing to generally unfavourable weather leaf is backward. *Dooars* and *Terai.*—There is severe drought generally. Outturn last month very poor. *Darjeeling.*—There is severe drought generally.

A Good Coffee Crop in Ceylon.

In these days when coffee is an unknown product in the majority of Ceylon districts—is there a single acre of unbroken coffee between Great Western, Bopatalawa, and Adam's Peak?—It is a pleasure, says the *Ceylon Observer*, to hear of a decent harvest on an old coffee estate. We learn that the Manager of Pallakelle in the Dumbara Valley has harvested considerably over 2,000 bushels of coffee on the old place; but, of course, this is from comparatively young bushes scattered over a large area. It was the policy of Mr. Vollar, when Manager, to plant a clearing of coffee, on the chance of getting a certain number of crops, while the interspersed cacao or rubber was coming on. We do not know if this policy is continued; but anyhow we congratulate the manager and proprietors on getting from 2,000 to 2,500 bushels of coffee.

The London Tea Market.

A further fall in price average 6⅝d. Messrs. Gow, Wilson & Stanton's called report of the 2nd instant to Colombo states that the market generally shows a slight decline, and that fine teas generally are easier; while the market for common Pekoes and broken Pekoes is weak. The price of fair liquoring Ceylon Pekoe Souchong is 5¼d (¼d down) and the average price of Ceylon tea sold on garden account this week was 6⅝d (also ¼d down)—as against 6¼d and 7½d respectively in the corresponding week last year. Reuter reports that medium to fine Ceylon teas are easier. Pekoe Souchongs are quoted at 4¼d (same as last week) and the average for the week at 6⅝d (⅜d down) as against 6½d quoted for Indian tea. 26,000 packages of Ceylon tea were offered for sale, of which 20,000 were disposed of; while of the 23,000 packages of Indian tea offered, 20,000 found purchasers.

Indian Tea in London.

The *Produce Markets' Review* of April 13, 1901, says:—In the absence of public sales and the private market having been practically closed, transactions have been on a moderate scale. The demand, however, has been about the average, and as buying for some time past has not been of a very liberal character, and the stocks held by the trade are but moderate a good business may be looked for on the general resumption of business next week. The quantity catalogued for Monday amounts to 32,717 packages, and there is every prospect of an active inquiry for all kinds, and former prices are likely to be well maintained. During the past few years public sales have only been held on one day a week after Easter until August, but owing to the larger quantity of tea to come forward it will probably be necessary to depart from this rule by holding sales on two days in each week.

The Tea Crop Prospect.

According to the *Ceylon Observer* a shrewd correspondent who has been observing the course of affairs very closely, writes as follows, by way of warning to low-country proprietors and managers:—"There is one precious lesson which producers of tea must have learnt in the late collapse of prices—that they have their own fate in their own hands. If all rigidly adhere to finer plucking and more careful manufacture, all the tea produced will be consumed, and at fair prices. And it is particularly the low-country estates which produce quantity without special flavour that can control prices. It was quite evident that in the struggle for *quantity* they were the losers—their prices fell below cost of production; while the high-grown estates flourished. If the lower estates produce good teas, the high-grown estates *must* also pluck finer to get a full difference in price; and this natural remedy will benefit *all*. It is to be hoped producers will never again be tempted to go in for record yields, etc., for it spells ruin to the industry in the end. I have been much struck with this point of view lately."

The Preservation of Fruit.

An important experiment dealing with a new method of preserving fruit in all its virgin freshness has recently been completed. The patentees are Messrs. Lawton,

and the apparatus consists of an air-tight storage room, in which fruit can be sealed up, the atmospheric air driven out and a sterilised atmosphere made to take its place. The latter is easily and cheaply produced, while the required temperature, it is asserted, is secured with one-fourth the expenditure of power necessitated for the ordinary process of refrigeration. Some weeks ago a quantity of fruit—bananas, pine-apples, and English hot-house grapes, as well as tomatoes—was placed in a chamber fitted at 57b, Hatton-garden, and duly sealed up, and lately the storage room was opened by Mr. Wilkinson, Principal of the Swanley Horticultural College, and Mr. Ashbee, Superintendent of Covent-garden Market, by both of whom the contents were declared to be in the same condition as when placed in the chamber, and of the identical taste and flavour. It is claimed for the invention that fruit can be picked ripe, placed in the chamber and conveyed to this country from any part of the world, and, moreover, it can be stored here in a ripe condition for a length of time. If the idea is really workable and on a large scale, it will be a great boon to our fruit-growers, as when fruit is being given away, as sometimes it is in the height of the season, it would pay to seal up the plums or strawberries and bring them out again, perhaps at Christmas time—or, at any rate, when the "slump" was over.

The Scheme that Failed.

It is asserted that much disappointment is felt in Calcutta at Ceylon's failure to come into line in the reduction scheme. It is believed, however, that the agitation has done good, finer plucking is general, and that a perceptible rise in the standard of quality has occurred. Serious drought in the tea district has already affected the out-turn to the extent of one million lbs. Normal crops are not possible for some time. An outbreak of cholera amongst tea estate coolies is feared. So though there is to be no "rest" for tea, it appears likely to show a decreased output, which after all, is what is wanted. The Secretary of the Planters' Association of Ceylon wrote to the Press on 2nd instant:—

The following cablegram was despatched to London a few days ago:—"Including London figures total 3,500,000 lbs." The above was in reply to the following cablegram received from London in the middle of April:—"Indian 10,000,000 secured, let us know the number Ceylon," followed by a further wire on 22nd April reading "Indians meet to-morrow; give us all the information you have."

The *Times of Ceylon* remarks:—"We finally part with the proposed voluntary abandonment of any small percentage of plucking area on estates throughout the island. We trust we do not pretend to be "wise after the event" when we say that we never regarded it as the proper solution to the problem. As a test, Mr. Rosling's proposal had much to commend it. Our only regrets are that the general desire of the community was not discovered by means of the preliminary plebiscite referred to above; that Indian co-operation has had to put up with prolonged uncertainty here; and that the display of lack of cohesion may be misunderstood to our detriment by opponents at home or elsewhere who will regard the failure of an effort which had the official blessing as showing weakness in the general community. The only sound, legitimate, and effective remedy upon which all are agreed—and quite apart from the doctrine of the 'survival of the fittest'—is the far more attractive gospel of increased demand. It is for India to strain its efforts to the utmost to secure a tea cess, and, with that invaluable weapon, to work with Ceylon to capture and hold all markets."

LETTERS TO THE EDITOR.

COFFEE.

New York, *April 5th*, 1901.

On the many inquiries regarding our views on the present position of Coffee, we cannot do better than recommend to those friends a careful perusal of our general coffee circular of July 6, 1900, as the matters reviewed by us at that time answer almost every question as to production and consumption and also the effect or influence of Brazilian exchange on the values of Coffee. It is known that Brazilian exchange has lately been made the leading issue in Coffee by dealers and speculators, but only because no other question was left open to serve in any way as an argument in favour of higher prices for Coffee. While the civilized world recognizes only the international standard of money, *viz.*, gold, Coffee people try to put special strses upon the question of how many Milreis the farmer receives, ignoring the point as to how much *gold* those Milreis mean. It is quite evident that the illiterate Italian, who in the majority of cases cannot read or write, and is the chief laborer in the raising and handling of Coffee in the State of San Paulo, fully appreciates the value of the Milreis with exchange at 12 pence as compared with exchange at 7 pence. He knows well enough he can buy more Lires or France to send back to Italy with Exchange at 12 pence than at 7 pence, and the higher the value of the Milreis the more certain it is that every bean of coffee will be picked. Can it be possible that this illiterate Italian laborer knows and appreciates the difference between the Milreis at 12 pence and at 7 pence better than the educated Coffee dealer of financial speculator in Coffee in Europe and elsewhere?

Comparative values of Coffee in Milreis only go to show that supply and demand are the ruling factors, and the relative possession of currency and gold prices is entirely of minor importance. Here are some examples of how much the Brazilian planters have received:

Between 1881 and 1883 ...	16 to 20	Milreis	per bag.
In the years 1884-1885 ...	About 22	,,	,, ,,
In the years 1888-1889 (after the abolition of slavery) ...	About 30	,,	,, ,,
In April, 1894 (with exchange at 9 pence)	Over 100	,,	,, ,,
In 1898-1899 (in the period of lowest prices from July to October, 1899) ...	About 36	,,	,, ,,
And this season the average will be at least	36	,,	,, ,,

with a much better rate of excahnge since the commencement of the 1900-1901 crop.

While we have given above the Milreis prices existing before and since the abolition of slavery in Brazil, in 1888, we are of opinion that free and comparatively intelligent labor (compared with slaves) gives much better results than did the slave labor, proof of this being given in the United States as well as in Brazil, and we furthermore think that the average price paid outright for labor actually performed which gave these good results proves lower than the actual cost of slave labor, which it is well known had to be constantly maintained, provided for, housed and watched, and rendered poorer results.

The surest law in the commercial world is the law of averages.

The Brazilian farmers for a long time were receiving excessive prices in Milreis owing to small crops and reduced rates of exchange, and this laid the foundation for the subsequent large crops, which forced lower prices in currency or gold because of over-supplies. No one in any markets expected planters to reduce their Milreis price because it was excessive, as natural laws enabled them to obtain such a price. Therefore, why should the Brazilian planters expect consumers now to pay more money for Coffee than trade conditions actually warrant, in spite of overwhelming "bull" speculation or because there are complaints that while receiving a sufficient price in gold, not enough paper money is received for their merchandise?

Speculation does not reason—in most instances speculation does not desire to reason or look into such details; yet with absolute truth we can say that the losses to consuming markets, owing to over-production of Coffee since 1895, have been more than the total foreign debt of Brazil. We do not blame Brazilians for this, as all misleading information has been welcomed by consuming markets—the real truth was not wanted and Brazilians never took the trouble to find out how much Coffee they could raise, or if they knew, did not wish to tell. It was this sort of thing that led to this current crop being estimated in July last as low as 7,500,000 bags, and the same thing was responsible for the 1897-1898 crop being estimated only 7,500,000 bags in July, 1897, which turned out 10,500,000 bags; and it is patent to everyone who follows the market now that the current 1900-1901 crop promises to break all records.

Notwithstanding that our crop figures have often been considered too high, they have been too low, with the one exception of 1899-1900 crop, which we estimated at 9,500,000 to 10,000,000 bags together with a majority of the Coffee World, but which turned out a little below 9,000,000 bags. With this exception, our own crop figures, while time for time higher than most people wanted to accept, still turned out to be too small. The estimates on the next 1901-1902 crop that we get from most reliable sources, who prefer to to err on the conservative side rather than go over the mark, point to a crop of 11,000,000 to 12,000,000 bags, Rio and Santos together. In the light of this it is impossible for us to follow those arguments which would favor higher values owing to currency or Milreis price received by the Planters, for we will probably commence the new crop with a World's visible 7,250,000 to 7,500,000 bags against 6,200,000 bags 1st July, 1899. *And in the face of a Gold Price which is fully Twenty Per Cent. Higher than that at which the 1899-1900 Crop Commenced.*

It must be remembered that the value in currency or Milreis in Brazil depends upon matters like the stability of the Government, honest administration, peaceful or troublous times and the chances of other political disturbances, whereas the gold price of a staple depends upon production and consumption, *i.e.*, supply and demand, and nowhere in the World would any other claims be made or listened to, except in a market like Coffee, where 95 per cent. of the dealers are on one side and grasping at any straw to afford them relief in their losing position.

If people speculating in coffee do so on the belief that Brazilian exchange should advance, why do they not speculate in the exchange itself, which, at least, is not burdened by heavy charges like freight, storage and insurance, etc., as on Coffee?

If Brazil has control of anyone product more than another, it is Rubber, as the quality of Para Rubber cannot be duplicated anywhere else and manufacturers accustomed to using Pará will not use any other Rubber. Still, with exchange having risen from 7 pence to 12 pence, Para Rubber has declined in price since last April from 98 cents. to about 85 cents., the present figure. No doubt the supply was excessive, compared with requirements and the manner in which the division was made between the Brazil currency price on the gold value, cost and freight, did not concern consuming markets. Although Brazil holds a dominant position in Coffee, it is certainly more so in regard to Rubber, and we point to this example because there is less speculation in Rubber than in Coffee, and therefore the article is less influenced by rumors and stories circulated to influence markets.

Now with respect to consumption.—In our circular of July 6th, 1900, we gave a table of figures which was then disputed in many quarters. How has it turned out? During the Winter of 1899-1900 computations were actively circulated trying to show that consumption was overtaking production, and that the increasing use of Coffee left 9,000,000 bags Rio and Santos, altogether too small, and that 10,000,000 bags were needed thenceforth. The world's deliveries from July, 1900, to April, 1901, decreased 1,200,000 bags! Does this mean a decrease of *consumption*, with declining markets? *Hardly.* It simply means that when markets are advancing the interior trade buys Coffee in excess of its requirements, and while less well-to-do holders are reducing stocks, rich holders are enabled to keep surplus supplies—but probably lose courage to increase, when everything is pointing to lower values. We now frankly state that about 1,000,000 bags Coffee are held here, outside of the visible supply, by a few large roasters and dealers. This has reference to stocks not counted in the American visible, deducted as if delivered, and this Coffee, in most cases, has been accumulating since the beginning of the large crop in 1896-1897, and is never counted in the official American visible.

Now, instead of 9,000,000 or 10,000,000 bags Rio and Santos Coffee being needed, the actual deliveries demonstrate the following facts:

In the crop year 1898-1899 with Rio and Santos yielding 8,871,000 bags,

The World's Visible Supply increased 750,000 bags,

Showing that only 8,000,000 bags Rio and Santos were required.

In the crop year 1899-1900 with Rio and Santos yielding 8,959,000 bags

The World's Visible Supply decreased 360,000 bags,

Showing that a total quantity of 9,319,000 bags Rio and Santos were delivered.

But as deliveries the first nine months of this crop compared with the first nine months of the previous crop are 1,200,000 bags less, it not only proves that last season's deliveries were excessive, but it also proves that the claim the World requires 10,000,000 bags Rio and Santos Coffee has no good foundation; and even with a fair increase of consumption in three years the World's requirements scarcely reach 8,500,000 bags of Rio and Santos Coffee.

We are fully aware that all figures and arguments that do not favor higher prices for Coffee are lost on the majority of the Coffee world.

During the current crop, the most ridiculous events,

rumors or assertions have been conducive to renewed speculation, and among them we may mention the reports of smaller receipts in Santos from 50,000 to 40,000 bags a day —40,000 to 30,000 bags a day—30,000 to 20,000 bags a day —and any cable that would point to falling off perpendicularly or otherwise of receipts, all has been taken as absolutely correct that the crop was finished.

It was also promptly believed and acted upon that the buying of large quantities of Coffee by heavy capitalists not only meant an immediate advance, but that prices would be held up. But in the face of all this, we think that the erratic advance of last year, as well as the heavy speculation in favor of higher prices, will not only prove fatal for the immediate future to consuming countries, but ultimately to producing countries, and all the more because the latter have been imbued with the idea that no matter how large their crops were, it was all wanted.

It cannot be ignored that Europe has large interests in Coffee plantations, Coffee people in Germany, in Holland and also in London being large owners of Coffee plantations and shares in plantation companies, and it must be admitted that this feature has biassed merchants in regard to values of Coffee, these interests in the raising of Coffee being entirely in sympathy with values in producing markets being as high as as possible, and, while it should be that consumers would wish to buy as low as possible time for time, yet we see that consuming markets aim to buy as high as possible in producing markets. The interests of consuming markets in plantations offer the solution.

It has been claimed that Brazil cannot raise Coffee to satisfy options sold in New York at 6 cents. But herein lies an error. The lowest grade of Coffee on the New York Coffee Exchange, *viz.*, No. 9 Type, has not been sold in Brazil during the current crop as low as 6 cents. The fact is, Brazil has not only been favored with large crops, but the quality of same has been exceedingly high, and therefore those who look upon New York options as being low at 6 cents are much misled, as the Coffee which has to be taken up on New York Exchange option contracts necessitates the payment of one and a half to two cents more than the option basis.

The lowest grade of Coffee known on the New York Coffee Exchange, *viz.*, No. 9, has not sold as low as 6 cents during this crop, while the contract grade No. 7, since the 1st of July last, has shown an average considerably above 7 cents. It naturally makes a great deal of difference if producing countries are selling at 6 cents as an average price for the crop or 7½ cents, and every Coffee-man knows that during the present crop Brazil has averaged fully 7½ cents for the average grade.

Whether during the past twenty years Brazil has sold her Coffee at 20 Milreis per bag—or 100 Milreis per bag—or whether Exchange in Brazil has been at 27 or 6 pence, it must be acknowledged that the price of the product has not been dependent upon either the Milreis value or currency price or the rate of exchange. The value of Coffee has been governed exclusively by the size of the crops in Brazil.

In the month of December, 1900, with exchange at 9¾ pence, we bought Coffee in Rio and Santos at identically the same price, cost and freight, as we are now paying, with exchange at 12 pence, and naturally the decline in price has been in the currency adjusting itself to the exchange rate.

Brazil for the present Coffee crop is receiving equal to some £6,000,000 to £7,000,000 Sterling more money than she received for the previous crop, and with a retrenchment at the same time in importations there, an enhancement of the value of the Milreis was a natural consequence.

Referring now to the coming crop season, we are of the opinion that Brazil will not receive as much Sterling for the 1901-1902 crop as she receives for the current crop; the difference may be quite large, so whether there will be a further rise in Exchange when the amount of Gold received for the crop is less instead of more is a problem that we, at this distance, do not attempt to solve.

As we are merchants doing a large export and import business with Brazil, we naturally hope that Brazilian currency will steadily enhance in value, as the higher ratio obtained for Brazilian money denotes confidence in the existing administration and the stability of affairs generally in the country; but the future value of Coffee will not be dependent upon the rate of exchange in Brazil nor upon speculation, no matter how large a scale it is indulged in, but entirely upon the natural influences of production and consumption.

There is no prime staple which should follow or does follow this law more closely than Coffee, as we have often demonstrated. During panicky times in the United States we have seen very high values for Coffee, but we have also seen rapidly declining markets for Coffee when times have been prosperous here, and this ought to carry its own lesson; for while nearly all other staple articles can be diverted into other channels or purposes to help out, such is not the case with Coffee. The consumption of Coffee is confined to one object only, and being the strongest of all natural beverages as a stimulant in its own form, increase of consumption of Coffee must be gradual, proportionate to the increase of population in civilized countries. If Brazil desires a higher price for Coffee it can be obtained only through decreased production, as it is a demonstrated fact, shown by the increase of supplies, that consumption is absolutely unable to keep pace with the rapid increase of production, and all artificial means to increase the value of the article will only bring about great disaster later on when working against natural influences.

W. H. Crossman & Bro.

GENERAL ARTICLES.

THE PHILIPPINE HEMP INDUSTRY.

Among the chief industries in the Philippine Islands is the gathering and export of hemp, *Musa textilis*. Manila hemp is known all the world over for its fine quality and its value for making all kinds of rope, from the biggest hawser down to the finest piece of twine, and it would be very much in order to devote a little of our space to this important feature of Manila's commerce.

"Manila hemp" is the name invariably used by the merchants of England and America to distinguish it from the Russian and Indian hemp, which is much inferior. In the Philippines, however, it is not regarded as a product of Manila and districts, but chiefly of the Southern islands, and it is called "abaca," with the accent on the last syllable.

The hemp trees of the Philippines have been tried to be introduced in Borneo and India, but without much success. The trees grow best on the Pacific slopes of the Southern islands. South Luzon furnishes the best quality and greatest quantity. The roots of the plants cannot exist in damp soil; volcanic soil, where the ground is dry, and plenty of moisture overhead, is essential to getting the best results. Here large plantations are found among the hills with the hemp trees in different stages of growth. They require little cultivation; once a week the native cleaner or gatherer

goes through the plantation and does the little weeding that is necessary while in performance of his duty of cutting and stripping the trees.

The trees are planted from suckers and grow to a height of ten feet, and from five to seven inches in diameter. In appearance they appear to an unpractised eye like the banana tree, and if these trees were allowed to grow five or six years they would develop a fruit something like a plantain; it is said by some that this fruit is poisonous.

When the tree is three years old, then it is the proper time to cut it down and strip it of its fibre. This stripping is a most difficult and important point in the production of hemp and requires great experience. The native cleaner, as he is called, goes up into the hill armed with his bolo and a bag of rice. He enters the plantation and glances to right and left as he walks along. Experience has taught him to tell at a glauce if a tree has reached the age for cutting. One slash with the bolo and the tree is cut down close to the roots. The first thing he does is to plant a cutting or shoot in close proximity to where the tree grew. This is invariably the rule, that when a tree is cut down another is immediately planted in its place, so there are at all times trees in different stages of development. As soon as this is done he strips the plant of its leaves and commences on the long stalk eight or ten feet in length. He strips off the outer skin and then commences the real work. In the centre of the stalk is a stout pith, and around this grow alternate layers of fibre and sappy vegetable matter. These layers of fibre must be carefully stripped off the stock at once for fear of them rotting the fibre. The cleaner in a couple of minutes has cut a small bamboo tree and made a rough bench. With a bamboo strip fastened to his knife and that in turn fastened to his foot, he stoops over to the ground in front and then makes a full backward sweep as far as his arms can reach, stripping a layer of fibre which he throws off to one side. This is repeated until the fibre is all taken off, and after spreading the stripplings on the ground to dry in the sun, he continues to repeat the work in another spot wherever he may find a tree in the proper state of maturity. The work of stripping is heart-breaking and causes many a lame back; even the native who is accustomed to the work finds it no sinecure. A full tree will yield about one pound of fibre and a native can clean fifty pounds in a week. The length of the fibre is from six to eight feet.

The natives are exceedingly independent and work as long as it suits their convenience. When a cleaner has got what he considers enough fibre cut, cleaned and dried, he ties it up and takes it down to market, where he sells it to the middleman and receives in return the market value of the fibre. The plantation owner receives one-half this remuneration and the native keeps the other, and this is the only time the plantation owner figures in the whole transaction, *i.e.*, when he gets his half. He simply watches to see that he gets his share.

In the hemp ports, representatives from the business houses in Manila buy from those middlemen. They are either Spanish, Chinese, or native dealers, who collect the hemp and barter with the native cleaners, using rice as the standard of exchange.

Grades.—Ordinarily, the hemp arrives here classified according to grades by a middleman, but sometimes it is sent here to be classified and the experienced eye of the merchant spots at once all defective or injured fibre. The quality depends a great deal upon the original cleaner and the state of the weather at the time the tree was cut.

To turn out the best grade the cleaner requires to be very careful in his stripping and have the fibre dried at once, whereas, if allowed to stand awhile, the fibre loses its fine colour and some of its strength. Hemp is graded according to fineness or coarseness, colour, length of fibre, and its tensile strength. The latter depends greatly upon the age of the tree. The colour and coarseness show the quality of the hemp and this depends, as mentioned above, wholly upon the cleaner.

Value.—The value of hemp varies. It has been known to be as high as £60 per ton and then again as low as £14 sterling. The price fluctuates continually, owing to the war and the political situation in the Philippines. The average rate per long ton, however, is about £25 or £30 sterling.

There are between 800,000 and 1,000,000 bales of hemp produced and shipped from this island annually. The United States, acting as a centre for South America, Cuba, and Canada, and England as a centre for Europe and Western Asia, take the bulk of the trade in about even quantities.

The bales are packed by both hand and steam pressess, and weigh about 28 pounds each. They are thus conveniently handled. About half-a-dozen of the shipping houses here do the bulk of the export trade and, perhaps, forty steamers are utilized in the carrying of rice to the ports and a return cargo of hemp to Manila. The handling of the business requires years of experience and a long residence in the country, to be successful in coping with the business methods of the wily Asiatics, both Chinese and Filipino.

We all remember how in visiting the owner of an orchard he takes us through his fruit preserves and can tell every grade and variety of apple tree. They appear to the unpractised eye to be all alike. It is the same with the hemp plantation. There are many varieties and the natives showing a visitor through the groves point out the different grades of trees, giving its native name and whether the quality is better or inferior to the ordinary. There are residents here in Manila, foreign as well as native, who, from long experience in handling hemp, can at a glance judge which ports certain bales of hemp have come from. It is indeed a great business and cannot be learned in a day.

From the outer layer of a properly matured tree comes the finest of fibre, and if this is carefully cleaned and dried, it is sometimes used by the natives to weave into cloth. They mix it with silk and make a sort of Indian muslin, in fact it makes the finest of hemp cloth. Some of the natives in the hemp-growing districts make coarse cloth to wear, while others make fishing nets, the fibre being exceptionally good for this purpose, as it is so strong. —*Manila Times.*

FIBRES IN GERMAN EAST AFRICA.

It is expected, says the British Vice-Consul at Dar-es-Salaam, that the cultivation of fibre will be very profitable. There are at present over 800,000 Fourcroya gigantea plants and 750,000 Agave Sisalana. Compared to other products the cultivation of fibre is very simple and inexpensive. The only fear is that owing to over-production the price will fall considerably, and the article will become a drug in the market. Within the last few months Fourcroya hemp has fallen from 33s. to 25s. per cwt. The first Sisal Agave bulbs were introduced by the German East Africa Company in 1891, 46 being brought from Yucatan and planted in the Kikogwe estate. From the original 46 plants over 700,000 have been obtained in nine years. At Kikogwe alone there are 640,000, covering an area of 1,000 acres, whilst 65,000 have been distributed amongst the German East Africa Company's other estates. The Sisal Agave at Kikogwe only lives for five or six years when allowed to go to seed. When the leaves are regularly cut, the life of the plants will probably be considerably longer. The annual produce of each plant is about 40 leaves, or 2 2/3 lbs. of dry fibre. During the year under review a sample of 100 cwts. of fibre was sent out and sold for 50s per cwt.

Ramie.—So far the only experiments carried out with this product are those of Herr Hoffmann on the Makinyumbe estate. A Rhea fibre extractor is shortly to be imported. Ramie (otherwise called nettle fibre or China grass) is largely used in the manufacture of fine yarns, and there are factories in Germany in which large quantities are used Up to the present the raw material has been imported almost exclusively from China.

THE FIRST USE OF COFFEE IN EUROPE.

The first authentic mention made of coffee or its use by a European, is probably that of Rauwolf, a German physician and traveller, upon his return from an extended tour through Syria, in 1573. The first scientific account of the plant being that given by Alpinus; an Italian naturalist, in his "Medicina Egyptorium," published in Venice, in 1591. Its use as a beverage is first referred to by two English Travellers—Biddulph and Finch—the former, in writing of it in 1603, stating "that the Turks have for their most common drink coffee,—a blackish drink made from a kind of pulse-like a pease, and called by them "Coava." In 1607, Finch relates that "the people of the island Socotra have for their best entertainment a China dish called "Cobo," a black, bitterish drink, made of a berry very like a bayberry, brought from Moka, and sipped off hot." Pietro Valla, a Venetian, in a letter written from Constan-

tinople, in 1605, states that upon his return to Venice "he would bring back with him some coffee, which he believed was a thing heretofore unknown in his country," and which he subsequently did. It is also referred to, in 1621, by Burton, in his "Anatomy of Melancholy" as follows: "The Turks have a drink called coffee, so named from a berry, black as soot and as bitter, which they sip up hot, because they find by experience that kind of drink, so used, helpeth digestion and promoteth alacrity." Coffee in a liquid state is said to have been sold in Rome as early as 1625. Some of the prepared beans of coffee were first carried from Turkey to France by De la Haye, as early as 1644: "Not only coffee, but also the proper apparatus for preparing it." In 1657, a small quantity was brought to Paris by Thevenot, its use, however, being confined solely to his own immediate family and a few friends. Up to this period, and for many years after, it had never been seen and scarcely ever heard of by the public at large in that country. In 1650 "several bales of coffee" were shipped from Alexandria to Marseilles, and in 1671 the first coffee house was opened in the latter city near the Exchange, "where the merchants met to smoke, take business and divert themselves with play." It was not until the year 1668 that coffee-drinking became popular in France, though infrequent travellers had brought with them from the East a few pounds of the then curious berry. In that year Solieman Aga was sent as Ambassador from Mahomet IV. to the Court of Louis XIV.; where he soon became a "lion," through the splendid and unique entertainments at which he figured as host. On bended knees the black slaves of the ambassador, arrayed in the most gorgeous oriental customs, presented the choicest Moka, in tiny cups of egg-shell porcelain, hot, strong, and fragrant poured out on saucers of gold and silver, placed on embroidered silk napkins fringed with gold ballion, to the grand dames who fluttered their fans with many grimaces, and bent their piquant faces—berouged, bepowdered and bepatched—over the new and streaming beverage. Such was the half-barbaric occasion by which coffee first became generally known to that nation, which is now so largely dependent upon the "brown berry of Arabia." The Parisians immediately became quite enthusiastic over it, the aristocracy adopting it as the fashionable beverage, it being recorded that the daughters of Louis XIV., had coffee imported expressly for the use of the royal household, at a cost of £5,000 yearly.

THE SALE OF NOXIOUS TEAS.

Mr. Geo. Brownen, F.C.S., writes to the London *Times*:—

Permit me to refer to and protest against the recent refusal of the Government to use the powers they possess to protect the British tea drinkers from the injurious use of spoilt and damaged teas. For some time past most unpleasant rumours from some of our tea-producing countries have warned us that damaged, and, therefore, injurious, teas were being craftily blended and manipulated and sold as genuine or sound commercial articles. For such purposes "the fine art of blending" was being unworthily used, and should be promptly stopped by the Governmental authorities. In the Ceylon newspapers, for instance, quite recently, there is a report of a meeting of planters called to consider a resolution requesting the Government to supervise or impose checks upon the exportation of unwholesome tea. The mover of this resolution stated, and (what is most significant) he was not contradicted, "that it was well known" that "teas known to be unfit for human consumption" had been exported as tea for sale and consumption. In the examination of a number of recent samples of tea obtained in this country I have been struck by the discovery of dried but perfectly rotten leaf tissues, upon which colonies of microbial forms, both adult and in ova, were found, indicative of damaged and objectionable materials for dietetic use.

I will admit that the adult microbial forms may be destroyed in the process of tea infusion, but the ingestion of ova and the products of rotten vegetable matter are neither useful nor invigorating to healthy or invalid. If tea was a production of the British Isles no doubt the Sale of Food and Drugs Act would meet the want and stop the mischie; but, unfortunately, tea is an imported article, and in its dry rolled condition the consumer sees no suspicious signs, and the chances of detection and conviction are in consequence rendered doubtful and remote, and, again, should detection result, the guilt might rest upon the ignorant middleman and the real culprit escape.

Instead of throwing the responsibility upon the British local authorities, as the Government seem disposed to do, it would be perfectly easy and simple for the Government to supervise the imported teas at the London, etc., bonded warehouses. These officials would be in touch with the Governmental experts of the chemical and biological laboratories of Somerset House and South Kensington. In point of fact, such stoppage of "rubbish tea" would be advantageous to the trade and prove beneficial to the consumer. In this case the truth of the old saw may be again seen—prevention is better than cure.

The Adulteration of Food and Drugs Act is a useful instrument for local authorities in local matters, but as regards teas and other imports we possess the immense advantage of port supervision. Let damaged tea, like diseased matter, be stopped there and the mischief is stopped from circulating, for it is probably the cause of the modern dyspeptic or "I can't drink tea" condition to a far greate extent than many are aware or have any idea of.

A CHINESE OFFICIAL PROTECTOR OF THE RUSSIAN TEA ROUTE.

INTERESTING WORK OF SHEN TUN-HO AND HIS POLICE AT KALGAN.

In our issue of the 18th of December last we mentioned that we had seen a letter from Shên Tun-ho, the well-known and much respected victim of the infamous Kang Yi, in which Mr. Shên mentioned that he had done the State some service at Kalgan and had been put in a position of command and trust there. We have now seen another letter, dated Kalgan, the 10th ultimo, in which Mr. Shên mentions that the had been recommended to the Throne for appointment as Chief Director of the Foreign Office at Kalgan and Exterminator of Boxers As soon as Count York's expedition left Kalgan, Mr. Shên enrolled a company of police, armed and drilled like the German drilled troops formerely at Woo-sung, with a small number of cavalry, to protect the trade route which passes through Kalgan, and the Russian tea traffic. With this force Mr. Shên drove away over 2,000 disbanded soldiers. captured three most notorious Boxer leaders, one of whom was a Mongolian official under sentence of decapitation. and recovered 14,000 stolen packages of tea belonging to Russian firms at Kalgan. This newly-drilled police force is turning out very well and giving full protection to both missionaries and traders. In recognition of his success, the Throne has returned to Mr. Shên his rank as a Taotai of this province, his red button, and peacock's feather; and we are sure this news will be received with much satisfaction by Mr. Shên's numerous friends in China and the West—*N. C. Herald*, April 10.

COFFEE IN B. C. AFRICA—HIGH ELEVATIONS.

A correspondent, who signs himself—"Virgin Forest," 3,200 ft. elevation, 12 inches of rain,—writes to the *B. C. African Times*:—

During the last few years coffee in B. C. A. at low elevations has been in rather an unsatisfactory condition, and we continually hear of light bean, thrip, the primaries dying back, bug, and other insect pests with the result that a blossom which should pan out to about a 7-8 cwts. crop per acre has turned out almost a complete failure.

It is a known fact that our pioneer planter, Mr. J. Buchanan, obtained from an acre of coffee about 15-16 cwts. of good and sound bean.

It would be well for the present day planter to ascertain what is wrong, and why he does not obtain the magnificent returns of some of the favoured estates of the early planters. Of course most will answer want of labour. But though this is bad enough, I as a planter of many years standing in this country, and some little experience in Brazil will say that labour is not the cause. If an estate is kept perfectly clean of weeds from the start and brought up to date in every way when labour is plentiful, a very few women and children will be able to get round that estate every six weeks. But let the estate get once out of hand, a nice box during the shortness of labour in the rains the unfortunate planter is in. To prove this, women and children are hand-weeding this plantation of about 400 acres, and do each about 500 trees a day. The cost of these

people is less than 1/6 each per month. Seeing then that it is not so much from shortness of labour coffee is not now in many cases the success it should be, why is it that the coffee returns are not increasing?

1. I should say from low elevation, want of rain and proper virgin forest land. Such combined will wipe out any coffee, and what crop there is obtained will be light, unsound, and punctured by bug; therefore getting a very low price on the home market. In my opinion no coffee should be opened under 3,000 ft. at the very lowest elevation and should be virgin forest land, with a rainfall at the least of 100 inches properly distributed.

2. SEED.—We all know quite well that either vegetables or animals if continually inbred will deteriorate. What is it here? Practically all the coffee planted in this country has been originally obtained from one tree introduced by the Mission years ago, and in some cases sellers of seed sell for 1/ per lb. coffee beans that they don't think good enough to put on the home market.

3. Ignorant and careless managemnt not a careful selection of best plants in the nurseries, and want of proper graded drains to stop the wash away of surface soil during the rains.

The above I think are the principal causes of the poor returns from coffee.

At low elevations we want to introduce Liberian coffee or a Hybrid between the Mozambique and B. C. A. coffee. I have seen about Quelimane (where there is little rain and a scorching sun), Mozambique coffee giving a sound and flourishing crop though the bean is too small to put on the home market, such a hybird I believe at our low elevations would give a most excellent return.

But at elevations of 3,000 ft. and over, where there is virgin forest land, and the rainfall exceeds 100 inches, such land planted with imported seed of Coffee Arabica will give truly good returns. I will guarantee that B. C. A. coffee under the above conditions, will obtain the top prices now commanded by Ceylon.

Any gentleman who wishes a proof of what I say I shall be most happy to see, and show over this estate.

Such products as cocoa, tea, tobacco, with suitable soil, and rainfall will pay well, under expert management, and a progressive Administration.

I am glad to hear that a move in the right direction has been made by the head of the Scientific Department, who is now going round the different districts, to report on, and advise the planters on the suitability of their land for different commercial products.

This sort of thing will do no end of good, but I hope the matter will be carried a little further, and that the administration on the report of the head of the Scientific Department will import what products are advised by him and give them to the planters at cost price. If this is done B. C. A. will hold its own with any planting country in the world.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Coffee.—*S. Paulo.* The *Ribeirão Bonito* states that the local coffee crop may be expected to yield about half what it did last year.

* * *

The *Gazeta* of Sta. Rita do Passo Quatro says that, in the opinion of *fazendeiros* in that neighbourhood, the coffee beans (grãos) will be of unequal size and quality this year, owing to the weather—prolonged and heavy rains alternating with days of intense heat.

During the week ended Friday, March 15th, aggregate entries declined slightly compared with the previous week, but were even so more than 135 % of those for the corresponding week last year. Since 1st March joint entries at Rio and Santos amounted to 475,978 bags as against 243,179 for the corresponding period last year.

Declared sales at Rio and Santos amounted to 148,000 bags and were slightly less than for the previous week and as also for the corresponding week last year. Much importance, however, cannot be attached to these figures as out of a total of 9,400,000 entered or in stock since 1st July only 8,000,000 bags have been reported as sold, leaving nearly 1 1/2 millions entirely unaccounted for.

The Santos markets, were weak declining throughout the week in sympathy with bad news from consuming quarters, but in spite of lower exchange and enormous entries making sales easier, transactions were not large owing to the absence of orders from both the States and Europe. Prices ruled 5$000 to 5$400 for *Superior, Goods* 200 to 300 reis better, *Re ulars* 400 to 600 reis better, and *Primes* 200 to 500 reis above basis.

Finer qualities were in better demand principally for the States, but low grades were neglected as also *Peaberries.* Some sales for European account were reported at 32s. to 33s. 6d. for *Superior* and 7 1/8c to 7 3/8c for No. 5 to the States, but not very much was done for either one or the other. Nothing new is reported regarding the coming crop, the weather continues very wet and, should there be no improvement, may possibly damage the prospects of the coming crop.

Prices on 15th instant reached 4$800 per 10 kilos. at Santos and 8$200 at Rio (latter duty paid) per 15 kilos. the lowest currency quotation since September 1899.

* * *

The Depreciation of Coffee. In a lecture . . . Sr. José Carlos de Carvalho maintained that the depreciation of coffee was due, principally, to the manner in which it was prepared and mixed for foreign markets. In order to produce a uniform grade, No. 7, inferior and almost valueless coffees were mixed with superior kinds, work of separation by the planter being thus undone. Certainly there does seem to be a waste of labour somewhere

A lot of 146 bags of No. 7 N. York type received from S. Paulo was classified as follows:—

Type No. 5	bags	109
Do. 6	„	2
Moka	„	12
Do. similar to No. 6	„	2
Type No. 8	„	19
Escolha	„	2
Bags		146

Another lot of 140 bags also classed as No. 7 was made up as follows:

Type No. 5	bags	110
Do. 6	„	2
Moka of arbitrary value	„	5
Do. small	„	1
Type No. 8	„	20
Escolha	„	2
Bags		140

A lot of 59 bags in cherry weighing 1,550 kilos. from Minas, after allowance of 50 kilos. for bags was classed as follows:—

Moka type No. 5	kilos	300
Do. do. 6	„	950
Do. do. 7, small	„	265
Escolha	„	35
Kilos.		1,550

Sr. Carvalho urged the necessity of coffee being sold according to quality and not by types and that shipments of *escolha* and other rubbish that bring Brazilian coffee into disrepute, should be prohibited.

* * *

The crop of the Dumont Estates, which last season reached 70,000 bags is expected to exceed 100,000 bags this season.

* * *

Coffee Shipments from Central American and Mexican ports are now being experimented to New York and Europe *viâ* San Francisco. *The City of Pará* having received over 1,000 tons at Guatemala, S. Salvador, Nicaragua, and Mexico, of which 950 tons are destined for Europe.

The agents of the Pacific mail must be sanguine indeed to think that with prices falling, as they now are, coffee can stand such handling. If Central America has some advantage in price, we have the pull in freights and ought to be able to beat rivals so handicapped at a canter. Year by year the struggle gets more and more acute, and if we only persevere is sure to end in victory for Brazil—the fittest.

* * *

Reduction of Coffee Freights on the Paulista Railway. Sometime back we announced the intention of the Paulista Company to come to the assistance of planters in the present crisis, and have now the satisfaction of announcing the reduction of the rates for coffee in such a manner that from no point on the line shall the cost per arroba exceed 1$500 for transport to Santos. The reduction is equivalent to 25 to 30 % for the more distant points and is intend-

ed to be permanent and extend to new lines as well as those actually under traffic. The maximum rate for food products has been also reduced to 800 reis per 60 kilos., whatever the distance covered, for delivery at São Paulo or Santos.

* * *

The Price of Coffee. In a leading article *A Imprensa* of the 19th March says:—

"At one time the variations in the rate of exchange served as a kind of barometer for coffee. There was regular relation between these two agents of our economy and finance; low exchange signified high coffee prices and *vice-versâ* whilst planters could always count on so many pounds sterling per bag. since then *sic*, such have been the *financial extravagances of economists concocted a la minute*, the fraudulent presentation of our products in consuming markets and difficulties in shipping even here and at Santos, that coffee is no longer regulated by exchange but its price is fixed as its tutors' fatality and carelessness decide to the sacrifice of the planters and their honest and painful labour."

The italics are ours, certainly, but we cant help wondering if amongst the "(extravagances of improvised financiers)" *A Imprensa* includes the worst of all, the issue of paper-money by Dr. Ruy Barbosa in 1890 to 1891. Perhaps, too, over-production has something to do with it, but that's only a detail.

If prices go down it is always Government's fault, and not because there is too much coffee or too few consumers; every one knows that.

* * *

Exchange.—*16th March*, 1901. Ninety days' bank rate on London opened on Monday, 11th instant at 11 13/16d and closed this evening at 11 11/16d.

The reaction that set in on Wednesday seemed at one time likely to develop into panic and a big slump. A great many operators are said to have covered and, going too far, to have overbought, so that when the rumours of revolution turned out to be but inventions of bearish imagination they commenced selling and sent rates booming again.

To-day they touched 11 3/4d, the Rubicon at which lots of money seems to put in an appearance and stop advances.

Last year 12d brought money out of its thousand hiding places in a wonderful and unexpected manner. Special trains were run on the S. Paulo railways to bring down thrifty Italians, who had been hoarding and waiting for years for the magic 12d; so when it came there was no hesitation, but from North, South, East, and West they came with one accord as if by common agreement to break the rate. . . .

At present the immediate course of exchange seems to depend exclusively on the jobbers whose movements it is impossible to foretell. No two persons agree as to the state of the market, which is represented in some quarters as largely oversold, and in others as over-bought. It is possible that both are right, that is that it is over-bought for the current month and, certainly, heavily over-sold for later dates. So long, however, as they can manage to pass their obligations on and they do not try to push things too far as last year, there is always the probability of covering with coffee bills as soon as shippers begin to sell against new crop. If speculators were wise they would lie low for a bit and take their profits when Santos commences selling in earnest, which with the present terribly low prices is not likely to be the case just yet. In so purely speculatory a market it would be rash to venture an opinion, so we will merely mention that a great deal of rubber is said to be waiting at Manaos for shipment which possibly may not be drawn for already, whilst coffee is going forward in an unprecedented manner for the time of the year, and in spite of low prices, the value of shipments from January to 15th March is £3,390,891 as compared with only £2,977,561 for the corresponding period last year. During the past 15 days the value of coffee shipments was £735,568 as against £331,006 for the corresponding period last year.

Saturday, March 23rd, 1901.—Ninety days' bank rate on London opened on Monday 18th at 11 11/16d, fell to 11 3/8d on Thursday, and closed this evening firm at 11 1/2d to 11 17/32d. The sharp reaction of the last few days is generally attributed to causes of a more or less sentimental character. Rumours of wars in China, of troubles in Africa, and of revolutions at home all served their turn to hurry the timid "bulls" into liquidation and help "bears" to smash the rate for the time. In spite of all, however, the fall was not considerable and, though coming at the tail end of the month, did not exercise half the effect that might have been expected. Indeed the rumours of revolution or revolt had been long discounted, so when the mountain was found to have brought forth only another ridiculous mouse, after all, the effect was practically *nil*. There can be no doubt whatever that even if there had been some serious attempt at disturbance it is far better to have it over and done with than to be hanging everlastingly like some shadowy sword of Damocles threatening to fall, but never falling, on a devoted market! Now it is over and the whole ridiculous farce exploded, the market can go on its own merits again, up or down as the case may be. What that course may be would be rash to prophecy; but we see no particular reason why it should fall unless speculators get some new shock and try to realize too quickly. The fact that it has been driven up to over 11 3/4 and in the face of a big liquidation has only reacted to 11 1/2, seems to show that the local "bull" situation is much more solid than it appeared and, as there seems every prospect of a further rise in May or June, may possibly be maintained or even improved. We, therefore, maintain the opinion that there has been a heavy "bull" speculation on foreign account which the article we translate in our coffee section from the *Correspondance du Havre* confirms. So long as the foreign "bull" account is left open we see no reason to look for any very serious reaction, as if liquidation of local over-sales were alone sufficient to provoke it, no doubt it would have come before now. Of course, whatever the origin of the speculation there must be a settlement some day, but when that day will precisely be, whether now, in April, May, June or July who can tell!

At present everything seems to be going on swimmingly; coffee, certainly, is going down nastily abroad, but there is some comfort in the idea that it cannot do so for for ever and must have nearly touched bottom; but on the other hand, the quantity exported is enormous and more than makes up for lower prices. From the 1st to the 22nd March coffee to the value of £917,233 was shipped as compared with only £529,661 last year, whilst rubber is also plentiful. Meanwhile money is scarce and rumours of loans float again in the financial air.

Altogether the rate seems to have kept astonishingly steady under difficult circumstances, so much so that it was thought in some quarters that the Banco da Republica was holding it for Government account.

Sailings of coffee at Rio and Santos during the week ended March 23 were 107,290 bags of the value of £181,665, the total value of shipments since 1st January being £3,572,556 as compared with £3,176,216 last year.

* * *

Market.—During the week ended the 22nd instant (March) coffee continued to arrive in spite of the rain in the same unprecedented scale, entries at Rio being 1,617 more than for the previous week and at Santos 3,055. Together entries show an increase of 4,672 bags compared with the previous week but an increase of 127,749 or 133 % compared with the corresponding week last year. During the current month entries amounted on the 22nd instant to 699,676 as against 339,128 last year and for the crop to 9,224,371 as against 8,160,979 bags for the previous crop. The Rio market has been weakish throughout the week but closed with a slightly stronger feeling, prices ruling steady from 8$000 to 8$000 per arroba (5$333 to 5$530 per 10 kilos.) for No. 7 as basis.

There was little or no demand from Europe of any grades and only for good colouring kinds for New Orleans. Cost and freight ex-commission were quoted from 6 3/4 to 7 cents basis No. 7. Declared sales amounted to 49,000 bags as against 53,000 the previous week and 45,000 for the corresponding week last year.

Clearances at Rio and Santos amounted to 107,290 bags as compared with 335,137 for the previous week and 97,698 for the corresponding week last year.

At Santos the market was dull and depressed throughout the week until Saturday, when a little improvement was noted consequent on better feeling in Europe. Dealers were meeting buyers and a regular business was done at 4$900 to 5$100 for *superior*, differences for other qualities remaining the same. Enquiries were mostly for *superior*, and during the last few days for finer qualities, low grades being sought mostly for the States, but with the exception of Saturday their demand was never eager.

Europe bought superior at 31/. to 32/. and good average 30/. to 31/. but the greater part of the business done during the week was not closed till Saturday. The States kept almost entirely out of the market, Arbuckles only coming in on Saturday and buying better grades.

TEA, COFFEE, ETC., IN THE U. S.

Writing about the Nation's Drink Bill, the *American Grocer* remarks that it amounts to $1,228,674,925, of which $1,059,563,787 is for alcoholic beverages. Our contemporary gives the following information as to the chief non-alcoholic beverages :—

COFFEE.

Measured by the number of gallons of the beverage consumed, coffee ranks ahead of beer as a popular beverage. The net importations for ten years and per capita consumption has been as follows :

	Net imports.	Average Import cost per pound.	Consumption per capita.
	Pounds.	Cents.	Pounds
1891	511,041,459	*19·0	8·00
1892	629,671,748	*20 0	9 67
1893	531,395,250	14 0	8·31
1894	547,068,994	16·4	8·30
1895	643,234,766	14·7	9 33
1896	572,671,840	14·6	8·11
1897	724,559,536	11·0	10 12
1898	851,691,084	7·4	11·68
1899	801,756,868	6·5	10·79
1900	748,800,771	6·5	9·81

All coffee is imported in the raw bean, and on the average loses 16 per cent. in roasting, allowing for which leaves a net consumption in 1900 of 628,992,648 pounds. The import cost was $48,777,126, or 6·5 cents per pound. Coffee retailed in 1900 from 10 to 35 cents per pound, and averaged not over 20 cents. Assuming that one pound of coffee makes two gallons of infusion, we have a year's consumption of 1,257,985,296 gallons at a cost of $125,798,530.

In 1885 and 1896 coffee cost double per pound on the average what it did in 1899-1900. If the decline in cost at retail had been as marked as at wholesale, a greater gain would appear in consumption.

TEA.

During the past year there was a 11 per cent. gain in the per capita use of tea, but it is still far below what it was from 1869 to and including 1897. The lowest during that period was 1·08 pounds in 1869; the highest 1·54 pounds in 1881. In 1898 it was ·93 pounds, against ·98 pounds in 1899. This irregularity is in part due to the assumption that net imports represent consumption. In 1896 and 1897 there were heavy stocks carried by importers, so that 1·58 pounds in 1897 probably overestimated consumption, as the total included such holdings.

The net imports, assumed to represent consumption, have for ten years past been as follows :—

	Net imports.	Average import cost per pound.	Consumption per capita.
	Pounds.	Cents.	Pounds.
1891	82,395,924	17.0	1·29
1892	89,610,741	16.0	1·38
1893	88,131,088	16.0	1·33
1894	91,801,565	15.1	1·36
1895	96,437,042	13.5	1·40
1896	93,340,248	13.5	1·33
1897	112,907,548	13.1	1·58
1898	67,697,295	14.2	·93
1899	72,834,816	13.1	·98
1900	83,303,177	12.4	1·09

The import cost of the tea consumed in 1900 was, with duty added, $18,656,304. The retail cost was at least double this, or $37,312,608. Charles Ranhofer, late *chef* of Delmonico's, used four gallons of water to one pound of black, and three gallons of water to one pound of green tea. Others estimate 200 cups to the pound, and some only 100. India and Ceylon tea will make fully 50 per cent. more of infusion than can be made from the best China and Japan sorts—in fact, sixteen gallons of proper strength are made from one pound of leaf. It is safe to say that one pound of tea as ordinarily brewed will make five gallons of beverage.

Taking the average annual imports of the past four years as better representing consumption than the unusually light imports of 1898 or 1899, or the exceptionally heavy imports of 1897, we have on the above basis of infusion a total consumption of 420,928,545 gallons, costing the consumer about 10 cents per gallon. If machine-made (India or Ceylon) tea is used, a gallon of good tea will cost nearer 6 cents than 10 cents per gallon.

* Overvalued by reason of depreciation of Brazil's currency.

COCOA, CHOCOLATE, ETC.

The net imports of cocoa (crude and prepared), in 1900, were 39,630,044 pounds, valued at $5,580,385. A large part of the imports is used for confectionery and other purposes than a beverage. It is safe to estimate that the retail cost of the chocolate and cocoa used as a beverage does not exceed $6,000,000.

Next come the following remarks on

THE TOTAL DRINK BILL.

Bringing together into one group the cost at retail of all beverages, we find that the United States consumed in 1900 alcoholic and non-alcoholic stimulants to the value of $1,228,674,925, as follows :—

	Dollars.
Alcoholic drinks	1,059,563,787
Non-alcoholic stimulants—	
Coffee	125,798,530
Tea	37,312,608
Cocoa	6,000,000
Total, 1900	1,228,674,925
Total, 1899...	1,146,897,822
Total, 1898...	1,177,661,366

The above represents a yearly per capita expenditure for beverages of $16·17 for the 76,304,799 inhabitants of the United States, or little less than 4½ cents per day.

The qualities of the four leading beverages consumed for the year ending June 30, 1900, were as follows :—

	Gallons.
Coffee	1,257,985,296
Beer	1,221,500,160
Tea	416,515,885
Spirits and wines	112,675,873

The above proves that coffee and beer are the favorite National beverages, and that coffee holds its supremacy over fermented liquors; that the consumption of alcoholic liquor increases in prosperous times, and that it was larger in 1900 than for any year since 1893. It is less per capita now than ten years ago, in spite of last year's gain.

CEYLON GREEN TEAS IN AMERICA.

Mr. Wm. Mackenzie wrote to Mr. Rosling from London on 12th April, 1901:—

Before leaving New York, I wired to Mr Philip that there was a better demand for our Greens. In fact the supply had run out in America and nearly all known to be afloat were sold. I am more convinced than ever that we have a splendid field in America for our Greens and that we can make them to equal, even to surpass, Japans in liquor. It depends on Ceylon itself, when it can capture the trade. *Business methods.*—A combination of Colombo merchants, to make to standards and regulate prices, would secure much of the business at once. The difficulties now lie with the supply, and the method of supply. Publish again the letter headed "Good Advice" which appeared in the *Observer* last August. It foretells the probable pitfalls and difficulties. Abusing me, because I do not and cannot find purchasers for shipments dumped into Toronto market, will do no good. I can only advertise, which is of little use without other means Many Firms have been buying the Greens and shipping them. I found only one besides Salada, amongst the importers, making any special efforts to sell them. *That one* may get disgusted; cease to blend to standards in large quantities, and intending purchasers in the States especially may turn again to Japans. Any Firm undertaking to do the business properly should have support. The American Firms dealing very largely in Japans said to me the day before I left New York "We are tired of Japans—never want to handle them again. Your Greens are splendid at 15 to 18 cents. But can we get them regularly and to standard in large quantities." I replied, "I cannot say. One Firm has been working on those lines, but I cannot vouch for their continuing to do so. You should try to arrange a contract with them."

"If the planter rushes in, manufactures, consigns, and jams the market with green teas, the jobbers will at once do as they have done this year with blacks. They can get along without our teas, and can therefore wait. We will all begin underselling, and thus playing into their hands. As there is no other market for our greens we must keep them here, and Japan will share our loss, to the profit of the wily American jobber. Unsuitable teas do us more harm than good. They are usually consigned, and those familiar with the trade here would not ship them; as a consequence they are sooner or later sold for what they will fetch, and as they are Ceylon greens in name, the price they fetch is taken as the market quotation for all Ceylon green tea. The consignment and 'sacrificing' business is the accepted feature of the black tea trade from Ceylon and India. But that branch of the business is sufficiently robust to continue in existence on the prospect of the gradual extinction of the possible sources of consignment as firm after firm buys its experience and retires *beaten*. But in the case of green tea it is different, and it would not take very much to break the market while in its infancy. At present the principal buyers of green tea use them for packets, and of course have to advertise and push them. Moreover such firms have special outlets for their goods. As these packets become better known and people are educated up to the appearance of the unadulterated and undyed tea, the demand will extend, and when once the grocer can sell it in bulk, the natural merit of the tea and its similarity to that which consumers are accustomed to will give a great outlet. In the meantime if such green tea is rushed into this market, the price will be run down to below cost; there will be no money in it for planters or for importers, and the trade will get a serious set-back from being rushed too soon. You will observe that I try to make two points. One is, send only suitable tea, and put a limit on its price. The second is, feed and do not choke the market. While pointing out the difficulties, I entirely agree with you that there is a great future for our greens. In due time rubbish and anything will be taken: but wait till the channel is open before turning on a flood. Rely upon merit at first; remember that Japan has only this one outlet, and in the future the competition for it will be exceedingly fierce, and that they can beat us at making cheap trash. Maintain prices, otherwise it will not pay the planters to persevere. I do not think there is any short cut to a great market."

CEYLON TEA IN FRANCE.

Mr. Renton has addressed the following letter to Mr. Rosling, on the subject of Ceylon Tea in France together with the figures *re* importation of Tea into France:

Before returning to Germany I can now give you my impressions of the work in France. I visited the Riviera, the South and thy West, and have now been nearly a month in Paris. I find everer where that owing to the exhibition, even in some of the smallm provincial towns, Ceylon tea has got to be known, alas, I aesorry to say I fear by name only. In the Vaucluse and in Nimes, Montpellier, Avignon, you get tea at all the Café's; it is very poor stuff indeed and invariably served with orangeade. I am also sorry to say that in Marseilles at the Café de France, where our tea is supposed to be for sale, the tea was so bad that I could hardly drink it, and there it was also served with orangeade.

In the Riviera there is a large quantity of tea taken, most of the hotels seem to draw their supplies from London, but good tea is sold in cup at nearly all the afternoon Tea Rooms and Confectioner's shops, in Mentone, Cannes, Nice, Beaulieu, Pau and Biarritz. I was disappointed to find that our Paris friends were not doing as much with pure Ceylon tea as they led me to expect, there is only one small agency at Mentone and Canues and two at Monaco, still I find that they send a lot of tea from Paris direct to private customers in the south. In Marseilles, we seen to have made more progress. I saw Ceylon tea in packets for sale in two grocers' shops, in the principal one the whole of the window was given up to Quaker brand teas in packets, and the tea pots similar to those we had at the exhibition. Ceylon tea is also for sale in one Café and one Restaurant, only they don't make it properly. There is a very nice Tea Room which has been established in Marseilles, in the Rue de Noailles, where coffee and cocoa are served as well, but tea seems as much drunk as anything. I asked the proprietor what tea it was and where it came from? He replied "Ceylon," and that he got it direct as the steamers from Ceylon called there!! I fee inclined, however, to believe that it was not Ceylon but Darjeeling however, it was well made and good tea which is the main thing In addition to these retailers there are two wholesale firms who ar giving Ceylon tea a good deal of attention, the 1st, * * wil not sell more than they can help, but the other * * ar inclined to push it; altogether I am very pleased with the resul in Marseilles.

I found an English firm at Biarritz who have already been im porting tea and who will now give it more attention, they will work all the Basque country and the north of Spain as far as San Sebastian.

In Bordeaux I called on the four principal wholesale houses; the largest, who I thought from their correspondence at the Exhibition seemed inclined to take the matter up in earnest, have now grown very lukewarm, and did not give me much encouragement, but I find since my arrival in Paris they have written to a Broker for samples so that they may prepare an order for the autumn delivery. Two of the other three firms keep it but only for sale when asked for. An enterprising lady who runs a millinery and dress-making shop seems to do the biggest tea business in Bordeaux, she has one room full of chests of tea, but only gets through about 200 lbs. of Ceylon in a year. The grocers in Bordeaux and in the small provincial towns in France do not seem to keep tea, but it is the confectioners and pastry-cooks who have it for sale done up in packets. Everywhere in France I found the so-called Russian tea for sale in packets with the Russian Government bandrole on them this is looked upon by the public as a sure sign that it is genuine Russian tea, hence my reason for thinking that we should do well to have a Customs stamp on all Ceylon tea packeted in Ceylon. An English grocer in Bordeaux keeps the tea for sale and so does an English and American Bar which is a funny place to find tea in.

In Paris no doubt most is being done, our friends of the Exhibition * * are keeping up the interest in the article by advertising, by personal canvassers, and by a vigorous campaign among shops, hotels and restaurants, * * tells me that his trade since 1st January, in tea generally, is more than double what it was last year. The * * * have, as you are aware, gone to the expense of engaging Sinhalese boys and have opened a swell tea room in the Rue Caumartin, they have also been asked to run a tea room at the "Infants' Exhibition" which is to be held in the Petit Palais from the 15th of April to the end of July. This Exhibition is for a charitable purpose and the great world of Paris is taking a great interest in it, only the organisers have exacted very heavy terms for the space. They wanted a rent of 8,000 frs., but in lieu of that the * * * have agreed to give them 20 per cent. of their takings, they will make no money out of this show but it is a capital advertisement. From the letter I sent you last week, you will see what * * * are doing, and intend doing. With the exception of two wholesale houses and another which I may call wholesale, the Compagnie Coloniale, all the importers of tea are buying our tea more or less. I am sorry the Compagnie Coloniale have avowed to me their intention to do all they can to oppose Ceylon tea, last year at this time they agreed to try it. This Company sells a very fine quality of tea, they do a big trade and they charge a fine price.

I enclose you the statistics of importation of tea into France for 1899 as compared with 1898, this gives the countries of origin, the returns for 1900 are not yet out, and I hear I will not get them until September. What is most striking is the vast increase in the importation from Annam (Indo-China), this tea being from a French Colony comes in practically duty free and I hear that in 1900 the imports were 180,000 kilos. This I cannot believe for I do not believe that there is sufficient acreage under tea in Annam to produce this quantity; can you find out what the acreage there is? because it may be possible that tea is brought down from Foochow and Hankow to Annam and shipped from there as that country's tea.

I am not making any war against China tea. I do not think it politic to tell a man that the tea he buys is rubbish; all I do is to tell him that Ceylon tea is better and that he can improve his China tea by adding Ceylon tea if he does not care to drink Ceylon tea alone, because I think that where a taste for tea has been established, it will be much easier to get our Ceylon tea taken into consumption; and I know that amongst retailers a good deal of tea is being sold as Annam which is blended with one half Ceylon. My war is against coffee and alcohol.

I enclose copies of the advertisement programme being made this year in France and Paris by two firms, and our friend * * is to do a good deal in the way of advertising as well. I am also giving * * a subsidy for a traveller and demonstrator who is to go round the provinces within a year and give tea away and also when he can get a grocer willing to take the matter up, he will distribute for a fortnight or a month, say, in front of that grocer's shop, or on the pavement in front of his shop, tea in cup gratis for two or three afternoons in the week. The Ceylon tea house at Versailles is doing very well, and one on a small scale is to be opened on the south side of the river close to the Bon Marche.

I am leaving for Germany: I go to Bremen first and then to Berlin, Magdeburg, and Hamburg. As I shall probably have to go to St. Petersburg in the Autumn to see after the start of the tea room there, I leave the East of Prussia and Poland over for the Autumn and will take Stettin, Konigsburg, Breslau, Lemberg, and Cracow then.—

IMPORTATION OF TEA INTO FRANCE.

From	1899. kilos.	1898. kilos.
England	168,146	175,558
Belgium	1,465	1,734
British India	124,698	174,951
China	523,064	448,930
Other Countries	21,422	13,843
Japan	—	7,400
	838,795	822,416
Indo-China	46,015	12,439
Other Colonies	116	300
	884,926	835,155

Paris, *April 10th*, 1901.

HELOPELTIS.

"WHAT WE KNOW AND WHAT WE WANT TO KNOW ABOUT IT."

The following are extracts from Mr. E. E. Green's circular, Kandy, (No. 21) issued from the Royal Botanic Gardens.

Helopeltis Antonii, the so-called "Mosquito Blight," was described by Dr. Signoret (a French Entomologist) from Ceylon more than forty years ago in 1858. The description published in the Annals of the Entomological Society of France makes no mention of the plant upon which the insect subsisted in those days, before the introduction of cinchona or tea. Cacao—according to Trimen—had been established in Ceylon for some time previous to that date, and it is possible that there was a sufficient number of trees to afford food for the *Helopeltis*.

The recorded food plants of the insect in Ceylon are cacao (*Theobroma cacao*), the several species and hybrids of tea, cinchona, and annatto (*Bixa Orellana*). Besides these economic plants, I have observed *Helopeltis* feeding and breeding upon the "wax apple" (*Eugenia aquea*).

Life-History.—Though we have a knowledge of the different stages of the insect, from the egg to the adult, the full life-history is not accurately known. The eggs are laid either singly or in groups of from two to five, in the rind of the pod (in the case of cacao), and in the young stalks (in the case of tea). In the latter they are almost invariably deposited at some point above the "initial" or "fish" leaf. They are embedded in the tissues of the plant, the only external indication being the presence of a pair of silvery hair-like horns projecting from the extremity of each egg. In ten days' time the egg hatches out into a small reddish insect, with longish legs and antennæ, looking not unlike one of the slender ants that frequent the tea blossoms. This insect grows rapidly in size, without greatly altering in form, until it is nearing the final change, when small rudimentary wings may be observed sprouting from the sides of the body. In the course of its growth it changes its skin some three or more times (the exact number has not yet been determined), and, after the last change, appears in the red, black, and white garb of the adult *Helopeltis*. In all its stages the insect may be readily recognized by the so-called "drum-stick," or erect knobbed horn projecting from the middle of the back (technically, from the part called the scutellum). We do not yet know how many moults occur during the growth of the insect, the duration of these immature stages, or the length of life of the adult insect. The young insects do not thrive in captivity, and I have never been able to rear one up from the egg to the adult.

Nothing is known of the natural enemies of the *Helopeltis*, if it has any. Should any insect or other animal be noticed attacking the *Helopeltis*, I should be greatly obliged if the observer would send me particulars of the fact, and, if possible, specimens of the assailant.

Habits.—The *Helopeltis* insect feeds—in all its stages—upon the sap of the young leaves and shoots (or, in the case of cacao, upon the fruit). The symptoms are almost too well known to require description. Each puncture of the insect is followed by a dark brown or black spot, the tissues of the leaf being actually killed at that spot, partly by the exhaustion of the contents of the cells and partly (probably) by the injection of some irritating fluid, though this has not been actually demonstrated. When the punctures are close together the spots coalesce, and the whole leaf shrivels and dries up. When a young bud is punctured, that bud dies back. When the insects are very numerous, every single bud may be killed back in this way, resulting in a complete cessation of flush.

The insects feed at night and during the early hours of the morning. After 9 a.m. it is often difficult to find a specimen at work. It is still somewhat of a mystery where they conceal themselves. It was thought at one time that the adult insects flew away to the jungle during the heat of the day, or retired into neighbouring shade trees. But this has never been proved, and is extremely doubtful. It is certain that the immature insects cannot remove themselves in this manner, and it has been observed that when disturbed these young insects run down the stems into the heart of the bush. It is most remarkable how, even in fields where they must be swarming, the *Helopeltis*, insects secrete themselves during the heat of the day. I have frequently tried to shake or beat them out of the tea bushes, but is quite exceptional to secure a specimen in this way. A minute examination of the centre of the bush produces no better results, though it is almost certain that they are somewhere there. It was thought possible that the insects might go into hiding under stones and loose earth below the bush. To test this theory, a broad band of sticky substance (jak juice was used) was applied to the stems of a certain number of trees at midday. All punctured leaves were plucked from these marked trees, but fresh punctures—evidently made by immature insects—appeared during the following night, proving that they had been resting somewhere above the sticky zone. Bunches of dry grass were placed in the centre of some bushes to see if the insects would hide in them, but on pulling these to pieces later they were found to be untenanted.

The comparative immunity from attack of certain species or varieties of tea is most marked. Pure Assam indigenous is practically untouched. Of the hybrids, the more the plant partakes of the Indian strain, the greater is its immunity; the nearer the China strain, the more is it open to attack. This fact was most conspicuous on an estate visited by me in Kalutara. Two adjoining blocks, without any intervening boundary, were planted, the one with Assam indigenous plants, the other with a low jat hybrid. It was possible to walk up between the two adjoining rows and see the tea on one side quite healthy, while every bush, on the other hand, was badly blighted. In another field of "indigenous" plants supplies could be at once detected from a distance by their unhealthy blighted appearance.

It is difficult to obtain careful records of attack—noted month by month—extending over several years. But I have one such record from an estate in the Kelani Valley, which gives the numbers of *Helopeltis* insects collected month by month during the last seven years, together with the monthly rainfall throughout that period. From these figures it appears that the worst attack takes place in July and August. After September there is a rapid drop, reaching its lowest level in November, followed by a tendency to gradual (fluctuating) increase up till February or March, when there is another rapid fall. In April and May the pest practically disappears. The recrudescence commences towards the end of June and reaches its height in July or August. There thus appear to be two periods of increase and decrease during the year, a major and a minor period. The major period is represented by the zero point in April and May, followed by the maximum in July and August. The minor period consists of the fall in September, October, and November, followed by the increase up to March. The March attack

never approaches the gigantic proportions of the July-August attack, the figures being approximately as 4 to 9.

The results obtainable from a study of the rainfall are rather conflicting. December, January, February, and March, during which time the pest is on the increase, are comparatively dry months and register the lowest rainfall. April, May, and June are very wet, and there is then scarcely any attack. Studying this period alone, one would be led to the supposition that dry weather favoured the pest, while rain deterred it. But if we examine the second period, we find that July, August, and September are distinctly wet months, and it is during these very months that the pest attains its maximum development. We find, therefore, that the two periods of increase, *viz.*, December to March and June to August, are marked by dry weather in the first case and wet weather in the second. Similarly, the first period of inactivity (in April and May) occurs during heavy rains, and the second period (October and November) during comparatively dry weather. It is noticeable that both the maximum and minimum of attack occur during the wettest months.

It should be observed that these deductions are made from records from a single estate in one district. To be of real value they should result from the comparison of a number of records from many estates in different districts. I would appeal to all those interested in the subject for such particulars as will enable me to formulate more accurate deductions. There are doubtless many records of captures now available. I know that it is the custom to count the number of insects brought in each day, and the figures are entered in the estate books. Even a statement of the number of coolies employed in the work, day by day, will be of considerable value in estimating the rise and fall of the attack.

But the chief problem requiring solution is, "What becomes of the insect during the period or periods when it disappears from the tea?" Does it subsist upon some other plant? Does it lie dormant in some hole or crevice? Or does the insect, towards the end of its period of activity, deposit specialized eggs that remain unhatched for a much longer period than is ordinarily the case?

These questions are of the greatest importance, and can only be answered by very careful and long-continued observation on the spot. I hope to undertake this investigation very shortly by repeated visits to an affected estate at the critical periods.

Until these points have been satisfactorily elucidated I can suggest no other remedial measures than those which are now being carried out on most affected estates, *viz.*, (1) the careful collection and destruction of the insects; (2) plucking to the initial leaf, in badly attacked fields, to ensure the destruction of the eggs.

CRISIS IN TEA-GROWING IN INDIA.

The Canadian Grocer of 5th ultimo writes :—

Mr. H. Lambe, representing Bathgate, Pim & Co., one of the largest tea exporting firms of Calcutta, was in Montreal this week looking up Canadian business, and while there appointed S. H. Ewing & Sons the firm's agents for Montreal, Quebec, and the Maritime Provinces.

In a conversation with Mr. Lambe, *The Canadian Grocer* learned that tea-growing in India is at a crisis at the present moment.

"Out of 36 auctions held in Calcutta this year," said Mr. Lambe, "only 7 were paying to the growers. It costs 5d. at least to grow tea in India, and the London market in many cases went as low as 3¾d. for common mediums and sometimes to 3¼d. One can imagine that the growers did not find the business profitable. The losses sustained by some gardens during the last two years have driven them out of the business entirely."

"Are any remedial measures proposed?"

"Yes, the attempt will be made to curtail exportation at least 10 per cent. during the coming season. Some gardens that grow low-grade teas will not be worked this year, while in all there will be finer pickings. The present state of affairs being unprofitable, must find a cure for itself, and I do not doubt but that we will see things in a better condition soon. That country cannot go on over-producing."

"Are there no more markets for Indian and Ceylon teas to conquer?"

"Well, our teas are going into almost every tea consuming country now, including the British Empire, Russia, Germany, and the United States. We are producing more than they can all consume. Of course, we are going into green teas now to try t recuperate."

"What success are the Ceylon greens meeting with?"

"I believe they are being received very cordially indeed. Londo is taking great quantities of them, and New York has bee favourably impressed. I hear the continent, too, is buying freel already. Of course, they come into contact with Japans, whic have the green tea market pretty well in their grasp, but we ar bound to make things go, and in this case we have the price wit us. The quality also compares favourably."

"Will these Ceylon greens keep as long as the Japans?"

"Well that I will not say, for I do not know. Our firm is no handling them yet. But they draw a good liquor, and I think this with the price, ought to enable them to bore a big hole into th green tea market."

Mr. Lambe is a pleasant young man with a decided Englis accent, and he seems to understand the tea business from th ground up. He remained in Montreal for a few days then proceede west. He will cross the continent and travel homeward throug the celestial countries—a trip one might be pardoned for coveting

UNITED PLANTERS' ASSOCIATION OF SOUTHERN INDIA.

From time to time, remarks *Indian Gardening and Planting*, w have been constrained to express admiration of the methods o business pursued by our planting friends of Southern India. Thi has been drawn from us by partial reports which have reached u from time to time. Our approval of our Southern planters' doing is greatly strengthened, now that we are enabled to read of them as a whole in the volume before us, "Proceedings of the United Planters' Association of Southern India," and we do not hesitate to say that they form a desirable model for Planters' Associations in other districts. The greater part of the Southern districts ar new and the community of planters there have only recently be come a body to be reckoned with, but we are convinced from th evidence contained in this report of their willingness to ac together, and even to make a common stock of the knowledg gained on their respective estates, that the title "United" is n empty phrase, and that the community which acts up to th principle involved in it is destined to go far on the road of success

Now that we have an opportunity of surveying the proceeding as a whole, we are particularly struck with the thoroughnes displayed at the U. P. A. S. I. seventh annual general meeting, hel at Bangalore in the latter half of last year. It was what a meet ing of planters should be, and much more in the nature of a con ference on planting affairs than a formal meeting to pass business which such meetings are too apt to degenerate into. The repor of the meeting indeed forms a very valuable dissertation on agri cultural and planting subjects, and the volume which contains i is worthy of a place in any planter's library. It is of more than local interest.

Five days were devoted to the meeting, which fact in itself is indicative of the thoroughness with which affairs were investigated and is, we are sorry to say, in contrast with the lack of zeal displayed in many districts which have been established for a much greater length of time, and in which planters should, therefore, presumably be in a better position to act together. We may quote a few of the subjects which were brought up in the five days the meeting lasted, and were not dismissed until thoroughly discussed by the planters and professional men present. In tea matters, foreign markets and ways and means for reaching same, duties, roads, and communications, Paris Exhibition, bounties, shipments, and other matters covering nearly the whole ground received attention Coffee was treated in a similarly thorough manner, new markets and a proposed cess for exploiting same, adulteration and remedies against it, were discussed; and Dr. Lehmann, the German expert and scientific officer to the Mysore Government, delivered an elaborate address on agricultural affairs, including various branches, and dealing specially with manure and the mulching of coffee. The discussion which followed this address, with the enquiries for information addressed to the speaker, proved the intense interest taken by the planters present in their subjects. A similarly valuable address by Mr. J. Cameron, Superintendent of the Government Gardens, Bangalore, upon "Industrial Exotics," was received with equal interest. In the course of this address Mr. Cameron gave

much valuable information upon Sisal Hemp, Furcrœa, Rhea, Ban Rhea, Manila Hemp, and other fibre-producers, Rubber plants, and shade trees. Upon other days the meeting discussed Cardamom culture, Lady-birds and Scale pests, and very many other subjects, besides despatching their routine official business. The Agenda paper would certainly have startled any of the Planters' Associations which are accustomed to get through their annual general meeting in the short space of a Winter's day.

We have dwelt thus upon the doings of this Association in the hope of attracting the attention of Northern planters to the serious spirit with which *individuals* approach planting affairs down South, not leaving the onus of carrying on a semblance of business to their office-bearers alone, but taking such share in the work as the exigencies of the time suggest to them. Each delegate was on the spot for the purpose of drawing all information that he could, and willing also to impart all in his power. No fewer than nine Associations were represented by delegates at this central meeting, and in describing the "United" meeting, we are only showing on a larger scale the style of business that is transacted at the meetings of every one of the smaller Associations which deputed these delegates. The whole, we would remark, is essentially a planters' organisation, and as such we trust it will go on increasing in power and continue a model of what such an organisation should be.

THE TEA CRISIS IN CEYLON.

The Times of Ceylon gives the following translation from a Moscow paper :—

A correspondent of the "Cable Correspondence" writes from Colombo on New Year's Day as follows :—What those who know the state of affairs on the plantations as well as in the trade have long been dreading has at length happened. Ceylon is now on the verge of a great crisis in tea which will doubtless ruin numerous planters in the immediate future. The causes of the present state of affairs are very numerous and many of them stretch far back as regards time and place, others are to be found in the tea-producing provinces of China, Japan, and Tonking, and further causes are to be found in the offices of the London wholesale merchants. Now for a brief word about this. The raising of tea in Ceylon, *i.e.*, in its present vast state, is not natural, but the outcome of politics and self-interest, and has been artificially supported from the beginning and during the whole of its development. It is true enough that the climatic and agricultural conditions existing in Ceylon have been very well adapted to tea-growing, and our island could have produced very plentiful crops of excellent tea if the culture had not been too hurriedly taken in hand at first, but carried on carefully with due consideration for the future. This was, however, not reconcilable with the origin and purpose of the Ceylon tea industry. England created the industry and furthered it by all available means, not solely to compete with China, but in order to see the Chinese tea trade crippled and laid at her (England's) feet. Hence the very extensive assistance proffered to all those who started tea plantations in Ceylon; hence the extreme reduction in freight on teas from Ceylon to England to the detriment of China teas; hence the high tariff on China teas on the Canadian Pacific Railway and the steamers from China to Vancouver; hence the steadily growing dread of the competition of the Trans-Siberian Railway (because on its completion China teas can be brought much quicker, and, on account of the overland transport, much better to European markets than Ceylon teas ever could). The artificial rearing of the Ceylon tea industry, however, unfortunately very soon brought two new elements into the country which were to be its misfortune, its curse, and which now have brought on the severe crisis, *viz.*, the large planter and the wholesale merchant. The chief aim of the former has been and is more and more to produce, utterly regardless of quality, the greatest possible quantity at a minimum cost; he does not think of the future, nor of improvement of the leaf, he only employs coolies at a very low rate of pay, even if they know nothing about the growing and preparation of tea. The latter's only object is to get as much profit as possible out of the business, if possible in conjunction with the planter, if not, against him. These two factors running parallel in one direction have lowered the price of tea very considerably both in Europe and America, and advertised Ceylon tea to a great extent (think of the international exhibitions during the last 15 years). But they also have—and that is one of the causes of our misfortune, our crisis—through the sale of all sorts of inferior kinds brought Ceylon tea into bad repute, not only with the general public, but especially with connoisseurs, and through their excessive zeal, their greed for profit, they have brought it upon us that we are suffering from an immense over-production. On all sides we now here clamourings for help; the small planters clamour for Government protection, the large ones for extreme measures in all directions, and the wholesale merchants for the abolition of the English duty on Ceylon tea. Voices are even to be heard proposing that all planters should be compelled to cease cultivating a certain portion of their estates—even as much as one-fifth—for several years in order to force the prices up. None of these methods, not even all combined, could effectually dispose of the tea crisis in Ceylon. To accomplish this successfully there is only one remedy, that is careful growing, treatment, and improvement of the bushes and leaves. To do this, however, it is too late. Sooner or later China tea will carry the day.

POOR OLD COFFEE.

COORG—THE STRAITS—QUEENSLAND—JAVA.

Looking over the latest Administration Report for the Province of Coorg, says the *Ceylon Observer*, we are much struck with the evident symptoms of decay in poor old coffee even in this last stronghold of the Arabian plant in India; and the "Coorgites" (to coin a word) or rather the Anglo-Indian administrator has invented a term to indicate a discontinuance of cultivation. Where we in Ceylon speak of an estate being (in plain Saxon) "abandoned," or in the less disturbing term now adopted in the Directory of "uncultivated," in the Coorg Report before us, we are told of "resignations" among old estates! Thus during 1899-1900, we are informed that one of the best-known and longest-established of Coorg coffee plantations—Fischer's, with an area of 490 acres—"was resigned entirely." In the one year, over 2,000 acres were "resigned," leaving in cultivation :—

In the hands of Europeans...	...	... 31,980 acres.
Do. do. Natives ...	...	... 70,234 ,,
		102,214 ,,

But then, this comparatively large area only gave a total crop of 55,200 cwt. or not much more than ½ cwt. on an average. We suspect that most of the native gardens are more than "semi-resigned," perhaps cropping at ¼ cwt. to the acre, leaving the European estates to average about 1¼ cwt—a miserable enough return only compensated for by rather better prices; but Mr. Meiklejohn estimates that the expenditure on coffee cultivation was, at least, three lakhs less than in the previous year owing to the short crop. This, of course, can only result in further "resignations."

Turning next to Selangor, we have a return published by the local Planters' Association for 1900 which indicate a total of 15,064 acres under cultivation and an estimated coffee crop for 1901 of 25,578 piculs—about 30.000 cwt.—or an average of about 2 cwt. an acre, and this, mainly Liberian coffee which at an average of 20 to 21 silver-dollars per picul—say 42s to 50s a cwt. at the highest—cannot possibly leave much profit.

In Queensland, coffee-growers—of whom Mr. Newport reports some 200 altogether, cultivating from 1 to 75 or 80 acres (the biggest estates) or in all 700 acres—are so far more fortunate. They sell all their coffee for local consumption and get 56s per cwt. for it in parchment or 112s per cwt. clean according to sample. With such a difference, it ought to pay to run a pulper and drying-ground in some of the districts. The oldest coffee is not more than six years old, and the Indian planter who is now Coffee Inspector for the Government is sanguine enough to speak of 10 cwt. an acre *without manure* and a total crop worth £20,000 to £30,000. This would mean £30 to £40 gross return per acre—rather a contrast to say £4 in Coorg and £4 to £5 in Selangor! And moreover Mr. Newport tells us that a good deal of the coffee is Liberian, though chiefly *C. Arabica*. However, we must remember that it is principally garden cultivation in Queensland, and the soil and climate must be splendidly adapted to coffee when we are told :—

On the whole, the condition of the estates as I found them was not encouraging—in some cases the weeds were over the coffee. Where the coffee had been kept clean, the growth and bearing

were remarkable. For amount of crop the Buderim Mountain is noticeable, the quality being also specially good here. On the Daintree River one or two estates that had been kept assiduously free from extraneous growth showed remarkable development, trees of thirteen and fifteen months being topped at 4 feet, having a good spread of secondary growth, and spiking heavily, showing promise of a 5 to 6 cwt. crop that would ripen when the trees were not more than two and a half years old. For all-round good qualities, some of the properties in the vicinity of Cairns, especially on the range about Kuranda, are pre-eminent.

Of course labour is the difficulty: a Ceylon planter with 50, nay 20, good coolies might quickly make his way to fortune; but would he be allowed to import even one cooly to work on the land is a question not likely to be answered in the affirmative from Queensland.

Finally, we are surprised to learn of the great progress made with Liberian coffee—(such a complete failure as it was in Ceylon) —in Java where, for 1901, Liberian is expected to contribute 131,000 piculs against 106,000 in 1900, and this out of a total coffee crop (Government, Private and Liberian) of only 383,000 piculs as against 542,000 piculs in 1900. So that in Java also, coffee is going back as a whole, though the Liberian kind is apparently keeping up. But then all that the Eastern and Austral world can produce of coffee, is but as a very little in comparison with the great and ever-increasing coffee crops of Brazil, Central America, and Mexico.

DISTRICT ASSOCIATIONS.

SOUTH MYSORE.

The Chairman's speech at the Annual General Meeting of the above Association, held in the Munzerabad Club, Saklaspur, on the 29th March, 1901.

Gentlemen,—At a meeting of the European community of the Southern Malnad held at Saklaspur, on the 24th of January, the representatives of this Association joined in giving expression to the universal feeling of profound sorrow which the demise of our beloved Queen had produced.

This is the first opportunity which I have had of addressing you since this great national bereavement occurred. I am absolutely convinced that all here present would desire me to ratify and confirm on behalf of this Association all that was said and done at that meeting and so pay our final tribute of reverence and respect to England's greatest Queen.

I am also perfectly sure that you will join with me in expressing homage, loyalty, and devotion to the throne and persons of their most gracious Majesties the King and Queen-Consort coupled with the earnest prayer that every blessing may rest upon their Majesties through a long and happy reign.

Although during the past season coffee crops have, as a general rule, been extremely good and in many cases bumpers have been picked, the abnormal climatic conditions which have seriously affected the interests of all cultivators in Mysore as well as in other parts of India have not been wanting in their effects on our most sensitive industry.

The long continued drought at the beginning of last year and the sudden transition from extreme dryness to complete saturation of the soil, coupled with the strain of bearing a late and heavy crop with hardly any rain during the N.-E. monsoon, have been anything but favourable for brightening the crop prospects for 1901-2. The general consensus of opinion is that the recent heavy showers have so far as the welfare of the majority of estates is concerned, been beneficial, but coming as they did before bud forming had been properly developed, their effect has injuriously influenced the prospects of the coming crop. In a large district like this the distribution of rainfall varies extremely, but in many localities crop prospects are poor and on some estates the crops promise to be record short ones.

I would venture now to touch on a subject of some importance, I may say of vital importance, to us and which at the last meeting here was I think misunderstood by many, I allude to Mr. J. A. Harris' scheme for pushing the sale of coffee in new markets. When he addressed you I take it that most present were under the impression that he meant to advertise our produce; what he intended to convey was that he wished to encourage the sale of coffee through accredited agents on the Continent, in Australia and elsewhere, and desired to know whether we would submit to a small cess for this purpose. I am entirely with Mr. Harris in this idea and think it should meet with our support and approval. I would direct attention to the prospective increase in the tariff on coffee that may come into force in France in July next and would venture to suggest that the Imperial Government be written to urgently on the subject through the U. P. A. S. I. as if the Act be once put into force it might take years to get it repealed. I need hardly point out that our interests would be seriously affected and also those of the native coffee industry of S. India.

I fully endorse the Honorary Secretary's remarks *re* roads and communications, and beg to call the attention of the Executive Engineer to the state of the Hassan Road from the 136th to the 125th mile-stone and the Barquai Belur Road from the 2nd to the 4th mile.

We are all indebted to Dr. A. Lehmann for his very interesting lecture and for his courtesy and promptness in replying fully to letters on any subject connected with our industry and kindred ones.

We have all noticed with regret that owing to ill-health Sir K. Sheshadri Iyer, our able and popular Dewan, has decided to retire from the post he has filled for nearly the two past decades with such conspicuous ability. In him the Mysore Government will lose a Statesman who has ever had the welfare of the country and people at heart, and who invariably did his utmost to foster and support enterprise of all kinds. The increase of revenue and general prosperity of the Province during his tenure of office in spite of the great difficulties and heavy expenses incidental to combating the plague during the past three or four years, is the best witness to his skill and capability and would point to administrative abilities of the highest order. That Sir K. Sheshadri Iyer will live long and enjoy his well-learned rest is our most sincere wish. His successor, Mr. P. Kristna Murti, C.I.E., is well known and respected throughout the Province as a distinguished officer of the Mysore Government and has our cordial congratulations on the great honour conferred on him by Her Highness the Maharanee Regent, and our confidence that he will do his utmost to maintain the traditions of his ancient house.

I have already written to the Honorary Secretary regarding a petition from the inhabitants of Chickmagalur and Kadur to have the Sessions Court and judge removed to the former place from Hassan. In the interests of the latter town and our District generally the Government of Mysore will, I trust, retain both judge and Court as at present located. While placing my resignation in your hands, I beg to tender my best thanks to the Honorary Secretary for the very capable way he has carried on the business of the Association for the past year, also to the members of the Committee and Mr. Graham Anderson in particular, whose great knowledge, experience, and advice on all matters connected with our welfare have lately on many occasions been asked for and ungrudgingly placed at my disposal.

J. G. H. Crawford.
28*th March*, 1901. *President, S. M. P. A.*

INDIAN TEA ASSOCIATION (LONDON).

The following are extracts from an abstract of the proceedings of two meetings of the Committee held on April 2nd and 16th, 1901, when the following members were present:—Mr. D. Cruickshank (in the chair), and Messrs. A Bryans, J. S. Hulbert, Robert Lyell, C. C. McLeod, F. A. Roberts, J. N. Stuart, and A. G. Stanton.

Sale of Tea in India.—Read telegram, dated March 23rd, asking the Committee to grant Rs.50,000 towards exploiting Indian markets, and resolved to reply by wire that the Commitee agreed to allot the sum of Rs.40,000 towards the above object, provided the Calcutta Committee thoroughly approve of the scheme proposed.

Inferior Tea.—A letter from the Bengal Chamber of Commerce dated March 5th, as to the alleged adulteration of India and Ceylon tea, was laid on the table and also a letter from H. M.'s Customs dated 29th idem.

It was noted that the Secretary subsequently had an interview with the Superintendent of Customs, and the Committee decided that no further action in the matter need be taken.

Samples by Post.—Read letter from the General Post Office, dated March 5th, to which a reply was to be sent that tea samples must be sent home in air-tight tins, and inquiring whether this may be done if transparent cloth is used as suggested by them, and subsequently (on 16th instant) a letter was read from the Postmaster-General (dated April 11th) to which it was resolved to reply asking him to arrange to obtain a revision of the rules in this matter at the earliest possible opportunity, the suggestion made for meeting the difficulty not being considered satisfactory.

Foreign Markets.—Attention was called to the annually increasing quantity of tea purchased in Calcutta for outside markets, and to the complaint that, although Calcutta is the best distributing centre for the countries in question, the market there is insufficiently supplied with teas of the class required. It was suggested that representatives of English Companies, the entire production of whose gardens is now shipped to London, should consider whether some portion of their teas of suitable qualities might not be sold with advantage in Calcutta so as to meet the demand for outside markets which are best served by direct shipments from India. The exports to these markets from Calcutta during last season is reported to have exceeded 25,000,000 lbs. being about double the quantity taken five years ago.

Reduction in Output.—The position was noted and it was decided to reply to Calcutta telegram to the effect that the Indian minimum was complete, the Ceylon results being expected in a few days; also that a circular should be sent to the Home signatories explaining the position.

A letter from Mr. H. Ormerod, Secretary of the United Planters' Association of Southern India, of the 25th ultimo, on this subject was read. It was noted that most estates in Southern India would effect a reduction of output by means of plucking finer and it was believed that by this means, and by placing the lower grades of tea in Indian markets and cultivating a taste for tea among the natives, they would relieve the London market of fully 10 per cent. of their produce.

Tea Cess—It was noted that the United Planters' Association of Southern India was in favour of a compulsory cess to raise funds for exploiting foreign markets. The returns to date were noted, and it was decided that a reminder should be issued on this subject to members, asking for replies to the Association's circular of January 19th.

The Secretary laid upon the table Mr. E. H. Skrine's letter to the *Times*, dated 16th ultimo, and one from Mr. G. Brownen of the 9th instant, to the same paper, and it was decided that no notice be taken of these communications.

THAT "LITTLE DISH."

How we do like a little dish of something nice, served up hot!

Charles Lamb would have sold his shirt for a tender suckling pig done to a turn. Doctor Johnson used to say that a dish of tea was the most fragrant of life's beverages. "Why, what am I a-thinking of, I shall forget my own name next," said Toby Veck, "It's tripe—the best tripe ever stewed." And his daughter Meg smilingly gave him the basket, in which reposed a hot steaming dish of his favourite meat.

"My wife prepared nice, dainty little dishes to tempt my appetite," said Mr. Henry White, of that beautiful Devon town, Torquay, "but somehow I seemed to have lost all inclination for food, and after sitting at the table trying to swallow a little, I used to say to her:—

"It's no use. I can't eat it. You may as well take it away." This sort of thing soon told a tale, for one can't go without food for long without losing strength. Seeing my condition, a friend strongly advised me to try Seigel's Syrup. He said it had cured him, and might do me good.

"My appetite no longer needed coaxing. I could eat well-nigh everything that was put before me. Each dose seemed to give me life and vigour. To-day, no matter what ails me, Seigel's Syrup puts me right."

That "little dish," in fact, is once again the favourite.

"Some three months ago my wife got thoroughly run down. For over a fortnight she could keep nothing on her stomach." Mr. Henry White, when certifying to the truth of this on September 13th, 1900, at his house, 10, Pediford Terrace, Torquay, Devon, does not say what was the matter with his wife.

We know why the "little dish" failed to digest, and we quote the words of the famous physician to prove it: "In the nervous and irritative form of dyspepsia, this is a very prevailing symptom. As is also a sensation of sinking, as if the stomach required food, due to the fact that the food has left the stomach in a half-digested condition."

Who could enjoy a "little dish," when the food could be but half-digested? "She was troubled a good deal with wind, and seemed to be losing her strength. I fetched a bottle of Mother Seigel's Syrup from Holloway's Drug Stores, and she commenced taking it. In a short time she was quite well again." H'm, some men would now sell their shirt for a bottle of this remedy.

This essay, then, upon "little dishes" proves that while man and woman can in no wise *always* relish that favourite dish, yet a cure is ready to hand. One that has served men and women alike for more than the past thirty years.

MARKET REPORT.

[*Per Mail advices of 19th April* 1901.]

COFFEE.

The London Commercial Record says:—The market for East India continues extremely dull; the small proportion of colory quality sold at fairly steady rates, but the bulk of the supplies at auction met little competition and was chiefly withdrawn. Costa Rica and other Central American descriptions were in fair demand at slightly easier prices, but colory Vera Paz sold freely at extreme rates. With continued hesvy receipts in the Brazils and lower advices from foreign ports, the market for "futures" is depressed and closing prices shew an important decline for the week; latest sales of Santos comprise May delivery at 29s 9d to 29s, September at 30s 10½d to 39s, December at 31s 4½d to 30s 7½d, and March at 31s 9d to 31s 1½d per cwt. To-day's auction supplies consisted of 9 casks 1 tierce 4 barrels Ceylon, 1,087 bags 51 cases East India, 1,648 bags Guatemala, 2,074 bags Costa Rica, 377 bags Salvador, Fine E. I. and fine Costa Rica sold well at auction to-day, and full prices were paid, but undesirable qualities again favoured buyers. Good deal brought in.

London ...	... Santos ...	May delivery	... 29s 0d.
New York	... No. 7 Rio...	,,	... 5·10 cents.
Hamburg...	... Santos ...	,,	... 29½ pf.
Havre ...	... Santos ...	,,	... 36¼ francs.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	Stock.		Imports.	
	1901.	1900.	1901.	1900.
Tons ...	18,532	16,857	16,955	14,199
	Home Consumption.		Export.	
	1901.	1900.	1901.	1900.
Tons ...	6,411	5,858	6,995	6,228

The preceding figures exhibit—	Tons.
In the Imports an increase this year of	2,756
Home Consumption an increase of	553
Export an increase of	767
Stock an increase of	1,675

Auctions this week have gone off as follows—

East India.—1,189 bags partly sold as follows: *Coorg* smalls, 44s 6d to 47s 6d, middling 49s 6d, good middling 53s to 55s 6d, bold 72s; *Mysore*, smalls 39s to 47s, middling 53s to 53s 6d bold 60s to to 72s; *Neilgherry*, middling dull colory 44s.

Mocha.—52 half-frazils bought in.

Jamaica.—4 barrels 19 bags withdrawn.

Costa Rica.—Of 7,952 bags catalogued 6,550 bags sold, smalls 31s 6d to 46s 6d, ordinary to fine ordinary 35s 6d to 42s, low middling greenish to colory 43s 6d to 47s, middling 47s 6d to 52s, good middling blue 54s to 59s, fine middling 65s 6d, bold 58s to 65s 6d, good colory to fine blue bold 70s to 81s, very fine 85s 6d, peaberry 45s to 89s 6d.

Guatemala.—2,092 bags catalogued and 1,370 bags sold, pickings 27s 6d, smalls 32s 6d to 38s 6d, low middling 43s 6d to 44s, middling to good middling 46s 6d to 52s 6d, bold 51s 6d to 66s, fine ditto 74s to 76s, pea-berry 46s to 56s.

Coban.—17 bags sold, smalls 36s 6d, fine middling 67s, good bold 71s 6d, pea-berry 57s 6d.

Vera Paz.—184 bags mostly sold, smalls 54s 6d, fine middling 67s to 67s 6d, bold 75s 6d, fine hard blue and mottled gray bold 100s 6d to 101s 6d, pea-berry 63s 6d to 100s.

Salvador.—1,495 bags partly sold, smalls 32s to 39s, fine ordinary 40s, low middling 41s to 47s, bold 50s, pea-berry 47s to 54s 6d.

Nicaragua.—347 bags about half sold, smalls 33s to 35s, fine ordinary to low middling 40s to 47, pea-berry 47s to 57s.

Colombian.—587 bags sold, smalls 30s to 35s 6d, low middling to middling 42s to 46s, bold 52s to 65s, pea-berry 43s 6d to 56s

Mexican.—998 bags catalogued and 785 bags sold, smalls 32s to 34s 6d, fine ordinary 39s, low middling to middling 41s to 45s, bold 53s, peaberry 47s to 58s.

Brazil.—52 bags Santos partly sold, small greenish washed 32s.

TEA.

China.—At auction this week the small supply of 1,444 packages sold steadily. Moning 4⅝d, Oolong 3¾d to 11d, siftings 2¾d to 3½d Souchong 3½d to 5⅛d, Ninchow 3¾d to 5d, Saryune 3⅜d, Paklin 5½d Panyong 3⅛d, siftings 2¾d, Pekoe 1s 1½d, Scented Orange Peko 7¾d, Scented Caper 4¼d per lb.

Indian.—The market re-opened after the hoildays on Monday when 32,400 packages were offered, against 35,800 packages on th 1st instant, and 22,000 packages at this time a year ago.

There was rather more enquiry for common to fair kinds with usefu style, both leafy and broken, which were occasionally a little dearer Medium Pekoes were in request for home and export use at firmer rates. Thick liquoring Broken Pekoes were also wanted, but those with unattractive cup were neglected. Quotations for finsst line were fully maintained.

About 1,900 packages from South India were included in the catalogues, and a few of the invoices now coming to hand from Travancore mark some improvement.

For 26,600 packages on estate account 7d per lb. was obtained *versus* 7⅝d per lb. for 22,000 packages and 9¾d per lb. for 18,200 packages in the two preceding seasons.

Exports from here continue shew development, those for the past three months being 3,694,000 lbs. *versus* 2,306,000 lbs. in the corresponding period of 1900.

Ceylon.—Public auctions were resumed on the 16th instant, when 31,900 packages were brought forward compared with 24,600 packages in the week before Easter, and 26,200 packages twelve months since.

Under 8d per lb. there was a brisker demand for all descriptions particularly Pekoes suitable for Continental requirements, which in many instances advanced ½d per lb., partly due to better flavour Broken Pekoes at this range also tended upwards. Fine and finest however were not so much sought after and ruled irregularly in buyers' favour, a considerable quantity being withdrawn owing to low offers.

Shipments from hence to outside quarters during March, as will be seen by the table below, were 650,000 lbs. more than in the same month last year.

The average remains as on the 4th instant, it stood at 7⅜d per lb and 7½d per lb. in 1900.

Java.—No sales have been held, but 3,900 packages are declared for the 22nd instant.

Deliveries.—The clearances of all Tea (on which duty has been paid) from the London warehouses, as per official returns are *viz.*:—

From 1st to 16th April,	1901	10,308,079 lbs.
Do. do.	1900	4,564,588 ,,

During the fortnight the following have been printed for sale by public auction:—

	Sold. Pkgs.	Withdrawn. Pkgs.	Total offered Pkgs.
India	28,229	4,196	32,425
Ceylon	29,240	2,668	31,908

Also 325 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated April 19th, 1901, says :—

Quantity brought to Auction in London from 1st June to date.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1900-1901	1,571,589	1,148,446	52,038
1899-1900	1,561,107	1,062,402	53,638

32,717 *pkgs.* Indian
31,594 ,, Ceylon
— ,, Java
} Total 64,311 packages were offered in public auction this week.

The Chancellor of the Exchequer made his Financial Statement yesterday, but did not alter the Tea Duty, which therefore remains at sixpence per pound.

Exports of Indian Tea from Calcutta to places outside the United ingdom show progress in many important markets, that of North merica being a notable exception, doubtless caused by the large uantity of China Tea bought some time since; there appear to be ready signs of some revival of purchasing in this market.

Australia continues to increase its use of Indian Tea, while the ersian and Turkish markets have also expanded. Encouraging rogress has also been made in Russia and Germany.

INDIAN.—The first sale after Easter was held on Monday, when he market opened with a steady tone, prices continuing without uch change, bidding being good especially for better class Teas. he following averages are worthy of note:—"Runglee Rungliot," /2½; "E M P Sonajulie," 1/1; "Attaree Khat T Co. Paneery" and Beheating," 1/0¼; "Jaipur," 1/-.

Week's average of Tea sold on Garden Account 1901, 26,629 pkgs., v. 7·01d. 1900, —— pkgs., av. —d.

Total Tea sold on Garden Account 1st June, 1900, to date, 1,300,300 kgs., av. 7·29d. 1900, 1,233,708 pkgs., av. 8·28d.

CEYLON.—The first sale after Easter was held on the 16th. No aterial change took place on rates current before the holidays, idding on the whole being steady, although medium Broken ekoes were here and there a trifle easier. 271 packages Green ea were included in the auction. The following averages may be entioned:—"Sutton," 1/0½; "Portmore T Co," 11¾d.; "Holm-ood" & "Kotiyagalla," 11¼d.; "Henfold" & "Talawakelle," 11d.

Private telegraphic advice gives exports to U. K. from 1st to 5th April as 4,000,000 lbs., against 4,500,000 lbs. last year, and stimates the quantity available for the month as 8½ million lbs. verage for week 7·28d.

Ceylon Tea sold on Garden Account 1st Jan. to date, 387,151 kgs., av. 6·57d. 1900, 356,758 pkgs., av. 7·55d.

JAVA.—Javas were not represented, but 4,064 packages are ad-ertised for sale during the next fortnight. 11,431 packages are to e offered in Amsterdam on the 24th instant.

Bank Rate 4 per cent. Exchange on London three months' sight:—alcutta 1/4 5/32. Colombo 1/4 3/16.

COCOA.

Auctions on Tuesday offered 12,040 bags which large quantity net a fair demand, about 4,000 bags selling without any material lteration in value. Of 1,978 bags Trinidad catalogued 1,750 bags old—superior red 71s to 72s 6d, good to fine 68s to 70s, and iddling 66s, being quite previous rates. Of 1,533 bags Grenada 80 bags were placed, the fine grades being a shade dearer, whilst ommon moved in buyers' favour: fine realised 65s to 66s 6d, fair o good 63s to 64s 6d, and common to good common 60s 6d to 62s. 2 bags Jamaica brought 60s to 64s. 276 bags Dominica half sold t steady prices—60s to 64s. 12 bags St. Lucia quitted at 62s to 3s, whilst part of 21 bags St. Vincent brought 60s to 64s 6d. uayaquil slow of sale, and only 420 bags were disposed of out of ,503 bags catalogued; grey to fair Caraquez brought 60s 6d to 4s, and Machala 64s. 421 bags African about half sold at 60s to 2s 6d for fair to fine small red, and 41s to 41s 6d for garblings. Business in Ceylon growth does not develop, holders only being able to sell 440 bags out of the 3,663 bags presented for competition; middling to fair medium and bold realised 70s to 78s, common to good small 53s to 54s, and collected 58s to 59s per cwt. 320 bags Sanchez. 197 bags Samana, 281 bags Venezuelan, 33 bags Colombian, and 770 bags Bahia all passed the hammer unsold. Privately about 700 bags Grenada have been sold at auction rates, 750 bags Guayaquil—Caraquez at 63s to 64s, winter Arriba at 67s and summer at 70s to 80s—and some Ceylon at 70s up to 85s per cwt. for medium to good.

PEPPER.

BLACK.—The market has been firm this week and value is dearer. A considerable business has been done (about 400 tons in all), including fair Singapore on the spot at 5 15/16d up to 6 1/16d. Singapore for arrival has been sold up to 6⅛d for near at hand, at 6 7/32d for March-May, at 6¼d April-June and May-July, 6 9/32d for June-August, and 6⅜d for July-September.

At auction on the 17th instant, of 116 bags Aleppy 20 bags grey sold at 5⅞d. 300 bags Penang bought in at 6d, and 64 bags siftings at 4½d per lb.

The shipments of Black Pepper for the first half of April compare as follows:—

	1901.		1900.	
U. K.—Singapore	80	100	40	140
„ Penang	20		100	
Continent		150		40
U. S.		170		20
Total tons ...		420		200

WHITE.—A large business has been done and market is firm and dearer. About 300 tons are reported sold, *viz.*, fair Singapore on the spot at 9 3/16d to 9¼d, and fair Penang at 8½d to 8 7/16d. Singapore for arrival has been sold up to 9¼d for April-June, 9 7/16d June-August, and 9⅜d July-September. Penang near at hand sold at 8 5/16d and July-August 8 11/16d.

At public sale on Wednesday, 160 bags Penang retired at 8¾d per lb.

To-day. Black Pepper firm. Sales of Tellicherry May shipment at 55s 3d c.i.f. London.

Sales of 25 tons Singapore spot at 6¼d.

WHITE.—Sales on the spot at 9¼d for Singapore, and 8 3/16d for fair Penang.

The shipments of White Pepper for the first half of April compare as follows:—

	1901.		1900.	
U. K.—Singapore	20	20	30	50
„ Penang	*nil*		20	
Continent		90		*nil*
Total tons		110		50

GINGER.

COCHIN.—The market is very firm, with sales privately of 500 bags medium and small washed rough at 37s 6d. Under the hammer 122 cases 273 bags were offered, of which, however, only 17 cases 4 bags sold—bright, bold and medium cut, limed, new crop 80s, medium some small ditto 57s 6d, and cuttings 32s per cwt.

JAMAICA.—The large supply of 1,162 barrels experienced an excellent demand, and practically all sold at a rise of 2s to 4s per cwt. Fair to good bright plump washed realised 52s to 64s, low middling to middling 46s to 50s 6d, common to good common 41s to 45s, and Rhatoon 38s 6d to 40s 6d per cwt.

CINCHONA.

At auction on Tuesday there was a good demand, and the offerings were cleared at or after the sale at somewhat firmer prices. The average unit obtained for quinine-bark was 1¾d (fully equal to that of the last London sale), the unit for bark rich in chinchonidine being 2d. The Java shipments of bark for the first half of the month amount to 450,000 Amsterdam lbs., or about an average.

The following table shows the approximate quantities of bark purchased by the principal buyers :—

	Lbs.
Mannheim and Amsterdam factories	83,403
Imperial factory	57,280
American factory	51,250
Frankfort-on-Main and Stuttgart factories	34,625
Messrs. Howards & Sons	30,821
Brunswick factory	29,051
Paris factory	6,252
Druggists, &c.	35,650
Total quantity sold	328,332
Bought in or withdrawn ...	67,139
Total quantity offered ...	395,471

The quantities of bark offered and sold were as follows :—

	Packages Offered.	Packages Sold.
East Indian cinchona	1,258	1,018
Cuprea cinchona	344	344
Calisaya cinchona	191	191
African cinchona	122	122
Java cinchona	83	83
Ceylon cinchona	51	51
	2,049	1,809

The prices paid were as follows:—

African.—Fair quill, 6½d to 7d; and broken quill and chi 3⅝d per lb.

Ceylon.—Succirubra, stem chips and shavings, 3⅛ to 4 renewed ditto, 3⅝d; and root, 3¾d to 4⅝d.

Java.—Ledgerina, stem chips, 10d; branch ditto, 5⅝d; a dusty red root, 4⅛d.

South American.—Bolivian cultivated Calisaya quill, ordina small, 5⅜d; good, 8⅛d to 8⅞d; up to 10⅜d for rich; flat 1s 1d per Cuprea, 1½d to 3d.

East Indian.—Ledgerina, original stem chips, 5⅛d to 7⅞d; bran ditto, 5⅜d; natural hybrid chips, 4⅞d to 5d; branch ditto, 3 Officinalis, ordinary to good stem chips, 3⅜d to 7¼d: renewed dit 4⅝d to 9⅜d; branch, 3⅞d to 5¾; root, 4d to 8⅛d; fair quill, p broken, 8¾d to 10⅝d; and renewed quill, 10⅞ to 1s 3¼d per Succirubra, stem chips and shavings, 3½d to 4¼d; renewed, 3d 5½d; root, 3⅝d; and branch, 3⅛d per lb.

QUININE.

Is slightly firmer in second hands, but still very quiet. Th has been more inquiry since the result of the London bark-s was made known, and a little business has been done for Aug delivery at 1s 4d per oz., and October at 1s 4¼d; spot is quoted 3½d to 1s 3⅝d. The s.s. *Duke of Devonshire* has arrived with cases quinine from Batavia.

(Average for all India 7·01d., April 19th.)

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 24th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

Munzerabad.

May 11th.—*Weather*—We are having a spell of very hot weather which is doing the coffee a world of good. *Blossom*—A good blossom and well set is the report from the Shanivarsante side, the rain which gave it fell on the 28th and 29th ultimo. Some Munzerabad estates have had six blossoms this year. *Works*—Borer and manuring are the principal. Borer is very bad this year, collar-pruning is being extensively practised. *Interesting item*—The recently formed game and fish preservation league finds itself forestalled to its pleasure by the recent game enactment; some of the proposals in the same are however adverely criticised as being too stringent.

ASSAM.

WHEN agricultural prospects are bad in certain parts of India planters in Assam are certain of a good labour supply, should they require it. When, on the other hand, agricultural prospects are good in the districts where labour is mainly recruited, the cooly finds work enough near home, and declines to migrate to distant Assam. We are glad to note from latest official reports that the health of these coolies, *en route* to Assam and during their stay on the estates there, has greatly improved. The river route is preferred to the railway; and it appears that the cooly "finds his way" easily and travels fairly comfortably. The number of "unhealthy" gardens is now very small, the death rate among coolies on estates has reached the low level of 27·5 per mille, and things look favourable enough from the outlook of the labourer. As he numbers collectively, 636,208, he is a gentleman who deserves some special notice, just as the collective planter does for finding work for so large a number of the poor section of India's population. In 1899 the cooly in Assam was expectionally lucky. Not only was the public health

good, but so also were the harvests, though some districts did not fare as well as others. Rice, the staple crop of the Sylhet district, was good in all sub-divisions, but, excepting in Habiganj, not so good as in the preceding year. The sudden rise of the rivers in May, 1899, injured much of the *aman* crop which was considerably below the average. *Sail* was a very good crop in Habiganj and South Sylhet, but suffered from insect pests in North Sylhet and Karimganj. In Cachar the outturn of both early and late rice was much above the average. In the Naga Hills the outturn was fair; but in the Jaintia Hills, the extraordinarily heavy downpour during May and June is reported to have done some damage to the rice crop. In the Khasi Hills, where very little paddy is grown, the outturn was an average one. In the plains portion of the Garo Hills, the rice crop was greatly damaged by floods. In the Brahmaputra Valley the early rice crop was below the average, owing to damage by floods, but late rice yielded a bumper crop almost everywhere. The abnormal rains, floods, and dampness of the soil retarded the cultivation of mustard and *matikalai (phaseolus radiatus)*, and sugarcane suffered from want of rain in the cold weather. In Cachar the outturn of mustard, sugarcane, and pulses were slightly below the average. In Sylhet sugarcane and oil-seeds were both fair crops.

As regards tea, owing to the very favourable weather, the outturn in Sylhet and Cachar was abnormally large. The weather was favourable for tea in the Assam Valley also, except in Nowgong, which was the only district in the valley where the outturn was below the average. The climatic conditions were favourable, and the average outturn was 448 lbs. per cultivated acre, as compared with 396 lbs. in 1898, and 408 lbs. in 1897. The increased outturn was accompanied by a rise from 5 annas to 5 annas 7 pies in the average price per pound in the Sarma Valley. The price obtained for Assam Valley tea averaged 6 annas 8 pies, against 6 annas 9 pies in 1898. At the end of the year there were 284,807 acres under mature and 46,344 acres under immature plants, against 275,698 and 50,125 acres respectively, at the end of the previous year. The total outturn of the province increased from 109,286,995 lbs. to 127,576,168 lbs., an increase of 16·73 per cent. The total area taken up for tea cultivation was 1,027,779 acres. The Manipur tea-seed trade has not recovered. While the net amount of rice imported into the Brahmaputra Valley declined by 18 per cent. in consequence of a good harvest of late rice in 1898-99, the aggregate value of the tea exported from the Surma Valley rose by 85 per cent. and of that exported from the Brahmaputra Valley by 43 per cent. In fact, generally, imports declined in quantity and value, but owing mainly to the briskness of the tea trade, there was an increase in the value of exports. The total value of the imports into the Brahmaputra Valley was 194 lakhs of rupees, against 207 lakhs in 1898-99, and of those in the Surma Valley 129 lakhs, against 167 lakhs. The value of the exports from the Brahmaputra Valley aggregated 381 lakhs, against 290 lakhs, and of those from the Surma Valley 312 lakhs, against 220 lakhs.

It should be noted that experiments with other crops than tea are being made in Assam, some having for their object the improvement of local food supplies, others the production of supplies for exportation. It is with the latter that the planter is usually chiefly concerned, so we may pass by experiments with potatoes and rice without further comment. Tobacco has been tried, but has not yet achieved success. Fruit trees,—apple, pea, and plum—have been planted, but a not very favourably reported upon. Sisal hemp has be tried by one or two planters. On Dauracherra garden t plants continue to thrive and multiply, and there are nc 25,000 seedlings in nurseries. A valuation of £42 p ton has been received on a sample sent to London. M Hunter has commenced to clear fibre with machinery b some time must elapse before he will be in a position report results. An experiment in the cultivation of rhea w given up, as the land was found to be unsuitable. Son other products are being experimented with, but particula have not found their way into official reports. In spite the depression in tea, prospects for Assam and the Assa planter seems fairly bright.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.

Bounty on Green Teas.

The Indian Tea Association (Calcutta) has issued t following circular, dated 6th instant :—I am directed by t General Committee of the Indian Tea Association to addre you respecting the following resolution which has been adop ed by the Committee of the Association in London, *viz.* :—

"That 1½ annas per lb. up to a maximum of 200,000 lbs. to manufactured this season, be allowed out of the funds of the le (American and Foreign Market Fund) on shipments of green t for the American market and shipped there direct from India, su funds to be distributed as a bounty at the discretion of the Calcut Committee, the definition of the term 'green tea' for the recei of the bounty being taken to be tea made from the ordina leaf plucked on the gardens, such as would be ordinarily ma into black tea, but which in its altered manufactured state w not compete with the sale of black tea in America or elsewhe The bounty to be paid on the same quantity as before sanctione *viz.*, 200,000 lbs., until it is seen what success is attained in t manufacture of green tea. The Association in Calcutta to be r quested to notify the Committee promptly if a larger quantity th 200,000 lbs. is likely to be specially prepared for shipment America."

It will be observed that a wider definition is now given the description "green tea" it being intended to include n only green tea properly so called but "oolong" ar "namuna" teas, and the following revised regulations hav been framed :—

(*a*) The General Committee propose to leave the decisio as to what may be suitable for the American mark largely to the discretion of those who make the tea, and d not require that experimental samples should be submitted f their approval before the tea is made.

(*b*) They reserve the right however to defer payme of the bounty in any case where, after examination of sampl drawn under clause *d*, they think the tea is likely to be foun unsuitable, until production of a certificate showing its *bon fide* sale in America at a price not under the equivalent three annas per lb. in Calcutta for any separate grade in th invoice. No bounty will be paid on dust or fannings.

(*c*) The Committee while they do not require th previous submission of samples nevertheless recommend tho who intend to make tea in consideration of the bounty submit samples to them for the examination and report experts. The leaf to be used for the manufacture of gree tea should not be coarser than ordinarily plucked for blac tea manufacture. Arrangements have been made for pr curing samples of the teas (other than black) which are

present being sent from Ceylon, China, and Japan to America, and a limited number of samples will be available to members of the Association.

(*d*) When teas upon which the bounty is claimed have arrived at port of shipment samples should be drawn and sent to the Committee; and on approval of these, and proof that the tea has been shipped to America for sale, the bounty will be paid.

(*e*) There is no objection to the teas being sold on the Calcutta market if the producer so desires; but payment of the bounty to him can only be made on proof that the tea has been shipped to America.

(*f*) It must be clearly understood that all teas upon which the bounty will be paid will be for the American market only.

(*g*) The Association will not undertake, or be in any way responsible for, the shipment of the teas.

(*h*) It is proposed to pay the bounty only to those gardens which have subscribed in 1900 to the American and Foreign Market Fund.

I am directed to ask those who intend to make "green teas" for the American market, to inform me of their intention as soon as possible stating the quantity they intend making. It will be understood, however, that such an intimation will impose no obligation either on the garden to make the tea, or on the Committee to pay the bounty, should the latter not become payable—either under clause *b* or clause *d*—before the amount now allotted has been exhausted.

Yours faithfully,
W. Parsons,
Secretary.

Indian Teas for India.

The Hon'ble Mr. G. L. Acworth makes the following suggestions for exploitation of South India with good teas:

(1) That all Associations interested in tea in South India be asked to join the scheme for pushing sales of good tea among the natives of India.

(2) That for this purpose the Foreign Market Fund be abandoned, and a small cess of (say) ½ pie per lb. on outturn of tea be contributed by each estate.

(3) That the railways be first attacked and that tea be served at railway stations at a very small cost, just as coffee is now.

(4) That an Inspector be appointed to travel on the lines and see that tea is well and properly made. The railways might be asked to grant him a pass.

(5) That funds permitting, an eight tray up-draft Sirocco be purchased and set up at some such centre as Erode, and that good teas be there blended and put up in 3, 4, and 8 oz. packets for sale on the railways and elsewhere.

(6) That leaflets be published in Urdu, Tamil, Telugu, and Canarese giving information as to how to make tea and so on, and that these be distributed broadcast. They should be headed by some attractive bird such as a peacock.

(7) That as it is desirable that only good tea should be distributed, and as a large quantity of most undesirable stuff without garden or any other distinctive marks finds its way into India from Ceylon, and elesewhere, the I. T. A. be urged to petition H. E. the Viceroy to impose a tax of 4 annas per lb. on all tea imported into India from abroad, otherwise it will be impossible for Associations to control the business and prevent spurious imitations of their teas being vended.

COFFEE IN DISTANT LANDS.

XXVII.

Costa Rica.—Young Ceylon gives the *Ceylon Observer* the following particulars of Coffee cultivation in Costa Rica:—

Methods of weeding, etc.—By way of prelude for purposes of explanation it is as well to mention that the most common distances at which coffee trees are set apart is generally three varas by three, though other distances such as 2½ by three varas, and four by 2½ varas are known, but are not common, the natural lay of the ground often being the reason given for a distance greater or less than the three varas both ways the Spanish vara being 33 inches).

After new coffee is planted, the best time being considered the commencement of the rainy season in May, the first weeding or shovelling follows as soon as is practicable to prevent wash from the heavy tropical rains, which are the most violent and destructive at this period of the year: supposing the ground to have been ploughed up and harrowed previously during the dry season, the first shorelling is the aporca, which is effected entirely by hand labour, and to accomplish which no machine has so far been introduced that will effectively do the two things, firstly the barking up and completely covering of all weeds to the line of coffee trees, and secondly the prevention of wash by means of cross dams, whose distance one from another is determined by the pitch of the ground, and vary on hill sides from a cross dam at every tree known as labtero system, to a cross dam to every four or five trees on ground almost flat, forming what are called cajones or boxes, to translate literally; in new coffee shorelling to the trees in aporcas it is not considered advisable to raise up the ridge higher than 10 or 12 inches on account of burying up the young plants too much. Any less height however is not advisable for the reason that the ground shovelled up packs considerably after a few heavy rains, and the following cleaning, the raspa, has to be taken into account in which ground is taken from the ridges to the centre of the rows: it is good policy to have special care taken in building the cross dams of sufficient thickness, and a few inches higher than the ridges, there being the risk of water breaking out and washing in heavy rain, an idea of which can be formed supposing one to break out at the upper end of a row of coffee trees, in turn breaking through all in its course to the lower end of the row taking with it tons of the best soil in a single rain: on a hillside where tableros are in vogue the ground to build up the cross dam is taken from the centre of the square of trees and in sufficient quantity to give the bottom of the whole thus made a perfect level thus giving each tablero a maximum capacity of holding rain water until it soaks into the soil. On flatter ground where the pitch will allow of doing so, and cross dams can be effective for instance at every second tree, they can be made more secure by taking the ground from the lower instead of the upper side of the dam. hereby lessening the chances of a break out through the levelling of the ground, the water standing back the full length of the cajon before passing over the dam at its lower end. In coffee planted out older than one year ridges are often built up higher than 12 inches, many going as high as 24 inches, though the good results of this are questionable, much mischief being caused to trees abundant in lower branches by excessive piling up of the ground. The aporca described above is all the cleaning done till about July, when the ground is pretty sure to be up again in weeds and in need of the second cleaning or raspa, which is also done by hand labour, and is the reverse of the aporca in that the weeds are shorelled to the centre of the row and covered with ground, a few boys cleaning around the stems of the trees in advance of the shorellers; this is done to save them from being cut by the shorels in cleaning close to them, a good custom being to reinforce the cross dams at this time with a little additional ground if necessary, there being at all times the danger of a break out in heavy rains.

This second cleaning is considered sufficient till about the middle of October when the crops are sure to be showing signs of ripening, when an aporca is repeated, leaving the ground clean and favourable for picking; in January or February at latest a raspa is given differing from the one done in July in the following, so that the weeds are left uncovered, causing them to dry up quickly in a season of the year which is always rainless.

The shovel used is I believe peculiar to Costa Rica, being round-nosed, square backed, slightly indented to the centre, measuring from 14 to 20 inches across, according to numbers and is manu-

factured principally in U. S. A. Considerable strength and pactice are needed to make an expert shoveller and the majority of the working classes begin working at it in their early teens; during the rainy months from May to November shorellers work almost daily from 6 a.m. till 12 and often till 2 p.m. when the rain permits, and it is considered that the work done is a good day's work, when the leader or man who takes the first row sets a good pace and example, for which a little increase in pay is made, all shovellers by custom having to even up their work with that of the leader.

This custom of cleaning is sometimes raised, a machetea with broad bladed machetes taking the place of a raspa, though a cleaning in this manner is only effective in the dry season: the machete being very much like the Cuban cane-knife, but with a thinner blade besides having a twisted handle which enables the worker to skim over the surface of the ground lifting very little dirt: covered cleanings of both kinds with shorels though costing more are at the same time more effective, as they annihilate all stubborn weeds and grasses, this not being the case with machetes. The amount of ground that can be gone over in one day working till 2 p.m varies according to its nature and other conditions; in ground moderately steep, where shorelling is customary and the surface well pulverised, a labourer can do about $\frac{1}{8}$ of a manzana or $\frac{1}{4}$ of an acre, in some cases more, but this can be taken as an average in aporcas, raspas with shorels and macheteas cost 25 and 40 per cent. less than aporcas, the former generally having the preference during the rainy months.

The saying that what is worth doing is worth doing well has no better application than in shovelling, a shovelling badly done causing more loss of ground than if left alone, a state of things which is generally admitted as only needing time to cause the ruin of an estate.

Some adverse critics declare that the roots of the trees are cut and suffer from the shovelling; ocular evidence, however, proves that trees over 30 years old when pulled up have a complete system of roots extending over six feet all round and this often two feet or more below the surface.

That rain should be induced to soak into the soil instead of running off is considered a point of advantage by many recognised as authorities in such matters, this is one thing accomplished by good shovelling, beside the perfect pulverisation of the surface to a depth of about four inches, added to which the thorough mixing of any class of manures applied to the surface is insured.

The above applies to the interior of the republic known as the Pacific slope: cultivating with machines has been carried on in newer coffee farms on the Atlantic slope with different success, but here again the soil is very porous almost everywhere, and the native labour which is always preferred in coffee is much more expensive than on the western slope on account of climatic conditions. When prices of coffee were at their zenith a few years ago, several investments were made in coffee forms on the Atlantis slope; results, however, have now shown that labour, seasons of the year, and last but not least that prices in the market are all in favour of Pacific grown coffee.

Trinidad.—The growth of coffee at St. Clair is conducted under circumstances far from favourable but has nevertheless met with considerable success. A fairly large section was planted with *Coffea stenophylla*, raised from seed grown in the old establishment on trees which were near to bearing plants of both *Coffea arabica* and *C. liberica*. Among these seedlings, have appeared several DISTINCT VARIETIES, and the first tree to fruit has produced "cherries" containing beans *twice the size of the type*. The cherries are dark purple when ripe, going black in drying, and the bean appears to be of excellent quality, so far as can be judged by sight alone, but there was not a sufficient crop to make any test of its flavour, as the berries were all required for seed purposes. Othe plants have also ripened fruit, but the berries vary in size There appears to be some little evidence in favour of the vie that these varieties are natural hybrids between the type an the Liberian, but the beans appear of much finer quality tha those of the latter species. The greater portion of the tree on the section, are now showing their habit of growth, and considerable variation in the size of the leaves is to be notice throughout. *Coffea stenophylla*, is evidently a plant whic will fall readily into the hands of the plant breeder, as shows a variability of character, which opens out a possibilit of the production of improved strains, which it was almo hopeless to secure from the less variable *Coffea arabica*. A the trees have done best where well shaded with the "Saman, but in places where they where open to the midday sun, th growth is fifty per cent. less. Good supplies of seed are no being harvested from our first planted trees. *Coffea sten phylla*, is evidently a plant which will be widely cultivate in the near future. Some of the trees have yielded si pounds of dry coffee per tree.

Two plants of a new kind received under the name o "Congo Coffee" have grown well, and have just set a fai crop of fruit. Their vegetative characters are somewha similar to Liberian, but the flowers are more like the Arabia type, set in the axils of the leaves, in large rosettes, of fro twenty to thirty flowers.

The strain called "Mexican Coffee" appears to be one o the most prolific croppers of the Arabian class. The tree are not large, but the produce appears to compare favourabl with good Arabian brands.

The coffee introduced under the name of "Abbeokuta has grown well, and probably is the best coffee of all to stan the sun. In habit and appearance it is somewhat similar t Liberian, but there is little to indicate it as being more tha a variety of that species but still there are characters whic readily distinguish it. There is considerable variety in th foliage of the different trees and the size of the beans.

The trees of "Golden drop" coffee, fruited freely durin the year, and some hundreds of young plants are on hand fo disposal. It appears to be a very productive kind and i golden yellow berries give it a very distinct appearance fro the ordinary Arabian of which it is a variety.

"Maragogipe" coffee continues to do well, producin beans of large size and excellent quality.

The narrow leaved or "Minerva" coffee, has again fruite freely. It probably fruits more regularly and at a younge stage than any other coffee, and is altogether a very desirab variety.

NOTES.

Vanilla in Trinidad. The Superintendent of the Roy Botanic Gardens, Trinidad, repor that the experiment with vanilla has made good progress.

Ceylon Tea Exports, 1901. The Committee of the Planter Association of Ceylon has adopte 146,000,000 lbs. as the estimate of the probable total expor of tea in 1900.

The Madras Labour Laws. The Government of India has pe mitted the Government of Madras refer the amended draft Bill to reg

TO THE DEAF.

A rich lady, cured of her deafness and noises in the head by *Dr. Nicholson's Artificial Ear Drums*, gave £5,000 to his Institute, so that deaf people, unable to procure the Ear Drums, may have them free.

Address—No. 989 D, THE NICHOLSON INSTITUTE,
Longcott, Gunnersbury,
London.

[w. 26-5-00—26-5-1901.]

ate contracts in Southern India to the U. P. A. S. I. for emark.

Cinchona and Quinine in the U. S.

The following are statistics of imports of Cinchona and Quinine into the United States of America :—

		1899.	1900.
Cinchona ...	...	lbs. 3,328,006	4,163,698
Quinine ...	...	oz. 3,802,638	3,091,735

Java Quinine.

The exports of quinine from Java during November, 1900, amounted o 154 cases, of which 92 cases went direct to New York, 4 cases to Amsterdam, and 8 cases to Rotterdam. From uly 1 to November 30 exports have been :—

Cases ...	1,193	695	614

Tea Inspection in Ceylon.

Some of our insular neighbours are warmly advocating the establishment of a system of Customs' inspection of tea in Ceylon, with a view to preventing the export of rubbish. Mr. Harcourt Skrine doubtless rejoices at these public admissions hat *some* Ceylon "tea" *is* rubbish.

Rubber in Trinidad.

Experiments in rubber cultivation are being conducted on a fairly extensive scale at St. Clair, Trinidad. *Castilloa* has done vell. *Hevea brasiliensis* grows rapidly. *Funtumia* has made splendid growth ; when lightly tapped at 2½ years the trees were found to produce rubber of excellent quality. *Ceará* has not done so well.

The Position of Coffee.

There is absolutely no inducement to buy coffee beyond near-by requirements, says the *American Grocer*. The situation in a nutshell s that supply is, and likely to continue for the next two years, far in excess of demand. The 1901-02 crop of coffee in Brazil is conservatively estimated at 11,500,000 to 12,000,000 bags, while the present crop is certain to exceed 10,000,000 bags.

The Glazing of Coffee.

Coffee is glazed in order to preserve aroma and aid in its clarifying. Several patents have been issued covering formulas for glazing coffee. One issued to John Arbuckle, Jr., in 1868, names a preparation consisting of half an ounce of Irish moss, half an ounce of gelatine, half an ounce of isinglass, half an ounce of white sugar, and twenty-four eggs. The first three are boiled in water and the moss strained clear. It is difficult, observes the *American Grocer*, to frame an excuse for the charge that coffee is coated in order to improve its appearance, because it is sold in sealed packages and is not presented to the buyer for inspection ; while the price indicates that it is not a high-grade article.

The Central Asian Caravan.

The Indian Tea Association (Calcutta) has decided to telegraph to Mr. Foley to exercise his own discretion as to his return route from Meshed to India, provided the time limit of four months is not exceeded. The sale of tea in India. In reply to a letter from the Hon'ble Mr. G. Acworth, Chairman, Central Travancore Planters' Association, in regard to the question of the extension of the sale of tea in India, the Indian Tea Association (Calcutta) has replied that the local contributions of tea would be accepted, and in fact were required by the proposed Tea Distributing Agency ; but before any final decision is come to by the Central Travancore Planters' Association, particulars of their scheme should be sent to Calcutta.

Ceylon Tea in London.

The *London Tea Market*. In their weekly telegram of 9th instant to Colombo, Messrs. Gow, Wilson & Stanton report that the market generally is weak, and that the market for medium liquoring Pekoes and Broken Pekoes as well as for common Pekoes and Broken Pekoes is also weak. The price of fair liquoring Ceylon Pekoe Souchong is 5d (a farthing down) and the average price of Ceylon tea sold on garden account this week was 6½d (an eighth of a penny down)—as against 6¼d and 7⅛d respectively in the corresponding week last year. Reuter reports that the tone of Ceylon tea is generally steady. Pekoe Souchongs are quoted at 4¼d (same as last week) and the average for the week at 6½d (⅛d down) as against 6⅛d quoted for Indian tea. 20,000 packages of Ceylon tea were offered for sale, of which 17,000 were disposed of ; while of the 15,000 packages of Indian tea offered, 13,000 found purchasers.

Cacao in Samoa.

In his report for 1900 the British Vice-Consul says :—At the present time cacao is engaging much attention here. At a distance of two or three miles from the sea it grows almost wild, and can be cultivated with success everywhere in Samoa, except perhaps on the summit of the mountains, where the climate will probably be too cold. The quality is good. Mr. Carruthers' cacao fetched lately the highest price in the London market. The Governor is introducing plants of the celebrated Soconusco variety from Mexico. Cacao planting should draw the attention of home capitalists. The great drawback is that leases from the natives for a longer period than ten years are not likely to be confirmed, as the Government does not wish to encourage land speculators, and refers any application of this kind to the Berlin authorities. British capitalists wishing to lease land should make application in the first instance to the Colonial Department at the Foreign Office, Berlin.

The Travancore Tea Estates Company.

This Company proposes making an issue of pre-preference shares, bearing ten per cent. interest, to enable the Company to carry on its operations. It will be remembered that the concern closed its season with a heavy deficit, and it was at first intended to ask all shareholders to make a ten per cent. contribution, with the probability of a further ten per cent. later on. This deferred liability did not meet with general support, and it is now proposed to issue these pre-preference shares, which will rank next to the Debentures. A meeting of the Preference shareholders has been called to discuss the subject, and the Board hopes that the necessary alteration in the Articles of Association will be sanctioned. A Home writer remarks :—One has heard a good deal of late years of the coming competition of South India teas. But if it is so difficult to finance a Company which started under such bright auspices as the Travancore, the thought is suggested that tea growing there, under present conditions, is attended with great difficulties, and that, after all, their competition is not greatly to be feared.

The Sunflower.

Dr. Harvey W. Wiley, chief of the division of Chemistry, United States Department of Agriculture, in a special report shows that the sunflower can be grown successfully over large areas in the United States ; that it is a crop which makes a considerable drain on the elements of soil fertilisers ; that one of the most valuable constituents of the plant is the oil, which exists in large quantities in the seeds ; that the economic production of the sunflowers is now confined almost exclusively to Russia, where it is an agricultural industry of considerable importance ; that in the United States it is grown as an ornament and for the production of seeds, which are used chiefly for poultry and bird feeding and for condimental and medicinal properties with farm animals ; that the oil of the sunflower seed is not produced commercially in the United States ; and that in the cultivation of the sunflower the methods pursued for growing Indian corn are to be followed, and the plant is capable of cultivation over almost as wide an area as Indian corn.

GENERAL ARTICLES.

MR. RENTON'S VIEWS ON THE OUTLOOK.

INTERVIEWED IN PARIS.

To interview Mr. Renton, and obtain his views on the crisis in tea, was, I knew from previous experience, a pleasant task, says a representative of the *Times of Ceylon*. I found the Ceylon Commissioner in his office in the Rue de Rome, near the Gare St. Lazare, and saw at a glance that I had disturbed a very busy man. Looking up from a long letter which was going, as I afterwards learned, to Colombo, Mr. Renton showed me several others still unanswered, and from various parts of the Continent, which demanded his attention. Despite his smile I felt that the genial Commissioner had not the time to spare to me that day, and it was arranged that I should see him after office hours at his hotel. Hotel du Tibre, Rue de Helder, just off the Boulevard des Italiens and within a stone's throw of the British Chamber of Commerce, accordingly found me the next day, and Mr. Renton also—again writing. This time it was someone in Germany, experimenting with the sale of Ceylon tea, who wanted hints on advertising, and to whom Mr. Renton was unbosoming himself: but he was ready for me in a few minutes.

"When I heard of the proposal to throw 10 per cent. of our acreage out of bearing my first act was to write out and instruct my Manager that he was to adhere loyally to any resolution which commended the support of the majority.

"Did you personally approve of the suggested means of relief?"

"I am not on the spot," replied Mr. Renton, "but I think it would be only a temporary help to throw 10 per cent. out of bearing. Besides I somehow feel that it would be rather hard upon and unfair to the owners of good estates. The market is not affected by the production of good quality teas, but there is a glut of common qualities. It is certainly my general experience that there is not too much fine quality tea on the market. It is quite true that the immense quantity of low priced tea which has been shot on to the market has had the effect of bringing down in prices the high quality teas, but it must not be forgotten that the fall in the prices of the latter has been nothing like that in the former.

"Then the 10 per cent proposal, in that it will put out of bearing the good and bad tea alike, does not altogether meet the necessities, you think?"

A STOP-GAP MEASURE.

"No. From one point of view of course it is only natural to expect the owners of good estates producing fine quality teas to do all they can to help their less fortunately situated brethren in a crisis like the present, but I fear that even if agreed to there is the danger that it may turn out to be only a mere stop-gap measure.

"In what way?"

"There is a lot of young tea which must come into bearing, and the exportation of tea is increasing every year. Even if we reduce the output by 10 per cent. for two years, what is there to induce to think that at the end of that period we shall have sufficien large markets to account for the additional output.

"Have you in mind any alternative idea to the 10 per ce proposal?"

Whilst disclaiming the idea of making a proposal, Mr. Rent was good enough to express his views upon the matter.

"I myself," he said, "would prefer getting managers in heavy flushing months to pluck their bushes properly, in order keep them in good heart and condition, and to throw away the la leaf. If this were done on estates, the coarse quality of teas wo be reduced, whilst at the same time the production would not be large.

"This is exactly what you contend is necessary?"

"Yes, to reduce the production by a process of eliminating coa qualities. But I would say that men at a distance like mys who have been away from the island for a year, are not compet to express as good an opinion as men on the spot. One can judge altogether from newspaper reports, and, although I th that the destroying of the large leaf in the heavy flushing mon would be the best means of attaining the end in view, possibly, were in Ceylon and saw the condition of the fields, I would something else. But I would repeat as an objection to the 10 cent. proposal that we are not producing nor exporting too mu tea of good quality.

NEW MARKETS.

"You will have something to tell me, Mr. Renton, about markets?"

"Yes, and I may say that I felt the gravity of the present posit to be a sufficient reason for the commencement of my campaign Europe within a few weeks of finishing work in connection with Exhibition. Apart altogether from proposals to reduce the out of tea, I do feel most profoundly that the only solution is to found in new and bigger markets. And I wish to add that, e with bigger markets, this will not avail in the long run, unless exportation can be stopped of the common rubbish which wil the long run assuredly disgust all consumers.

"What countries did you visit this year?"

"I made an extensive tour through Germany, Austria, Northern Italy, besides, of course, in France.

"What is your plan of campaign, if I may so call it? Is it *a outrance* against teas other than Ceylon?"

"No," replied Mr. Renton, "I make war on no one."

For a moment I felt that my suggestion had perhaps been tasteful to the Commissioner, and I was relieved to hear following excellent reasons why Mr. Renton proclaims no Jeh against China teas:—

"I make no war against China tea as a matter of policy. countries where there is very little tea drunk, and where it is many parts unknown, I think the very first thing to be done is induce the people to drink tea at all. It is no good running do the production of another country. When once we have got people to take to the drinking of tea, they will want it stron than the China people can give it 'em."

After a momentary pause Mr. Renton added: "Of course, wh ever I go among the wholesale firms and the people who handle generally, I preach the doctrine that Ceylon tea is far better t China. *Cela va sans dire.*"

"Following the success which has attended the pushing of Cey teas in Paris, do you prosecute the same measures elsewhere?"

"This is what we are trying to do, and I am convinced that best method to attain our ends is to follow the example of Paris provide *salles de degustation* wherever possible on the Contin which in time we hope will become as popular as the ones in Pa Of course, we have not funds large enough to permit of our do more than assisting private enterprise in this way—we cannot selves run tea shops in the various towns. My great aim pa cluarly during my lost tour was to induce the import firms, and wholesale firms to take up this aspect.

"There is no doubt about the success of these measures Paris?"

"Not the least in the world. We have been thoroughly succe ful, and in Paris there is no question now about Ceylon tea be known.

"And outside of Paris—what progress has been made in other large towns of France?"

"I would like to see Ceylon tea offered in cup and package in

the *patisseries* and confectionery shops in all the big French towns. In many places you will see it at present, and there is no doubt that the habit of tea-drinking is growing.

"And Germany and Italy?"

"The same measures must be adopted. We must get the public accustomed to look upon tea not as an article of luxury, but as an article of food just as much as coffee.

"In this you have an uphill task?"

"Most undoubtedly; and, having regard to the limited funds at our disposal, it is difficult to do as much as one would like to in the supporting of the firms who handle our teas.

"Do you encourage the big wholesale English firms?"

"I find the wiser way is to support the natives in each country; for instance, in France, to help the French importing firms who sell to the French grocers.

"Is anything done to assist firms on the Continent in bringing Ceylon tea prominently before the consumer?"

"Yes, very often suggestions for effective advertising are made by me, and where a firm has its own ideas in this way it is helped financially in so far as possible on the basis of proportionate expenditure. It is very satisfactory when you come across continental firms which show enterprise and strike out on original lines, as has been my experience during the tour.

"Were you satisfied with your tour through Germany and Austria?"

"Yes, quite. Arrangements for the handling of Ceylon tea have been made with large firms importing through Bremen and Hamburg. It is satisfactory also to find that the German statistics show an increased market. In France, outside of Paris, I was very pleased with my visit to Marseilles. I found Ceylon tea in several shops in Marseilles and also called upon three importing firms who are handling it. In Austria I am hopeful that we may do well, and the arrangement we have made with a well-known house with ramifications all over the country should open out this market.

"You don't force any particular form of *publicité* upon the firms before they receive your tangible co-operation?"

"Not at all, I say to a man 'You advertise Ceylon tea in the way you think best'; and on the basis of one-third we assist him in bearing the expense."

Mr. Renton explained some of the difficulties he met with in visiting continental firms—such as the lack of the Government stamp (the banderole) which Russian tea has, and the complaint from customers that Ceylon tea will not keep (with the necessity of explaining to them the procedure to be followed upon receipt of a consignment). I gathered, however, that the future was quite hopeful in the Commissioner's opinion, if only one thing can be assured—that the doctrine of keeping up the quality of tea shall be universally adopted in Ceylon.

THE LONDON MARKET.

The London Commercial Record of 26th April says:—

This week has been an exceptionally dull and depressed one, the reaction after the excitement over the recent Budget making itself felt in every branch of our trade. Sugar, as we anticipated, both for spot and arrival registered a decline, the pressure to sell available parcels, those that had been thrown into our ports to evade the duty, has a depressing effect upon our market, and the consumer is slow in availing himself of the cheap offers submitted to him. Everybody appears well stocked, sometime will elapse before the speculative holder of ready Sugar will reap the benefit of his venture, although he is endeavouring to induce consumers to avail themselves of the opportunity of buying cheap sugars. These holders are at the moment prepared to sell at about 1s 6d below market value, but as there is no demand for spot goods they will have to await their opportunity which is sure to come sooner or later. In the meantime dock charges and rents will somewhat diminish their profit, which however is of secondary importance considering they are holding a margin of 4s 2d per cwt. The strong feeling against the conditions of the new Budget are slowly abating, people come to realise that they have to face the inevitable and that grumbling and kicking against the increase of the Income tax which after all is the principal, if not the only, bone of contention are of no avail, the most important point for us is to endeavour to shake off the gloom it has cast upon us and revive trade which has already unduly suffered from its effect. All markets are anxiously awaiting the improvement generally and confidently prophesied after the passing of the Budget, and the sooner it makes its appearance the better for all of us, for the Lane at the moment is suffering from a severe fit of depression. There are several articles which, owing to their favorable statistical position, would under ordinary circumstances undoubtedly demand general attention and support, but they lack the interest they deserve in consequence of the absence of confidence and enterprise ruling in the Lane at the moment. Pepper, to pick out only one of a number, has become flat—as far as Black is concerned—although its statistical position is generally and openly recognised as being eminently favorable to a bull movement. Weak and sporadic attempts have been made to raise the value to a height demanded by its position, but after a few days pushing prices are allowed to drop down again to their former level. There is, perhaps, no better thermometer indicating the temperature prevailing in the Pepper market than Tellicherry Pepper. The moment a better tone begins to gain ground in Black Singapore, enquiries for this Indian Pepper reach our market to vanish instantly when the former description is showing the slightest tendency to weakness. We have seen a good business in Tellicherry Black this season indicating good trade in Black Singapore, but at the moment buyers have withdrawn from the market and view indifferently the efforts of Indian holders to create renewed interest by simulating extreme firmness and quoting higher prices. Of course the movements of this Pepper are not altogether regulated by the state of the European markets, the Eastern demand, principally that of Calcutta, has a great influence upon the tendency of its fluctuations, and, as at the moment a strong Eastern demand is favoring black Tellicherry, holders naturally entertain very lofty ideas, the more so as the position of the article demands the greatest care at the moment on the part of its operators. Stocks, we are informed, are exhausted, and the entire quantity still available in the interior is estimated to amount to about 2,500 tons only. This quantity will have to suffice to meet the demand until the arrival of the new crop in January, 1902. Indeed a very small total, if we consider that the exports of Tellicherry Pepper from 1st April to 31st December, 1900, to Europe amounted to about 1,100 tons and about 2,300 tons to Indian ports. Any attempt at raising Black Singapore will therefore have every support from India.

THE REDUCTION OF CROP AND CEYLON.

"J" writes in *Capital*:—

For some time it has appeared to those who have studied this question that, if it was to be brought about by means of combination betwixt the two great producing countries, India and Ceylon, there was but little chance of any result being attained, and, India was again to be made to play into the hands of needy Ceylon, for, to those who are acquainted with the economic conditions under which a large proportion of the crop of the spicy isle is produced, it seemed a foregone conclusion that Ceylon could not, from its financial position, cut short or hold back its crop; a fact which must be quite well known to the wire-pullers in Mincing Lane. Picking up an old Calcutta "Directory" and taking the first twenty gardens on the list, we find the relative position of India and Ceylon reflected in the area of the gardens. The area of the 20 gardens of Assam reaches a total of 35,496 acres, whilst the Ceylon 20 represent only 6,139 acres. The difference in size of the gardens is very marked, and there is not a 700 acre garden amongst the Ceylon lot at all. In Assam, there are two small gardens of 100 acres each—one owned by a native, and the other, only evidently a beginning, and this brings down the average of the Assam gardens very much, but we have taken them just as they come. Of the 20 Assam gardens, there are 2 of 100 acres or under, 3 of 700 acres, 7 of 1,000 acres, 3 of 1,500 and upwards, and 5 of 2,000 acres and over.

Contrast Ceylon with this, and we find there are 6 (or almost 30 per cent.) under 150 acres, 7 from 200 to 300 acres, 1 between 300 and 400 acres, 3 between 400 and 500 acres, and 3 between 500 and 700 acres. It is worthy of note that there is not a single 700 acre estate. The deduction to be made from the above figures is that Ceylon estates are more numerous, but very much smaller in area,

and, are consequently owned by a very much greater number of people, probably not so well to do as the big Assam Companies, more difficult to get at, and less able to bear any strain upon their finances. In fact, the Ceylon tea industry holds much the same position to the Indian that the highland crofter does to the lowland farmer at home, and it is for this reason that we say that until Ceylon by force of circumstances has its holdings condensed, there is little chance of carrying out any set programme, and that after all the question will be settled in the old way, *viz.*, by supply and demand. That the Ceylon men got a fright last year is undoubted, and this year they will probably pluck a little finer leaf than they did in 1900, but if the Indian crop is short, and everything points to this owing to climatic influences, then they will again revert to coarse plucking. The number of factories in Ceylon is as nothing compared to the number of estates, and it is quite common for one central factory to buy and manufacture the leaf from 3 or 4 smaller estates. Cash has to be paid for the leaf, and to get the cash back, the manufactured tea must be sold for what it will bring; in fact, throughout the greater number of estates this hand to mouth sort of existence obtains, and when the 1 lb. draft dispute was on, Ceylon gave India away, as it could not hold out, it was bound to realize, and the same thing will continue to be the case until a large proportion of the smaller holdings are wiped out and formed into good, strong, financial companies.

India has nothing to be afraid of in the struggle; as most of our best agency houses have put all their good concerns into good fighting trim by building up reserves and pursuing a conservancy policy, which has been anything but the case in Ceylon. In fact for many years a number of Ceylon concerns have been paying away without any thought to the morrow their uttermost farthing, and are now ruing the day they did. Some of our Indian Companies have pursued the same course, and are now finding out the mistake they have made, but fortunately they are in the minority. The news from London that Ceylon cannot guarantee a reduction of eight millions has just come in time, and given our Indian planters a chance still further to put their house in order, and, we can see nothing for it, but to let the matter be fought out, and the sooner it is done the better, for after all it is a case of the survival of the fittest, and Ceylon will yet live to add another to the list of its many failures—coffee, cinchona, cardamoms, rubber and possibly tea, in the near future. There is no use disguising the fact that tea cannot pay with the prices now ruling, and those who continue to pluck and manufacture 3d. to 4d. rubbish will be the losers, not those who content themselves with a fair outturn of leaf, and a fair quality of liquor in cup. Tea, as an old planter years ago remarked, is made on the teelah, and and in the tea house, and if people persist in plucking fishing rods and gig whips they must be content to work their gardens at a loss, and this will put a stop to bheel gardens being opened out in India and extensions in Ceylon, and when the industry has passed through the fire and been cleansed and purified, we believe there is a good look out in future years; but, how many will emerge scatheless? Not many, and some will have had their wings scorched, we are afraid, through the action of the selfish part of human character.

ARABIAN COFFEE.

Mr. T. M. Hastings writes from Cairo to the *B. C. African Times* :—

The following is the only account of the growth of coffee in Arabia that I have been able to find in the Khedivial library here. It is from the book of an Italian Manyoni who travelled twenty years ago. It will be remembered that in Arabia as in Cholo, coffee is "Kumangwao." "The tree which produces the coffee grows to a height of from two to four metres from the ground but is seldom of greater thickness than from five to eight centimetres (1½ to 2 inches) in diameter. When arrived at maturity it very much resembles a lemon tree of eight years growth. The lower branches generally curve downwards, thus taking a shape somewhat like an umbrella. The wood is so soft and pliable that the top branches can be bent as to almost touch the ground." (Then follows an account of the leaves, flowers—which seem more fragrant than ours—and berry, of which the Arabs apparently make a decoction of the pulp). "The Arabs assured me that the plant is propagated from seed and not from cuttings, as some travellers have state The entire berry as plucked from the tree is sown in a bed, an afterwards when the young plants come up they are transplante in specially selected plans on the sides of the hills in the shadie and dampest corners, well sheltered from the wind. Moreover, i order to give shade and an equal temperature, and the necessa moisture, the Arabs plant splendid tamarind, bananas, and oth trees. The most difficult thing in the cultivation of coffee is preserve the moisture about the roots which is absolutely necessa for the growth of the plant. This object the Arabs attain by lea ing the water which runs from the mountains in small channels the roots of trees. There are 18 different kinds of coffee. All t year round the trees are covered with both flowers and fruit. T principal gathering, however, takes place in May, etc., etc"

The Arabs seem to dry the berry and grind off the husk in stone mill. This account seems to me interesting as showing th the Arabs not only shade, but also irrigate the coffee.

The coffee districts could be easily visited by any one going fro Aden to Hoderdah, north of Mocha, on the Red Sea, and then three or four days into the interior.

I cannot find what the rainfall of Yemen is. An Engli traveller describes the country as being very beautifully wood with mountain torrents; and no less a person than Alexander t Great decided to spend his declining years there. Any person w has "come, seen, and conquered" in B. C. A. might do worse th go there. It is governed by the Turk and would offer a pleasa change to those who are dissatisfied with the *régime* in B. C. Their labour regulations, I understand, are still of the old fashion kind.

TEA TRADE IN THE UNITED STATES.

REPORT BY BRITISH AMBASSADOR.

A report was recently made to the British Ambassador Washington on the tea trade in the United States, and subs quently sent to the Foreign Office. From this report whic has been forwarded by the Colonial Office to the Secretary the Ceylon Association in London, we take the following :—

"There is now a monthly importation of tea of between nine a ten million pounds. This is an increase of nearly one milli pounds per month as compared with twelve months ago, and near two million pounds compared with two years ago.

"Taking the figures for the eight months ended February 28 la the amount imported was 78,794,023 lbs. Of this about 54 per ce came from China and 37 per cent. from Japan. Only a little over per cent. was imported from the United Kingdom, British Nor America, and the East Indies combined.

"The previous year for the same eight months, China had abo 47 per cent. of the trade, Japan about 44 per cent., and the Briti possessions about 8 per cent.

"China therefore has increased her trade considerably, while a the other countries have sent less.

"The difference may be even greater than is shown by the figures because there is nothing to show from what country the t imported from British North America came. Part of it may ha come from China and Japan.

"Though the quantity of tea drunk per capita in the Unit States is less than previously, it does not necessarily mean that le tea is going to be consumed. The population is increasing rapid and large numbers of the immigrants come from non-tea-drinki countries; though they cannot be considered as tea consumers first, there is no doubt they will in time become so when they their children adopt the customs of the country. The habit drinking tea is certainly on the increase, and there will certain be a very much larger business to be done in the future than the is at present.

"The demand for Ceylon and Indian qualities is increasing most parts of the country. With energetic pushing and particul attention being paid to the quality and price preferred their oug to be no difficulty in securing for British dealers a much larg share of the trade.

"If we glance at the prices of tea imported from the sever countries it will probably suggest a reason why the sale of th from China has increased so much.

"Prices per pound of tea imported during the eight months nded February 28th:—

From	1901. cents.	1900. cents.	1899. cents.
United Kingdom	19·6	19·1	22·8
East Indies	13·5	12·6	17·1
British North America ...	17·2	16·3	16·1
China	10·6	12·0	12·4
Japan	14·1	12·4	13·7

"It will thus be seen that China has been selling her tea cheaper han her rivals and increasing her trade while other countries have ncreased their prices and have done a smaller trade.

"The following information supplied by dealers in tea in different oasts in the United States may be useful.

"*New York.*—The China qualities sell best in the East and the Japan in the West, Formosa included in the China teas. The demand for Ceylon and India qualities is increasing. The demand is chiefly for the cheaper grades on account of the duty. The proportion of green tea sold as compared to black is about 1 to 5.

"*San Francisco.*—The China qualities sell best, then Japan, and Ceylon third. The demand for Ceylon tea is increasing, the demand s chiefly for the better qualities. The proportion of green to black s 1 to 3. Demand for green is decreasing.

"*New Orleans.*—China tea is the best seller, but demand for Ceylon is slightly increasing. The chief demand is for medium and for better grades, the proportion of green to black is about 1·3 green to 2·3 black.

"*Philadelphia.*—China and Japan sell best. Never much demand for Ceylon. Demand is greatest for medium grades. Proportion of black to green 5 to 1. Demand for latter is decreasing.

"*Baltimore.*—China sells best. No demand for Ceylon. Demand chiefly for cheaper grades. Proportion of black to green about 5 to 1."—*H. & C. Mail*, April 26.

THE TEA DUTY.

LIVELY DISCUSSION IN THE HOUSE OF COMMONS.

Last night in the House of Commons the question of the tea duty was discussed. On the resolution for continuing the duty on tea at 6d per lb.,

SIR SEYMOUR KING

said he desired to say a few words with reference to the duty and its incidence. He was speaking on behalf of an industry in which 30 millions of British money were invested, which had caused jungles to be turned into smiling tea-gardens and which had given employment to hundreds of thousands of persons. The industry was, by the admission of the Chancellor of the Exchequer himself, doing extremely badly. There were forty-five companies registered in London, with a capital of £9,000,000, or nearly one-third of the total amount invested in the tea trade. In 1897 he found that capital was worth £12,000,000; to-day it was worth less than £10,500,000. Seventy per cent. of the companies engaged in the tea industry were paying no dividend. The result was that large numbers of these concerns had to go to the wall and that there was a great loss of employment among the coolies. That was largely due to the hostile legislation from which the industry suffered here and in India. Cocoa, the wholesale price of which was 6d per lb, was taxed 1½d per lb. Coffee, which sold at 8d per pound wholesale, was also taxed 1½d. But tea, the average wholesale price of which was 6d per pound, was taxed 6d per pound, or 100 per cent. Indeed, millions and millions of pounds of tea were sold at the wholesale price of 3d and 3½ per lb, so that the duty on such tea was at the enormous rate of 150 per cent. They all professed great devotion to temperance, but they did serve it much by taking the most popular of the temperance drinks 100 per cent. He agreed with the Chancellor of the Exchequer that people who neither smoked nor drank should contribute something towards the cost of the war, but he did not understand why tea should be taxed so heavily as compared with cocoa and coffee. The tea industry was being taxed out of existence, and the only satisfaction the planter enjoyed was the grim satisfaction that the Chancellor of the Exchequer would be unable to extract any income-tax out of them. He admitted the difficulty of obtaining any reduction of the tea duty this year, but he could not allow the imposition of it again this year to pass without lifting up his voice against it.

Mr. Lewis moved to amend the resolution by substituting "March 6, 1902," for "August 1, 1902," as the date to which the tea duty in its present form is to run. He said that the tax was most oppressive to the tea producers and consumers alike, and that there should be a reduction in it at the earliest opportunity.

The Chancellor of the Exchequer said in the Act of 1899 August was named as the date of expiry of the tax, because it was necessary to allow of sufficient time after the ordinary time of the year at which the Budget was introduced to prevent the clearing of tea in anticipation of an increased duty or the holding back of tea in anticipation of a decreased duty. Last year March 6 was adopted, because, for obvious reasons, the Budget was brought in on a very early date. He must adhere to the month of August, and he hoped the amendment would be withdrawn.

The amendment was, by leave, withdrawn.

Mr. Broadhurst asked whether the Chancellor of the Exchequer had made inquiry, as he promised last year, in regard to the feasibility of taxing tea on value and not on weight. The poor man who bought common tea paid as much duty as the man who purchased the best tea, and that was absolutely unjust. He hoped that in the course of a few years the duty on tea would be abolished.

Mr. W. Redmond said he wished to move an amendment with the object of reducing the tax on tea to the figure at which it stood before the Chancellor of the Exchequer's proposals of last year. The tax paid in Ireland upon tea was enormous, and the fact that tea was consumed to a much greater extent in Ireland than in Great Britain proved that the tax fell with greater severity upon Irish tax-payers than upon English tax-payers. Tea might almost be said to be the national drink in Ireland, and the percentage of alcohol consumed by people in Ireland was much less than the percentage consumed in England or Scotland. The amount paid by Ireland on tea in the year 1898-99 was £564,000. In 1899-1900 it was no less than £648,000. It was impossible to say what the figure for 1900-1 was because the Committee had not at their disposal the figures to show what the tax realised. He considered that was most inconvenient and improper, and he for one refused to consent to the re-imposition of the extra tax put upon tea last year until he knew what that tax had realised.

The Chancellor of the Exchequer said he would try to have these figures presented earlier next year. It would certainly be an advantage. As far as he could tell the total amount received last year on tea was £6,250,000, and of that the Irish share would be £875,000.

Mr. W. Redmond said that showed an increase of over a quarter of a million on the amount raised before the additional tax was put on. From the Irish point this taxation was unjust because it arose out of the monstrous state of things in South Africa. The people of England had allowed the war to be brought about, and had applauded it, and he took great satisfaction in knowing that they would now have to pay for it. The spree was over, and the taxpayer was beginning to find out that the wine was bad and that he had a headache. He moved to reduce the tax on tea from sixpence to fourpence.

Mr. Lough (Islington, W.) believed that any attempt to graduate the tea tax would be a failure; the inevitable effect would be to put a premium on the lowest quality and to beat down the higher qualities. If any reduction in duty took place he hoped it would be an all-round reduction, but they could hardly hope that any reduction would take place. We got 84 per cent. of all the tea used in this country from the colonies, and only 16 per cent. from foreign countries. On the other hand, we got 94 per cent. of our sugar from foreign countries and only 6 per cent. from the colonies. The tea so largely consumed by our people was for the most part produced in India and Ceylon, and undoubtedly the increase in the tax which was made last year had struck a disastrous blow to the industry. The consumption of tea had been checked, which had caused prices to fall, and thereby the producer had been hit. The consumer also had suffered; if there had been over-production the consumer would have got the benefit, but he had not got it. Before the tax was raised tea had been sold at 1s per lb., but now it was not retailed at less than 1s 2d, and it would be of great benefit if the extra 2d were taken off. As to the case of Ireland, there was no way in which that country could be worse hit than by raising the tax on tea or tobacco. He urged that the figures of Ireland's contribution should be given; they must be known, as the Chancellor of the Exchequer had quoted the gross amounts.

Mr. Austen Chamberlain said he would make inquiries as to the return; there was no desire to keep back information.

Mr. Lough said he had been trying to get these returns in time to be of any use for the last six years, but could not get them from the Treasury before August or September.

On the return of the Chairman, after the usual interval, Mr. Farrell supported the proposal for a reduction of the duty on tea. It was 40 years, he said, since Mr. Gladstone fixed the duty at 6d on the pound, so that the Chancellor of the Exchequer was not acting on very progressive lines in maintaining the duty at that figure. Tea was of universal consumption in Ireland, and there was some evidence to show that the increase of lunacy in that country was connected with the excessive use of adulterated tea. He contended that the increase of lunacy in Ireland was due to the shocking quality of the tea which was used by the people, and this low quality was caused by the high duty placed on an article of universal consumption. Generally speaking, however, their opposition was based on the higher ground of the financial relations existing between the two countries. He asked whether the Chancellor of the Exchequer could not see his way to differentiate the duty as between England and Ireland. If the right hon'ble gentleman did so, he thought that the loss to the revenue could not be very great, while the relief thereby afforded to the poor in Ireland would be very substantial.

Sir M. Bhownaggree said he hopped on some future occasion the Chancellor of the Exchequer would be able to announce a reduction in the tea duty, and thereby encourage native industry in India.

Mr. Lewis said the right hon'ble gentleman had allowed a golden opportunity to pass by, and now the burden would fall, not only on the producers, but the consumer of tea. If the Chancellor of the Exchequer pleaded that in a year like this he could not make a concession he would point, in reply, to the doles and sops which had been given in the last few years to the favoured classes whom the Secretary of State for India described as the friends of himself and his party. If these doles were taken away and a reduction of 2d made on tea, the Chancellor would earn the gratitude of great masses of people.

Major Rasch said that tea planters and merchants had in times gone by been making very considerable profits, whereas the people in the agricultural districts had to eke out a precarious existence by growing wheat at 40s and selling it at 30s (Laughter.) Yet they made no complaint to the Chancellor or anybody else.

The Chairman informed the hon. member that the point he was making was not relevant to the amendment.

Mr. Daly continued the discussion.

The Chancellor of the Exchequer.—My hon. friend the member for Central Hall and the hon. member for West Islington have approached this matter from the point of view of India and Ceylon, but I hope I have shown that I have not been wanting in sympathy with the tea interest thereon what I have already said with reference to this subject. I am quite aware that the tea interest is a most important one, and that at present it is in anything but a satisfactory position; but I rather attribute that state of things to over-production than to increased taxation. My hon. friend compared the taxation of tea at 6d per lb. with the taxation of cocoa and coffee, and he suggested that the tax on cocoa and coffee ought to be raised. But I would remind my hon. friend that when the taxation of tea was 6d on the lb. the taxation of coffee and cocoa was the same as now, and that when the tax on tea was lowered cocoa and coffee remained as they were. My hon. friend said that in his opinion the increased duty last year had been paid, not by the consumer, but by the producer, and that the price of tea has not been increased on account of excessive production. I think there is a good deal of truth in those statements. I do not say that the extra duty of 2d imposed last year has not been to some extent an increase of burden on Ireland, but my belief is that, owing to the reduced cost of the article, apart from the duty, although those who live in Ireland have had to bear a larger amount of the total sum raised from tea than before, I believe they have had more tea for it. The increase of duty, therefore, has not been, as is represented by hon. members, a loss to Ireland. I confess that, although I sympathise with the great industry of India and Ceylon, yet I think in dealing with this question we must first consider the interests of our own tax-payers. If I could reduce the tea duty I should be glad to do so, but to talk of a reduction this year is to my mind simply impossible.

Mr. Caine (Cornwall, Camborne), strongly opposed the d duty of 2d on tea imposed last year as pressing heavily on the consumers who purchased in small quantities, and as havi depressing influence on the tea trade of India and Ceylon. long as the Government persisted with their system of doles to agricultural interests every form of new taxation would be oppo

Mr. W. Redmond asked that before the second reading o Finance Bill a return should be presented showing how th ditional tea duty had operated in Ireland

The Chancellor of the Exchequer said he would do what he c towards providing the return.

Mr. Lough supported the request of the hon. member for Cl

The Committee divided, when there voted;—For the amendn 140; against, 221; majority against, 81.

The Committee then divided on the resolution, when the num were:—For the resolution, 221; against, 130; majority, 91.—*I and Colonial Mail*, April 26.

BASIC SUPERPHOSPHATE.

A NEW MANURE.

"On the 1st ultimo at Burlington House before the Societ Chemical Industry Mr. John hughes read a paper on his manure, Basic Superphosphate. He says that favourable no have already appeared in the *Times*, April 5th; the *Dublin Far Gazette*, April 6th; the *Morning Post*, April 10th; the *Stand* April 16th; the *Field* (page 522), April 13th; and the mate though only invented last November, is now being made by s the largest manure firms in the United Kingdom. Already manure has been shipped to Calcutta, Mauritius, Demerara, Trinidad."

Basic super is not intended to supersede ordinary superphosp on good arable land containing plenty of lime, but is intende be applied on soils that are either deficient in lime or contai excessive quantity of vegetable acids such as sour pastures It is also recommended as specially suitable as a fertiliser turnips grown on land subject to the disease known as "finger toe." Manure manufacturers have suffered seriously from petition with basic slag because on sour grass land acid man were unsuccessful, but now by the simple addition of slaked l ordinary superphosphate can be converted into a manure ticularly adapted to all sour soils.

The manure is known as "Hughes' Patent."

THE PROPOSED TEA EXCHANGE.

The London correspondent of the *Ceylon Observer* writes

THE TEA AND PRODUCE COMMITTEE OF THE CEYLON ASSOCIATIO met this week to consider the proposed Tea Exchange, and, a considerable discussion, this very diplomatic resolution passed:—"The Tea and Produce Committee of the Ceylon Asso tion in London having considered the Memo. and Articles Association and Bye-laws of the proposed Tea Exchange and Address of the Chairman of the meeting held on the 29th Ma are of opinion that benefit might result to the tea trade gener by the establishment of a Council which would bring together representatives of the various sections of the trade. They are entirely satisfied that the substitution of restricted auctions lim to members of a Tea Exchange for the entirely open public auct at present held would be of benefit to the producers and impor of tea, but they suggest that some form of private auction might be tried under conditions to be arranged by the vari sections interested in the tea trade."

It is possible that in Ceylon this may be thought rather a wol position to take up. But, under the circumstances, it is a reas able one enough, for it seems now practically certain that the system is to be given a trial, several firms of importers hav agreed to the principle. It is not so much that they think t sellers will benefit by the change, but that they think it politi humour the dealers who are bent on trying private sale. And th is also the feeling—on the *omne ignotum pro magnifico* pri ple—that no change can be for the worse and may possibly t

t for the better. At the same time, as I have said before, this ew departure is a thing to be carefully watched. At a time like e present, when shipments are moderate, private sales may amuse e dealers and do no harm to us. But, if there is again an over-pply of tea, as there was three months ago, these tentative sales ight be used as a lever for boycotting all public auctions and for rcing sellers into a hole-and-corner sale-room where teas would ot meet with honest competition. That way lies disaster for pro-ucers and for the London tea market.

CACAO PODS AND SEEDS.

A Cacao Planter has sent the *Ceylon Observer* the follow-ng interesting extract from his diary of tests made in 1894 nd 1900, and since kept as guides as to what pods to use or planting :

1894. Pods from a Young Estate.	Weight.	Length.	Round.	Number of Seed.	Wet. oz.	Dry. oz.
Forastero Rough and red, grooves yellow when ripe	2 to 9	12	45	5	2½
Condameera Smooth, red long groves yellow when ripe.	2 to 9	12	29	2½	1¼
Hybrid Smooth, red with green grooves, when ripe yellow	2 to 8	11	38	4	2⅛
Caraccas Rough and red, pink grooves latter, when ripe yellow ...	2 to 8	10	36	3¼	1½
Marawa Rough, green, whole pod, when ripe yellow	2 to 9	11	40	4	1⅝
Condameera Smooth, green whole pod, when ripe yellow	2 to 8	11	45	5	2½
Total	12 to —	—	233	23¾	11⅛
Say Average	2 to —	—	385-6	35-6	1⅞

1894—Selected *small* pods from an old estate well manured—hough I had many 3 lb pods.

Forastero Rough, red, pink grooves, latter yellow, when ripe ...	12-16	9½	11	51	4½	2⅛
Condameera Smooth, red, pink grooves, latter yellow, when ripe ...	1-13	8½	13½	43	5	2¼
Condameera Smooth and green, whole pod yellow, when ripe... ...	1-3	7	11¾	36	4	1⅛
Hybrid Rough red with green grooves latter yellow, when ripe ...	2-10	11	13½	38	4	2⅛
Hybrid Smooth red with green grooves later yellow. when ripe... ...	1-8	8½	12	26	3½	2
Caraccas Rough red, grooves get yellow, when ripe	1-4	8	11¾	35	4⅝	2⅛
Caraccas partially rough red, whole pod pink, when ripe	1-1	7	11½	30	3	1⅝
Marawa Rough, green, yellow grooves when ripe	1-2	10½	11¼	21	3½	1⅝
Marawa Short, smooth whole yellow, when ripe	1-2	7½	12	38	3¼	1¾
Forastero Hybrid Short, rough, green grooves, latter yellow, when ripe ..	1-3	7	11¾	36	4	2⅛
Total 10 pods	14 to —	—	—	354	39¾	20⅜
Say average	16½ to —			-35½	4	21-16

The last three pods from a dying Forastero tree 12 years old experimented on—

November, 1900. 1 pod ripened, though husk thin and soft ...	7 oz.	—	—	39	2	1¼
1 pod ripened, though husk thin and soft	7¼ „	—	—	40	2⅛	1 5-16
1 pod ripened, though husk thin and soft	8 „	—	—	42	2⅛	1 7-16

Among cocoa 10 and 10 The tree gave in last seven years 1,666 large good pods, cut out in November, 1900, seed equal to 2 oz. for pod or say 1¾, but cacao seed last seven years—no pods turned black, but all ripened, though tree was dying for practically four months.

THE COFFEE EXPERT EXPLAINS.

If you want to get puzzled about coffee, talk with an "expert" for a little while. Here is an explanation of the commonness of bad coffee, given to the reporter of a New York newspaper, by "the coffee buyer of one of the city's largest grocery establishments":

"There is no question about it, all coffee ought to be ground just before it is cooked, and yet fully three-fourths of our retail trade is in ground coffee. Laziness and late breakfasts have ruined our American coffee, and patent coffee pots have finished the job.

"About the only place I know of where I get coffee to suit me now-a-days is in the little village where I spend my vacation. I send up the green coffee, and the landlady browns it in small quantities and grinds it as she needs it. Then she makes it in a battered tin coffee-pot, settles it with an egg, and serves it with real cream, and I feel that I'm really getting my money back and that life is worth living.

"Of course, buying coffee already browned isn't so disastrous as buying it ready ground. I advise browning it at home, a little at a time, but it does take time and bother, and practically no green coffee is sold except to coffee roasters. They have every convenience for wholesale roasting and do it well enough.

"Anyone who knows anything about coffee can tell one kind from another, in the green; but the coffee roasting process has been so perfected that the green berry marks may be completely obliterated.

"Individual tastes in coffee differ greatly, and much of the flavour depends upon the roasting, which is another reason why coffee should be roasted in the home, to please the taste of each family. Some coffee-drinkers affect special mixtures, too, and buy the different berries and mix them themselves, so as to get exactly the blend they like.

"Not one cook in a hundred is careful enough not to allow coffee to boil, and boiling will queer the best coffee on earth. It must come just to the verge of boiling and stay there for a few minutes, but never go beyond; for boiling brings out the tannic acid and not only injures the flavour and aroma, but makes the stuff positively injurious."

CULTIVATION OF RUBBER TREES.

Some people may be surprised to learn that there is still a raw product that man finds just as difficult to obtain as it was a hundred years ago, and that it is harder to obtain than ever. It is the milk of a very insignificant looking tree, growing in great quantities over a large tract of territory. The tree itself is generous; liquid follows the incision; a wait of a few hours for the milk to harden and a man has the equivalent of a day's wages. This white liquid, after exposure to heat, and many species to that of the sun alone, and without any further treatment, gives thirty per cent. of its bulk in pure rubber. Despite this, the world cannot obtain a tithe of the supply it needs. The simple reason for this state of affairs is that the tree, although generous itself, elects to grow in regions which for the most part are death to white men and are removed from civilization by thousands of miles of swamp and jungle.

To alter this condition of things two sets of men are working on opposite lines. They are engaged in a sort of race for a very high stake—an unusually high stake indeed, as the pure rubber is now selling for something more than $1 a pound. One set are chemists, who are trying their best for the last twenty-five years to find a substitute for rubber. So far there has not been an unqualified success among their attempts, and there are experts who go so far as to say that chemically it is impossible to combine for the market a substitute having the different properties of pure rubber. Be that as it may, hardly a day passes but the long-expected substitute is brought forward and the company formed to exploit the perfect substitute of the year before goes into the hands of a receiver.

The field of activity of the other set of men is very different. It is found in a few farms in Mexico and Central America, and in a few Government experiment stations, notably in Jamaica and Ceylon. There are a small number of farms where something like a systematic attempt is being made to farm rubber on a large scale; some half dozen in the Isthmus to Tehauntepec and a very few more in Nicaragua, Costa Rica, and the rest of Central America.

The difficulties which confront this handful of farmers are peculiar. In the first place, no one ever tried before to make rubber grow as a crop for the market. There are no data, no facts of even the simplest kind to tell these men whether their ideas are the right ones The natives of the country take no interest in things outside their own particular business, and a man about to establish a plantation has had to start fresh, with his own ideas to guide him and these latter cannot be said as yet to have become authoritative, for none of the farms are more than six years old, and the trees must be up that time before the question of growing them can be settled. Rubber planting, then, is not only an absolutely untried undertaking, but there has been nothing of tradition or general knowledge of the subject with which to make a start. If rubber were a delicate tree, or difficult to cultivate, the outlook would be disheartening indeed.

Second, the general conditions are against the planter. The nature of the country throws him entirely upon his own resources, and the climate is apt to be enervating, to say the least. Transportation is a great problem. Labour is scarce and not easy to handle, the native peon of Central America being a mixture of childishness and independence, and a hard drinker to boot. Although strong and active as young men, excellent axemen and better with a spade than any other labourers in the world, they become debilitated very early in life. They have no constitution and must be cared for like children. Furthermore, they look to the patron or owner, for the settlement of every ill, spiritual or temporal. You must keep them sober, get them out of debt, make peace between them and their wives, arrange any infelicities that may occur between them and their neighbors' wives, doctor the whole family, and educate the children, if you have time. For the peon is essentially a creature formed for the patriarchal system. With a chief or employer whom they know or respect the better class of peons become in many essentials ideal labourers—steady, careful, hard-working, quick to catch an idea, faithful to follow it out, entirely honest; their employer's interest becomes their own. But in order to obtain this desirable state of things a farmer should be a first-rate judge of capacity and character, a fair lawyer, physician, and man of business.

A third problem before the farmer of rubber is where to plant. *Castilloa elastica*, for practical purposes the only rubber in Central America, has an extremely varied *habitat*. It is found at all elevations up to 2,000 feet and in a great variety of soils and locations, with a consequent variation of rainfall. So here, again, the farmer must make a choice, and one upon which his success will probably depend, with nothing to guide him in the making. As regards location, it is conceded that Castilloa needs a tropical climate, a rainfall that can be depended upon, a good drainage, and an elevation of less than 1,500 feet, but these conditions have great latitude of choice.

The most important of the questions relative to the method of planting rubber is the one about which the farmers are most divided, and is probably the most vital connected with its cultivation. It is the question whether to plant in groves, in the open, or under forest shade. The advocate of the former system says that in any other part of the world, if one wants to get a particular crop, it is customary to give the tree or plant all the chance possible. One clears the ground, turns it up, and after the tree is planted keeps all weeds from encroaching upon its light and food space. Why not apply these elementary principles to rubber and plant in plowed and open land, in groves, like an apple orchard?

The advocate of the forestry system points, however, to the manner in which the tree grows naturally, and says that rubber is found thriving best under shade, in a cool, wet spot, and by "thriving" he says he means gives the most rubber. The tree will grow, it is quite true, faster in the open than in the forest, and you will get your groves of rubber trees more quickly, but the question is, will you get the milk from them? For it does seem to be a fact that rubber found in open pastures will not yield so much milk as those trees growing in the forest, where it is cooler and moister. If it could be ascertained exactly what function the milk of the tree performed, one would probably be able to tell how much sun and how much rain would produce the tree with the largest quantity of rubber. The milk is not a sap, but a latex, which is carried just under the outer bark, and the slightest nick from a pen-knife will be followed by a thick liquid, which if caught on the finger dries at once, leaving a shred or two of pure rubber, like small elastic bands.

There are farms established by exponents of each theory. can see in Mexico rows of young trees in open cleared lan every respect like a coffee or orange plantation; and aga Costa Rica the farm consists of rubber trees planted in amon forest trees, only cleared where the growth is very thick, thou course the bush is kept down by cutting twice a year. Those are following these two theories will be relieved when they their first crop. But at present they are having rather an an time of it, for on the one hand it will be expensive business, n say impossible, to plant shade among those trees in the open the rubber may be ruined before the shade comes up. But course would be imperative should the advocates of the orc theory find themselves in the wrong. On the other hand, sh the forestry people be at fault it will require considerable ski the owner of the rubber growing in the forest to cut out the and let in the sun without injuring the rubber. Ringing tre the right phases of the moon, some eminent scientists to contrary notwithstanding, will go far toward solving the pro for the grower of rubber in the forest and make his positio stronger of the two, on the whole, in that he runs the lesser as it is easier to cut out the shade than to put it back.

As for the rubber planter's profits, nothing definite can be about them as yet. A man might buy a thousand acres of rubber land for $5,000, and he might plant it and bring it to duction for $45,000 more—$50,000 in all But now as to the ret it is like figuring on the chicken industry; one becomes alarm the rate chickens, eggs, and profits pile up. In the same way estimated that rubber will produce a handsome return every at the end of the sixth year from planting. Anyone can work for himself the following sum in multiplication for the profi the eighth year: One thousand acres with 200 trees to the a one pound of rubber to the tree each year, sold at a net pro 50 cents a pound.—*Ag. Gazette.*

GLAZED COFFEE.

The *American Grocer* remarks :—

The package coffee war in Ohio has some humorous features, of the sort that may prove very costly for those originating th For instance, circulars have been sent through the State, tw which are headed respectively, "An Appeal for Pure Food in Kitchen" and "Common Sense About Coffee." They state there is a great deal of glazed and self-settling coffee on the mar and that it is under the ban of the Dairy and Food Com sioner; that this glazing is intended to cover up defects in co and is largely composed of either bad eggs, or glue, or rosin, Irish moss. Then follows a statement that glue is made out of bones, hoofs, etc The circular also displays a cut, showing collection of "factory eggs," "roaster eggs," "muscular eggs," shows a few eggs with young chicks just emerging from the sh These circulars also state that by the use of "glazing" the ma facturer gains about two ounces on each pound. The inferenc that "glazed" coffee is ruining the health of users, and that S Dairy and Food Commissioner Blackburn had found it neces to call a halt on its sale in Ohio.

Such statements injure the entire trade by creating a dist in the minds of consumers, which cause them to ignore all pack coffee. This ought to be a good time for the grocers of Ohi push bulk coffee. The coffee department can be made a g trade-getter and very profitable Never was there a more favour time for making money in retailing coffee than now. There difference in price between No. 7 Rio and the finest Padang Inte of 24 cents. a pound. Mexican, Central American, and Venezu coffee that will roast as well as any Padang Interior can be bou from 12 to 15 cents, and having a heavier body, is sure to satisfaction, particularly if a good blend is made.

The secret of a good coffee trade is to buy the very best flavou bean, have the coffee fresh roasted every day, and educate sumers to buy the whole bean and grind the coffee as wanted use. Keep the grades high, and remember that a high price car conviction to the minds of consumers that it means the high quality. A satisfied palate seeks gratification unmindful of c It may grumble, but it cannot resist the temptation to sat desire. There are department stores in New York that mak great fuss about 20 and 25-cent. roasted coffee, and yet offer th very finest selection at 45 cents per pound.

DISTRICT ASSOCIATIONS.

SHEVAROY.

Proceedings of a Meeting of the Committee of the Shevaroy Planters' Association, held in the Victoria rooms, at 1 p.m., on Monday, the 6th May, 1901. PRESENT :—Messrs. W. J. Lechler, C. Rahm, C. G. Lechler, Rev. M. Andersen, and Mr. R. Gompertz (*Honorary Secretary*).

Read Circular No. 33/01 of 24th ultimo from Secretary, U. P. A. S. I., forwarding letter from Honorary Secretary, Central Travancore, requesting our support in obtaining an import duty on tea.

Resolved that we consider the C. S. P. Association ought to be supported in this matter.

Read letter from Mr. G. Russell Gunning offering his services to proceed with the tea caravan to Persia to sell coffee for us.

Resolved that he be informed that this Association regrets that it is unable to employ him.

Read letter from Private Secretary to H. E. the Governor saying that it was impossible to grant the requests mooted by the Planters, *viz.*, to reduce the minimum for which supply bills can be granted and that notes should be cashed at the Yercaud Treasury.—Recorded with regret.

Read letter from S. Stanes & Co. forwarding correspondence with the Traffic Manager, Madras Railway, asking that the freight charged on coffee should be reduced to the same rates as that charged on Northern Railways.

Resolved that Honorary Secretary be requested to ask the Chairman, U. P. A. S. I., to move in the matter.

The following papers were read and recorded :—

Circulars received from the Secretary, U. P. A. S. I., Madras.

No. 29/01. Baron Von Rosenburg wants to know the rate of land tax paid to Government for coffee lands.

No. 30/01. Madras Chamber of Commerce forwards copy of letter addressed to Mercantile firms and Railways *re* obtaining a reduction in freight from Madras and hopes the U. P. A. S. I will support it.

No. 31/01. Forwarding correspondence between Madras Chamber of Commerce and Government of Madras *re* improvement to Madras harbour which Chamber considers emergent.

No. 32/01. Forwarding letter from Legislative Member enquiring whether it would be desirable for a Committee of the U. P. A. S. I. to discuss amendments to Labor bill, or whether it should be left till Annual General Meeting.

No. 34/01. Madras Chamber of Commerce will be glad to join U. P. A. S. I. in endeavouring to prevent the adulteration of coffee.

No 36/01. Malabar Chamber of Commerce will gladly join in any action to stop adulteration of coffee.

Letter from Superintendent, Police, Salem, in reply to this Office letter No. V, dated 22-4-01, regarding the behaviour of the Police in the Coffee-stealing Case at Scotforth Estate.

Books and papers received during the month :—

Proceedings of the Coorg Planters' Association, dated 30-3-01.

Proceedings of the Indian Tea Association.

Brazilian Review, dated February 19th and 26th, March 5th and 12th, 1901.

Planting Opinion, dated March 30th, April 6th, 13th and 20th, 1901.

(Signed) ROBT. GOMPERTZ,
Honorary Secretary, S. P. A.

INDIAN TEA ASSOCIATION.

The following are extracts from an Abstract of the Proceedings of a Meeting of the General Committee held in Calcutta, 7th May, 1901 :—

Considered a draft of a proposed Circular to the members of the Association respecting the amalgamation of the Cachar and Sylhet Branches. On the 4th March the Surma Valley Sub-Committee had submitted to members a scheme under which the two existing Branches would be replaced by one organisation to be styled the Surma Valley Branch This Branch would consist of nine District Committees—four for Sylhet and five for Cachar—and a General Committee. The members of the District Committees would be appointed by Calcutta Agents; and the members of the General Committee—fifteen in number—by the District Committees. The scheme had been received with approval by all Calcutta Agents interested in the Surma Valley. The Sub-Committee had accordingly decided to put it into operation. With that end in view they had prepared the draft circular already mentioned, the main object of which was to ask Agents to communicate with their representatives on the District Committees, in order that those bodies might be got into working order without delay. There were, however, two other points raised in the Circular regarding which the General Committee thought some further discussion was required. They were (1) as to a local subscription; and (2) as to the Secretaryship of the Branch. The Sub-Committee thought no subscription was necessary; and that an Honorary Secretary should be appointed.

After some discussion it was agreed that the arrangement proposed by the Surma Valley Sub-Committee should stand temporarily. That is to say that for the twelve months throughout which Mr. Cresswell would act there should be no subscription. In the meantime the District Committees and the new General Committee (when formed) would consider the matter, and report as to whether a local subscription and a paid Secretary were deemed necessary. Certain modifications were to be made in the draft circular to bring it into conformity with this decision.

The Committee discussed with Mr. Mann a letter dated 14th April which he had addressed to them with reference to certain recent statements made in the English press by Mr. E. H. Skrine and others upon tea as a possible carrier of microbial disease. The statements were to the effect that some tea that had been examined in England had yielded colonies of microbial forms, living, and capable of cultivation by the ordinary methods of bacterial culture. In commenting upon these statements Mr. Mann pointed out that few natural products came into consumption with so great a guarantee of freedom from dangerous microbe infection as tea; for in the drying process during its manufacture it was always twice, and in some cases three times, treated in such a manner that all dangerous organisms were destroyed. Any material exposed to the air of a city such as London for a single minute would give colonies of microbial forms. But they were not dangerous, and were inevitable. From the point of view of microbial contamination the advantage on the side of tea was very great, when its all but absolute security was compared with the constant dangers to which milk, water, beer, etc., were exposed.

The Committee had also noticed a letter in the London *Times* of 13th April from a Mr. Geo. Brownen, F.C.S., in which similar statements to those traversed by Mr. Mann were made. Mr. Brownen had further remarked that, "for some time past, most unpleasant rumours from some of our "tea-producing countries have warned us that damaged, and therefore injurious, teas were being "craftily blended and manipulated, and sold as genuine or sound commercial articles." This remark was, in the opinion of the Committee, absolutely without foundation so far as India was concerned. And they resolved to draw the attention of the London Committee particularly to it although they had observed that that body had decided to take no notice of the statements made by Mr. Brownen and Mr. Skrine. A copy of Mr. Mann's letter was likewise to be sent to London, with the object of showing that the allegations as to the presence of dangerous microbes in tea were also entirely contrary to the facts.

Considered a letter dated 24th April from the Hon'ble Mr. Granville L. Acworth, Chairman of the Central Travancore Planters' Association, with regard to the question of the extension of the sale of tea in India. Mr. Acworth stated that his Association were considering a scheme for exploiting the markets of Southern India. It was proposed that, for this purpose, 10 per cent. of the low grade teas produced by the local gardens should be utilised. In the first place, however, he considered it necessary to ascertain if the proposals which had been formulated in Calcutta were intended to

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

include Southern India within their scope. If so, he thought the teas sold should be obtained locally.

This letter had been submitted to the Sub-Committee appointed in connection with the question. They had expressed the opinion that the operations of the proposed Tea Distributing Agency should include Southern India

It was decided to reply in this sense to Mr. Acworth's enquiries; and to suggest that possibly the local scheme might be worked in conjunction with the Agency. But, if not, and if the latter organisation had sole charge of the work in Southern India, contributions of tea from planters there would be of course accepted, and would in fact be required. It was also to be suggested to Mr. Acworth that before any final decision was come to by the Central Travancore Planters' Association, particulars of their scheme should be sent to Calcutta.

Considered letters dated 12th, 20th and 22nd April from Mr. E. G. Foley in connection with his journey to Meshed. He reported that the caravan left Quetta on the 19th April. He expected that it would reach Nushki in about a week's time. From that place the journey to Meshed would occupy about forty to fifty days. On reaching Meshed he proposed to await the Committee's instructions as to his written route. He thought it advisable that he should return *viâ* the Caspian Sea, Baku, Odessa, Alexandria, Suez and Karachi. In June and July camels could not face the Baluchistan desert by reason of the intense heat; and to return by the Seistan-Nushki route would consequently mean a delay at Seistan. He also submitted alternative proposals for a return journey through Russia, to enable him to make enquiries into the prospects of Indian tea in that country.

In their letter No. 337-O of 30th March the General Committee had sanctioned Mr. Foley's journey to Meshed on the understanding that the time occupied would not be longer than four months. They now decided to telegraph to Mr. Foley to the effect that he might exercise his own discretion as to the return route provided the time limit indicated were not exceeded.

With reference to the possibility of sending Indian tea into Russia overland, the Committee decided to ask the London Committee to endeavour to obtain some information as to the quality of tea, the style of packing, etc., which would be most suitable for that market.

Considered a letter dated 18th April from the Honorary Secretary, Central Travancore Planters' Association, with reference to the following resolution which had been adopted at the Quarterly General Meeting of that Association held on the 13th April, *viz.*:—

"That this Association do ask the support of the Indian Tea Association, and the United Planters' Association of Southern India, in urging on the Government of India the immediate necessity of putting an import duty on foreign-grown teas."

In the letter it was stated that in 1899 half a million lbs., and in 1900 1½ million lbs. of Ceylon tea, had found its way into India duty free. The Central Travancore Planters' Association thought that Ceylon and other foreign teas should be taxed; or that Indian teas should be admitted into Ceylon free of duty. The Ceylon teas sent to India were mostly without estate marks, and were consequently of a quality likely to be prejudicial alike to the interests of India and Ceylon.

The Committee discussed this proposal, and decided to point out, in replying to the letter, that an import duty upon foreign tea of 5 per cent. *ad valorem* was already levied in India; and to ask if it were suggested that this should be so enhandced as to make it a protective duty. Further enquiries were also to be made as to the reasons, especially in regard to Ceylon teas, which had led the Travancore planters to the conclusion that a tax was required.

MARKET REPORT.

[*Per Mail advices of 26th April* 1901.]

COFFEE.

The London Commercial Record says:—Large supplies of East India have been brought to auction during the week, and have met with a slow demand, but, as importers have shown a disposition to sell, a fair quantity has changed hands, prices for the most part showing a decline of 2s to 3s per cwt., but even at this concession many parcels remained unsold; the very limited proportion of choice grades brought, however, quite francy prices. Costa Rica and Central American descriptions have not been in such liberal supply, but they also show a reduction in value. A generally dull tone has prevailed in the market for "futures" until yesterd when an estimate of 6,500,000 bags for the next Santos crop be reported, prices rallied 6d to 9d from the recent lowest point, closing quotations are rather higher for the week; latest busin includes, May at 29s 10½d to 30s, September at 30s 6d to 31s and December at 31s 1½d to 3 s 10½d per cwt. Supplies to- at auction embraced 26 packages Ceylon, 1,588 bags East India bags Nyassaland, 211 bags, &c., Jamaica, 9 bags Salvador, bags Guatemala, 2,689 bags Costa Rica, 355 bags Nicaragua, bags New Granada, and 84 bags Colombian. Jamaica in pu sale went well, but Costa Rica and other kinds largely bought Tone of the market quiet.

TEA.

CHINA.—At auction during the week 3,334 packages offered and partly sold at steady rates. Moning 3⅝d to 4⅝d, Scented Caper 3¼d to 4¾d. Oolong 3¾d to 11½d, Saryune 3½d per lb.

INDIAN.—A reduced quantity was brought forward at auction, *viz.*;—25,000 packages contrasted with 32,400 packages previously and 27,900 packages a year ago.

There was quieter tone in the bidding and except for the most desirable invoices, prices were not so generally favourable to importers as in the week before, especially for parcels with red or mixed leaf. Orders for some of suitable Pekoes and Pekoe Souchongs were to hand from outside quarters Rather under 2,000 packages from South India, mainly of ordinary quality, were represented in the sales.

No doubt the large amount of capital locked up in clearances in anticipation of the Budget in tea, &c, has hampered the trade for the time being, and rendered dealers indisposed to buy freely until they have been able to work off a portion of their stocks.

For 20,600 packages on Estate Account 7d per lb. was obtained, compared with 7½d per lb. for 16,000 packages and 9⅜d per lb. for 11,000 packages in the two preceding seasons.

Including what is advertised for Monday next, the total printed in April is as under:

1901.	1900.	1899.
116,000 pkgs.	111,800 pkgs.	61,200 pkgs.

making 1,579,000 packages put through the Mincing Lane Public Sale Rooms from 1st July against 1,549,000 packages and 1,457,000 packages in 1899-1900 and 1898-1899.

CEYLON.—Catalogues comprised 32,700 packages opposed to 31,900 packages on the 16th instant and 30,800 packages in 1900.

On the whole there was not such a strong demand and most kinds went rather irregularly. Quotations for both leafy and broken descriptions up to 7d per lb. were as a rule about maintained, but over that figure there was less inclination to purchase and for many of the medium and fine lines, particularly broken Pekoes, considerably below former rates had to be accepted to effect business. Finest were also in somewhat smaller request and easier. Shippers gave fair support to Pekoes and Orange Pekoes with good flavour.

The average is 7d per lb. On the 18th it stood at 7⅜d per lb. and also in 1900.

JAVA.—Nearly 4,000 packages passed the hammer. Not much change occurred in the value of the upper grades, but for others the tendency was lower.

For Monday next 2,500 packages are advertised.

Deliveries.—The clearances of all Tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 23rd April,	1901	13,015,344 lbs.
Do. do.	1900	7,488,205 ,,

During the fortnight the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.

Also 333 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated April 26th, 1901, says :—

Quantity brought to Auction in London from 1st June to date.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1900-1901	... 1,598,446	1,182,436	56,379
1899-1900	... 1,589,054	1,093,558	57,250

25,286 *pkgs.* Indian
33,329 „ Ceylon
3,941 „ Java
} Total 62,556 packages were offered in public auction this week.

The low prices lately current have undoubtedly assisted materially in promoting a taste for Indian and Ceylon Tea in foreign countries. The re-exports from Great Britain given in the following table show an increase in every country specified.

Quantity of Indian and Ceylon Tea re-exported from 1st January to 31st March.

Indian.—A marked diminution in the size of the auctions is now taking place, only 25,286 packages being brought forward during the week, while the quantity advertised for next week only totals 23,031 packages. 229 "last of the season" invoices have been brought forward to date, against 257 to the corresponding date last year. There was not much change to note in the market except that bidding was hardly as brisk as last week, while some slight irregularity was occasionally noticeable in prices. There was good competition for some fine liquoring parcels from Assam. The following averages are worthy of note:—Budla Beta T. Coy.'s gardens "Budla Beta" and "Kanjikoah," 1/2¼ and 1/2, respectively; "Jokai T. Co. Hattialli," 1/1¾; "Koomtai," 1/0¾.

Week's average of Tea sold on Garden Account 1901, 20,824 pkgs., av. 6·89d. 1900, 25,524 pkgs., av. 7·56d.

Total Tea sold on Garden Account 1st June, 1900, to date, 1,321,124 pkgs., av. 7·23d. 1900, 1,259,232 pkgs., av. 8·27d.

Ceylon.—The heavy auction of 33,329 packages coming after the sale of 31,594 held last week proved a severe strain upon the market; this was most pronounced in medium and better liquoring Teas, which have been in somewhat fuller supply than was the case a few months back. Broken Pekoes of this class were more depressed than whole leaf Teas, and frequently sold at a distinct decline upon last week's rates; the firmest grades were Teas for price, which remain at about the same quotation as last week.

Average for week 6·90d., against 7·34d. in 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 419,151 pkgs., av. 6·66d. 1900, 387,079 pkgs., av. 7·53d.

Java.—A somewhat heavy supply was brought forward, comprising 3,941 packages, in which twenty gardens were represented, all the Teas being of direct import. Competition was fairly general, although several breaks were withdrawn from sale; the market was, nevertheless, on the whole, slightly firmer than was the case before the holidays, this being the first auction held since Easter.

Bank Rate 4 per cent. Exchange on London three months' sight:—Calcutta 1 4$\frac{5}{32}$. Colombo 1/4$\frac{3}{16}$.

COCOA.

There was little movement in the market on Tuesday when 3, bags were brought forward for public competition; only ab 1,050 bags found buyers, prices generally ranging about the sa as last week. Of 702 bags Trinidad offered, 490 bags sold—fine 70s to 70s 6d, middling to good 67s to 69s 6d, and blacks 45s being valuations. 42 bags Dominica brought 59s to 61s 6d, bags fine bright red St. Vincent 65s to 66s, and 12 bags fair Lucia 62s to 63s. Guayaquil moves off fairly well at steady pric 880 bags offered and 500 bags sold—grey to fair Caraquez 62s 64s 6d. The following passed the hammer unsold:—153 b Grenada, 254 bags Samana, 99 bags Colombian, 50 bags Bahia, bags Venezuelan, 262 bags Puerto Cabello, 447 bags Ceyl Private transactions embrace 200 bags Trinidad, including f at 71s 150 bags fair common Grenada at 60s. 100 bags Colomb on secret terms, small lot of Venezuelan at 72s, and 200 b Guayaquil-Caraquez at 61s 6d to 64s 6d per cwt.

PEPPER.

Black.—The market has passed through a very quiet week, a the only business reported for arrival is a sale of 15 tons Singapo March-May (s.) at 6$\frac{5}{32}$d, which is in favor of the buyer. On spot moderate sales of Singapore have been made at 6$\frac{1}{16}$d.

At Auction on Wednesday 166 bags Aleppy retired at 6d to 6 13 bags good bold heavy brown Ceylon realised 6d per lb.

White.—is steady with a fair business at full rates for Singapo Penang being dearer in the spot. On the spot sales of Singapore are reported at 9¼d, and Penang at 8$\frac{9}{16}$d to 8⅝d. arrive only a limited trade—Singapore, July-September (s.) at to 9$\frac{9}{32}$d, and Penang, June-August at 8⅝d (the latter being decline).

At public sale on the 24th instant 39 cases 120 bags Singap were bought in at 9¼d to 11½d, whilst 21 bags good Ceylon sold 9⅜d to 9½d per lb.

GINGER.

Cochin.—The market has quietened down considerably, but undertone is very strong. Privately only small sales have pass recent top rates being well maintained in the business done, wh at auction of 58 cases 289 bags offered 20 cases small rough c heavily limed, sold "subject" at 38s 6d washed rough being boug in at 40s per cwt.

Jamaica.—was again in excellent demand, and practically whole of the 1,105 barrels catalogued sold, prices obtained exhib ing a further rise, especially in the case of the best lots. Good fine bright washed realised 62s to 71s fair 52s 6d to 60s low m dling 46s to 51s, common to good common 41s to 45s 6d, low da 38s 6d to 40s per cwt.

St. Lucia.—22 bags limed rough small sold at 36s to 40s per c

Green.—10 barrels realised 40s per cwt.

CINCHONA.

The auction to be held at Amsterdam on May 9 will consist 5,430 bales and 109 cases, weighing 513,543 kilos. Java bark. I expected that a supplementary catalogue will be issued later. the drug-auctions 8 serons of Huanoco sold at 6¾d to 7d, and twen three serons of Loxa quill were held for 1s 6d per lb.

QUININE.

Dull of sale, and easier in second-hands. The small business d includes a few thousand ounces German sulphate, at 1s 3¼d to 3¾d for August delivery; spot is quoted 1s 3¼d per oz.

CARDAMOMS.

Fine qualities were dull of sale, 3s 7d being refused for extra b pale, which were valued at 4s; medium and lower qualities w dearer, however. The following prices were paid:—Ceylon-Mysc Fine bold pale (1 case), 3s 6d; medium to bold pale, 2s 11d to 3s medium palish, 2s 6d to 2s 8d; medium long brownish. 2s 5d; sm and medium pale, 1s 9d to 2s 2d; small palish, 1s 7d to 1s 1 small specky, 1s 8d; good splits, 1s 4d to 1s 5d; brown pickin 1s 4d to 1s 5d; very small shelly, 1s 1d; dull greenish to pale, 2s to 2s 2d. Ceylon-Malabar: Good bold polish, 2s; small ditto, 1s and ordinary pickings, 1s 4d. Seeds were in demand, and practica all sold, at from 1s 10d to 2s 2d per lb.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 31st instant. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

THE COST OF COFFEE.

Estimates of the cost of a particular product, like estimates of the cost of a particular mineral, must necessarily be somewhat unreliable. The conditions of planting, like those of mining, vary very considerably and one man or one mine may be able to produce an identical commodity or mineral at 10 or even 20 per cent. lower cost than another, because of circumstances not under human control. Notwithstanding this variability of conditions, however, estimates as to the cost of production of coffee are not without their uses. If carefully made, they give some idea of the minimum price under which even the most favoured planters cannot produce with a margin of profit; they give some indication of the points at which this or that estate, or even this or that producing country, must drop out of the race; though allowance must, of course, always be made for the quality produced in each country and for the geographical and political circumstances that regulate the choice of market. As to the cost of Indian coffee, we have, we regret to say, no reliable information. It is but natural that planters should hesitate to give out to the world a note of the price at which they can produce; that they should not care to publicly announce the point at which profit ceases and loss begins. Yet we cannot but think that it is to the interest of the coffee-planting community in India as a whole that every member should have some idea either of the average or of the probable maximum and minimum cost of producing coffee in the different districts, with a memo. as to how the average quality produced compares in value with a given type. It should be possible to obtain information of this kind from the majority of planters and to form at least an approximate idea from it as to what coffee costs in Coorg, Mysore, Nilgiris, Wynaad, Shevaroys, Nelliampathis, etc. We would suggest that all such calculations be made on the basis, not of cost *on the estate*, but of cost per cwt. *delivered*

c.i.f. London. This, broadly speaking, is the market where all the different qualities of Indian coffee meet in competition.

We have published from time to time estimates of the cost of Brazilian coffee. A more recent calculation of sale proceeds compared with cost is given below, not merely to show figures relating to a very small lot but to indicate the general lines on which Indian estimates might be drawn up, for comparison with Brazilian. The estimate is made by a planter in Barra Mansa, in the State of Rio de Janeiro, and is as follows:—

Freight per Railway	64$000
Cartage at Rio	10$000
Duties	96$000
Hire of Bags	4$000
Commission on Sale 3%	27$000
	201$000

To this, he states, must be added the cost of production, as follows:—

Cartage from the Plantation to Station	100$000
Picking 250 alqueires at 800 reis	200$000
Hauling to the drying Yard	16$000
Drying at 40 reis	40$000
Washing and Sorting	40$000
Freight of Bags at 300 reis	7$400
Transfer from the Western to the Central Railway	2$500
Work on Plantation	100$000
Unloading, etc.	30$000
Management	60$000
Interest 10% on 536$600	53$660
Employees	210$000
Expenses of Planter's family	205$000
Total cost	1,064$660
Yield of 100 arrobas at 9$000	900$000
Loss	164$660

This gentleman complains that as at 9$ per Arroba coffee leaves a dead loss it is better to leave it unpicked on the trees. The *Brazilian Review* criticises the above calculations, remarking that for so small a quantity as 100 *arrobas* the planter's expenses personal and for employees seem excessive. Undoubtedly, says our contemporary, "for small plantations managed on such a scale, present prices must be absolutely ruinous. Even deducting interest and personal expenses, at 9$000 the *arroba* there remains on 100 *arrobas* only 94$000 clear after payment of all other expenses. How the small planters in the States of Rio and Minas are to live at all under such conditions is hard to see and, should the present excessively low prices continue much longer, must result in some sort of a transfer of plantations to the labourer and elimination of the capitalist element." With special reference to coffee already gathered, our contemporary points out that according to the above account-sale the cost of delivery from Barra Mansa is 2$000 *per arroba*, so that, even at the villainous prices now current, 6$700 would remain over to the planter for every arroba of coffee that had already been picked and delivered at the station. If the expenses of hauling to the station (100$), return freight of bags and transfer from one railway to the other be included, in all 110$000 for 100 arrobas, the cost of delivery of the coffee would be raised to 3$110 per arroba and at 8$700 still leave a surplus after payment of expenses of delivery of 5$590 per arroba. It seems, therefore, unquestionable that when coffee has been actually gathered it will not fail to be marketed even should prices fall below present quotations. The expenditure for care and maintenance of plantations has been already incurred and that for harvesting and delivery, exclusive of the planter's personal expenses and interest, c not exceed, in this instance 4$360 per arroba. So that wh ever may happen to the next or subsequent crops, th seems little question that even at 8$000 per arroba greater part of the coming crop will be marketed. Th are, of course, many outlying points where such a pric prohibitive, but these must be exceptions. This by the w We have digressed merely to give an indication of one of useful deductions that can be drawn when a man has a idea of what his coffee actually costs. Such knowledge be turned to account in many other ways also, and we can but think that the planting community would benefit estimates of cost were submitted from various districts carefully collated.

THE SAN JOSÉ SCALE.

We give to-day some interesting papers on the San J Scale, a pest that has tried the patience of Californian fr growers very severely. In the ravages of this pest and various pests in India, as also in the remedial measures t commend themselves to agriculturists and scientists, ther a basis for interesting comparisons. Our readers sho institute these for themselves when their estates are affli by pests of any kind, for an account of the treatment of description often affords useful hints as to how to deal w others. For instance, a few months ago Dr. George Watt s gested that parasites might be utilised to wipe out pe Now in California the San José Scale has not been hav quite a peaceful time of late, and it is claimed that the truction of the Scale noticed in orchards in the Santa C valley and in the vicinity of San José, has been due larg to the attacks of one particular parasite, *Aphelinus fuscipen* This is one of four kinds that are known to feed on the Sc The parasites are exceedingly small, wasp-like creatures, larvæ of which feed upon the Scale insect. To determ whether or not this little friend was present in an orch Prof. W. G. Johnson once cut twigs about 4 in. long, c taining Scales, and inclosed them in glass tubes about 6 in length, the ends of which were stopped with cotton. there were any parasites present, they were seen in a days crawling on the surface of the glass within. In instance 1,478 parasites were taken from a single tube, 1, from another, and over 1,000 from another. This was first important discovery of these little friends in abundanc eastern U. S. A few days before this discovery the Profes had advised the owner to cut and burn all the badly infes trees. Immediately after finding the parasites, he was advi to cut and pile all the wood and branches, but was given spec directions that they should not be burned. If the trees been burned, all the parasites would have been destroy On the other hand, where the twigs were left in the orch the little insects escaped and concentrated their attack u the destructive Scales on their trees where they had b overlooked. Now, as this keen observer of Nature, remarks "By using a little judgment in these matters an orchar can assist nature in restoring the balance she desires." the same time he throws out a warning that it must be bo in mind that we cannot expect too much from these li friends, and it behoves every fruit-grower to do everyth in his power to prevent the further spread of the Scale,

t the same time foster the development of nature's own educing agents, the parasites.

Ten times more interesting than cock-fighting would a ontest be between, say, the green bug and some parasite friendly," if the observer were the proprietor of a stricken state. It is obvious that the world of parasites deserves to e studied, and that the little hymn, so dear to school-boys, bout "big fleas" and "little fleas" points to a line of cientific research that deserves to be followed up "*ad nfinitum.*"

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S .I.)

The General Committee of the Indian Tea Association Calcutta) have issued, under date 16th instant, their Monthly Return of Sailings and Daily Customs Entries of Tea from Calcutta, also a Return of Exports of Ceylon Tea for four ears up to 29th April, 1901.

Exports of Indian Tea from Calcutta.

NOTES.

Coffee in London. Cable advices, dated 20th instant, put Stock at 27,000 tons; fortnight's landings, 4,300 tons; deliveries, 2,200 tons.

Cinchona in London. Cable advices report a firm market, price per unit 2d. Total monthly sales, 3,500 packages.

India's Tea Export. The quantity of tea entered for export to the United Kingdom in the first half of May is 466,704 lbs. against 692,064 lbs. last year. The total from 1st April to 15th May is 662,259 lbs. against 1,424,057 last year.

The Hon. Mr. Buckingham. A proposal is afoot to present the Hon. Mr. Buckingham with a piece of plate in public recognition of his services to the tea industry. The subscriptions are limited to £1. The lists close on 31st May.

Lipton, Limited. Lipton, Limited, pay a final dividend at the rate of ten per cent. per annum, making a dividend of ten per cent. for the year; £15,000 is placed to reserve, and £19,500 written off to depreciation. £5,166 is carried forward.

New York. The following are statistics of Imports to New York in 1899 and 1900:—

	1899.	1900.
Cocoa and Cocoa shells ..	£1,002,204	£1,215,600
Coffee	£9,755,791	£9,868,905

Tea is not specially mentioned in the consular report from which we take the above figures.

Rubber in the Straits Settlements. A brisk demand for Pará rubber seeds is still reported from the Straits Settlements, though the number of planters does not increase. The termite is found to be the chief enemy of the young tree. The most promising of recently introduced economic plants is said to be *Kickxia Africana*. *Castilloa* is not a success.

To make them pay. The Satyr was amazed because Man used his breath to warm his hands and cool his porridge. Well, during the last few weeks it has been urged in all seriousness that to make Indian Tea pay the yield must be reduced and to make Indian Coffee pay the yield must be increased. The Satyr must still regard human bipeds as "impossible animals."

Java Cinchona. The N. Y. Nederlandsche Veem, cinchona-bark department at Amsterdam, reports the shipments during April, 1901, from Java to Europe at 800,000 Amst. lbs., against 530,000 in 1900,

TO THE DEAF.

A rich lady, cured of her deafness and noises in the head by *Dr. Nicholson's Artificial Ear Drums*, gave £5,000 to his Institute, so that deaf people, unable to procure the Ear Drums, may have them free.

Address—No. 989 D, THE NICHOLSON INSTITUTE,
Longcott, Gunnersbury,
London.

[w. 26-5-00—26-5-1901.]

996,000 in 1899, 856,000 in 1898, and 560,000 Amst. lbs. in 1897. The total shipments from January to April have been 3,423,000 Amst. lbs. in 1901, 2,436,000 in 1900, 3,021,800 in 1899, and 3,212,000 Amst. lbs. in 1898.

Indian Teas.

"The season has now closed, and has proved—say I. A. Rucker and Bencraft in their circular dated April 25th—for the Planter quite the worst on record An over supply of common quality reaching this country to face an increase in the duty, has made quotations exceptional. For some time Indian Tea Shares were at a heavy discount, but recovered very quickly when the worst of the Tea market had been seen."

The London Tea Market.

In a cable dated 16th instant, Reuter reports that the tone of Ceylon tea is generally steady. Pekoe Souchongs are quoted at 4¼d (same as last week) and the average for the week at 6⅜d (⅛d down) as against 6d quoted for Indian tea. 20,000 packages of Ceylon tea were offered for sale, of which 18,000 were disposed of; while of the 13,000 packages of Indian Tea offered, 11,000 found purchasers.

Ceylon Tea in London.

Cabling on 17th instant Messrs. Gow, Wilson & Stanton report that the market generally is steady, that for medium liquoring Pekoes and Broken Pekoes as well as for Common Pekoes and Broken Pekoes being also steady. The price of fair liquoring Ceylon Pekoe Souchong is 5d (same as last week) and the average price of Ceylon tea sold on garden account this week was 6⅜d. (⅛d. down)—as against 6¼d. and 7⅛d. respectively in the corresponding week last year.

Amsterdam Bark Market.

The amount of bark announced for sale at the Dutch auctions in Amsterdam on May 9th, was 7,057 packages, containing 652,093 kilos. (nearly 1,434,615 lbs.) The exports of Java Bark for April were 791,000 Amsterdam lbs. against 524,000 Amsterdam lbs. last year, and 1,009,000 Amsterdam lbs. in 1899. The total for the four months is 3,382,000 Amsterdam lbs., against 2,418,000 Amsterdam lbs. last year, and 3,025,000 Amsterdam lbs. in 1899.

The New Tea Season in India.

It has been decided to hold the first auctions of the new season at Calcutta on the 31st instant. The news from the districts reports much more favourable weather, rain having fallen in all districts. Its distribution, however, has been very irregular in parts of Assam and Dooars, and a further fall would be welcomed. The quantity manufactured to date is said to be about 25 per cent. only of last year's returns The total exports from the 1st April to date show an increase; but include a large quantity of old season's tea, probably about 1½ million pounds.

Colombo Tea Sales.

Bidding was slow at the sale last week, but good or desirable kinds sold well and quite up to last week's prices. The *Times of Ceylon* remarks:—There was weakness, however, in common to medium sorts, and Pekoe and Pekoe Souchongs of this class were in less demand and sold in buyers' favour. Another report states:—Competition at this sale was rather slack, except for tippy and thick liquoring Broken Pekoes, which were in strong demand. Common Pekoe and Pekoe Souchong were neglected, and could only be sold at lower quotatio Very few fine teas were offering, but these realised g prices. Dusts and fannings were very firm. Quality ge rally very poor.

Advance in Price of Roasted Coffees.

American papers to hand are of coffee. The Coffee War is said have been ended, or at least a tr has been called, and in consequence the Woolson Spice peo advanced their *Lion* brand 1/2 cent. to 10 1/2 c. per lb., t placing it on parity with Arbuckle's *Ariosa*, which has usua been a full cent. higher than its rival's. It was reported t Havemeyer had made over control of the Woolson Spice to Arbuckles, but this was afterwards contradicted. It see however, certain that the Coffee and Sugar War has b at length settled, which is the great point as far as we concerned and a fact that cannot fail to favourably affect price of coffee generally.

Coffee in London.

Fine quality still commands spec terms. Advices, dated 3rd insta state:—The low prices ruling for Coffee have caused the tra to buy more freely—the supply to come forward is, howev still very large. East India shews a reduction of fully per cwt. for the bulk, but fine colory kinds, suitable for home trade, have quite maintained their value Fine or nary to low middling green Jamaica sold readily at advance of 2s to 3s per cwt. The higher grades of Co Rica and Central American are quite steady, but other qua ties are rather in favor of buyers. "Futures" have furth risen 1s per cwt.; Santos opened to-day at 31s. 3d May, 6d July, 32s September, and 32s 6d per cwt. December.

Coffee in Sao Paolo.

It is stated, says the *Brazili Review*, that the coffee crop in Simão this year will come out far under the estimate, owi to the great quantity of stunted berries. The flowering w about the average, and the fruit looked promising in its fi stages; but the great heat experienced during January a February prematurely ripened an immense part of it; the being fazendas on which two-thirds of it are useless. T phenomenon has been chiefly noticed in lands along the Se Azul. On 31st ultimo a meeting of planters took place Cravinhos, when resolutions were passed that the State Go ernment should be requested to take measures with a view the reduction of coffee tariffs and imposts. Accounts fr Mattao state that the late tremendous rainstorms have knock down about 30 % of the coffee berries in that neighbourho

Brazilian Coffees.

The *Brazilian Review* remarks th the prices recently ruling for coff must be ruinous to many planters, leaving absolutely margin for expense for the following season. Clearly wit out money and without credit many planters must go inev ably to the wall. It is possible that, even so, their plan tions will find buyers to continue the struggle, but as ye by year profits are cut down and disappear, plantations mu be more and more neglected and their yield diminishe Besides within two years all the new plantations will ha come to full bearing, when from one cause and another t production of coffee in Brazil may be almost certainly expect to show a regular reduction, as progressive as the increa since 1890 has proved. Prices will of course rise in cons quence, but only when they attain very much higher rat

an those current are they likely to stimulate planting in ew districts again as in 1890—1895.

razilian Coffee and British Tea Planters.

The *Brazilian Review* remarks :—"A SENSIBLE PROGRAMME—In Ceylon and India the "over-production" of a is creating as much discussion as coffee here. All kinds f proposals are rife, from limiting production down to prohiition of exports, but good sense is, as usual, re-asserting self as shown in the following programme adopted by influntial Associations : 1*st* Increase of the tea cess. 2*nd* Agitaon for the reduction of the duty on tea in England. 3*rd* o moderate manuring and manure more for quality than uantity. 4*th* To waste no time on wild schemes for reducing ne output, but to concentrate all attention on the means o increase the demand for tea. 5*th* Advertise, advertise, all ver the world ! 6*th* That those interested in producing should ecome interested in the large distribution Companies abroad nd a Reserve and Extension fund of Tea companies be emloyed for buying shares in Home Companies like Mazawattee, tc. We recommend the consideration of this programme to Brazilian planters."

Brazilian Crops.

The *Brazilian Review* of 2nd ultimo remarks that as regards coffee there eems to be some question whether it will be so extraordinaily early as was anticipated. From the interior of S. Paulo eports regarding the condition of the fruit on the trees are not atisfactory ; in many parts the fruit is hollow and empty and s generally expected to give a much lower yield in weight han last crop. Indeed it would be scarcely surprising, as he yield was exceptional this year, 50 to 55 litres of dry ruit having given 15 kilos. of marketable coffee, whereas 65 o 75 kilos. is the usual average. It seems possible that this ear even that average may not be reached, in which case, owever big the crop may look on the trees, a shrinkage of 0 to 20% in weight would cut a big figure. By some plantrs the poor appearance is attributed to the weather and by thers to prolonged neglect of the plantations and late weedng. Besides the idea is gaining ground that the crop will ot be so early, after all, as the good fruit is still green and nly the empty burned-up fruit has yet yellowed or seems eady to pick.

The London Tea Market.

The Produce Markets' Review of 27th ultimo says :—INDIAN TEAS—With considerably reduced supplies and a good steady demand most descriptions brought quite last week's rates. The medium and finer teas which formed a smaller proportion than latterly of the quantity brought forward were briskly competed for, and sold at prices somewhat less favourable to buyers. This was more particularly the case for those of earlier import of good appearance and quality, which are free from the uneven colour of the leaf noticeable in the Autumn growths. As these kinds are getting into a small compass, and there is every prospect of a good steady demand continuing, a firmer market is quite probable. The common teas have sold irregularly, and, on the whole, at easier prices, some of the lowest grades having been down to 3½d, while the trade have not experienced any difficulty in supplying their requirements at 5d and under. Of the coming crop the early reports were not favourable, but later prospects considerably improved, and the season is likely to be as forward as last year. The public sales comprised 25,200 packages compared with 32,400 last week, 3,122 being withdrawn. Most of the above consisted of Autumn growths, many of which were of mixed Red Leaf, for which the demand was slow, while the more desirable sorts met with a good reception.

The London Coffee Market.

The Produce Markets' Review of April 27, 1901, says :—After the heavy fall in the terminal market during the last few weeks a reaction has set in and prices began to advance early in the week. On Thursday a reduced estimate of the coming Santos crop was issued and considerably helped the upward movement, quotations advancing a further 9d per cwt. Seeing, however, that there is still much uncertainty as to the out-turn of the present crop, the total estimate for the year being already exceeded, although there are still two months to run, we cannot place much reliance on figures for the crop which is perhaps just commencing to be picked in the earliest districts. There is no doubt much that can be said in favour of higher prices, the present ones are abnormally low and, with a high exchange, planters getting a much lower price per bag. Still the coffee is there and must be marketed, and the principal feature that we see to favour an advance is that quite possibly some estates may after this year go out of cultivation and if so a continuance of bumber crops cannot be looked for. At the auctions a dull tone has prevailed ; Plantation East India, of which the bulk has consisted, has gone out of favour in many quarters both here and on the Continent, and as there is a heavy crop this year prices have had to be materially lowered until now it is by far the cheapest coffee in the market.

GENERAL ARTICLES.

TEA REDUCTION AND GREEN TEAS IN CEYLON.

AMERICA *v.* RUSSIA.

The *Ceylon Observer* says :—A gentleman who owns tea property in Ceylon and knows a great deal about tea-growing and manufacture in more countries than one,—indeed was "in tea" we suppose, before a million lbs. was exported from our island—thus expresses himself in the course of a letter sent to us by last mail :—

"As to the late discussion in your columns *in re* over-production, though I said nothing I think a great deal—and my thought is, How anyone in possession of any common-sense at all can support such an utterly nonsensical and unjust scheme as to urge a 10 per cent. reduction on all estates, no matter where situated In the first place such a combination is totally against the principles of political economy and in the second is a subtle way of robbing Peter to pay Paul. Indeed I cannot help thinking that the proposers and supporters of the scheme must have axes of their own to grind, which would be done if their views were carried out. I go further and say that in my opinion it is an unjustice and a sheer robbery to ask well-chosen and well-cared-for estates to fine themselves in order to support and keep alive estates which should either never have been brought into existence or cultivated with some show of reason other than 'grab all for themselves and let others go to the deuce.' Now that they find the boot pinches them, they appeal to the gererosity (foolishness rather) of those who have *not* been enjoying for a few years past the same prosperity as themselves, to save them. No—a thousand times no—an industry which cannot live except by the appeal to the generosity of the more wise of the same body deserves to die. The plain simple maxim applicable in this case is 'The survival of the fittest,' and the extinction of such places as cannot produce what the public demand, at a price that pays. I know a case in point : when I became interested in Ceylon, a friend who was seeking an investment at the same time—after many arguments—decided to invest in a low-country property. I placed my faith in high country.

Which of us had the better result? For many years my low-country friend undoubtedly scored over me and being wise in his generation he sold out at an enhanced price after some years of prosperity. Do you suppose I should pity him *now* if he had not done so and was now feeling the pinch? No—most decidedly no! Demand rules supply and if the latter attempts to gain the mastery, *it always fails* and suffers.

[There is, however, the hard case of owners of old coffee estates who had no option but to go into tea. - ED. *C. O.*]

"As regards the attempt at green tea making, as at present conducted, it is in my opinion doomed to failure, and I look upon the Bonus given to it by the 'Thirty Committee' as so much money absolutely thrown away. I have been for many years conversant with the green teas produced by China and Japan and their position in the markets of Canada and America, and I feel sure that, as at present made, there is no future, except one of failure, before the green teas now produced in Ceylon. My reason is that, as compared with the green teas of China and Japan, the Ceylon manufacture shows no point of resemblance, and therefore cannot compete with them. If you are able, by such subsidy and pushing, to create a demand in Canada and America for what is practically a *new type of green tea*, well and good, but my experience tells me that it is a most difficult and profitless task to try and change a nation's taste, and I do not think that such change will be effected.

"And this brings me to a final word. Years ago I spoke to one or two of the then 'Thirty Committee' urging that three-fourths of the money then, as now, was being absolutely *wasted* in America, and should be employed in Russia, but my advice, costing nothing, was deemed worthless. Perhaps bitter experience is now teaching the Committee the truth of it. America is not a large tea-drinking country, is prejudiced against change, and especially where that change is likely to benefit any British industry; whilst Russia is one of the most persistent users of the fragrant leaf, and is only now showing that interest in the Ceylon article, which a proper use of the 'Thirty Committee' funds would have induced years ago."

MODERN ARTIFICIAL FERTILIZERS.

THEIR ORIGIN, MANUFACTURE AND USE.

"H" writes in the *Planters' Monthly*:—

The following treatise is intended mainly for the guidance of farmers in the selection of the proper fertilizers for our particular soils. Besides it is the purpose of these notes to explain the general principles upon which modern, rational manuring is founded.

The Chemical Composition of Plants.—In order to ascertain which elements a plant requires for its normal growth and development it is necessary to find out of what it is composed. If the ashes of wood, straw, roots and other parts of plants is subjected to a chemical examination it is found that the same consists, invariably, of the following, *viz.*, phosphoric acid, potash lime, magnesia, sulphuric acid, chlorin, oxyd of iron, silicic acid, and soda. Water, carbonic acid, and ammonia (Nitrogen) have escaped as volatile gases during the process of combustion. All plants are therefore built up of these twelve substances combined together in different proportions.

The question now arises: Are all of these substances absolutely necessary for the normal growth and development of a plant or not? This matter has been the subject of careful and extensive experiments by eminent scientists. These experiments have demonstrated that a plant cannot thrive without sufficient quantities of water, carbonic acid, nitrogen, phosphoric acid, potash, lime, magnesia, oxyd of iron, sulphuric acid, and chlorin; whereas silicic acid, and soda seem to be unessential. The former ten therefore constitute the real plant-food, for without one of them no real plant-life is possible. Of course some of these are more important than others, besides some plants require more of one than of another; and it must be considered that soils differ a great deal in their chemical compositions, they are often rich in one plant-food and poor in the other. A soil, however, must contain all of these in order to be productive, with perhaps the exception of water and carbonic acid, which are supplied by the atmosphere, as is also a part of the nitrogen. It remains now to be determined which of the above substances are the most necessary and essential ones and which of them are generally deficient in our soils.

There is scarcely any soil on the Hawaiian Islands which la in oxide of iron, for the oxides of iron and alumina form the grea part of the bulk of our soils. Magnesia, sulphuric acid, and li are also mostly present in sufficient quantities Although the p centage of lime is sometimes quite low, it is nearly always suffici for the purpose of plant-food.

Nitrogen, phosphoric acid, and potash must therefore be cal the most important substances for it is these that we have supplement by means of manure. A chemical analysis may of reveal quite a good supply of one or all of these in a soil, yet th are mostly present in a more or less insoluble and inert form s therefore of little or no avail to the plants. The plant-food of a is absorbed in a dissolved form by a peculiar action of the fine roo it must be soluble before it is accessible to these roots, a although a small part of it is gradually rendered so through the fluence of the sun, rain, and atmosphere, as well as the action the roots themselves (by means of an organic acid secreted by the that is in most cases not sufficient to produce good crops y after year

Upon these facts are based the modern views on rational man ing and subsequent manufacture of suitable artificial fertilizers.

Artificial Fertilizers and their Manufacture.—The manufact of artificial fertilizers is a distinct branch of the chemical indus and a flourishing one, for artificial manures are to-day just as in pensable on the modern farm or plantation as a plough For intense and rational management they are an absolute necessi in fact oft-times the life of a farm depends upon it.

The material used for the manufacture of artificial fertiliz must be divided into three classes, *viz*, such that supply the ph phoric acid, or the nitrogen, or the potash.

The main sources of phosphoric acid are rock phosphat guanoes, and bones.

Rock phosphates are mineral phosphates of sedimentary ori and are found principally in Florida, South Carolina, Canada, Spa Algeria, and many other places, in crystalline form (Apatite) non-crystalline form (Phosphorite). They contain up to 80 and per cent. of pure tribastic phosphate of lime and are therefore v concentrated. They are scarcely ever used in their raw state, a manure, as they are of little use even if finely ground. But ma factured into superphosphate they form the bulk of the phosph manures on the market. Guanoes are found on many islands the Atlantic and Pacific. They consist mostly of carcasses a dung of sea-birds with more or less impurities. Some of th contain also considerable ammonia. Guanoes are also used ext sively in the manufacture of superphosphates, in fact they superior to minor phosphates, owing to the absence of fluorine a other undesirable ingredients, often found in the mineral ph phates.

Bones in the raw state are of little or no value as a fertiliz they contain more or less fat, which retards their early fermentati Various means have been brought into use to render the bo more available for manuring purposes. Boiled or steamed bon when ground, form an excellent manure for some purposes, a bone-ashes and bone-black (charred bones). Bones are also used the manufacture of superphosphates and double superphosphate

In all of these substances the prevailing form of phosphoric a is tricalcium phosphate and as this form is totally insoluble and little use to the plants, it has to be converted into monocalciu phosphate, a water soluble form, before it can be used for manuri purposes.

When phosphates, guanoes or bones (containing tribasic ph phate of lime) are treated with the proper amount of sulphu acid to displace two of the bases, the result is a mass consisting monocalcium phosphate and gypsum. This mass readily solidi and is afterwards ground and sold as superphosphate. Anot from of phosphoric acid is the dicalcium phosphate, in this only base is displaced by sulphuric acid. Dicalcium phosphate is of known as available or citrate soluble phosphoric acid It is soluble in water, hence not as valuable as the monocalcium ph phate.

Double superphosphate is a very concentrated superphospha in which liquid phosphoric acid has been used for dissolving, inste of sulphuric acid.

There is another phosphate preparation known as the phosph slag or Thomas Phosphate powders—a by-product of the Besse process of refining iron ores. It is used to a great extent Europe owing to its cheapness. The phosphoric acid is mos

esent in the form of tetracalcium phosphate. As it is low in rcentage of phosphoric acid it must not be regarded for export. is article must be finely ground to be of any avail, as it is plied directly to the land without first undergoing the process dissolving by sulphuric acid.

Of all the phosphate fertilizers there is none better suited to the cal soils and conditions than the superphosphate, for it supplies e phosphoric acid in an easily soluble form which is immediately ailable to the plants. It contains large quantities of gypsum, aking therefore the liming of fields unnecessary where it is used.

The nitrogenous manures are divided into three classes, accord- g to the form in which their nitrogen prevails. They are: Organic nitrogenous manures; 2. Nitrates, and 3. Ammonium mpounds. In the two latter forms, especially the nitrate, the trogen is almost immediately available as plant-food, whereas the rganic manures have to pass through a process of decomposition, fore their nitrogen contents will become available to the plants.

The chief products containing organic nitrogen are of animal igin, and consist mostly of dried blood, tankage, dried meat or sh meal, fish offal, horn or hoof meal and also hair, wool and ather clippings. All of these are of more or less value as manures, wing to the great differences in their relative percentage in itrogen as well as their mechanical conditions. Dried blood is the ost valuable one and as it readily ferments, its nitrogen is soon nverted into a soluble form. Good flesh meal as well as horn and oof meal are also good fertilizers for some purposes, but not as uick acting and effective as dried blood. The same thing may so be said of fish-scrap (fish guano) provided it contains not too uch fat. Hair, wool, and leather clippings are very slow acting anure and therefore of questionable value and unsuitable for rtilizing purposes.

Nitrate of soda or Chili saltpetre, as it is also called, is chiefly ported from Chili and Peru, where extensive deposits are found. contains from 15 to 16 per cent. of nitrogen. Nitrate of soda is e most active of all nitrogenous manure, which is due to its ighly soluble state, and is therefore often used as a top dressing here quick action is desired. No large quantities should be plied at any one time, for it is not absorbed by the soil and nsequently may be easily leached and carried down into the sub- il beyond the reach of the roots. An excessive use may produce jurious effects as it stimulates a rank growth of the foliage and tards maturity, but when judiciously applied it is a valuable imulant.

Sulphate of ammonia is considered the most valuable of nitro- enous manures, it is almost as active as nitrate of soda, but at the me time, not quite as soluble. Its chief advantage is that it is adily absorbed and retained by the soil, especially our clay soils, ithout losing its good qualities. Sulphate of ammonia contains sually about 20 per cent. of nitrogen It is quite expensive, the ost of it being imported from England and since annexation took lace, the imported article has to carry a duty of six dollars per wo thousand pounds, which does not tend to make it any cheaper. evertheless it is one of the principal constituents of the so-called mplete fertilizers, and the preferred form of nitrogenous manures.

The bulk of the potash manure is manufactured by the Potash yndicate of Strassfurt, Germany, where large deposits of carnal- t, sylvinit, Kieserit, etc., etc.. are found. These raw salts are ncentrated and converted into the following potash fertilizers, s., sulphate of potash, containing about 50 per cent. pure potash; uriate of potash, containing about 60 per cent. pure potash; lcined fertilizer salts, with about 38 per cent. pure potash, and ainit with about 12 per cent pure potash. Of these only sulphate potash and muriate of potash must be considered for these lands. The other two are not concentrated enough to bear high eights and other charges connected with exporting, although for me purposes they are just as good manures as the former. They re therefore mostly used in Europe. Sulphate of potash seems to be e general favourite on these islands and surely it is the best of all otash manures, for it is water-soluble and readily absorbed by the il, where it is retained for the gradual use of the plant. Wood- shes is also often used, but as the article generally contains only bout 6 to 7 per cent. of potash it is seldom imported.

Since artificial fertilizers are made out of two or more of the arious materials abovementioned, it follows, that there exist wide ifferences in the relative percentage of phosphoric acid, nitrogen, id potash, which naturally corresponds with the quantity used of ch of the ingredients. As their fertilizing as well as commercial value depend upon their contents alone, it is necessary that the farmer should know exactly what he is buying.

The following combinations are mostly used, *viz.*, superphosphate and sulphate of ammonia, superphosphate and sulphate of potash; superphosphate and sulphate of ammonia and sulphate of potash. These are the three best and most advantageous combinations and no doubt form the bulk of the artificial fertilizers used on these islands. The percentage of phosphoric acid, nitrogen, and potash can be made to suit the requirements of the soil. Nitrate of soda, dried blood, and some of the other substances abovementioned are also often found as constituents of artificial manures. Nitrate of soda is used mostly alone as a top-dressing. Fertilizers containing phosphoric acid, nitrogen, and potash are called complete fertilizers.

A proper fertilizer should be of good mechanical condition and its moisture should not exceed 12 per cent. The various ingredients must be so well mixed that the different particles cannot be discerned with the eye, in fact the fertilizer must look like one homogenous article. It must not cake in the bags and when dissolved in water should contain no coarse material in the sediment

Will it pay to use artificial fertilizers? This is indeed a well-founded question, which is only answered by careful, practical experiments and trials. But under any circumstances it must be the aim of the farmer to conserve the fertility of his soils, and not only by proper tillage but also by systematic restoration of such plant-food as is taken out of the soil by the annual crops. Even the richest soil will not continue to produce good crops without the use of proper fertilizer, on the contrary it will be gradually depleted of its fertility.

THE SAN JOSÉ SCALE.

The *American Agriculturist* gives the following advice as to **Spring Treatment for the San Jose Scale**:—

Trees of all kinds infested with San Jose scale should be given careful attention before the leaves appear, and the following methods of treatment are suggested.

1. All trees incrusted with this scale should be dug up and burned.
2. Moderately infested trees should be headed back by cutting out the tops and thoroughly washing the trunk and larger branches with a 2-lb. solution of whale oil soap and water. This can be applied with any ordinary spray pump. Use a potashlye whale oil soap rather than that made with caustic soda. The former is very much more effective and more easily applied, as it does not thicken when cold. The peach tree illustrated herewith is one in a block of 3000 cut back and treated one year ago. It represents one year's growth after treatment.
3. Slightly infested orchards of peach, pear, plum and apple should be sprayed with a 25% solution of 150 deg. fire-test kerosene and water before the buds open. About 25,000 peach trees were successfully sprayed last spring with this material in the Blue Ridge mt peach belt.
4. A 25% solution of crude petroleum and water can be used in the same manner. Commercial crude petroleum is exceedingly variable. A grade containing little or no asphaltum, but a fair percentage of paraffin, is desirable. It should have a specific gravity of not less than 43 deg. (Beaume scale) and not necessarily over 45 deg. Crude oils of this character cost 8 to 12c per gal. by the barrel.
5. Small trees of all kinds can be cheaply fumigated with hydrocyanic acid gas. The Emory box fumigator should be used. We will describe this apparatus in a future issue.
6. All trees should be pruned as much as possible before spraying. All brush should be piled near the orchard, left until midsummer and burned. This will enable the natural parasites to escape and concentrate upon other scale-infested trees.

In the same issue our contemporary writes on **The San Jose Scale Scare**:—

This pest is responsible for the biggest furore ever caused among American fruit growers in general and New York state horticulturists in particular. And rightly so, for it threatens orchards and nurseries whose products in this stage alone represent an annual value of millions of dollars. Even comparatively small townships in central and western New York ship thousands of carloads of fruit products yearly, while young stock is shipped from York state nurseries by the trainload.

The interests of fruit growers and of commercial nurserymen are alike in this matter. They should unitedly fight the common enemy. Division of forces, in this crisis, is worse than useless.

"More scared than hurt" perhaps best expresses the horticultural situation in the middle, southern and New England states just at this time. Yet if the scare forces all to co-operate in combating the scale, much dreaded injury may still be prevented. For the matter is quiet as important in all the region cited as in the Empire state. Indeed, Prof. Britton says the danger of this pest in Connecticut is greater from within than from without the state.

We believe that, with a few important exceptions, nursery stock should be fumigated with hydrocyanic acid gas. This treatment kills all living insects, not San Jose scale alone. It is cheap and simple, and with proper judgment nursery stock so treated is not injured. . . . Many nurserymen in various parts of the country have successfully fumigated for several seasons Hundreds more will do so this spring. It is probably quite as needful in other states as in New York. Further directions will appear later as to what stock to fumigate, what not to treat, etc. It is "no great chore" to fumigate nursery stock, and by being able to guarantee one's trees free from scale the nurseryman so far increases his sales and profits that lots of them are doing this for their own advantage without waiting for legislation, the sooner this practice becomes general, the greater will be nurserymen's profits. And the very few who now criticise American Agriculturist's position will then be warmest in praise of our policy.

Yet to compel nurserymen to fumigate, and let the fruit growers alone, will not fully cover the case. The scale is now so well established that legislation which fails to reach the fruit grower will be insufficient to check the further spread of this pest. This is "as true as preaching." And progressive fruit growers realize the fact and are already combating the scale . . . These people, like the gressive nurserymen, are looking out for No. 1 without waiting for the legislature to act. But while we believe that such self-help is the best help, those fruit growers or nurserymen who jeopardize the welfare of others as well as their own interests by neglecting the pest, require some law to induce them to be more mindful of the general good.

With a good law, economically administered by competent officers, who have had the co-operation of the entire horticultural interest, Maryland has solved this problem in a practical way at small expense. Michigan, Illinois, Iowa, Virginia, Georgia. North Carolina, etc. have laws of a similar character working in a satisfactory manner. West Virginia, Pennsylvania and some other states have the matter before their legislatures this winter.

The Maryland law gives the entomologist and the state pathologist absolute control of every orchard and nursery, including public or private property, on which plants are grown. These officers can condemn, destroy or have treated, under their supervision, any plant considered dangerous. In case instructions for the treatment of any plants are not carried out within the specified time, the state officers remove or treat them at the expense of the owner, the cost being collected by the state attorney

The Maryland law is backed by every nurseryman and fruit grower in the state. Public sentiment is so strong in its favor, there has not been a single case of compulsory removal or treatment of plants. In this movement in the eastern U. S. Maryland is the acknowledged pioneer. The $8000 expended annually has been worth millions to her fruit and nursery interests. Never in her history has the sale of nursery stock been so great as since the fumigation law went into effect.

While the utmost vigilance in fighting the pest should be insisted upon, it is more than probable that nature will, in a measure, help the work. The internal parasite Aphelinus fucippennis is credited by some as being responsible for the reduction of the San Jos éscale in the Santa Clara valley of California, has already been discovered doing effective work in one Maryland orchard, and should be carefully considered in this connection. American Agriculturist was one of the first to call attention to this enemy of the scale several years ago, and our efforts to encourage the dissemination of this important parasite have been of great value to the country. Yet because of this almost invisible friend at the seat of war, no one is justified in letting the scale run riot. All interested should cooperate with nature. But let us keep cool, do nothing rash, but counsel together and stand as one man, allied with nature, against the common enemy. A single season of such effective co-operation would go far toward controlling the scale.

EGYPT AND CEYLON TEA.

A PARSEE MERCHANT'S VIEWS.

A representative of the *Ceylon Independent*, in the cou of conversation with Mr. Dadabhoy regarding his recent to Egypt, enquired as to the sale of Ceylon tea in the lan the Pharaohs and it is interesting to hear what Mr. Dadab has to disclose :—

"I have," he said, "found to my regret that Indian tea gained a footing in Egypt, the trade being in the hands Mahomedan Persian merchants. Indian tea is not only sold Cairo, but also on the way throughout to the River Nile at s places as Luxar, Assoun, Wady-Halfa, Lower Nubia, Kharto Soudan, and even as far as Abyssinia. I have visited several Ind tea shores belonging to Persian merchants situated in Mani Khan-el-Khalil and found Assam a common poor liquoring tea, which in appearance is a fine, "wiry tippy" tea. It is liked by upper classes. Rubbish Souchong is sold to the poorer classes. find out what tea was given by the several Café Houses I visi well-known Cafés, *viz.*, Café Chica, Egyptian Bar, Splendid B Finde-siecle, etc. The rubbish they gave me was quite enough upset me. They have a peculiar way of drinking tea there. T use lemon with tea. They do not know the virtue of milk in th tea. But nothing daunted I asked for some milk. The peo there only stared at me and said *la*. I then put lemon ju instead and found that it improved the taste of the tea and mad palatable. Ceylon tea is only sold by Messrs, Walker Mei rachi, Limited, at Esbekieh, who are the Agents of the Ceylon operative Tea Gardens Company. They sell the "Bee" Brand T It is well and good they offer this tea for sale in their stores, the quantity sold is infinitesimal. Ceylon tea is supplied to English Army from Colombo. But Ceylon tea is evidently worked at all. No effort has been made to push Ceylon tea amon the vast masses of the population of Arabs, Egyptians, Coptics, Soudanese, who can be easily weaned to tea from coffee which costly luxury. A small cup of simple tea, unpalatable as it is sold at Cairo from half to one piasteres or from 8 to 16 cents. the Ceylon Planters' Association will take this matter up I assure them they will not regret it. With a market in this par the world with an intelligent man who can speak Arabic, the und taking is sure to prove an immense success."

PEPPER.

According to a telegram received from India the monsoon broken out on the Malabar Coast with unusual vehemence, s the *London Commercial Record*. Heavy rains and storms h visited the coast, rendering shipping extremely difficult greatly interfering with the forwarding of goods from interior to the ports. Inundations are threatened, roads h become impassable, and produce liable to be affectedby dam ness has to be kept back awaiting a break in the bad weath Thus the whole business with that part of India has been int rupted and a season has been brought to a close which m be regarded as an exceptionally unsatisfactory and unprofita one to all concerned. In some instances the speculation am native dealers and planters, which of late years has gradu attained larger proportions, has been the cause of an absolut unnatural state of affairs, whereas on the other hand over-prod tion in other instances has been the means of a ruinous depre tion in values In the case of ginger and pepper, native operat have ruled the market; they have decided the future, and Eur has been compelled to look on, unable to compete to any appreci extent. From the very first the poor prospects of the ginger c induced native speculators to operate on the bull tactic, and am themselves succeeded in maintaining a level of prices considera over that of London, with the result that our speculators abstai from purchasing, the position of the article not offering suffici inducement to them to pay a high premium over spot valu History has since proved that they were wrong and also that opinion—expressed on several occasions—of an ultimate rise values was absolutely correct. The Continent seems to have tak a different view of the future altogether; no doubt underestim ing the strength of the native bull clique, operators there ente to a considerable extent into bear sales of those sizes which

eferred by Continental consumers. These daring bears have d to buy back or cover with loss in India. London on the whole s looked on, buying extremely little on arrival terms, and being parently satisfied with pushing spot values up 6d to 1s at the me. In this way a good quantity of stuff has changed hands, t hardly in any case have the profits realised been unusually od ones. The break of the monsoon will probably put a stop to rther shipments from the Coast, but Bombay dealers may yet y London with their purchases, and more shipments from there e sure to arrive, although we are inclined to believe that they ll amount to little only. A good market may therefore ensue d last for some time. The same applies to Tellicherry and Alleppy pper. Natives have operated very successfully in these sorts well, much to the annoyance of European speculators, but the onsoon brings business in them to a close as well, and to holders spot stuff will be afforded an opportunity to realize with advant-ge. Coffee on the other hand is hopelessly depressed and declin-g owing to the enormous weight of Brazilian sorts and the sappearance of the American Coffee Ring which was to do ch wonders.

RUBBER IN GERMAN EAST AFRICA.

There are numerous sorts of caoutchouc creepers and trees digenous to German East Africa, but the only kinds which are of lue are *Landolphia Kirkii* (Kiswahili, Mohango), and *Mascarenhasia elastica* (Kiswahili, Mgora). Until quite lately it was believed at the best rubber was the product of *Landolphia florida* var. *omorensis* (Kiswahili Mbungo), but it has now been proved that is creeper is practically worthless. Samples of the milky juice the wild fig tree have been sent to Europe on several occasions, t the price obtained has always been so low as not to repay the st of transport. *L. Kirkii* is principally found in the Kilwa, ndi, Mahenge, Songea, and Langenburg districts; a little also mes from the Hinterland of Dar-es-Salaam, Tanga, Pangami, and agamoyo, and from Bismarchburg, Mpapua, and Tabora. A rtain amount brought from Portuguese territory finds its way the port of Mikindani. *Mascarenhasia elastica*, known in the ade as Mgoa rubber, is only found south of Dar-es-Salaam. everal trials have been made with other kinds of rubber. *eve Brasiliensis* (Pará rubber) has been planted repeatedly, but ithout success, the climate being too dry. *Ficus elastica, L. adagascariensis*, and an *Euphorbia sp.* (from Madagascar) have ne fairly well. *Castilloa elastica, Hancornia speciosa*, and *Willughbeia* were each tried once, but the seed did not germinate. *anihot Glaziovii* (Ceará rubber) was first planted at Tanga in 91. There are at present about 20,000 trees, but it is feared that will not pay as the atmosphere is too moist. It is thought proble that Ceará rubber will do better in Donde-Barikiwa (Kilwa strict), where a small experimental plantation has lately been ened.

The Decree which came into force on January 1, 1898, forbidding e export of impure rubber, was altered on June, 7, 1900. Such bber, when met with, is to be confiscated by the authorities, om whom it may be purchased by responsible European merants, who bind themselves not to sell the same as rubber of good ality.

THE MARCH COFFEE MOVEMENT IN THE UNITED STATES.

The deliveries of coffee last month in Europe and the United tates have only been exceeded three times since March, 1900, and ere 102,996 bags above the monthly average for the present crop ar; and yet the visible supply was increased 135,609 bags for e month. Receipts at Rio and Santos were more than double hat they were in March of last year. It has been demonstrated ready that the Brazil crop this season is the heavies ever harvested, hile conservative estimates make the 1901-02 crop nearly 20 per nt. greater, or 11,500,0 0 to 12,000,000 bags.

It is certain that supply is heavily in excess of demand, and that e full productive force of new plantations has not been felt. hether it will pay to carry heavy stocks on the basis of present st is a matter of individual opinion. The burden of supply is too eat to permit of a speculative control of the market.

Reports from Java fix the estimate of the 1901 crop of Government, Private, and Liberian coffee at 383,000 piculs, as against 542,000 piculs in 1900; of which 131,000 piculs Liberian, against 106,000 piculs in the previous year. Central American coffee is largely held in Europe, where the market is weak.

The following statement shows the movement and general position of the article :—

	Bags.	Bags.
Stocks, March 1, 1901—		
United States	953,031	
Europe	3,917,637—	4,870,668
Receipts during March—		
United States	760,356	
Europe	616,986—	1,377,342
Total supply, April 1 ...	...	6,248,010
Less stocks, April 1, 1901—		
United States	1,154,094	
Europe	3,813,183—	4,967,277
Deliveries, March -		
United States	559,293	
Europe	721,440—	1,280,733
Deliveries, March, 1900—		
United States	589,743	
Europe	706,331—	1,296,077
Decrease as compared with March, 1900		15,344
Deliveries (United States and Europe), March ...		1,280,733
Do. do. do. February ...		1,067,607
Do. do. do. January ..		1,328,216
Do. do. do. December ...		1,180,838
Do. do. do. November ...		1,281,638
Do. do. do. October ...		1,340,059
Do. do. do. September ...		981,198
Do. do. do. August ..		917,608
Do. do. do. July ...		1,219,058
Total for nine months, 1900-1901		10,596,995
Do. do. 1899-1900		11,783,570
Decrease as compared with 1900-1901 ...		1,186,575

The February deliveries in the United States consisted of 432,203 bags of Brazil; 127,090 bags of all other sorts.

The visible supply of the world on April 1, 1901, was 7,412,277 bags, against 7,276,668 bags on March 1 (an increase of 135,609 bags), and 6,222,595 bags on April 1, 1900.

The visible supply on August 1, 1900, was 5,817,759 bags, so that in nine months it has increased 1,594,518 bags.

The total receipts at Rio and Santos for the first nine months of the trade year were 9,338,000 bags, against 8,220,000 bags for the same time the previous year, and 7,503,000 bags in 1898-99.

Trading in options on the New York Coffee Exchange in March reached a total of 685,750 bags. The lowest price for options was 5·50 cents for April and May; the highest, 6.90 cents for March, 1902. Spot coffee, No. 7 Rio, fluctuated between $7\frac{5}{8}$ and $6\frac{7}{8}$ cents. —*American Grocer.*

BRITISH GREEN TEA IN CANADA.

A Canadian agent of one of the largest houses in Japan lately wrote to his principals :—

It will be of interest to members of the Tea Guilds in Japan to know that Canada cannot any longer be depended upon as a consumer of Japan teas on the parity of last year's prices, owing to the improvement already made in the quality of Ceylon Green Teas—the fact that a bonus of two cents per pound is paid upon all Green Teas by the Ceylon Tea Planters' Association—and that the teas can be purchased at a laid down cost in Canada of fully five to six cents per pound under the corresponding quality in Japan Teas.

If it be not already known, and, if the trade of Canada is of any importance to Japan, it should be demonstrated that the Canadian market cannot be held for Japan unless teas of good quality can be laid down in Canada at a maximum price of sixteen cents per pound for the simple reason that the staple tea in all descriptions—China-Japan or British grown is purchased by the "consumer" at twenty-five gold cents per pound—to realize which it must pass through the following hands :—

1*st.*—Wholesale grocer pays 16c. less 3 per cent. for cash.

2*nd.*—Retail grocer pays 18c. less 3 per cent. for cash, and, unless this can be done, Ceylon teas will assuredly take away within three years the whole of Canada's trade in Japan tea because to-day equal quality in Ceylon greens can be supplied to:—

1*st.*—The wholesale grocer at 14 cts.

2*nd.*—The retail grocer at 18 cts.; and since upon the Ceylon tea the wholesale grocer can make a profit of 4 cts. per pound—all his inclinations and energies are concentrated towards the sale of the teas which pay the largest percentage of profit.

In 1900 Japan teas of suitable quality cost:—

1*st.*—The wholesale grocer, 18½ cts. to 19 cts.

2*nd.*—The retail grocer, 19 cts. to 20 cts.; consequently neither wholesale nor retail grocer made any money and the effort to make the consumer pay 30 cts. or 35 cts.—instead of 25 cts.—proved a dismal failure, and consistently so, with every other tea grown offering freely at prices which enabled both wholesale and retail grocers to make a handsome profit and yet permit the teas reaching the consumer at twenty-five gold cents per pound.

It is probably true that owing to the advance in cost of production, Japan teas cannot be laid down in Canada at 16 cts. with profit to all through whose hands the teas have to pass before reaching the distributor here, *i.e.*, the wholesale grocer.

That it will pay better to let Canada's trade pass, and to cultivate silk or other products instead of tea—and the wisdom of the decision will rest upon those interested—but it is abundantly evident that, so far as Canada is concerned, the tea growers, the tea guilds or the Government of Japan must take prompt measures to meet the competition from British grown teas—or step down and out of Canadian trade.

BRAZILIAN EXCHANGE AFFECTING COFFEE.

SAID TO BE BASIS OF LEWISOHN BROTHERS PURCHASES.

There has recently been considerable talk in the coffee market in regard to large purchases commonly ascribed to the "metal trade." These purchases, however, are by close market students declared to be for members of the firm of Lewisohn Bros., the well-known copper merchants, acting in conjunction with the Rothschilds and other representatives of what is usually termed haute finance of the Continent. So far as this buying can be measured by prices it may be said to have caused an advance of 80 points on December from the lowest point last month and 1 cent on the nearer positions. The low point was the result of a succession of favourable crop reports indicating another large yield. It is understood that much stress is being placed by these large buying interests on the fact that exchange in Brazil on London has been steadily rising, which, of course, means that the premium on gold has been decreasing, and in turn means, according to the arguments of those who are inclined to regard this as a bullish influence, that the planter will for his coffee crop get a decreased volume of paper money which, in his home trade, will acquire no greater purchasing value our account of the decreased premium on gold. Therefore it is argued the planter will be unable to pay his labour and will have less inducement to protect and market his crops. This view, however, is not general, as it is pointed out that if Brazilian paper money appreciates in value, and is able, therefore, to purchase more American flour, petroleum, lard, etc., as it appreciates, the Brazilian planter will soon find he is receiving a remunerative price for his coffee.

The entrance of the Lewisohn interests in the market is not particularly new, however. In fact, as far back as the Spring of 1897 they were generally credited with being free buyers and are supposed to have been buying at times quite freely since. The real reason for the attention which their purchases have recently attracted, however, seems to be the news that they have been making purchases, cost and freight in Brazil, having taken, all told, something more than 50,000 bags in this position. Mr. Herman Sielcken, of W. H. Crossman & Bro., said when questioned regarding the Lewisohn purchases:—

"The purchases by the Lewisohn Bros. are undoubtedly a good thing for the market. If they carry a part of the surplus crop as they have been doing in the past three years, it will certainly benefit holders and more especially Brazil. As this crop is turning out more than 1,000,000 bags in excess of general expectations, the taking of the 300,000 to 400,000 bags in this country by one large capitalist is certainly a great benefit to the Brazilians. As far as values are concerned they are much higher than two years ago, and at the same time both present stocks and future supplies much larger Exchange in Brazil is now 11 1/4d. and in my hun opinion it has no significance whatsoever. Our own firm bou in 1882, with exchange at 20d. No. 7 coffee at 5c cost and frei Therefore there is no reason that the Brazilians are not getting a g price at present, when they average for the crop at present, when t average for the crop fully $10 a bag, while in the years 1882 to 1 they did not average to exceed $8·50 to $9·00, with crops than c about half what are being turned out now. The Brazilians certa are getting good prices in good money—that is English sterling. they do not get as much poor (paper milreis) as they did when change was 7d. they get more than double in paper money t they got from the years 1882 to 1886.

"I cannot reason that a crop is not sufficiently remunerative if Brazilians get a full price in gold, as the price they get in pape naturally a relative one. If a Brazilian milreis of to-day ha larger buying power for American flour, for American petrole lard and lumber, it necessarily must have a larger buying po for the produce at home. If this is not so the world ought to t Bryanite, as Bryan's theory of currency would then be indor I can only say the over-production continues and the coffee co tries get the full prices for the quantities they produce."

THE STRONG POINTS IN FAVOUR OF COFFEE.

"The strong points in favour of coffee," said another very minent member of the coffee trade, "are primarily the improvem of the position of the Brazilian Government's finances by reaso which the premium on gold has steadily declined since 1898, an now 140 per cent. premium against 370 per cent. in that year. currency prices obtained by the planter are lower now than a time when coffee in Europe and the United States was from 1 to 2 cents lower than to-day's prices, so that the Brazilian pla is worse off now than when coffee in New York sold at the rec low prices of 1899. Well informed people are of the opinion t the ruinous prices realized by the planter seriously affect his abi to pay, comparatively speaking, the high rates of wages colon demand, and that the exodus of labourers which began last Sept ber is likely to continue. At any rate few people believe t colonists will enter Brazil unless assured of as good cash wage they can readily obtain in the Argentine Republic. It is not reasonable to suppose that the condition of distress of a fair portion of the Brazilian planting interests will seriously affect caretaking of existing plantations and the proper harvesting their yield."—*New York Journal of Commerce*, March 4th.

NOTES FROM BRAZIL.

(From the *Brazilian Review.*)

Exchange.—*April 6th*, 1901.—Ninety days' Bank rate on Lon opened on Monday 1st at 7/8d. and closed this evening at 11 2 to 11 15/16d.

When we wrote this time last week the market seemed und plethora of ready bills to be ready for a new rise, that was expec to carry the rate over the sticking point 12d. *en route* for altitu corresponding to the more or less vividness of imagination. cause of the unexpected weakness is explained by the large cou demand that springs up immediately the rate gets close to 1 and the requirements of a large jobber who is said to have ta £200,000 during the week and to be now trying to sell again. Santos it is reported that there has also been heavy taking, an the market can stand it all without more reaction, it must be pretty good way.

Coffee continues to go forward in a wonderful manner, last we clearances here and at Santos being worth £327,977 as aga £131,943 last year, and the value of the total shipments for crop amounting to £16,370,009 as against only £12,483,894 year. Nor does there appear to be any prospect of their falling as before the end of the current month washed coffees of the crop may be expected. Offers of bills from Pará have also b considerable, £200,000 having been done on Saturday at 1 whereby it seems that rubber cannot be so exhausted as imagined. It is, however, extremely difficult to get any relia information from that market and, though we have repeate attempted to start a regular correspondence, hitherto it has alw been a failure. We are, however, at present in negotiation wit fresh party and trust before long to be able to supply our read

ith reliable and prompt information with regard to that important narket.

Market—In spite of the week ending April 4th having comprised nly four working days this year instead of six, as last, joint entries at Rio and Santos were 51,755 bags greater than for the corresponding eek last year, and 52,904 bags less than for the previous week. Up to the 4th April entries for the current crop were 1,222,941 bags ver last crop's and since 1 January 845,262 more than last year.

The Rio Market was weak throughout the week, prices ruling rom 7$900 to 7$500, but closing somewhat firmer on Saturday at $600 to 7$700 for No. 7, New York type. American enquiries were rincipally for low grades, No. 7 upwards, for European account better rades being chiefly in demand and colory coffees for N. Orleans t a premium of 200 reis, which, however, are scarce and somewhat ard to find. We quote 6·70 to 6·74 cents cost, freight and commission, at which orders were somewhat difficult to fill, sellers aving apparently made up their mind to resist a further fall. usiness for Europe is reported dull, only old or small new orders eing completed at 30s. 6d. to 31s. 6d. c. f. and comm.

The demand which previously was entirely for inferior grades entres at present chiefly on finer qualities. Reports from the interior of Minas and Rio could not be better, the rain having stopped, he weather is now almost perfect and no complaints are heard ven from districts such as Cantagallo, which were always dissatisfied with something, either too much rain or too much drought. he quality of the coffee in most of the Minas and Rio districts is lso expected to be good and of full weight. During the week nded 5th April sales declared at Rio amounted, in spite of the two olidays, to 138,000 as against 152,000 the previous week and 82,000 or the same week last year.

The market at Santos was generally weak, but steadied on Wednesday with a fairly large business doing at slightly higher prices. We quote :—

Primes	...	...	..	...	4$900	to 5$000
Superior	...	...	...	...	4$700	„ 4$800
Good	...	..	...	..	4$400	„ 4$600
Regular	...		...	...	4$100	„ 4$300

Medium qualities were in demand, lower grades being neglected. uropean offers ruled 30s. for good average at which probably arge orders could be executed. Sales were effected at 30s. 6d. to 1s. 3d. for *good average* and 31s. 6d. to 32s. 3d. for *superior*. Americans are out of the market, only one big roasting firm buying rom time to time; otherwise orders are for grades lower than for urope. Entries in consequence of Passion week were much maller, but still very considerably in excess of last year's, whilst les were double.

Reports as regards the weather in the interior of S. Paulo are onflicting. Shipments fortunately continue as heavy as ever and ocks are consequently slowly falling.

The Weather.—The Agricultural Commission of Sao Paulo reorts that during the month of February the temperature ruled wer than usual. Winds were abnormal blowing chiefly from E. hereas those usually prevailing at this time of the year are .-W. and S.-E. This possibly accounts for the extraordinarily eavy rainfall, 60mm. having fallen in two hours on the 6th February nd 57mm. between 3 and 7 p.m. on the 18th. The total rainfall for he month was 235·7 as against the normal average of 202mm. In 891 the fall was 45mm. greater. Rain fell at S. Paulo on 12 days uring the month of February.

At Campinas the average temperature ruled somewhat higher han at Sao Paulo, 21·99°, being 1/2° below the normal.

The prevailing winds were S.-E. and N. to N.-E. Rain fell during 8 days but the quantity was only 0·2mm. over normal.

The Inspector of the 1st district reported plantations looking xtremely well, the evenly distributed rains having been most beneicial and caused no damage except in a few districts where hailones happened to fall. Great scarcity of labourers is felt in some istricts, such as Mogy-Mirim and Leme, and it is possible that arvesting may suffer in consequenee. Some old plantations in he Campinas district show a splendid bearing in consequence of areful cultivation and manuring with coffee husks.

From the 3rd district the Inspector reports that in spite of money nd other difficulties the appearance of the crops is excellent and romises a yield at least equal to the current season's. Notwithanding in several districts, especially in the *terra roxa* region, it as been observed that coffee is ripening without reddening, but asses directly from green to ripe yellow. This appears to be an indication of empty, hollow fruit known as *café chocho*. If this anticipation be realized a considerable reduction, perhaps of 1/3 may be looked for in this district

From the 4th district the Inspector reports that the general state of plantations during February was satisfactory, the fall of fruit from the trees in some sections being compensated by the exuberance of the newer, so that the coming crop is expected to be good and to commence about June. At São Carlos the trees are generally less loaded than last year but the fruit seems to be excellent.

At Araraquara on the contrary the fruit is ripening unequally and there is great lack of labourers. At Jaboticabal the fruit ripened prematurely, but the quality seems to be superior. At Brotas conditions are good and the crop is expected to exceed this year's, but at Annapolis it is said to be premature and poor; whilst at Jahú the coming crop is expected to be about the same as the current one.

The Inspector of the 5th district states that crops of all kinds seem satisfactory with promise of abundant harvest at S. Manoel, Tieté, and Botucatú. At S. Roque plantations are somewhat backward as well as at Campos Novos de Paranapanema, where planters, however, complain bitterly of the cost of transport.

OLD "THREE-DECKERS."

H.M.S. "Rodney" ploughed the sea into two broad ribbons of white foam, as she gathered weigh on her journey out to the Cape of Good Hope, in days when the Boer War was undreamed of and ships like this old "three-decker" ruled the waves supreme.

Nine hundred men manned her, and prominent among them was Corporal Eccles, one of the "boys of the old brigade."

Corporal Eccles, who spins this yarn to me, is now hale and hearty at 65, and he has served Her Majesty 21 years as a Royal Marine—"soldier and sailor too."

"'Twould take me days to tell you all my experiences during the 21 years I spent on the old 'three-deckers,' H.M.S. 'Dragon,' 'Camellian,' and 'Rodney,'" said the bluff old Corporal, shifting his quid, "but that storm off the Cape in the 'Rodney' was the worst bit o' weather I ever experienced.

"Nine hundred men on board her, and 150 men disabled or wounded in the hurricane. Casks broke adrift from their lashings, thundering against the bulwarks until they started a plank. Sheep, caught by hills of incoming green seas, were swept down the hatches like corks in a mill-race.

"I carry a wound on my thigh to this day that was caused by a table hurled against me when scrambling into my hammock. Aye, m' lad, a sailor-life is full of adventures and *tests of endurance.* During the whole 21 years of active service I never had a day's illness. That's a pretty good record!

"When my term was nearly completed, I was transferred to H.M.S. 'Pembroke.' She had just been taken off active service and was being fitted out for a work-ship. During the alterations, as she lay at her moorings dismantled, her ports wide open, I had to take my turn on sentry duty, rain or snow.

"Mid-winter it was, and the weather cold and raw.

"Pacing about 'tween decks," said the Corporal. "exposed to the worst of weathers, I caught a severe cold, and I couldn't shake it off. My record was broken.

"It settled on my chest, hard and fast, making my breathing awfully bad. I couldn't walk uphill. I was too wheezy. You could hear me breathing, like a tug, twenty yards off. I did manage to struggle through my work, though.

"Then indigestion set in. After eating, my stomach became swollen with wind, making *a disagreeable rumbling noise* and causing great pain. Several doctors tried to help me, but their medicine didn't hit the mark. I got worse and worse.

"The old 'Pembroke,' now lying at Chatham, is something like the hulk I then was. My cough shook my body through and through. For months I slept propped up with pillows. After a fit of coughing, perspiration rolled off me, soaking my linen. My body seemed on fire.

"Like the sharp stab of a cowardly knife did a long breath pain me. I got alarmed and nervous, for *things were looking ugly.*

"Though this day is the 20th of April, 1900," said the gallant Corporal, "I yet remember that aching pain that caught me in the back, on the right side, and that my bowels were very costive. Altogether, I was in a bad way. My wife, when the doctors had

failed to help me a sheer hulk—insisted on giving me Mother Seigel's Syrup, to pull me round.

"I had no faith in it, *because* it was an unprescribed medicine, but I *swear* by Seigel's *now*. My first bottle sharpened my appetite, improved my breathing, and loosened my cough.

"The improvement continued week by week until I was completely restored to health. Cough, pain, and weariness were *swept away like chaff before the wind*."

"Corporal Eccles," of 9, Southill Road, Chatham, says Mr. H. Woolgar, "is personally known to me. Unquestionably, Seigel's Syrup saved his life. Now he is getting younger every day."

"Aye," continued the old seaman, who, by the way, is proud of his medal for "long service," "Mother Seigel's Syrup put life, power, and 'go' into my almost lifeless hulk. I am now sixty-five, still young and full of life and energy—all due, mark you, Sir, to Seigel's Syrup. If you think others will try its powers, you may publish this."

Such was the Corporal's stirring narrative, and its truth is vouched for by Mr. G. W. Philips, of the Chatham High Street, number 312, who writes: "I can verify every word that Mr. Eccles has said. Mother Seigel's Syrup has made a new man of him. *No man* acquainted with Mr. Eccles's case *could* doubt the efficacy of Mother Seigel's Syrup for all disorders of the stomach and liver."

H.M.S. "Rodney" no more ploughs the deep, but she lies in peace and quiet at Chatham; yet *you* who are sailing in stormy waters because there is trouble within you—mutiny among your digestive organs, in fact—can follow in the steps of the gallant Corporal, and can attain, in this way, to the same hale old age.

MARKET REPORT.

[*Per Mail advices of 3rd May* 1901.]

COFFEE.

The London Commercial Record says:—There is a little improvement to note in the position of this market, although a larger proportion of the offerings sold than of late, but the preponderance of unattractive qualities causes prices for such descriptions to show a further decline. A few packages of Ceylon realised extreme figures. For East India the demand generally has been dull at a reduction of fully 1s per cwt. for the bulk, but fine colory kinds, suitable for home trade, have quite maintained their value. The higher grades of Costa Rica and Central American are quite steady, but other qualities are rather in favor of buyers. The market for futures opened firm, and prices subsequently advance 1s 6d per cwt. on a rise in Exchange and moderate receipts, but latterly the tone has become easier, and closing rates are about 1s higher for the week; business yesterday was done in May delivery Santos at 31s to 31s 1½d, Septembers at 31s 10½d to 32s 1½d, and December at 32s 6d to 32s 7½d per cwt. Catalogues to-day consisted of 2 tierces 1 cask 6 barrels 4 bags Plantation Ceylon, 1,827 bags East India, 2,127 bags Costa Rica, 452 bags New Granada, 681 bags Guatemala, 96 bags Salvador, and 184 bags Colombian. The sales went off with slow demand and prices unchanged. Good qualities made full prices.

Auctions this week have gone off as under:—

Ceylon—*Plantation*.—5 casks 4 barrels 2 bags sold—smalls 45s, good middling 90s, bold 102s, peaberry 62s.

East India.—6,514 bags partly sold as follows:—*Mysore*, smalls 35s 6d to 46s 6d, fine ditto 62s 6d, low middling to middling 49s 6d to 48s 6d, good middling 51s 6d to 58s, fine middling 76s 6d to 77s 6d, bold 71s to 79s 6d, fine bold 104s, peaberry 46s to 85s 6d; *Coorg*, smalls 35s to 43s 6d, low middling 42s to 44s 6d, good middling 55s, bold 50s 6d to 69s, peaberry 46s 6d to 62s; *Neilgherry*, smalls 33s to 43s, low middling to middling 39s to 47s, bold 50s to 56s, peaberry 43s 6d to 54s 6d; *Nelliampathy*, smalls 32s to 39s, low middling 39s 6d to 42s 6d, bold 54s, peaberry 46s 6d to 51s; *Wynaad*, smalls 39s to 42s, low middling 42s to 44s 6d, bold 54s 6d, peaberry 55s. *Shevaroy*, smalls 41s, middling 44s 6d, bold 53s, peaberry 55s 6d. *Nelliampathy*, smalls 36s. *Naidoobatum*, bold brownish 65s.

Costa Rica.—Of 7,301 bags catalogued about 5,8 0 bags sold, smalls 30s to 45s, good ordinary brownish 37s to 38s, low middling to middling 41s 6d to 49s, good middling 49s 6d to 62s 6d, bold 60s to 78s, fine bold 86s 6d, peaberry 45s to 85s 6d.

Guatemala.—Of 2,271 bags offered 1,600 bags sold—smalls 34s to 40s 6d, good to fine ordinary 35s to 40s, low middling to middling 41s to 48s 6d, good middling grayish 55s, bold 57s to 73s 6d, peaberry 39s to 58s.

Vera Paz.—14 bags sold, bold greenish 59s.

Salvador.—742 bags partly sold, low greenish 41s to 43s, good middling blue 48s 6d, good bold 62s, peaberry 46s to 54s 6d.

Colombian.—243 bags sold, smalls 31s to 32s 6d, fine ordinary 37s, low middling to middling 41s to 47s 6d, bold 48s to 52s, peaberry 40s to 54s.

Mexican.—86 bags sold—goood middling blue 47s, bold 64s, peaberry 56s 6d.

Rio Exchange 1s $1\frac{7}{16}$d, previous day 1s 1½d.

Havre, *May* 2.—Good average Santos May opened barely steady at 38¼f. and closed steady at 38¼f., September opened at 39¼f. and closed at 39¼f., December opened at 39¾f. and closed at 39¾f., March opened at 40¼f. and closed at 40¼f.

Hamburg, *May* 2.—Good average Santos May opened quiet at 30¾pf. and closed steady at 30¾pf., September opened at 32pf., and closed at 32pf., December opened at 32¾pf. and closed at 32¾pf., March opened at 33¼pf. and closed at 33¼pf.

New York, *May* 2.—Closing prices of No. 7 Rio were as follow:—

		May.	June.	July.	Aug.	Sept.
May	2...	5·40	5·50	5·60	5·65	5·70
May	1...	5·30	5·35	5·45	5·65	5·70

TEA.

China.—At auction yesterday the small supply of 1,995 packages of Moyune nearly all sold at steady prices. Gunpowder 6¼d to 1s, Imperial 3¾d to 6¼d, Foong Mee 8d to 1s, Sow Mee 6¾d to 1s 4½d, Young Hyson 4⅝d to 7¾d, Hyson 3⅛d to 8d per lb.

Indian.—Public sales were rather lighter, totalling 22,600 packages, against 25,100 packages last week and 26,100 packages in 1900.

Competition was less keen, except for the most desirable parcels which as a rule, held their own. Common and medium sorts, both leafy and broken, were irregular, with a downward tendency specially marked in those with mixed appearance.

For 20,000 packages on Estate Account 6½d per lb. was obtained, contrasted with 7¾d per lb. for 19,000 packages, and 8⅞d per lb. for 6,500 packages in the two preceding seasons.

Deliveries for April were 10,917,000 lbs., compared with 7,813,000 lbs. in 1900 and 12,793,300 lbs. in 1899.

Ceylon.—Auctions comprised 25,600 packages opposed to 32,700 packages previously and 31,800 packages a year ago.

Bidding was languid, these reduced supplies even being in excess of immediate requirements and a good deal was withdrawn owing to inadequate support from the trade. Pekoe Souchongs and Pekoes at and under 6d per lb. in many cases fovoured buyers

to the extent of ¼d and ½d per lb., while above that price much unevenness was noticeable, offers for Pekoes and Orange Pekoes often falling 1d per lb. below former quotations. Ordinary Broken Pekoes did not show much alteration in value, but the better ones were more or less neglected and a considerable quality was bought in.

April clearances were 7,740,000 lbs. in 1900, and 6,280,000 lbs. in 1900, and 6,806,000 lbs. in 1899.

The average is 6⅝d per lb. On the 25th instant, it stood at 7 d per lb., and 7¼d per lb. in 1900.

JAVA.—About 2,500 packages passed the hammer. A dull tone prevailed for inferior descriptions, and a large proportion failed to find purchasers. The few attractive lines, however went off fairly well.

Deliveries.—The clearances of all Tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 30th April, 1901	... ...	14,974,780 lbs.
Do. do. 1900	... ...	10,462,977 ,,

During the fortnight the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	17,956	4,680	22,636
Ceylon	18,761	6,851	25,612
Java	1,243	1,205	2,448
Total ...	37,960	12,736	50,696

Also 411 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated May 3rd, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1900-1901	1,621,503	1,208,077	58,827
1899-1900	1,615,552	1,125,599	60,093

23,057 *pkgs.* INDIAN
25,641 ,, CEYLON
2,448 ,, JAVA
} Total 51,146 packages were offered in public auction this week.

Movements of tea in London, as shown by the Tea Brokers' Association, are given below.

Reduction of output.—As it does not now appear practicable to to reduce the output of Tea in accordance with the scheme brought forward by the Indian and Ceylon Tea Associations, it seems probable that many Planters may individually go in for finer plucking. There is no doubt that fine plucking. if generally resorted to, would do good, by reducing the total output; but at the same time it would tend to over-supply the market with fine and good medium Teas. What the Trade is really suffering from his over-production of all grades, and unless considerably less Tea is produced, the consequences may again be serious.

INDIAN.—Although only a small quantity was brought forward, rates were easier, the decline being most pronounced in good-medium, and find kinds.

The Official wire gives exports for month of April as 195,000 lbs., against 400,000 lbs., same period last year.

Week's average of Tea sold on Garden Account 1901, 20,065 pkgs., av. 6·48d. 1900, 19,000 pkgs., av. 7·72d.

Total Tea sold on Garden Account 1st June, 1900, to date, 1,341,189 pkgs., av. 7·22d. 1900, 1,278,232 pkgs., av. 8·26d.

CEYLON.—The heavy auctions which have taken place since Easter have proved too much for a market in which buyers have already over-supplied their requirements. For better class Teas, prices were frequently 1d per lb. and even more under valuations, while medium and common sorts were a farthing to a half-penny lower.

The official telegram gives exports to U. K. for April as 9,000,000 lbs., against 9,500,000 lbs. in April, 1900, making exports from 1st January to end of April 38,000,000 lbs., against 39,000,000 lbs., last year. It estimates the quantity for May as 9 to 9½ millions, against 10,500,000 lbs, shipped last May. Average for week 6·63d., against 7·16d. in 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 444,867 pkgs., av. 6·66d. 1900, 416,345 pkgs.. av. 7·51d.

JAVA.—Javas sold with some irregularity, prices frequently showing a slight decline.

Bank Rate 4 per cent. Exchange on London three months' sight:—Calcutta 1/4 5/32. Colombo 1/4 3/16.

COCOA.

A rather better tone prevailed for West Indian at the auctions last Tuesday than has been the case for some time, but other growths still remained flat. Of 1,067 bags Trinidad catalogued 730 bags sold at full prices—very fine red 72s, good to fine 69s to 71s, middling 67s 6d. 563 bags Grenada mostly found buyers at 64s 6d to 66s 6d for good to fine red, and 60s to 62s for common to fair, which shows a rather higher value for the better lots. 183 bags Dominica partly sold at 59s to 62s. 6 bags fine St. Vincent brought 64s 6d. 158 bags Jamaica about half sold at 61s to 63s 6d for fair to good fermented. 358 bags fair Samana realised 57s 6d to 59s for fair to good, and part of 25 bags Colombian 62s 6d for pale red. Of 886 bags Guayaquil catalogued 320 bags were placed at 37s 6d up to 52s 6d for blacks, &c. Of 481 bags African about a fourth part sold at 63s 6d to 64s. Ceylon does not improve at all in demand, and of the 519 bags offered only about 50 bags, fire and water damaged, sold at 44s to 50s per cwt. 16 bags St. Lucia, 19 bags Puerto Cabello, and 50 bags Venezuelan passed the hammer unsold Privately sales embrace 200 bags Trinidad at 66s to 69s 6d, 100 bags Bahia at 63s to 65s 6d, 500 bags Guayaquil at 63s to 64s for Caraquez and 64s 6d for Machala, and 200 bags Ceylon medium red at 70s per cwt.

PEPPER.

BLACK.—The market is dull in tone, and no sales are reported for arrival; 6 7/32d buyers is the quotation for Singapore March-May shipment, and 6 1/16d for fair Singapore on the spot.

At auction on Wednesday 295 bags Tellicherry sold at 6d to 6⅛d for fine small heavy brown and 5⅞d to 6d for good fair brown. 10 bags good heavy brown Ceylon realised 6¼d. 40 bags Aleppy bought in at 6d, and 109 bags Lampong at 5⅞d per lb.

The shipments of Black Pepper for the month of April compare as follows:—

	1ST-HALF.				2ND-HALF.			
	1901.		1900.		1901.		1900.

GINGER.

COCHIN.—Is very quiet. Catalogues embraced 75 cases 230 bags, all of which passed the hammer unsold—washed rough at 40s per cwt., and cut at 56s up to 75s. Privately fair washed rough has sold to a fair extent at 37s 6d to 38s 6d and cut B's at 70s per cwt.

BENGAL.—100 bags offered and 25 bags sold at 34s per cwt. for good fair.

JAPAN.—100 bags plump limed, mouldy, bought in at 34s per cwt.
JAMAICA.—435 barrels nearly all sold at generally lower prices—fair to good bright washed 51s 6d to 63s, middling 46s to 50s, common to good common 43s to 43s 6d, Rhatoon 36s 6d to 38s per cwt.

CINCHONA.

The Amsterdam correspondent of the *Chemist and Druggist* writes on April 25 that 1,482 bales Ledgeriana hybrid and 375 bales 119 cases Succirubra bark, weighing 170,720 kilos., have been added to the auction to be held on May 9, so that the total amount to be offered on that date amounts to 5,593 bales Ledgeriana, officinalis, and hybrid, 1,694 bales and 228 cases Succirubra, totalling 684,263 kilos., and containing 30,806 kilos. quinine. The average percentage of manufacturing bark is 5·10 per cent, against 5·58 per cent. for the March auction.

The exports from British India during the six months ende September were :—

	1900	1899	1898
Lbs.	1,525,617	1,379,508	818,283

For the ten months ended October the exports from Hollan were :—

	1900	1899	1898
Kilos.... ..	4,002,000	4,712,000	4,050,000

The imports for a similar period were :—

Kilos.... ...	3,799,000	4,783,000	4,235,000

QUININE.

A dull and featureless market is reported in second hands, an prices have again slightly receded. The small business done in cludes spot at 1s 3d to 1s 3⅛d, August at 1s 3½d, and October 1 3⅞d, per oz. The demand from the trade is fairly good.

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 7th instant. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Munzerabad. *May 21st.*—*Weather*—Strong winds from the S.-W., and much thunder with vivid lightning, occasional rain. *Works*—Borer and manure. *Plant diseases*—There is little leaf disease about now, it was hard on several places last month. *Supplies*—have not done as well this year as could he wished, the showers in March and April causing a good deal of mortality amongst them. *Interesting item*—The range has been open at Saklaspur for the last fortnight under the supervision of Serjeant Pearce from Polli Betta.

Munzerabad. *May 28th.*—*Weather*—Strong south-westerly gales with heavy showers; temperature very variable—one day cloudy and cold, the next sunny and hot. *Works*—Manure still occupies the chief position, borer a good second. *Plant diseases*—Borer severe, but estates are looking well. *Health*—indifferent throughout the district. *Interesting item*—Hailstones measured ½ inch in diameter fell to-day.

THE TEA PROBLEM.

What is the Tea Problem? There have been so many Tea Problems. The problem of tea cultivation, the problem of tea manufacture, the problem of competition with China, the problem of opening up new markets. And at last we find ourselves confronted with a problem that has either lurked in the background or strayed into the foreground for a moment or two, all the time. It is the chief problem of all. Solve the others how we may, we must find a satisfactory solution to this, or tea must go to the wall. We have sought it in activity and enterprise, we have dreamt of it in "rest." Yet it eludes the grasp. Various authorities have told how it should be worked out, yet there has been a fatal flow always. True, some have made tea "pay;" many

have done so; but circumstances have changed, and at the present time the best grown tea does not, generally speaking, pay the producer. It is a double-barreled problem that is before us: how to make tea in the most efficient and economical manner, and how to sell it to best advantage. On the former point, one of the latest *dicta* is that of Mr. EDWARD ROSLING, Chairman of the Planters' Association of Ceylon. This gentleman asserts that if a man cannot make coarse plucking pay he must pluck finer. But this is a mere assertion, it by no means shows that fine or "finer" plucking will always pay. The simple fact is that production is largely dependent upon selling price. A low rate encourages fine plucking; a rise in the market causes men to sacrifice quality to quantity, and down go the prices again.

As to the "rest" scheme, Mr. ROSLING, remarks that Ceylon was not in any away to blame for the failure of the joint scheme. The scheme that has failed was not the Ceylon original scheme, but one which had been accepted to meet the views of those in London, and which was adopted simply on the principle of following the line of least resistance. The Home proprietors and London directors were responsible for the scheme falling through, and they alone. India had to get ten millions, seven of which was at once found at Home, leaving only three millions for India. Ceylon had eight millions to get, of which one and a quarter millions only could be found at Home, leaving six and three quarter millions for the Island. In Ceylon practically four millions were found, so that in that respect Ceylon has done as well if not better than India. No reproach, therefore, can attach to Ceylon. There has, according to this gentleman, been a good deal of misunderstanding about the proposal, which was only intended to be for one year in order to stay planters' hands whilst they reduced the stock. We find no fault with Mr. ROSLING for thus trying to make the best of what he has found to be inevitable, but what he says sufficiently shows the hopelessness of the joint "rest" scheme. Are we to expect anything better from an Indian "cess" scheme? There Mr. ROSLING appears to see no indication of a desire for joint working. He recently said that his view was that if they could in India get a cess and would devote that cess to the opening of markets which Ceylon did not touch, it would do India good and would not do Ceylon any harm. The cheap Indian pekoe of the same liquor as Ceylon pekoe had a better appearance, and, as on the Continent of Europe they valued appearance greatly, the tendency was for those Pekoes to oust Ceylon pekoes. Ceylon had spent a great deal of money in pushing its tea on the Continent of Europe and in America, and it really was not the business of the Ceylon people to urge in favour of a cess for India, which would help her to become Ceylon's greatest competitor in those markets. He would not go so far as to oppose a cess for India, but he certainly could not become one of its advocates. If an Indian cess was used for the pushing of trade in Persia, India, or where the geographical position gave facilities which Ceylon had not, it would be a most excellent thing.

The one thing that pleases us in these remarks is that they contain an admission that the interests of Ceylon and Indian teas are not under all circumstances identical. This is what we have urged for months past. It is all very well to classify them both as "British-grown," but this does not touch the point that they are also largely "British-consumed" teas. That is the true crux of the present problem. The British consumer, or rather, the British distributor of tea has th advantage over the British grower. The large blender com mands the market. He regulates the price at which he buy the price at which he sells. The producer gets not too muc the consumer has to pay more than a fair price, compare with the cost to the distributor. Increase of consumption thus checked, and the producer finds himself face to fac with losses where he ought to find profits. New markets ar desirable certainly, but above all things it is desirable tha the producer should be able to command a fair price for h teas in proportion to what the consumers pay, so that th maximum of immediate advantage to the planter may be ac companied by the maximum of stimulus to demand. This the line along which we should like to see Indian tea-planter direct their advance movement. They have millions capital behind them, there is no lack of influence, but th present organisation is defective.

BRAZILIAN COFFEE AND FINANCE.

The Brazilian Congress opened on 3rd May. In his offici message the President states with respect to coffee that th crisis in that trade occupied the attention of the whole natio The Government has reduced the rates for carriage on th State railways and also on private railways by agreemen with the companies. The Message mentions the grea development that has taken place in the working of the mine and recommends the construction of the port at Rio de Janeir by private enterprise, with Government assistance. In th important paragraph dealing with finance detailed informatio is given regarding the crisis in the affairs of the Bank of th Republic, which had absorbed 260,000 contos in emission in the period from 1892 to 1898. The Government refuse absolutely to authorise fresh emissions, and the Bank, unde official control, has paid its creditors, after having alread redeemed 34,000 contos. The Message affirms that th Treasury will resume its gold payments at the time whic has been agreed upon with Great Britain. It has alread £2,300,000 deposited, and it is probable that by December wil have encashed £1,800,000 more, whereas payments during the second half-year amount only to £1,200,000. As a guarantee for future years the Treasury will have a reserv of £4,000,000 per year, without reckoning £1,000,000 allotte to the paper-money guaranteed fund. The financial year 190 shows a surplus in the Budget of 69,000 contos, and the firs quarter of 1901 shows an increase under every head o revenue as compared with the corresponding period of 1900 Several old debts have been liquidated, and the Treasury ha no debts now in circulation—a thing which has not happene for years.

THE ENCYCLOPÆDIA OF SPORT.

By arrangement with the *Madras Times* we are able t offer to our readers copies of **The Encyclopædia of Sport** a work that deserves the attention of every sportsman. It i a well-written book, admirably illustrated, and well bound It is, what it professes to be, an Encyclopædia that gives a mas of information regarding sports in all its branches. Our con temporary has manifested considerable enterprise in offering the book to its subscribers, and we trust that our supporter also will avail themselves of the opportunity to enrich thei respective libraries.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

Erratum.

In issue of 18th ultimo, the last sentence of suggestion No. 6 of the Hon'ble Mr. Acworth should read :—"They should be headed by some attractive *device* such as a peacock."

NOTES.

Colombo Tea Sales. The sale on 22nd ultimo was comprised of a large proportion of unattractive teas—as usual at this season—and buyers showed a disinclination to buy except at lower rates. Prices therefore again gave way for all but flavoury kinds, of which there were very few offering.

The "Resting" of Tea. We observe that our Calcutta contemporary, *Indian Gardening and Planting*, claims to have been the only opponent of the "resting" scheme some months ago. We are glad to be able to state that we opposed the scheme *ab initio* and that South Indian planters, almost without exception, did likewise.

Not Low Enough! According to the *American Grocer* one of the oldest jobbers of coffee says he will be willing to buy options when 4c. is reached, but 5c. coffee has no attraction. Deliveries have been light. Late sales of Brazil were on the basis of 6c. for No. 7 Rio, spot, and 7¼c. for No. 3 Rio. Options fairly active.

The Coming Brazilian Coffee Crop. The *Rio Claro*, published at the city of that name, says that a person who visited twenty different plantations in the Araraquara, Mattao, Ribeiraozinhc, Jaboticabal, and Dous Corregos districts found only three to be maintained in proper order, a fact that, if true, cannot but exercise a serious influence on coming crops.

Coffee in Uganda. Less than five years ago the first coffee seeds were introduced into Uganda by missionaries. Now there are extensive crops under cultivation. Last year 100 tons were exported from Uganda, and this year this amount will be greatly exceeded. The quality of Blantyre coffee is said to be the best in the world, superior even to the famous Mocha.

The Nyassaland Coffee Company. An extraordinary general meeting of the shareholders of the above Company was held at the offices of the Agents and Secretaries Messrs. Carson & Co., at noon on the 25th ultimo when the previously passed resolution was confirmed winding up the affairs of the Company and appointing Messrs. W. Shakespeare and E. R. Williams as Liquidators.

The Packing of Coffee. Sr. Gregorio Gonçalves de Castro Mascarenhas has invented an *in-volucro*, by which, the *Brazilian Review* presumes, is meant some new method of packing in a patent barrel, bag or something, which he says will be of the greatest value. He asks for a reduction of 1% on all coffees exported by his method. He thinks that the State can easily afford it as it has a large surplus and can besides clap on an extra duty on something else!

Para Rubber. The following statement shows the total yearly crop of Pará Rubber from the Amazon Valley (including Bolivia and Peru) during the years 1877—1900.

	Tons.		Tons.		Tons.
1877	7,598	1885	12,696	1893	19,730
1878	7,898	1886	13,390	1894	19,470
1879	7,926	1887	15,690	1895	20,981
1880	8,635	1888	15,990	1896	22,315
1881	9,492	1889	13,300	1897	22,257
1882	10,018	1890	16,890	1898	25,374
1883	11,158	1891	18,430	1899	25,374
1884	11,782	1892	18,990	1900	26,693

Black Pepper in Sylhet. A correspondent of *Indian Gardening and Planting* writes :—The cultivation of this plant, although in the very embryo of existence in South Sylhet, has every prospect of becoming one of the recognised products of the district. Although the plant is indigenous to Assam, it is not grown in any of its districts as a commercial product. It is to be seen growing in the villages in Upper Assam, but only for home consumption. It is never grown, as far as I can find out, for even the local markets. It is to be seen growing in some of the South Sylhet villages, but only rarely, and never is grown for sale.

Vanilla in the Seychelles. The next year's vanilla-crop promises to be a very good one. The rains in November, however, prevented it being the bumper crop it then appeared to promise. The owners of the mountain-vanilla estates were the heaviest losers owing to the rain. It came down steadily just a day or two before the great flowering days, the result being that thousands of flowers were not fecundated. The area under vanilla in the Colony is steadily increasing. There are a good many diseased vines about all over the islands, but now, owing to each vine being kept distinctly separate from its neighbour, the fell vanilla-disease cannot cause the ruin of our plantations as it did in 1889 and following years.

The Dutch Cinchona Auctions. The auctions of cinchona-bark held at Amsterdam, on May 9, consisted of 7,515 packages, of which 7,378 packages sold at an average unit of 10c. per half-kilo., against 8·95c. per half-kilo. paid at the auctions on March 28. The following were the approximate quantities of quinine purchased by the principal buyers :—English and American factories, who purchased the equivalent of 13,346 kilos. ; the Brunswick factory, 4,420 kilos. ; the Mannheim and Amsterdam factories, 5,180 kilos. ; the Frankfort-on-Main and Stuttgart factories, 4,340 kilos. ; and various buyers, 3,115 kilos. The prices paid for the manufacturing bark ranged from 13c. to 111¼c. per half-kilo., and druggists' bark from 12¾c. to 107c.

The London Tea Market. The special telegram, dated, 23rd ultimo, from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally is steady, and that the market for medium liquoring Pekoes and Broken Pekoes, as well as for Common Pekoes and Broken pekoes is also steady. The price of fair liquoring Ceylon Pekoe Souchong is 5d. (same as last week) and the average

price of Ceylon tea sold on garden account this week was 6⅝d. (a farthing up)—as against 6d. and 7d. respectively in the corresponding week last year. Reuter reports that the tone of Ceylon tea is generally steady. Pekoe Souchongs are quoted at 4⅝d. (⅛d. down) and the average for the week at 6⅝d. (¼d. up) as against 6⅜d. quoted for Indian tea. 25,000 packages of Ceylon tea were offered for sale, of which 22,000 were disposed of; while of the 12,000 packages of Indian tea offered, 11,000 found purchasers.

Tea in Holland.

The larger part of the supply of tea in Holland during 1900 was as before from Java, the total importation, nearly exclusively to Amsterdam, amounting to 81,337 chests. The receipts of China tea were again insignificant, and though the quotations were low it becomes more and more difficult to find buyers for this quality. Ordinary Java tea was imported in such a quantity that the price, especially of inferior descriptions, was much depressed. Good marks were in fair demand at remunerative figures. Of Assam tea only 200 chests were taken to this market. Prices ranged as follows :—

	Per lb. From		To	
	s.	*d.*	*s.*	*d.*
Java, Souchong, and Pekoe	0	4¾	0	6½
Orange Pekoe	0	5½	0	10½
Java Flowery Pekoe	0	8¼	3	4

The "Leeming" System.

We understand that the "Leeming" system of planting coffee has proved a success on the Shevaroys. We note that a South Sylhet correspondent of a Calcutta paper writes :—"Planting widely apart and leaving them to nature has been tried repeatedly and has always failed. The system produces a large amount of weakly and unripened wood which, besides exhausting the energy of the plant uselessly, overcrowds those branches which are really strong enough for fruit-bearing and prevents them getting that ripe, short-jointed firmness which is absolutely necessary before a satisfactory fruit crop of any kind can be looked for. Besides the crowded bush has no chance of having the full benefit of air and sunlight which makes it peculiarly liable, according to all authorities on the subject, to leaf disease." The mistake here is in "leaving them to nature." Whether planted near or far apart, coffee-trees are all the better for a fair amount of pruning and handling.

A Mysore Planter in Ceylon.

Mr. E. C. Bolton is the subject of the following kindly notice in the *Times of Ceylon*:—We received a visit this morning from this gentleman, once a Ceylon planter, but who left for Mysore many years ago, it being some eighteen years since he was last in Colombo. Shortly before he left he was on Wattakelly, Madulkele, and formerly in Ambegamuwa being there a near neighbour of Mr. R. S. Atkinson, once of Morlands, of whom he was anxious to hear news, as well as of other old friends. He gave a poor description of coffee prospects in Mysore, stating that his prices, which had formerly left little to be wished for, had, from Brazilian competition, fallen to a figure that no one could possibly have anticipated. He left for India to-day, being on his way out again after a trip home. Necessarily he sees great changes here, not the least of all in the offices of the *Times of Ceylon*.

The Agitation for an Indian Import Duty against Ceylon Tea.

The *Times of Ceylon* remarks :—"We do not say we have heard th last of this; but the reply of th Calcutta Committee to the Centra Travancore Association is rather a damper. It transpire that there is an import duty already—though it is a sma *ad valorem* one—and, as we have said all along, the Bomba Government will not go in for a protective duty at th expense of the inhabitants of that Presidency in order to giv our friends in South India an easier time. Mr. Deane ha singled out Ceylon tea especially, in calling for a high dut against "foreign" teas, and he will find his proposal any thing but popular. Our tax is a genuine one against chea Chinas, and is not upheld as against Indian teas at all; no could Indian teas hope to compete with Ceylon teas for co sumption in Ceylon, if they cannot successfully compete no in India!" What our contemporary means by saying th the Ceylon tax is not "upheld" against Indian teas is Gree to us. The tax is, at any rate, *levied* on Indian leaf.

The Proposed Indian Tea Cess.

The following remarks by Ceylon planter are instructive :—I s nothing more important to tea plan ers at this time than the establishment of an Indian Te Cess. And yet "what a world we live in." Even the matt of raising funds by a Cess in India is viewed with mixe feelings, if not alarm, by men whom one would suppose wou only be too glad to see even Indian tea introduced into eve country where it has not yet become a necessary of lif Every pound of Indian tea held back from the Londo market, by the aid of the Indian cess finding markets for in other countries, is so much in our favour. Have we n been crying out because India has not hitherto been payi a fair share of the cost of pushing its tea in America and foreign lands, as it could not but reap the benefit of o mission work? Why, then, should there be any feeling distrust as to the result of double the expenditure employe in making known British-grown teas? In my opinion will be a sad day for many of us if by any chance Ind were looked on as a rival to Ceylon.

A Remedy for Over-production.

Mr. A. Cooke, the well-know Chota Nagpur tea planter, has fo mulated the following scheme f the welfare of the tea industry, and which he is anxio should be adopted, is briefly this:—Assuming the yield Indian tea this season to be 187 million lbs., let there be Government Tea Cess of 2 pies per lb.; this will produ Rs.19,48,958. The actual cost of plucking, manufacturi packing, and forwarding to Calcutta of one pound of tea estimates at 2½ annas per lb., or Rs.12 per maund. Inste of making 10 million pounds of tea less, as arranged for the reduction of output scheme, make the full amount b sell the extra 10 million lbs. to the Tea Distributing Agen at Rs.12 per maund for distributive and exploiting purpos in India and foreign markets. Instead of getting nothi the growers will get Rs.15 lakhs (which will be the cost 10 million lbs. at Rs.12 per maund), and the Distributi Agency will have Rs 4,48,958, more or less, as a worki capital. If this scheme is adopted, Mr. Cooke says th there can be no more over-production.

Indian Tea for Burma.

The *Rangoon Gazette* says :—Wi the present complaints of over-p

duction of tea in Ceylon and India, and the attempts made to find new markets for their produce, it might be worth while for planters to see if they cannot find a remunerative business in supplying pickled tea for Burma. The article is consumed in almost every house in the Province, except by Europeans and natives of India. It is now made principally in the Shan States, and if Indian planters were to send experts to see how the process is carried on they perhaps might find a paying outlet for a portion of the cheaper varieties of tea produced on their estates, which they now find so difficult to sell. Tea is also largely drunk by the Burmese ; and even itinerant vendors in the larger towns are said to make from Rs.2 to Rs.3 a day selling a very miserable decoction sweetened to excess at two pice a cup. Travellers by train in India find no difficulty in getting a good cup of tea at most Railway Stations at four annas a cup. This is too costly to be a popular drink. But at very few places in Burma can good tea be bought by the cup, though, we believe, the sale would soon be popular if it were introduced along our railway lines.

Examination for Tea-making.

A planter writes to the *Ceylon Observer* :—Referring to the subject of an Examination for Tea Makers by "an old Planter," brought up by a local paper recently. In anticipation :—(1*st*) To observe from whom it is that the Tea-makers who know nothing about tea hold the best testimonials ? (2*nd*) What pay will be given for the passed candidate to start with (ans.—Rs. 50 to start). (3*rd*) To what extent the pay is limited (ans.—to 250). (4*th*) Pension, retired allowances, and gratuities (ans. 70 to 100). (5*th*) Providing for the granting of Pensions to Widows and children of deceased Tea-makers (ans. 25 to 50). (6*th*) Tea-makers to be encouraged with his free will for tea-making process. (7*th*) No Ceylon expert to hold the examination, as Ceylon tea seems very low in the market. Hope this would give more privileges to Ceylon tea to be high in the market. As our contemporary remarks, "The above is from a tea-maker, but appears to be rather a catalogue of existing professional conditions and reforms wanted by tea-makers, than questions they would be required to answer in an examination." After all, what is needed is not Examinations, but Education !

The London Coffee Market.

The *Produce Markets' Review* of the 4th ultimo says:—The Brazilian receipts have shown some signs of falling off, and as in addition the exchange has advanced another ½d, the terminal market has been decidedly firmer, and quotations have advanced 1s 3d during the week, but part of this been lost. The weight of coffee in all consuming countries and the heavy stock in Santos is altogether against any material rise, and, in addition to this, in about a month the new crop may be expected to commence being marketed. At the auctions a full supply has been offered and sold, prices being rather better for medium Guatemala and Salvador, which had fallen rather below their value. Of Costa Rica the bold sizes have not maintained the high values current during the last few months, but the medium sizes have sold without change. East India, particularly the A and B sizes of Mysore, continues to sell at prices which have not been seen for many years past, and a large business has been done. There are already some signs of merchants withdrawing such coffees from the market, as it is hardly likely that quotations can remain on such a basis when the arrivals begin to fall off, as is generally the case during this or next month.

Coffee Freights.

Now that the Freight question from Brazil has again come to the front it may interest some of our readers to note the advantage that Brazilian coffee has over India in the matter of the cost of transit from port to port. The following are given by the *Brazilian Review* as

CURRENT COFFEE RATES FOR THE WEEK ENDING APRIL 6TH.

The Cost of Coffee.

A correspondent writes to the *Brazilian Review* from New York as follows :—"There has always been a decided difference of opinion among the coffee trade as to the actual cost of producing coffee. The writer having spent five (5) years in Hayti carefully figured same on the basis of 25c. a day, gold, for the ordinary negro labour, making the actual cost of production, after testing same carefully for several years, 2c. per lb. for manipulation, and 2c. for bagging, freight to Europe and return of proceeds. Cultivation varied so much that I was unable to figure accurately as to that. I presume like circumstances exist with you, but would say 2c. a lb. should cover it. Of course this does not include export duty and therefore I made the total cost of production to be 6c. a lb. With me I found that washed coffee would cost but little more than the unwashed on account of the greater ease with which the former was dried and manipulated. Will you kindly let me know, as near as possible, what the cost is in Brazil ?" The editor of our *Rio* contemporary comments thus :—There is great discussion as regards the cost of production in this country, which varies considerably with the district, being lowest in Sao Paulo where the yield per 1,000 trees

is more than double that of the State of Rio de Janeiro and parts of Minas. We should put down the bare cost of production and delivery of Sao Paulo coffees at the port of Santos, exclusive of interest on capital or rent, at about 4$000 per *arroba* of 15 kilos., which, reduced to American money at 12d. exchange would give 96 cents per lb. The gold cost will naturally increase as exchange rises, because plantation expenditure, being paid in currency, scarcely varies, or, at least, very slowly with the rate of exchange. It would, therefore, be very difficult to say what the sterling cost of production is, except momentarily, but in milreis it is probable that 4$000 per 15 kilos. covers working expenses and transport on most well-managed estates within the area of average distance from the coast. If any of our readers can supply reliable information on the subject, we shall be pleased to publish it.

LETTERS TO THE EDITOR.

COFFEE PRUNING.

SIR,—In a letter published in *Planting Opinion* some few weeks ago, I endeavoured to show that the real reason for pruning is to be found in the necessity of having a succession of wood for the purpose of bearing the crop following, that in the embryo, at the pruning season. I will now go a step further, and add as a rider to the above proposition, that when enough old wood has been taken off, to ensure a good supply of fresh wood for the following season, that enough has been done; and that anything more than that is extravagance and a waste of steel, and the only parties who derive any advantage from it are Messrs. Rodgers & Son, Mappin & Webb, and other makers of pruning knives. They like it no doubt; for a knife with an inch-blade is whettled away to the back-bone in a very short time in heavy pruning.

Heavier pruning than that mentioned above only makes the tree throw out far more wood than is required, which has to be handled off again, and if not quite so bad as overbearing, must still have an exhausting effect on the tree, without the corresponding advantage gained by a heavy crop. It may be said that so many back growing and cross shoots are produced, that unless you have much more wood than is wanted, you have no choice, but to leave wood in the wrong place. This, in my opinion, is due principally to carelessness in leaving "stobs," from which shoots spring at right angles, in towards the stem. If, in pruning, the branches are cut off close, nearly all the new shoots will be found pointing in a proper direction, and if only sufficient pruning has been done to bring out a little more than the required quantity of wood, the handling will be much simplified.

When a tree has on it enough wood for the following year, there is no danger of its not ripening its crop. The trees which do not bring fruit to maturity, and which are so exhausted after crop, are those which are ill supplied with foliage from too light pruning, or neglect of the operation altogether. They have no leaves, or scarcely any, wherewith to imbibe moisture; and, consequently the fruit in ripening drains the very life blood of the tree. There are only two sources open to the coffee tree from which to obtain nutriment,—from the earth by its roots, and from the atmosphere by its leaves. The first course, the earth may be considered dried up during December, January, and February, and therefore the only means it has of maturing its fruit is by what it takes in by its leaves and the sap already in the tree.

While supporting and maturing its fruit, chiefly on th moisture and gases absorbed by its leaves, a tree ma be compared to a man spending his income; but whe through lack of leaves, the fruit matures on the sap the in the tree—its vital juice—it may be likened to the sam man spending his capital—killing the goose which lays th golden eggs. Another light in which heavy pruning ma be viewed is, that of its improvidence. Enough wood and no more, is left on to give an average crop in a favou able season; if unfavourable blossoming showers are exper enced, the crop is short. Not so with the medium prune he leaves a margin for the failure of blossom, and in case no failure, I imagine, a little more than his estimate is better mistake to make than a good deal less. In pruning as in most other things the "Golden mean," should be strive for. As "Shakespeare," says "They are as sick th surfeit with too much, as they that starve with nothing it is no mean happiness, therefore, to be seated in the mea which is to say in other words, that you may have too mu of a good thing.

HEROBOLLOLLOS.

May 19*th*, 1901.

THE TRAVANCORE TEA ESTATES CO.

SIR,—"The remarks of a Home Writer" on the Trava core Tea Estates Co. in your issue of 18th instant are obviously written in ignorance of his subject, that I sha feel obliged, if you will insert the following explanation the difficulties of T. T. E. Co.:—

The Company was started some five years ago or so, whe tea was booming, with a nominal capital of £150,000. A the time of the flotation of the Company the Directors onl issued £75,000, considering there would be no difficulty getting the remainder of the capital taken up as require In this, however, they have been disappointed, for just capital was required to complete the equipment of the factories and to bring a large area of young tea int bearing, the tea depression set in. Hence the difficulties the Company. It is no wonder, that capital cannot easil be raised for a new concern like the T. T. E. Co., whe shares of old-established concerns in the North, concern still paying good dividends, can only be disposed of at great sacrifice. The T. T. E. Co. own some magnificent pro perties, and it is a mistake to suppose, as a "Home Writer remarks, that "tea-growing in South India under presen conditions is attended with great difficulties." This is not a all the case. We are suffering just as other tea producer are, but if planters will stand together now and combine to se this crisis through, we shall pull through, just as I hope the will both in Ceylon and North India.

I hold no brief for the Travancore Tea Estates Co. an do not own a single share therein. My object in writing to disabuse the mind of the public as to the difficulties of tea growing in South India. There are none; in fact there ar probably greater facilities in South India than in most othe places. There are thousands of acres of magnificent land both in Travancore and Wynaad, which merely requir capital to develop. Land such as I speak of, and which know well, will grow tea of the finest jât and will yield any thing from 600 to 1,000 lbs. per acre, according to climate.

PEERMAAD,
25*th May*, 1901. } GRANVILLE L. ACWORT

GENERAL ARTICLES.

THE TEA TRADE IN THE U. S.

The amount of tea held in warehouses increased 11,647,091 pounds in twelve months says the *American Grocer* of 24th April, 1901.

It is unaccountable that the American people are so indifferent to the flavour of tea. Most consumers are satisfied if the tea served is a warm beverage. The very few find as much delight in tickling the palate with an exquisitely-flavoured tea as the connoisseur with rare wines. For this reason it pays to serve tea in the store; not necessarily free, but at a nominal charge per cup. Unfortunately many dealers do not know how to properly brew tea; neither do they appreciate the distinctions in flavour. Many are like the average consumer—satisfied if they can taste the tannin. They would be as well satisfied with tansy or catnip tea as with a fine Moyune or delicate Formosa.

The late Theodore Child—an epicure, and author of "Delicate Feasting," says:

"The points to be insisted upon are that the tea should be freshly made, and not left to 'brew' for an indefinite period.

"Tea should be prepared daintily, in small quantities, and drunk immediately. If it be needful to prepare tea in large quantities, the infusion should be decanted in a warmed earthen teapot as soon as it has acquired the appropriate strength.

"The object of decanting the infusion is to prevant the liquid from becoming impregnated with tannic acid and other acrid and noxious principles which the tea-leaves contain.

"The infusion of tea made as Audiger directs is a suave drink, soft to the palate, and tasting only of the delicate aroma of the tea-leaves. The time required for the infusion can only be determined by experience and individual taste. The equivalent in modern parlance of Audiger's 'two or three paternosters' would be five to ten minutes. Remember that the longer the tea is infused the more acrid it becomes, because the leaves give forth more and more tannic acid.

"For tea-making and for all delicate cooking operations the water should be caught at the first boil. Nickel or silver pots are unobjectionable, provided they be kept scrupulously clean; but ordinary porcelain or earthen pots are preferable on all accounts.

"If the tea be good, the addition of milk spoils the taste. Furthermore, the tannic acid which is contained both in tea and in coffee changes the nature of the albuminous part of milk, and, so-to speak, tans the globues of the milk, and renders them indigestible. Tea and milk are difficult to digest. Pure cream is less objectionable, because pure cream is really butter or grease, and contains very little of the albuminous part of milk."

At last Wednesday's auction, prices showed a further decline. Moyune tea sold as low as 6½ to 7 cents per pound, in bond; Foochow Oolong at cents, in bond. The prices obtained were the lowest since the imposition of the tax.

THE PROPOSED TEA CESS AND HOW TO EMPLOY IT.

"A. C." writes to the *Pioneer*:—

By getting a Government "cess" placed on all tea everyone would be compelled to subscribe. The yield of Indian tea is 187 millon pounds and this amount at 1 pie per pound would produce a revenue of Rs.9,74,479—and at 2 pies per pound would produce Rs.19,48,958. Indian tea estates have already promised to restrict 10 million pounds of tea and Ceylon has so far promised to reduce about 3 million pounds. The estates which do actually refrain from making a proportion of their tea will gain Rs.12 per maund of 80 lbs. This is the cost of plucking, manufacturing, packing, and forwarding to Calcutta of 1 maund of tea. The cost of 10 million pounds (125,000 maunds) at Rs.12 per maund would be Rs.15,00,000 (15 lakhs). I have shown that a cess of 2 pies per pound would produce 19¼ lakhs and this would leave 3¾ lakhs for working expenses. The idea is that instead of refraining from making the tea, the estates shall be asked to make their usual quantity and sell a percentage to the Association at cost price, *i.e.*, Rs.12 per maund, which is about 2½ annas per pound. This scheme will give the producer the upper hand, he will be able to withdraw 10 million pounds from the regular markets, and he will be able to place it wherever it is most wanted. It will not be necessary to withdraw the full 10 million pounds and the amount to be withdrawn can be regulated by the prices offered at the usual sales. When too much tea is offered prices go down, and if we could promptly withdraw from 5 to 10 per cent. from the next sale, prices would go up and the tea withdrawn could be held in reserve, or sent to open out new markets. It could be landed in those new markets at cost price. The producers of the tea would be repaid the cost price, 2½ annas per pound, on only a small proportion of their teas, but they would benefit by keeping up the prices for the whole year to a paying figure. What we have to do is first to consent to the imposition of a cess, which will supply a fund of from 9½ to 19½ lakhs of rupees. This is only a fraction of the loss entailed from giving up the command of tea-selling. Then we have to consent to allow a proportion of our teas to be withdrawn at any time on condition that we are paid the cost price, 2½ annas per pound. We shall then be able to command the tea sales, and to regulate the price at which we sell our teas. If this scheme is adopted there can be no over-production. Over-production means that the supply of tea is greater than the demand, but if we *withdraw* the surplus we can keep the supply always level with the demand.

The present is the most serious crisis which has ever been faced by the tea industry, and consequently is the best time for proposing and establishing a radical reform, and the shareholders of tea companies are naturally those who can effect the most if they will wake up and make themselves heard. The revenue from a heavy cess on all tea will enable us to avert many dangers. Agents employed at home might have gained us sufficient votes to have reduced the duty to 4d. or 5d. as a compromise. The Chancellor is undoubtedly right in supposing that we can pay the full 6d. duty, he must know that we are willing to reduce our output, and that this reform is considered by tea owners a *sufficient* safeguard. He has it from our own mouths that over-production and *not* the extra duty is the cause of our distress, he would be only too glad to use our random speeches against us. And to think that leader of home rule, was the only one found to speak for us! The Associations appointed to watch our interests have proved insufficient. Shareholders should now establish a new form of Association with 18 to 20 lakhs of rupees per annum as a capital to work with. It is the apathy of the shareholder that has ruined the tea trade.

CINCHONA IN JAVA.

The condition of cinchona cultivation in Java is, says the *Chemist and Druggist*, not altogether that of an open book, at least so far as knowledge in the London market is concerned, for it is a prey to all sorts of rumours, especially as to cultivation being on the decline. We have during the past ten days had the opportunity of getting authentic information on the matter from two gentlemen who are not primarily interested in cinchona production. One resided in Java for nearly ten years, following a scientific pursuit, and the other spent nearly two months in the island investigating the cinchona question. Both agree that cinchona cultivation is on the up grade in Java, and that the cultivation of ledger trees there may be said to be in its infancy. Everything is giving way to ledger trees, which are all planted as graftings upon succirubra seedlings. These compound plants flourish exceedingly in the well-cultivated soil, which is kept as clean as any Surrey market-garden. There is no sign of any plantations going out of cultivation; rather the contrary, as the whole tendency is to get bark of high quinine percentage. Much interest is taken by the planters in the Bandong Quinine-factory, and as the planters can with advantage get their highest-yielding barks worked up there, they do not export the best barks. The factory is now the only one in Java, and it is slowly making its influence felt on the market. Last year it sold 900,000 oz. of quinine by auction locally, the bulk of it going to the United States. We may note that the exports of quinine from Germany to the United States decreased 1,000,000 oz. last year. It has often been asserted that the Java planters have the quinine situation in their own hands if they would come to some agreement to restrict the output or control the supply of bark. This is just what they cannot, or will not, do. On the contrary, they ship larger quantities every season. For instance, the shipments for 1898-1900 have averaged over 11,000,000 Amsterdam lbs. per annum, against an average of 9,000,000 for 1895-1897. During the first four months of

this year the shipments also show the large increase of nearly 1,000,000 Amsterdam lbs. To this fact, taken together with the heavy London stock of quinine, is attributed the recent depression of the market and want of confidence among speculators. During this week there has been a slight revival, but it is thought to be merely a "move" with the idea of giving a fillip to the bark auctions at Amsterdam, at which the quantity offered is again large, representing nearly 1,080,000 oz. quinine in the bark, or over 30 tons. The result of these auctions will be found in our Trade Report, and will be eagerly awaited by quinine speculators and dealers generally, for upon it depends the immediate course of the quinine market. According to the drug statistics there was a stock of 3,330,000 oz. of quinine in the London warehouses at the end of April, and although this is slightly less than the stock at the corresponding period of 1900, it has none the less disheartened speculators. The deliveries for April were only 37,000 oz., while the imports reached the respectable total of 218,480 oz. The above stock is a heavy one, and the figures since the beginning of the year, month by month, show that it is normal in recent history :—

	1901	1900
	oz	oz.
January	3,300,000	2,800,000
February	3,100.000	3,090,000
March	3,150,000	3,320,000
April	3,330,000	3,430,000

We may repeat in regard to the heavy shipments of cinchona from Java that they are not a matter of uprooting trees or anything of that kind, but are simply the natural outcome of a culture which is carried on with excessively cheap native labour, and under the best possible scientific conditions. There is no evidence, as far as we can gather, that this is done at a loss to the planters, and they are not in the slightest interested in what will suit quinine speculators.

INDIGENOUS MARKET FOR TEA.

"J" writes in *Capital* :—

There is possibly nothing that ought to absorb the attention of all those connected with the tea industry so much as the capture of the Indian tea market; the greatest outlet for our common teas, for, undoubtedly Ceylon growers will exploit it if those of India do not. It seems of course to those who do not know, very easy to lay down reasons, for the present depreciation in prices, and for imposing a compulsory cess to be used for opening outside markets, but, to those who have carefully gone into the matter, it is a very much more difficult task in India than in Ceylon to get these things carried through. To begin with tea, in the huge empire of India, is but a small drop in the ocean of revenue, whilst, in Ceylon, it is close upon 60 per cent. of the total, a fact which explains the easy way in which taxes and cesses can be imposed and collected. Although, as far as the collection goes, we cannot think that would be difficult in India. A compulsory cess could be levied at the Kidderpore Docks without any extra establishment, and very little extra trouble, and, unless the Government of Bengal wishes to see tea in the same plight as indigo, it will come to the rescue and collect the tax. If we remember rightly, there was but one dissentient to the cess, and even he gave in, rather than see the proposal frustrated, so that the Lieutenant-Governor should see his way now to begin and collect the tax as from 1st January last. It seems to us, that this is the only fair way to raise a fund to exploit the market in foreign countries as well as in India. Whilst on the subject of cesses, it seems to us, that we ought to have an import tax on all teas of China and Ceylon in addition to the present 5 per cent. *ad valorem* duty. Why should we collect a cess to open up a market amongst the native populations of this huge country if Ceylon is to be allowed to come in and reap the benefit? Charity begins at home, and the Tea Industry, Tea Association, and Chamber of Commerce should be up and doing. There exists an import duty in Ceylon, why then should there not be reciprocity? In fact, unless this is done, it is simply offering a premium to Ceylon to pluck coarse tea again, and flood the home and all other markets with rubbish. India, for the Indians, Ceylon, for the Sinhalese. Our planters in Travancore and other parts of Southern India are no doubt keenly alive to their own interests, and would readily help any movement or agitation of this kind. We are sorry to hear that a certain amount of lukewarmness has already manifested itself in Calcutta amongst those most interested in the pushing of the distribution of commo teas to the native population in North-Western India, due, n doubt, to the hope which has sprung up within the last month o so, *viz.*, that, owing to the extraordinary drought that has prevaile throughout nearly all the tea districts the crop would be a shor one, and prices were bound to rise. We sincerely hope this is no the case, for surely the report of the last fortnight's sales b Reuter is not very cheerful reading. Last week's average of 6½ for all Indian tea brought to auction spells ruin to 90 per cent. gardens, and the sales we refer to should surely impress (if an thing was required to do so) the gravity of the present situatio unless some united action is taken up and vigorously carried ou With the lessons before our eyes of the West Indian sugar industr and, to come nearer home, of indigo—are we going to sit still as body, and make no united effort, content if a few fit ones survive Are we going to allow 50 to 60 per cent. of concerns to go to th wall, for the want of a little combination and energy? It seem almost marvellous that so little unanimity exists among Te proprietors, Agents, Secretaries, or even among planters them selves, and we are afraid another term of adversity is the onl remedy to cure this undying jealousy; that is the canker eating the whole industry, which prevents the fructification of man schemes bound to succeed, if carried out even half-heartedly, bu which are simply condemned as failures, without even a fair tri at all because of the jealousy referred to. In some of the annu reports of companies which have been published this year, th present depression is referred to as only temporary; but, w entirely fail to see what grounds there are for such a statemen Latest advices from home indicate heavy stocks, and a declinin market, or, to use the broker's expression, a "languid tone pr vailed" and this too, in spite of there being no dearth of repor regarding the drought and the poor outlook for the season telegraphic advices received since the mail left make it certai that there is more than sufficient tea on the market for prese wants, and dealers are not afraid of the situation, even in th face of a short crop. All praise to the Tea Association fo its action in trying to exploit the Persian and Russian market but there should be at least a dozen schemes like this runnin side by side on the chance that some of them at any ra would be successful and create an opening for our teas. W want to get rid of 50 to 60 million lbs. before we can say the situa tion is a sound one, and this with combination and money can b done in India, if Ceylon is barred, and the Calcutta Agents wil throw themselves vigorously into the breach, but there must be n half-heartedness as at present, and no lack of money, to provid which a small cess only is required.

CHARGES ON BRAZILIAN COFFEE.

At a meeting of the Sociedade Nacional de Agricultura Sr. Hy gino Costa, partner in the Commissario firm of Duarte Dav & Co opposed the formation of a co-operative society for direct exportatio and sale of coffee. In the course of his speech Sr. Costa showe that at present charges on coffee were as follows :—

10 %	Export duties.
15 %	Railway freights.
2 %	Cartage.
6 %	Sacking.
2 %	Eventual.
35 %	from the plantation to delivery aboard.

At present Sr. Costa says that exporters make the nice littl profit of fcs. 8·20 on every bag exported; but how it is that the don't all become millionaires instead of busting-up as they usuall seem to do; or why every one don't turn exporter with so brillian a perspective before him is one of those things that Sr. Costa doe not condescend to explain. His account is as follows :—

Purchase of 10 bag of 60 kilos. at 10$000 per arroba ...	fcs.	42·0
Freight		2·8
Eventuals		1·0
Total ...	fcs.	45·8
Sale f.o.b. at 45 fcs. per 50 kilos., duties paid by buyer ...		53·0
Profit		8·2

But if the retail trade is included, matters are far worse and th

manner in which unfortunate planters are defrauded is still clearer. Sr. Costa's little account then comes out as follows :—

Cost of 60 kilos. coffee at 10$000 and 10 1/16 dv	fcs.	42·00
Import tax		81·60
Loss of weight 20% on roasting		24·80
Roasting and packing		12·30
Other expenses 30%		36·30
Total ...		197 09
Sale		360·00
Profit	fcs.	163·09

No doubt a great deal may be done by co-operation and the elimination of unnecessary middlemen, but that they can ever be dispensed with altogether as Sr. Costa seems to imagine, is as unlikely as the discovery of the philospher's stone or of perpetual motion. The fact that such a Society is proposed by Sr. Costa is requisite in evidence of the contrary.—*Brazilian Review.*

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange.—*April 13th*, 1901.—Ninety days' Bank rate on London opened on 8th at 11 5/16d., rose to 12 3/8 on Friday, and closed this evening undecided at 12 7/32d. . . . the statistics of imports and exports show unmistakably the balance of foreign trade to be in favour of the country. Leaving aside the month of January, for which the statistics of imports are incomplete, those for February show a balance in favour of our trade of £1,424,936, and though imports are certainly increasing, there is every reason to believe the results for March will prove equally satisfactory, and that, judging from the shipments of coffee and rubber, their value will, in all probability exceed that for February. It is true that as exchange rises an increase of imports must be looked for, which may succeed in turning the balance against us once more. Indeed, this movement seems to have already commenced, as the number of consular invoices received at the Commercial Statistics Bureau has risen from 7,301 in February to 10,105 in March.

Shipments of rubber are also likely to fall-off considerably in the course of this month or next, whilst coffee entries may likewise diminish for a time under the pressure of extremely low prices. But even so, with the enormous stock of coffee already in hand, that must be shipped at any price, there seems every likelihood of exports being maintained well ahead of imports right through this, the generally slackest time of the year, and into the busy season when the new coffee crop will commence to flood the market with bills once more.

It is true that the situation in the coffee market is rapidly approaching a crisis when something must give way. The cord if overstrained, says the proverb, will part at its weakest point and, sooner or later, either sterling coffee prices or exchange must yield, one down or the other up, or coffee will cease to be marketed. As exchange rises coffee prices fall proportionately and before long the limit of currency prices must be reached, if it has not been already, when no more coffee will be sent to market. Naturally either sterling prices or exchange or, perhaps, both would then react; the question being which would of the two give way first? With the enormous stock of coffee in hand and prospect of an early and record crop, hopes of improvement of sterling prices must be faint indeed; the probability, therefore, being that exchange will be the first to feel the pressure and to give way. Before that can happen, however, there remain over a million bags of coffee to be disposed-of that with new entries, however small, may be counted on to keep the market supplied for a month or two with bills. Should the foreign markets, meanwhile, for any reason take to "bulling" coffee, instead of a weakness of exchange there would be, perhaps, another and a monumental rise.

All is but conjecture, because the future of coffee is itself uncertain, depending, as it does, not only on immediate and easily recognizable factors but on others yet in embryo, as to which no calculation can be made. A sharp frost in June or July, a further heavy fall of currency prices, or even a rig in American markets might change the whole prospects of coffee and of exchange with it. Still, at present, the situation is not healthy, and sooner or later something must give way.

Coffee.—Entries during the week ended 12th April reacted once more, being 45,465 in excess of the previous week's and still nearly four times those of the corresponding week last year. At the commencement of the week entries were on so small a scale as to inspire the liveliest hopes that the long predicted falling-off had indeed come, that, however, were quickly destroyed again by the animation towards the end of the week. In spite of prices having fallen to a point that was generally considered prohibitive, coffee continues to pour in and to falsify all predictions. At the same time there must be a limit at which it is unprofitable to send more coffee to market, and this some people pretend is already reached at Rio, and that, unless prices react, little will arrive under 7$ per arroba.

Since prices fell under 7$500, commissarios state that very few way bills have been received from Minas, and Rio and look for a decided shrinkage in entries from these districts and however the present stock may be marketed, it seems likely that under 7$000 little new coffee will be sent down from the plantations.

The market opened at Rio on the 8th with good hopes of American houses entering to cover previous supposed sales, which, however, were disappointed and sales were very limited at prices ranging from 7$600 to 7$300 per arroba. Desirable high grades were scarce, those offering ranging from No. 7 down. A few samples of new crop washed coffees were offered and the crop at Rio and Minas is expected to be early whatever may be the case in S. Paulo. We quote cost, freight, and commission at 31s. 3d. on the basis of 7$600 per arroba, and 12d. exchange, but understand that offers for future delivery have been made on the basis of 6$900 and refused.

Declared sales at Rio during the week ended April 4th were 32,000 as against 37,000 the previous week and 28,000 for the corresponding week last year. *Embarques* or shipments having been 57,549 as against 49,562 the previous week and 31,127 for the corresponding week last year.

THE COFFEE TRADE IN THE U. S.

The *American Grocer* remarks :—

Coffee should be a prominent and distinct feature in every retail store, if it is made, what it ought to be, one of the most profitable articles handled.

Grace Greenwood, when requested to write in an autograph album, penned the following lines:

Says Juliet from her balcony, "What's in a name?
All I have of fortune and of fame is in my name."
—*Grace Greenwood.*

And the retailer should be able to say:

"Of all the things the grocers sell,
'Tis coffee makes the profits tell."

There's Padang and Sumatra Java, with a range in the price of the green bean from 17 to cents; Maracaibo, Rio sorts, and the milder Santos; Mexican and Central American, some marks of which have superior body and exquisite flavuor; "Blue Mountain" Jamaica, which the writer is using with great satisfaction; Mocha and peaberry of various growths; Laguayra, the big bean; heavy-flavored Liberian, and lots of other kinds. The expert who buys for drinking or cup quality is enabled to pick up green coffee at very low cost, that will roast as well and give the same or better satisfaction than sorts and marks that are in popular favor, and therefore command a price higher than is warranted by intrinsic merits.

Probably nine-tenths of the retailers are not in a position to buy green coffee; neither have they sufficient knowledge of sorts and grades to warrant their doing so if their trade warranted large purchases. Such retailers should make connection with a thoroughly reliable jobbing house that carries a large and varied assortment and has its own roasting plant, and thereby enabled to furnish fresh-roasted coffee of uniform grade and in quantities as wanted. Thus the buyer has at command the requisties of having coffee fresh-roasted every day, and is in position to urge consumers to have it ground as wanted and fresh made.

Study the wants of your customers, and note the peculiarities of their palate. The coffee which one set of people pronounce superb is not relished by another set, but have each customer always served with the same kind, and not switched from one sort to another. It is therefore advisable to have your own designation for the different grades of coffee in stock and also to avoid changing the price, in order that patrons will associate a name and price when ordering coffee.

If downtown buyers drop into Callanan's for coffee, the chances are they will ask for No. 41, and they will learn by experience that No. 41 is always uniform in quality. Let your individuality find expression in the selection of names. See to it that you obtain a generous profit. You are entitled to it.

A prominent coffee importer describes Porto Rico coffee as being a large bean, without much body, but of good flavour. Some years ago considerable of it was brought to this country, but latterly most of it goes to France, where the bean is very heavily roasted—almost black. It may not be generally known that varying degrees of roasting make varying qualities and flavours of the same kind of bean. So much is this the case that counterfeits of the better grades can be made by this roasting process.

A very good story was told the writer by the coffee importer. He had a very "cranky" customer, who doted on Bogota. Sent for a lot. The finest was forwarded, but he wasn't pleased with it, and said it made poor, very poor, drink. The shipper knew there was no better Bogota in market, so under another brand sent him the same coffee, slightly differing in roast, which failed to suit. The third and fourth time same coffee was sent, differing a little in roast, but under different brands; but no go. Then Mr. Coffee Importer took a sample of same coffee, and made a personal call. He named it after the vessel that brought it, added ¼ cent. to the price, and told "crank" he was sure he had the right coffee at last. A test was made; the "drink" was "perfect." An order was given; everybody was happy, though the fifth lot of Bogota coffee was the same as the first. Taste, like the brain, has imagination. The mind cure resides largely in the tongue.

The leading expert in this city on mild coffee, in answer to the question, "What are the characteristic differences between Bogota, Mexican, and Padang coffee?" says: "Bogota has more body than the others; Mexican more acidity; Padang but little body—is light-wasted, but sweet. If one is looking for fine, delicate flavour, without regard to strength or body, Padang would likely suit." Mexican is not an agreeable drink, if taken alone; it needs to be blended, especially with Bogota. The older blends, still run by some of the best and older grocers of New York, are made by mixing Java, Maracaibo, and Mocha.

The general condition of the coffee situation is, according to one of the best-informed and long-headed coffee-houses of the Metropolis, decidedly "bearish." The vast increase of coffee area in Brazil, the improved methods of culture, the perfecting of coffee machinery, the increasing rail-road facilities, are flooding the earth with a caffeine deluge. So huge is it that, according to the law of supply and demand, the prices are bound to decline to about what they were two years ago.

At the present moment ruling prices are to a considerable extent artificial—the result of a speculative mania. Deliveries are being made under old contracts, and are not a correct index of actual values.

The new crop, which is beginning to move in Espirito Santo, is simply immense—in the neighborhood of 11,000,000 bags—making a total world's supply for the coming year of some 15,000,000 to 16,000,000 bags. This gigantic heap of the fragrant bean is too big for the world's annual mouthful, so, of course, prices must fall. The output of the milder coffee countries, especially those in the East, is limited and rapidly declining; but, as the Brazilian product, especially Santos, is and has been gaining in quality as well as quantity, the slight diminution of Padang, etc., makes no impression whatever. Santos coffee possesses a remarkable adaptive quality, which, through a varying roast and other manipulation, can be made to assume the appearance and characteristic taste, even, of almost any brand.

Given a surplus of cotton, it is not so bad, because new uses may be, can be, found for the raw material. But with coffee it is different; as a drink only can it be used, and unless the coffee-drinkers will increase their potations by 50 per cent., there is no way of immediately disposing of the surplus; hence, as remarked before prices must fall.

In answer to the question, "What marks of coffee are in demand by the best class of grocers in fancy blends?"

Creighton, Morrison & Meehan named the following: Java, Mocha, Washed Bogota, Washed Guatemala, Washed Caracas, Fancy Maracaibo, Fancy Santos, Washed Costa Rica, Washed Mexican, Washed San Salvador.

The sorts most in demand are: First, Washed Bogota; second, Washed Guatemala; third, Fancy Maracaibo. The base of a blend is usually about 40 per cent. of Santos. Pretty much every gro has his blend hobby, and mixes the proportion of brands acco ing to his fancy.

Of late years the tendency has been to the lowering of standard—due mainly to fierce competition and consequent cut prices. The result has been disastrous to trade permanen Scores of concerns that once enjoyed large patronage on a spe brand are now *minus* the demand and *blus* a conviction that, a all, "Honesty is the best policy."

The above remarks, coming from a veteran coffee impor should have weight with the hundreds of retail grocers and co dealers, who, to secure a present trade, destroy their chance a future business by minimizing quality and maximizing cut pri 'Mid the general "fall from grace" in the quality of special bra we take pleasure in noting that our well-posted informant rema ed that there was at least one notable exception—that Arbuc Brothers had persistently maintained quality; maintained it, in the face of a distinctive "cut and kill" competition that wo have busted the commercial integrity of a less sturdily hou house.

If in business you'd succeed,
Make truth and honesty your creed.

Samuel Wilde's Sons feel quite positive that it would not pr a good investment for jobber or retailer to carry a full stock coffee, in view of the over-supply and heavy new crop prospe They are confident, however, that the consumption of coffee in United States and the world generally is increasing, which w tend in some small degree to lessen surplus.

TEA PLANTING IN INDIA AND CEYLON.

Against the 392,000 acres now under tea cultivation in Ceylo with 30,000 acres not yet in bearing,—we may, says the *Cey Observer*, put the area of tea in all India at not less than 535,0 acres, of which as many as 100,000 acres have been planted fr 1897 onwards and cannot therefore be considered to repres mature trees or fields in bearing. There is therefore altogeth 130,000 acres of young tea which must be taken into account, order to emphasize the absolute necessity for both countries fig ing for new markets in Russia and the Continent of Europe gen ally, as well as in America. The case stands thus for the Brit tea-growing industry:—

Total.	Acres in bearing.	Young tea, acres.	Tea crop 1890—lbs.	Estimate cro when all in bearing with fine plucking
India ...	435,000	100,000	187,500,000	220,000,000
Ceylon ...	360,000	32,000	148,400,000	160,000,000
Totals ...	795,000	132,000	335,900,000	380,000,000

[India has had planted over 250,000 acres with tea since, 1885, and greatest areas by far in single years were in 1896—37,000 acres; and 1897, over 36,000.]

Now, we do not think there is anything to frighten us in a to output—say three years hence—of 380,000,000 lbs. of British-gro tea; and we are prepared to give good reasons for our hopefulne In the first place, let it be remembered that China is still by the largest exporter of tea. During 1899 she sent away altogeth no less than 217,467,000 lbs. of tea and for 1900, we do not think figures can be less. This includes overland supplies to Russia Asia (in fact Central Asia altogether) as well as to Russia Europe. By sea China sent away 8 million lbs. more in 1900 than in 1899-1900. This should make up for any shortage ov land. In fact, China and Japan together still supply the wo with no less than 270 to 280 million lbs. of tea, distributed to Nor

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, oth have no effect, and none do good. Sugar and water, or a little glycerine, gi relief when the throat is inclined to be dry; this applies to persons whose thro are affected by the weather. About a third of a teaspoonful of Condy's Fluid a tumbler of water, if used as a gargle every morning, will clear the throat brace up the uvula, which, in some singers, is so long that it interrupts the p emission of the voice, and introduces a grating undertone, while it also tend make a tremolo on the upper notes."—*The Idler*, February, 1900.

America, Europe, Australasia, Central Asia, etc. Now we see no good reason why British-grown tea should not by 1904, supersede the teas of China and Japan to the extent of 45 million lbs. of tea, apart from the natural growth of the world's consumption of our staple. This presupposes of course, that the campaign on the Continent of Europe on behalf of both Ceylon and India will be carried on energetically for the next three years, and that the "sinews of war" will be supplied by an Indian, as well as by a Ceylon, Tea Cess.

It may be of interest to learn that Travancore (and Cochin) in all its divisions has now about 27,000 acres under tea of which 11,000 (together with 1,700 acres of coffee, 660 cinchona, and 300 cardamoms) are reported for Sir John Muir's Kanan Devan and Anglo-America Companies in North Travancore—all being of course, comparatively recent plantings.

CEYLON *vs.* JAPAN TEA IN CANADA.

Messrs. Tarrant Henderson & Co., have sent to the *Ceylon Observer* the following letter from their Canadian Agent :—

TORONTO, 14*th March*, 1901.

CEYLON *v.* JAPAN TEA.

DEAR SIR,—In view of the statement, made by Mr. Shimiau (Japanese Consul) to the representative to His Majesty's Goverment at Ottawa, that Canada is the second largest consumer of Japan tea in the world, it will be of interest to members of the Tea Guilds in Japan to know that Canada cannot any longer be depended upon as a consumer of Japan teas on the parity of last year's prices, owing to the improvement already made in the quality of Ceylon green teas—the fact that a *bonus* of two cents per pound is paid upon all green teas by the Ceylon Tea Planters' Association—and that the teas can be purchased at a laid down cost in Canada of fully five to six cents per pound under the corresponding quality in Japan teas. If it be not already known, and, if the trade of Canada is of any importance to Japan, it should be demonstrated that the Canadian market cannot be held for Japan unless teas of good quality can be laid down in Canada at a maximum price of sixteen cents per pound, for the simple reason that the staple tea in all descriptions—China, Japan, or British grown is purchased by the "*consumer*" at twenty-five gold cents per pound—to realise which it must pass through the following hands :—

1. Wholesale grocer pays 16c, less 3 per cent. for cash; 2. Retail grocer pays 18c, less 3 per cent. for cash; and, unless this can be done, Ceylon teas will assuredly take away within three years the whole of Canada's trade in Japan teas because to-day equal quality in Ceylon Greens can be supplied to :—

1*st.* The wholesale grocer at 14c.

2*nd.* The Retail grocer at 18c.

and since upon the Ceylon tea the wholesale grocer can make a profit of 4c. per pound—all his inclinations and energies are concentrated towards the sale of the teas which pay the largest percentage of profit.

In 1900 Japan teas of suitable quality cost :—

1*st.* The wholesale grocer 18½c to 19c.

2*nd.* The retail grocer 19c to 20c.

Consequently neither wholesale nor retail grocer made any money and the effort to make the consumer pay 30c. or 35c.—instead of 25c.—proved a dismal failure, and consequently so, with every other tea grown, offering freely at a price which enabled both wholesale and retail grocers to make a handsome profit and yet permit the teas reaching the consumer at 25 gold cents per pound.

It is probably true that, owing to the advance in cost of production, Japan teas cannot be laid down in Canada at 16c with profit to all through whose hands the teas have to pass before reaching the distributor here, *i.e.*, the wholesale grocer.

That it will pay better to let Canada's trade pass, and to cultivate silk or other products instead of tea—and the wisdom of the decision will rest upon those interested—but it is abundantly evident that, so far as Canada is concerned, the tea growers, the Tea Guilds or the Government of Japan must take prompt measures to meet the competition from British grown teas—or step down and out of Canadian trade. It is not within the writer's province to suggest measures. It is sufficient to draw attention to facts—which cannot be denied, modified, or altered.

Yours faithfully,
(Signed) VERBUM-SAP.

CACAO CULTIVATION IN CEYLON.
(MAY, 1901.)

In July 1898 the estate returns showed a total of 21,260 acres under Cacao; and in May 1901 the aggregate worked out, amounts to 23,696 acres, or an increase of 2,436 acres. But this is apart from native gardens of 50 acres each and less, of which a special separate list has been compiled, showing a total in cultivation of very nearly 9,000 acres. We have therefore a grand total under Cacao Cultivation in Ceylon, of all ages and conditions, equal to 32,600 acres. Seeing that our heaviest export hitherto has been 42,745 cwt. it is quite clear that a large proportion of the acreage must be very young or in very poor bearing; for we should hope that when all the trees are mature, and the fields and gardens properly cultivated, our export should reach to 100,000 cwt. This would not average much more than 3 cwt. an acre, which we suppose can be readily harvested from every properly planted and cultivated plantation. There are, however, enemies to reckon with, and successfully overcome; as these may be under the Cryptogamist's directions, we do not suppose that the bumper crop we refer to can be anticipated for five or six years to come.

One thing seems very clear, that Ceylon can never be a leading Cacao-growing country,—can never attain, for instance, the position of Trinidad, which is officially credited with a yearly crop exceeding 200,000 cwt.; and still less that of Ecuador, which annually exports 500,000 cwt., or nearly one-third of the world's requirements. Ceylon Cacao planters have, at least, the consolation that their product is not likely to be overdone in this Island, in the sense in which Tea is supposed to be already overproduced. What they have to do now is to maintain and improve the high reputation of their product; to perfect their methods of curing; to apply (in Mr. Carruthers' words) "more sanitary methods of cultivation" and gradually to improve their varieties of Cacao by selection and other means so as to increase the profit from their fruit trees.—What the Cacao tree is capable of may be judged from the solitary specimen of the Caracas variety growing on Keenakelle estate, Badulla, to which we have so often referred in our Hand-book. Mr. Carruthers has found that the tree is about 17 years old, over 22 feet high, with a spread of 30 feet; and for the last five years it has given an average of 434 ripe pods per annum; this is at 3,800 feet above sea-level. Of course, it would be absurd to assume what a plantation could be made to do, from this solitary, well-cared for tree; but still this experience affords some idea, we trust, of what many of our Cacao planters may anticipate as their trees, planted in good soil, grow older and fully matured.—Dumbara, the Matale's Panwila, Kurunegala and Galagedara, and Monaragalla are the leading Ceylon Cacao-growing districts, and we do not suppose the Government, if their officers were so instructed and tried their best, could sell another 5,000 acres of Crown land, really well adapted to the cultivation of *Theobroma cacao*—which requires not only rich, deep soil but shelter from wind and good drainage. —*Ceylon Observer.*

DISTRICT ASSOCIATIONS.

KANAN DEVAN.

Minutes of Quarterly General Meeting held at Munaar Reading Room, 4th May, 1901. PRESENT :—Baron Von Rosenberg (*Chairman*), Messrs. P. R. Buchanan, J. A. Richardson, F. J. Graham, S. L. Robertson, R. Harley, A. J. Wright, W. D. Martin, W. O. Milne, W. Hendry, J. S. Patterson, W. S. Milne.

Minutes of last Meeting.—Read and passed.

Address by the Chairman :—

GENTLEMEN,—The year which we now close has not been a prosperous one for this District. For two of the products we cultivate it has been marked by extreme depression in the markets and the third has also experienced a fall in value, though now showing signs of recovery. Signs are not wanting that we may hope for better times, with regard to two vigorous measures are being concerted to assist the rehabilitation of the markets. In these your Association has not been behindhand. It has joined in the demand for a compulsory cess to further schemes for increased consumption and

it has expressed its willingness to co-operate in schemes for exploitation of Indian Markets. You will be glad to hear that a beginning in this direction has been made and that a telegram has been addressed to the Indian Tea Association informing them that South Indian planters are desirous of pushing a local scheme amongst themselves asking for support if the compulsory cess is enforced.

This scheme forms one of the subjects on to-day's agenda and I trust that it will be seriously and fully discussed. Beyond this we can only work towards giving the District a good name in the markets by making good teas and I am glad to see that this is being earnestly taken in hand. Some prejudice against Travancore will have to be overcome but that is merely a question of continuity in effort.

In the Coffee market we will have to await issues on a larger field, we cannot hope to influence it much from India. Something is however being done by a Company which is now pushing sales of Indian coffee in India in a cheap and marketable form.

This may in time reduce the exports of Indian coffees and with smaller supplies in the Home markets, they may fetch higher prices just as Ceylon coffees by their variety still command exceptional prices.

But even from a wider view the position seems to me more hopeful.

In Brazil the bottom of possible production, especially in view of a higher exchange, seems to have been touched. It is more than probable that this District will again have decent crops, let us hope that they may meet a better market.

I regret to say that my efforts to induce the Travancore Government to help coffee planters by a reduction or abolition of the export duty during the present period of stress has met with a direct refusal, on the grounds that we pay a lighter assessment than coffee planters in other Districts. I have asked for other rates of assessment through the U. P. A. S. I. but have not yet received a reply. When it comes I trust my successor will again bring the matter before the Government. I think it will be possible to show that our export duty and assessment combined do not come to less than 3 to 4 rupees per acre.

You will have seen that the import duty on tea into England has not been increased and that the decision in the House of Commons on a proposal for its reduction, though not carried, showed considerable support and induced the Chancellor of the Exchequer to state that he could not reduce it this year. In this statement lies a grain of hope that if the campaign against it be vigorously pushed he may see his way to doing so next year.

I need hardly point out how important it is that every effort should be made in this direction by those interested in tea both out here and at home.

While on the subject of duties, you will see, among the circulars on the table, a proposal from the Central Travancore Association that an import duty be imposed by the Indian Government on foreign teas. This is specially aimed at Ceylon and is doubtless designed to force her to remove her import duty on Indian teas. Personally I am not in favour of this proposal. I am opposed to all duties on teas whether in Colombo or elsewhere. If Ceylon tea is consumed in India it means so much of it deflected from other markets and if Indian tea planters cannot beat it on their own preserve with a fair field and no favour more shame to them. To urge the abolition of the Ceylon import duty in every other and legitimate way is another matter and would deserve our cordial support. It seems far more important to me that rubbish, whether from Ceylon or China, be stopped altogether and that Government be approached to investigate such teas in the customs entries and have them destroyed.

Turning to this Association affairs more particularly I regret to have to state my opinion that in influence and power it has lost ground to a remarkable extent. I have no hesitation in saying that its status was more commanding when it represented 2,500 acres than now that it is supposed to represent 17,000. It received closer attention to the events of the District at the hands of the Travancore Government, its desires even when not granted received thorough investigation and prompt reply. That is no longer the case, I need not particularise, you will see it from the correspondence that comes before the meeting. The reasons to my mind are not far to seek but it is undesirable to go into them, let us rather hope that with energy and perseverance matters have not gone too far to be remedied. But it will require conspicuous zeal on the part of the office-bearers and lively interest on the part of membe to do so.

From the balance-sheet before you, you will see that we ha some funds in hand. But these will be depleted or nearly so by t calls likely to be made on account of the Kundale River bridge a extra expenditure on roads. It is to be hoped that Governme may still be induced to refund us our expenditure on roads duri the second half of last year, at all events to the extent of the pr mised Grant-in-aid which to date has been withheld.

You are aware that a local Memorial in the shape of a chur (undernominational) is being subscribed for to perpetuate th memory of the late lamented and revered **Queen-Empress.**

I feel certain that I shall be voicing your wishes in proposi that the Association, as such, subscribe towards a monument respect and gratitude.

In conclusion, let me advise the Association to neither apply f nor agree to any further more Grant-in-aid. It represents a bod of men who are giving their best to render this District of Tr vancore a flourishing one. Taxes and duties are levied upon the and Government may well be asked to attend to the necessities communication, of health, of education. It cannot be said to do thi when it does not grant sufficient to cover the upkeep of a sing exit from the District even in the shape of a bridle path when i Medical Grant is less than a tithe of that expended, when requests us to build bridges and gives us a Grant-in-aid conside ably below their cost, and when, with a large population, three not a single educational establishment.

(Signed) JOON ROSENBERGH.

Proposed by Mr. P. R. Buchanan that the Chairman's report b accepted and printed in the proceedings but that though it migh be as well not to particularize in open meeting the causes of the los of influence referred to by the Chairman it was a matter that th office-bearers should enquire strictly into. Seconded by Mr. J. S Patterson and carried.

Proposed by Mr. S. L. Robertson that the accounts for past yea be passed. Seconded by Mr. F. J. Graham and carried.

Baron Von Rosenberg having stated that owing to pressure o work he did not offer himself for re-election as office-bearer. M P. R. Buchanan asked him to reconsider his decision and propose to the meeting that Baron Von Rosenberg be re-elected Presider and that all possible facilities be given him to aid him in his work a such. Mr. Hendry seconded this stating that it might show wan of moral courage for Baron Von Rosenberg to refuse office at a tim when as he had stated the Association was decadent. The matte was then put to the ballot and the following were elected.

ELECTION OF OFFICE-BEARERS.

President.—Baron Von Rosenberg.

Honorary Secretary.—J. S. Patterson.

Committee.—Messrs. P. R. Buchanan, J. H. Hunter, W. M. Taylo W. Hendry.

Volunteer Movement.—Mr. Milne asked whether the Associatio would pay the expenses, a sum of Rs. 10, incurred by Mr. Tolle mache but subsequently withdrew the motion.

Mr. Patterson was added to the Committee in conjunction wit Messrs. Milne and Graham.

Scheme for furthering Tea Sales in India.—Read telegram t S. T. A. proposing independent action of S. T. Planters and askin for a subvention in proportion from a compulsory tea cess, i enforced.

After a lengthy discussion Mr. Richardson proposed and Mr Graham seconded that Mr. Buchanan and Baron Von Rosenber form a Sub-Committee to discuss this question and formulate scheme to be brought before the next Committee Meeting.

Medical Grant.—Dr. Kerr stated that although he had sent in th required forms duly filled in he had received none of the promise Grant-in-aid. He proposed applying for a portion of Grant-in-ai shortly which, if granted, should be altered to the Surianallee Devi kulam portion of the District.

Export Duty on Coffee.—Chairman proposed that on receipt of in formation from the Secretary, U. P. A. S. I., giving the land cess i other planting Districts of S. I. the matter be again brought befor the Dewan and H. H. Government be asked to reconsider thei decision.

Roads and Bridges.—The Chairman stated that after an unpro fitable correspondence with the late Chief Engineer on the subjec of Grant-in-aid for second half year, 1900, upkeep of Munaar Mettu

Road of which a total of Rs. 29 had only been paid, he had submitted the matter to the Dewan and asked that if the matter could not be settled otherwise, Mr. Sealy, the Magistrate, be applied to for information as to whether the Association had repaired the road in accordance with the Grant at the time of inspection. The Dewan had however referred the matter back to the Chief Engineer and Mr. Sealy was leaving for England.

Proposed by Mr. Wright and seconded by Mr. Martin that all the contractors be written to and told that they are limited to Rs. 19 per mile per half year and that if they have occasion to exceed this amount the Honorary Secretary be written to and permission obtained, otherwise this Association will not hold it itself responsible for the payment.

Harbour on West Coast.—Read four letters from U. P. A. of S. India of February 11th, 21st, March 6th and 15th.

Proposed by Mr. Buchanan and seconded by Mr. Hendry that Calicut would be the most convenient Port.

Proposed presentation to Honorable Mr. Buckingham. Proposed by the Chairman that a vote of thanks be passed to the Honorable Mr. Buckingham for the services he has rendered to the Planting Community.—Carried with acclamation.

The Meeting closed with a vote of thanks to the chair.

Circulars and letters on table.—Planters' Labour Bill, Ports, Queen Victoria Memorial Fund, Registration of Tea Acreage, Paris Exhibition, London Representation, The French Tariff, Reduction in Output of Tea, Adulteration of Coffee, Tea Shop at Paris, Proposed Tea Cess, The Tea Crisis and the Proposed Tea Cess, Ceylon Tea Cess, Proposed Coffee Cess, Import Duty on Foreign Teas, Medical Rest-House at Bodi Mettu, Mettu Bungalow, Bodi Mettu Bungalow Bill, Land Tax, Copies of Indian Planting and Gardening, and Planting Opinion.

J. S. Patterson,
Honorary Secretary.

UNITED PLANTERS' ASSOCIATION, F.M.S.

Extracts from Report for 1900 :—

There have been three General Meetings and three Committee Meetings held during the year, which have, on the whole, been well attended. The experiment has been tried of holding one of the General Meetings at Sungei Ujong, which was well supported by Negri Sembilan planters; distances are so considerable that it is obviously impossible for more than one or two members to attend from the State in which the meeting is not held.

It is much to be regretted that the Perak Planters' Association has now apparently become defunct, and that the planters have not been able to nominate, at any rate, one of their number to represent them. We have during the year only been supported by one member from Perak.

Experimental Gardens.—Mr. Stanley Arden has been sent out from Kew Gardens, and after a period spent in Ceylon acquainting himself with the methods in vogue over there, visiting the various Malay States with their Botanical Gardens, and becoming known to the planters, has now been entrusted with the opening of an Experimental Garden At the time of writing this report the locality is still under discussion, though probably one of the blocks situated near Sungei Rengau will be the situation selected. The head-quarters of the Manager, locality of the Garden, products to be treated, etc., have all formed the subjects of correspondence between the Government and the Association.

The Labour Question.—The Association learnt with some surprise from the late Acting Governor (Sir A. Swettenham) that the sum of only $50,000 had been spent on the recruiting of labour in Selangor during 1899; but it can be taken for granted that during the past year a very much larger sum has been spent, as large gangs of coolies are still pouring in to the extension works.

Various questions as to the stamp of coolie required, and the method of treating them on arrival here, have formed subject for discussion at a special Commission upon which your Chairman was privileged to sit.

Legislation re Abandoned Estates, etc.—The British Resident of Negri Sembilan, in consequence of a severe outbreak of the caterpillar pest, proposed to the Resident-General the necessity for legislation to enable the Government to arbitrarily destroy abandoned estates, or estates that were choked with weeds, where the caterpillars appeared, it being understood that such a proposal would have met with the approval of the planting community. The question was very fully discussed both by your Committee and at a meeting held in Seremban, with the result that a resolution was passed negativing the proposal of the British Resident, Negri Sembilan.

Export of Coffee to Europe.—For some considerable time the question of finding a better market than Singapore has been before the Planting Community; various solutions were suggested. A bonded warehouse where coffee could be stored to enable it to mature has been and is still under discussion. An assessment of all estate to enable the Association to advertise has also been proposed. During the past year, and very largely on the recommendation of Mr. T. Heslop Hill, who has taken infinite pains in London to discuss the question, samples were sent home to Messrs. Sanderson & Co., of Mincing Lane. These samples were on the whole favourably reported upon, and the prices quoted were distinctly higher than those then obtainable in Singapore. The Association, on receiving guarantees of over 100 cwt., a month from various members, decided to try the experiment of monthly shipments. A special Committee of Selangor and Negri Sembilan Planters was elected, but owing to various initial difficulties the first shipment has only recently been forwarded, the result of the sale being still unknown. It may be of interest to the Association to learn that the small retail business initiated by one of the Selangor Estates, under the name of the Kajang Coffee Co., is progressing favourably, and though at one time it was thought possible that the venture would have to stop, recent reports go to show that the monthly output though small is an increasing and to a small extent a paying venture.

We understand that a similar concern is working successfully in Edinburgh. The fact that at various Temperance Exhibitions the Kajang Company's stall has earned bronze and gold medals proves that if properly treated our Malay coffee finds favour.

An interesting experiment is also being tried: Some 12 pikuls of coffee have been bought from the Port Dickson Coffee Curing Mill by the Association, five pikuls of which have been sent to Aden and the remainder kept at Port Dickson, with the object of testing the system of storing coffee in a dry place before putting it on the market. Six months was the period decided upon and this has not yet elapsed.

Agricultural Bulletin.—At the instance of the Resident-General the proposal has been made that an "Agricultural Bulletin" be started, in which all matters of interest to the Planting Community might be discussed. The idea was very favourably received by our Association, and Mr. Ridley, of the BotanicalG ardens, Singapore, has prepared a draft programme which, though perhaps rather too scientific and technical in some respects, is exceedingly comprehensive. In response to a circular letter issued to the members, promises of support have been received. Such a Bulletin, your Committee feel, will eventually prove extremely valuable and be the means of ventilating ideas and facts at present not generally discussed, and concerning which it is extremely difficult to get information.

Agent in Singapore.—The following resolution, forwarded by the Selangor Planters' Association has been fully discussed, both by your Committee and the Association:—

"That, with the increasing production of coffee in Selangor, it would be to the interest of the Association to appoint an Agent in Singapore, but that this Association is of opinion that further enquiries should be made, and that in the meantime the United Planters' Association should be asked to take the matter up."

Messrs. Barlow & Co., of Singapore and Manchester, have been addressed, and the Honorable J. M. Allinson of that firm has been in personal communication with several leading members of the Association, and it is confidently hoped as an outcome that the system of public auction which works so successfully in Ceylon and other Colonies may be inaugurated, and that much of the present dissatisfaction may then disappear.

Singapore is at present the greatest commercial centre in the Far East, and the establishment of fixed auctions, as in Colombo, will probably do much to attract buyers and competition from various buying centres—*e.g.*, New York, London, Hamburg, Melbourne, etc.

The increasing production throughout the Native States, as evidenced by the accompanying figures, explain the action of the

Association in endeavouring to obtain a recognised local market in which all sales ars effected by public auction.

Terms of Engagement of European Employees.—As there appeared some doubt regarding the term of notice applicable to Europeans, in the absence of any agreement, upon the termination of their engagement, your Chairman had some correspondence with the Judicial Commissioner, resulting in the Association passing the following resolution, which, it is hoped, will in the future facilitate the settlement of any differences of opinion upon this question :—

"That in the opinion of this Association the usage as regards the termination of engagements between European employers and employees in the absence of any agreement should be fixed at one month's notice on each side, that period being the most convenient in the interests of both parties."

PLANTING PRODUCTS.

Coffee.—In an interesting Report the Selangor Planters' Association show that in the principal European countries and the United States of America, the consumption of coffee during approximately the last 10 years has increased from 1,101,146,000 lbs. to 1,495,296,000 lbs. and that the rate of consumption per head of the total population of the same countries has risen from 2·83 lbs. to 3·59 lbs. These figures are obtained from a return supplied to the House of Commons, dated 3rd August, 1900, and may therefore be regarded as absolutely reliable. It is explained that accurate returns of production were not obtainable, owing to the ignorance of "statistical science" on the part of producers, principally in the Central and South American States, so that it is to the London Brokers' Reports that we have to refer for statistics regarding the balance of production over consumption; in other words, for the world's stocks; and these we find by latest advices to amount to 1,449,000 bags (a bag being approximately a pikul) as against 659,000 bags a year ago.

The Director of the San Paulo Agricultural Institute has compiled a valuable report upon the existing condition of the estates in Brazil and their future prospects, and, without quoting from it at any length, it is sufficient to say that most estates are burdened with heavy mortgages, that they require much greater attention, especially as regards manuring, than they are receiving, whilst the rise in the value of the milrei from $8\frac{13}{32}$d. to $11\frac{19}{32}$d. in the last year (Rucker and Bencraft's Circular of 21st March) cannot exercise other than an extremely deterrent effect upon that industry. The Brazils (Rio and Santos) produce such an enormous percentage of the worlds supply, that an even partial collapse in that country would undoubtedly result in greatly improved values. The date of the San Paulo report is not known, but when it was written the milrei was $6\frac{1}{2}$d., and we find it stated that "with exchange at $6\frac{1}{2}$d. and coffee at $15 in Singapore [*i.e.*, Mexican dollar value] $3\frac{1}{2}$ per cent. interest could be paid on the capital"; again, "if the Brazilian planter had to pay his labourers in gold he would have been ruined long ago," but he *sells his coffee in gold* which he reconverts into milreis, and the consequent effect of a rise of $3\frac{3}{16}$d. in one year and of $5\frac{3}{32}$d., since that report was written, must be disastrous in the extreme. There is no denying, however, that the world's stock of coffee has increased over 100 per cent. in the last year, and the only conclusion to be drawn is that mortgagees have foreclosed and resold to a large extent, and that estates, at consequently a much lower capital value in other hands, are still capable of being worked at a profit. Your Committee have endeavoured to obtain statistics of coffee exported from Selangor, Negri Sembilan and Perak, the following figures have resulted from their efforts:—

	1898.	1899.	1900.
Selangor ...	22,948 pikuls	26,407 pikuls	34,295 pikuls.
Negri Sembilan...	3,163 ,,	4,541 ,,	6,199 ,,
Total ...	26,111 ,,	30,948 ,,	40,494 ,,

We have not been successful in getting any returns from Perak, but from this State and other sources it is probable that the total production in 1900 amounted to at least 50,000 pikuls, or say, roughly, 3,000 tons. That we have not been idle in endeavouring to get our coffee, straight from the plantations, brought prominently before the public will be seen from reference to the subject elsewhere in this report, but it must be admitted that we are far from being satisfied with our curing, though year by year no doubt the quality improves. There is a growing feeling that possibly a more acceptable coffee may be produced by sun-drying the cherry, and your 1901-1902 report will undoubtedly supply you with the result of several systematic experiments which are n being undertaken.

Rubber (*Hevea Braziliensis or Pará*).—This variety of rubb continues to come on exceedingly satisfactorily, the average grow of trees from nine months upwards amounting to about 1 foot p mensem, whilst at three years their average circumference at 3 fe from the ground is about 16 inches. This far exceeds anythi reported from Ceylon and other countries where Para is bei planted, and we consider that Mr. Curtis's description, in the 19 Annual Report on the Botanical Gardens of the Colony, of t tapping of the 15-year-old Pará tree in the Gardens at Penang, conclusive evidence of the contention of the writer "that in th cultivation lies a source of wealth of the greatest importance." two years $12\frac{1}{2}$lbs. of dry marketable rubber were procured "witho any apparent injurious result to the health of this tree," and t conditions under which it is growing are reported as anything b favourable. It appears, in the opinion of the different Directors the Botanical Gardens, that the size of a tree more than its a indicates its fitness for tapping, and probably a circumference 30 inches 3 feet from the ground is the limit at which attempts extract the rubber should be commenced. Reports from Lond show that prices for Para have of late declined, one reason alleg being the falling-off in the demand for bicycles, but in Para rubb we have undoubtedly the most valuable and highest quality rubb in the world, and your Committee feel that the large number trees, amounting now to several millions, planted in the Federat Malay States, must, in the not very distant future, prove a source revenue which will largely recoup the planters for the losses whi they have sustained through the decline in value of Liberian coff

Ficus Elastica (*Gutta Rambong*).—The only interesting fact th your Committee have to report over and above the continue luxuriant growth of this tree is the wonderful result obtained Mr. R. Derry, of Perak, of 25 lbs. per tree from two 19-year-o trees at Kuala Kangsar in one tapping. In your Annual Repo for 1899-1900 it was regarded that some Ficus Elastic rubber whi was sent home by Mr. Derry was valued at 3/6 per lb. as again 3/10 for the Para rubber sent to London for sale by the san gentleman. Assuming then, that the F. Elastica rubber resultin from the abovementioned tapping in any way approximates in val the quotation for the former shipment, it is clever that, in th variety also, planters will have a valuable source of revenue. M Derry's conclusions on the subject of tapping Ficus Elastica a that trees may probably be first worked when from four to fi years old, and that the average yield should amount to $\frac{1}{2}$ lb. f every of the tree's age, the cost of collection, both with Pará an Ficus Elastica, being from 30 cents to 35 cents—*i.e.*, $7\frac{1}{2}$d. to 9 per pound.

Cocoanuts.—During the past year many reports have come to han of trees planted as seedlings, about 2 feet high, from two years an ten months, to three years and three months ago, throwing o bunches of spike, and blossom which has set well, and now for sturdy bunches of young nuts. These coconuts are the comm variety which have hitherto been supposed only to commen flowering in their fifth to sixth year, and there can be no dou that, as with both kinds of rubber, the growth of our coconut tre also is quite abnormal. There are thousands of acres of alluvi land in the Malay Peninsula capable of being converted in flourishing rubber and coconut properties, and your Committee fe that when the investing public know and realise this agriculture the Malay Peninsula will receive a stimulus which will lead infinitely more extensive operations than we have had any exper ence of in the past.

Sugar.—Your Committee hear that great success has attende the sugar industry in Perak during the past year, and that eno mous extensions are being contemplated. Unfortunately, howeve Perak takes little interest in our Association, and we are not in position to supply you with any data.

Insect Pests.—The season under review has, on the whole Selangor, been free of severe attacks of insect pests, the bee haw moth caterpillar has broken out rather badly on a few estate but no damage to speak of has been done, the eggs, cate pillars, chrysalids and moths having been promptly collecte by hand and destroyed. In Negri Sembilan, however, a ba outbreak is reported, which led, in one instance, to the cuttin out of all the coffee on a large Chinese estate, and caused son considerable damage to a neighbouring property. Various cate pillars and borers have been found on rubbr trees of both kind

te ants have continued to do a certain amount of damage and panut beetles have had to be regularly collected; but remedies ll kinds have been tried, generally with some measure of success, the discovery has been made that a decoction of "tuba" roots, lied to the base of affected trees is apparently so efficacious that white ant known as "Termes gestroi" is completely kept under it. Such a simple remedy, involving as it does only the plant-up of an acre or two of this quick-growing creeper, which is ily procurable and equally easily propagated by cuttings, is a st valuable discovery, and there seems no reason why, by tinued and intelligent effort, this, the worst and most destructive t known to us at present, should not be completely mastered l eventually cease to give us any trouble.

Labour.—The supply of Tamil coolies during the past season been sufficient, and your Committee think that our present tem of free labour leaves nothing to be desired, either in theory or ctice. We do not feel disposed in this report either to defend that tem against the numerous attacks to which it has been subjected, to correct publicly the many ridiculous misconceptions that exist h regard to it; the fact that our own men go over to India and ng back, to the same life that they have themselves adopted, ndreds of their relations and fellow-countrymen, appears to us supply a sufficient answer in itself to the attacks of those who not in sympathy with us. The Government have imported me thousands of "free" coolies during the past year, and it must admitted that the experiment has by no means proved an un-alified success; but it is a rare experience for any departure m the beaten track to be attended with *no* initial difficulties or sappointment, and your Committee are convinced that the vernment are now dealing with the question in such a thorough nner, that, in the absence of unnecessary and unjustifiable structions being raised by those whom the advocates of "free" our have themselves always been content to abstain from criticis-g, signal success must result.

The membership, as evidenced by subscriptions, is slightly minished—

MARKET REPORT.

[*Per Mail advices of 10th May* 1901.]

COFFEE.

The London Commercial Record says:—There is no material change report in the market for the past week. Demand continues thout any activity, the higher grades alone meeting with brisk mpetition. The bulk of the supplies of East India has not been tractive, and prices are occasionally in favor of buyers, but ving reached so low a level there is not quit so much pressure sell, and privately moderate sales have been made at steady rates. o important alterations can be quoted in the value of Costa Rica d Central American descriptions, colory kinds selling readily d less desirable qualities moving slowly. The market for futures s been quiet, and prices at the close shew a little ease. Yester-y business was done in May delivery at 31s, July at 31s 6d to 31s d, and December at 32s 4½d to 32s. Auction supplies to-day nsisted of 2,684 bags East India, 25 barrels Jamaica, 812 bags lvador, 285 bags Colombian, 188 bags Guatemala, and 1,962 bags osta Rica. The sales went off slowly without change in values.

The preceding figures exhibit— Tons.

In the Imports an increase this year of ...	4,180
Home Consumption an increase of	647
Export an increase of	1,541
Stock an increase of	2,154

Auction this week have gone off as under:—

Ceylon.—*Plantation.*—6 casks 5 barrels 6 tierces sold—middling brownish 70s to 71s, bold 93s to 104s.

East India.—3,329 bags partly sold as follows:—*Mysore*, smalls 34s 6d to 43s, mdidling 45 to 48s 6d, good middling 57s 6d, bold 54s to 57s, good bold 71s to 76s 6d, peaberry 49s to 72s; *Coorg* smalls 34s 6d to 39s. low middling 40s 6d to 42s 6d, good middling 51s to 51s 6d, bold 55s to 60s, peaberry 47s to 57s; *Travancore*, smalls 33s 6d, low middling 41s, peaberry 47s; *Nelliampathy*, low middling to middling 42s to 44s 6d, bold 54s, peaberry 50s to 52s; *Wynaad*, smalls 37s 6d, low middling 42s.

Mocha.—30½-frazils withdrawn

Nyassaland.—117 bags sold—pickings 31s, smalls 29s 6d to 30s, low middling to bold 36s to 39s 6d, peaberry 42s to 44s 6d.

Jamaica.—8 tierces 5 casks 175 barrels 33 bags mostly sold—ordinary to fine fine ordinary 34s to 43s, low middling to middling 46s to 55s, bold 57s to 61s, peaberry 42s to 45s 6d

Costa Rica.—6,553 bags offered, 4,850 bags sold—smalls 32s to 45s, fine ordinary to low middling 41s to 46s, middling to good middling 48s to 58s, fine middling 61s 6d, bold 58s to 74s 6d, fine ditto 76s to 83s, peaberry 41s to 80s 6d.

Guatemala.—Of 2,734 bags catalogued 2,000 bags sold, smalls 29s 6d to 40s, good ordinary to fine ordinary 39s 6d to 41s, low middling to middling 42s to 50s, bold 50s 6d to 58s 6d, peaberry 44s to 58s.

Vera Paz.—15 bags sold, good to fine bold 83s to 101s, peaberry 86s.

Salvador.—682 bags mostly sold, smalls 33s to 34s, low middling to middling 40s 6d to 44s, good middling 47s 6d to 49s, peaberry 48s to 54s.

Nicaragua.—57 bags sold, bold dingy 36s 6d, good middling blue 50s.

Colombian.—516 bags sold, smalls 25s to 32s 6d, ordinary to good ordinary 31s to 38s, fine ordinary 43, middling bright greenish 44s 6d to 46s, bold 47s to 51s, peaberry 38s to 44s 6d.

Mexican.—439 bags partly sold, smalls 33s, low middling 43s, bold 52s 6d, peaberry 52s.

Rio Exchange 1s 0⅞d, previous day 1s 1d.

Havre, *May* 9.—Good average Santos May opened barely quiet at 38f. and closed quiet at 37¾f., September opened at 39f. and closed at 38¾f., December opened at 39½f. and closed at 39¼f., March opened at 40f. and closed at 39¾f.

Hamburg, *May* 9.—Good average Santos May opened quiet at 31pf. and closed flat at 30¾pf., September opened at 32pf., and closed at 31¾pf., December opened at 32½pf. and closed at 32¼pf., March opened at 33¼pf. and closed at 33pf.

New York, *May* 9.—Closing prices of No. 7 Rio were as follow:—

	May.	June.	July.	Aug.	Sept.
May 9...	5·40	5·40	5·50	5·60	5·65
May 8...	5·45	5·55	5·60	5·70	5·75

TEA.

CHINA.—1,371 packages Moyune green were offered at auction yesterday and sold at steady rates, except Hyson which was decidedly cheaper. Gunpowder realised 4½d to 1s 1¾d. Imperial 4⅛d to 5½d, Foong Mee 8¾d to 1s 1¼d, Sow Mee 7d to 1s 4d, Hyson 2¾d to 3¼d, Young Hyson 6½d to 8d per lb.

INDIAN.—There was a further reduction in the quantity brought forward, which totalled 15,330 packages contrasted with 22,600 packages previously, and 20,000 packages at the corresponding period last year.

Not much change occurred in the case useful and brisk liquoring lots which met with competition, but parcels with red and stalky appearance were not in request, and for these lower prices had to be accepted in order to effect sales.

About 1,360 packages from South India, several invoices possessing better flavour, were included in the catalogues, and occasionally rather higher quotations were recorded.

For 13,600 packages on estate account 6⅛d per lb. was obtained compared with 7½d per lb. for 14,100 packages, and 9d per lb. for 11,000 packages in the two foregoing season.

Exports from the United Kingdom during the last month were nearly double those of twelve months since, and four times larger than 1899.

CEYLON.—Public auction were lighter, *viz.*, 18,800 packages against 25,600 packages on the 30th ultimo, and 38,700 packages in 1900.

A more general demand prevailed although a good deal of irregularity was noticeable. Common to fair Pekoe Souchongs and Pekoes in many instances again went in favour of buyers. Medium grades both leafy and broken were fairly supported, particularly when drawing full flavoury infusions, while fine and finest lines were not very well represented and sold somewhat slowly.

The average is 6½d per lb. On the 2nd instant it stood at 6⅝d per lb., and 7⅛d per lb. on the 9th May a year ago.

JAVA.—Slightly under 3,800 packages, principally ex *Jumna* offered "with all faults," passed with a quiet tone.

Deliveries.—The clearances of all Tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 30th April, 1901	... ...	2,319,114 lbs.
Do. do. 1900	... ...	3,071,448 „

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	12,321	3,001	15,322
Ceylon	16,841	1,980	18,821
Java	1,502	289	1,791
Total ...	30,664	5,270	35,934

Also 145 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated May 10th, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1900-1901	1,636,994	1,227,585	60,618
1899-1900	1,635,727	1,164,304	60,093

15,491 *pkgs.* INDIAN
19,508 „ CEYLON
1,791 „ JAVA
} Total 36,790 packages were offered in public auction this week.

The production of Indian and Ceylon Tea during last year exceeded the world's consumption by about 20 million pounds; in the previous year the excess was about 14 millions. There is, therefore, abundant reason for the present severe depression in prices.

	1900.	1899.	1898.
Export from Countries of Production	334,072,942	302,590,293	276,437,473
Total Consumption	314,230,316	288,695,931	279,031,828
Surplus Production ...	+19,842,626	+13,894,362	—2,594,355
	1897.	1896.	1895.
Export from Countries of Production	268,865,989	253,141,438	233,834,519
Total Consumption... ...	261,875,872	246,607,478	227,806,249
Surplus Production ...	+6,990,117	+6,533,960	+6,028,270

Now that the proposal of the Indian and Ceylon Associatio the reduction of output has fallen through, it is more nece than ever that the importance attaching to the above figures s be fully realised by planters.

If we are to go on increasing our surplus production on th sent scale, the price is likely to be still further reduced.

Exports from India and Ceylon with consumption in no ducing countries are shown below:—

INDIAN.—Only 15,491 packages were brought to auction ag 23,057 last week. In spite of the smaller sale no improvemen be recorded in the market, although buyers seemed perhaps a more ready to operate at the decline established last week.

Week's average of Tea sold on Garden Account 1901, 13,815 p av.5·97d. 1900, 14,974 pkgs., av. 7·43d.

Total Tea sold on Garden Account 1st June, 1900, to date, 1,33 pkgs., av. 7·21d. 1900, 1,293,206 pkgs., av. 8·25d.

CEYLON.—The auction was rather smaller, comprising 1 packages against 25,641. Prices were again somewhat irreg especially for medium whole leaf Tea which was occasionall to ½d. easier, although there was perhaps more bidding tha week.

Average for week 6·55d., against 7·17d. in 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 46 pkgs., av. 6·65d. 1900, 453,314 pkgs., av. 7·48d.

JAVA.—The market was inclined to be rather weaker.

Bank Rate 4 per cent. Exchange on London three months' sigh Calcutta 1/4 7/32. Colombo 1/4¼

COCOA.

At auction on Tuesday 1,539 bags were offered, but there very little demand, and only 920 bags sold. Of 555 bags Trin catalogued 470 bags were placed at 67s to 71s for middling to red. 53 bags Grenada realised 64s 6d for good and 60s for com 234 bags African sold at 60s to 63s. 314 bags Ceylon about sold, at 28s 6d up to 69s for smoke-and-water damaged. 8 Jamaica. 15 bags Colombian, and 360 bags Guayaquil ret Private transactions are restricted to 500 bags Trinidad—fi 70s to 71s 6d, and good red at 67s to 69s, and 700 bags Ma Guayaquil at 61s per cwt.

PEPPER.

BLACK.—An active speculative business has been done da the week at higher prices, but the tone at the close is q About 400 tons have probably changed hands including Singapore on the spot at 5 1/16d up to 6 3/16d, fair Tellicherry at to 6 3/16d, and grayish to fair Alleppy at 5 15/16d to 6d; for arriva best prices realised have been 6 11/32d for Singapore March-

shipment, 6⅜d for May-July, 6 7/16d for June-August and July-September.

At auction on Wednesday 127 bags Trang bought in at 6¼d; of 340 bags Aleppy 200 bags fair sold at 6d. 19 bags good heavy Ceylon realised 6¼d per lb.

WHITE.—Is also dearer with large transactions. About 300 tons reported sold, *viz.*, fair Singapore on the spot at 9¼d to 9 5/16d, June-August shipments at 9½d, July-September at 9½d, August-October at 9½d; Siam on the spot 9¼d, near at hand 9¼d, May-July shipment at 9¼d; and Penang on the spot at 8¾d, June-August shipment at 8 15/16d, July-September at 8 15/16d, and September-November at 9 1/16d.

At public sale of the 8th instant. of 3 cases 168 bags Singapore 3 cases fine bold sold at 1s. 241 bags Penang bought in at 8¾d, while of 57 bags Ceylon 21 bags sold—fine 10½d, fair mixed blacks 8⅞d, small part shrivelled 8½d per lb.

100 tons Tellicherry sold to-day *viz.*, April-May to Havre 56s 6d c.i.f. delivered weights; May-June, June-July, and August-October 56s 9d c.i.f., optional port.

GINGER.

COCHIN.—Washed rough realised an advance of 1s per cwt., and other kinds are very firm. Of 96 cases 340 bags offered 180 packages sold—medium and small roughly cut and scraped, limed, 65s, small part medium ditto 49s, smaller ditto wormy 45s to 47s 6d, good slump medium and small washed rough 41s, fair cuttings 32s per cwt.

JAPAN.—200 bags bought in at 35s per cwt.

JAMAICA.—In good demand at rather higher prices. 772 barrels offered and all sold—fair to good bright washed 53s to 63s, middling to good middling 46s to 52s, common to good common 41s to 45s, dark Rhatown 37s 6d per cwt.

GREEN.—6 barrels sold at 33s per cwt.

CINCHONA.

The shipments from Java from March 25 to May 5, 1901, amount to 979,000 Amst lbs, and the total from January 1 to May 5 is 3,052,825 Amst. lbs. In auction 10 serons Crown bark offered and sold at 1s 5d to 1s 6d for the Loxa, and 6¾d for Huanoco. A bale of flat Cartagena water-damaged sold at 3d, and for 2 bales of flat Calisaya 6d is to be submitted.

QUININE.

A better feeling has prevailed in the secondhands this week, and more business has been done at firmer prices, especially for distant positions. Spot parcels have changed hands at 1s 3⅜d to 1s 3½d., June at 1s 3⅝d, August 1s 3⅞d, and October 1s 4d to 1s 4⅛d per oz.

CARDAMOMS.

Cardamoms were in fair demand, opening at lower prices, but as the sale proceeded values became irregular; the medium and lower grades sold at full-up prices generally, and fine were about unchanged. The following prices were paid:—Ceylon-Mysore, extra bold pale selected, 4s to 4s 3d; medium to bold pale, 3s 2d to 3s 4d; good medium pale (partly open), 2s 5d to 2s 7; small and medium (partly open), 2s to 2s 4d; long lean pale, 1s 11d to 2s; small pale, 1s 4d to 1s 7d; brown and split, 1s 4d to 1s 5d; seeds, 1s 10d to 2s per lb. Ceylon-Malabar, small brownish, 1s 5d; and pickings, 1s 3d.

INDIA-RUBBER.

With some pressure to realise tendered spot Rubber prices declined, and sales of fine Pará were made down to 3s 8d per lb. The pressing lots being disposed of, prices have advanced to 3d 9d spot and up to 3s 9½d paid for distant forward delivery, closing quiet. Entrefine sold at 3s 7d. Peruvian ball from 2s 4d to 2s 4¾d, slab at 2s. Negrohead lower, scrappy 2s 8d, Island 2s 2d, Cameta 2s 5d.

Agents for LEA & PERRINS' WORCESTERSHIRE SAUCE.

CROSSE & BLACKWELL'S, LTD.

By Special Warrant Purveyors to The Queen AND Empress of India.

CELEBRATED OILMAN'S STORES.

A RARE OPPORTUNITY.

THE ENCYCLOPÆDIA OF SPORT.

Appeals to every class of Sportsman throughout the world.

It cost nearly £20,000, and took three years to produce.

It contains 2,574 columns of the most fascinating reading matter.

This work is now offered by The Madras Times for a **Limited Time** only, for a Preliminary Payment of Ten Rupees, and Ten Monthly Payments of Rs. 3-8.

Only a limited number of sets will be offered on these special terms, and prompt application is therefore necessary to avoid disappointment.

Sold in Madras at London price, thereby saving cost of Carriage.

Ready for Immediate Delivery.

THE INDIAN CONTRIBUTORS.

Every branch of Indian Sport is dealt with by a Recognised Specialist. The following names are a guarantee that Sport in the East is handled by the highest authorities :—

THE ENCYCLOPÆDIA OF SPORT.

WHY SHOULD I BUY THIS BOOK?

Because it is the only complete work in any language dea ing with every variety of outdoor sports and pastimes.

Because it is no dull dictionary or mere dryasdust work reference.

Because each subject is treated by the ablest expert.

Because it contains forty full-page copper-plate engra ings, in additon to many hundreds of illustrations in the tex

Because it can be obtained on the following terms :—

Cash.

Rs. 42 (London Price, £2 15*s.* 0*d.*), Cloth.

Rs. 57 (London Price, £3 15*s.* 0*d.*), Half Morocco (re commended).

Rs. 83 (London Price, £5 10*s.* 0*d.*), Full Morocco.

By Deferred Payments.

Rs. 10 down and Ten Monthly Payments of Rs. 3-8, Clot

Rs. 10 down and Ten Monthly Payments of Rs. 5, Ha Morocco (recommended).

Rs. 15 down and Ten Monthly Payments of Rs. 7-8, Fu Morocco.

Coorg.

POLLI BETTA, *5th June.—Weather*—Thunderstorms, very local in their distribution, continued throughout last month and continue still. Signs of the approaching monsoon are somewhat more pronounced since yesterday. The sky was overcast yesterday morning and last night and is so this morning, and there was a strong wind from south-west last afternoon. Rain also fell last night. The burst of the monsoon may be upon us at any moment after this. *Crops*—Though what blossom opened out set, there was such a paucity of healthy bearing wood after the heavy crops of last season, that crops are bound to be light next season. Coffee is looking very fresh and healthy now and is covered with a fine growth of new wood. Borer has been bad again this season. *Labour* is ample for the time of year; and *General Health* very fair. *Works* in hand are weeding, supply pitting, and centering.

PLANTING IN THE MALAY STATES.

WE have been favoured with a copy of Minutes of a General Meeting of the United Planters' Association, F. M. S., held at Kuala Lumpur on the 25th February last. This paper throws a good deal of light upon what planters are doing in the Federated Malay States and upon the practical assistance that they are receiving from the Resident-General. A few months ago, Mr. STANLEY ARDEN, a gentleman with an excellent scientific training, went out to the Malay States to assist planters by conducting investigations and experiments. His appointment appears to be that of "Superintendent, Experimental Garden, Kuala Lumpur." His first instructions from the Acting Resident-General were that he should visit the various planting centres in Selangor—in the districts of Klang, Kajang, Kuala Lumpur, Ulu Selangor, Kuala Selangor, and Kuala Langat; that he should get "in

thorough touch" with the planters, ascertain what they required from him, bearing in mind that his present post was created at their request, and give them all the advice and information that it was in his power to afford. Mr. ARDEN was then to pay a similar visit to the Negri Sembilan States, with the same objects in view. It was thought that some place in the State of Selangor would he most suitable for headquarters; and while in Selangor Mr. ARDEN was to take the opportunity to look out for a site for his future experimental garden. Further instructions to Mr. ARDEN were that he was to confer and consult with the Chairman of the U P A. F. M. S, and submit concise reports. It was explained that what was required from him was practical work, not unnecessary official correspondence.

On the very day on which the above official instructions were issued, Mr. ARDEN sent in, as Superintendent of Experimental Plantations, a report on his visit to Penang, Province Wellesley, and Perak. In Penang he noted what was being done in the way of rubber-tapping in the Botanical Gardens. He reports:—"Although the trees here are not growing under the conditions generally recommended for Hevea braziliensis (Pará rubber)—being planted on a dry, sandy bank—it is interesting to note that the returns are very favourable; the average annual yield for the last three years amounting to rather more than 1 lb. of dried rubber. It appears, therefore, that not only does Hevea thrive under varied conditions, but that it gives a fair return, which statement does not apply to Ficus elastica, the 'Gutta rambong' of commerce" In Kuala Kangsar rubber and other economic plants in the Government grounds were inspected. Kuala Lumpur, or the immediate neighbourhood was mentioned as the most suitable site for headquarters. Rambong and Pará rubber trees in other districts were inspected. In Province Wellesley it is thought that sugar might be cultivated in some parts of the interior; and Mr. ARDEN remarked:—"This is somewhat important, in view of the fact that beet-root sugar cultivation is on the decline in Europe." After referring to fine specimens Hevea and Ficus seen at Setiawin, Mr. Arden observed:—"In reference to Ficus elastica, I would like to point out that it has been proved in Bengal and elsewhere that 'although it grows with undiminished rapidity and luxuriance in districts remote from the hills . . . it fails to produce caoutchouc.' Dr. Morris also says that, in spite of the abundance of the tree under cultivation in the tropics of both the Old and the New World, it has nowhere proved so valuable for the production of rubber as in the mountainous part of Assam. It seems, therefore, that there is a possibility of this tree failing to come up to the expectations of the planters of this country, and I would advise Government to allow me to proceed to Setiawin to experiment on these trees with a view to obtaining reliable data concerning their yield. It would be necessary to rent a sufficient number of Ficus from the Penghulu. The Pará trees are Government property."

Mr. ARDEN'S virtual condemnation of Rambong was challenged by Mr. E. V. CAREY, (Chairman of the U. P. A. F. M. S.) who observed in a letter to the *Malay Mail*:—"Mr. ARDEN'S admitted attitude has hitherto been one of extreme caution, and no one will blame him for it, but here almost at the very beginning of his first report we find what is tantamount to an expert condemnation of a product, the success or failure of which will affect not a few members of the planting community. I do not think therefore that I can be considered unreasonable if I ask that some explanati be vouchsafed. I also see that 1 lb. per tree of dried rubb is given as the average annual yield of the Pará trees in t Penang Botanical Gardens, and that '1½ lbs. per tree' r presents the yield of the Perak trees, but 'the tappings we not exhaustive.' This Mr. Arden styles 'a fair return,' b would he have us, or the thousands who read his repo believe that 1—1½ lbs. of rubber per tree is the golden harve that the future has in store for us? If so, then I can on say that he has formed his conclusion very rapidly; if no why does he not say, that with regular systematic a scientific tapping such as he is going to teach us, we ma reasonably expect a greater yield? The prospects of th country in rubber are being watched all over the worl and the utterances of a man in Mr. Arden's position mu of necessity influence public opinion to no small degree, behoves him therefore to be very sure of his groun before he commits himself to statements which admit criticism, almost as soon as he has arrived in the country It may seem a little unfortunate that at the very outs there should be a difference of opinion between the offici expert and a leading planter; but the probability is tha this will do good rather than harm. Mr. CURTIS, of th Botanic Gardens, Penang, stated in reply to Mr. CAREY letter:—"It may interest and encourage you, and th members of your Association, to know that in two years have taken from one Pará rubber tree 12½ lbs. of dr marketable rubber, and so far as I can see the tree is non the worse in health, Mr. DERRY got on an average 3½ lb from a hundred trees (the oldest seventeen years old) at single tapping, and might have got much more, but it wa feared it might interfere with the seed crop. If this is no good enough for you I don't know what you want. W have no "Rambong" big enough to experiment on, and therefore, I cannot say anything definite as to the yield o this tree. It grows slowly in the waterfall gardens, bu some, I saw in Malacca, gave me the impression that in th right kind of soil, there is money in this too." We sha probably hear more about rubber in the Federated Mala States, and we feel sure that Mr. ARDEN'S work and experi ments there will lead to useful results.

COFFEE IN DISTANT LANDS.

XXVIII.

Maranhao.—The coffee-tree grows well in this State One peculiarity, however, prevents it being grown for commer cial purposes. The fruit on the trees does not ripen all at th same time, in fact, flowers, green berries, and ripe berrie may be seen at the same time on one tree. The result o this is that the berries have to be picked one by one instead o a number being stripped from the stem by one sweep of th hand, as can be done when they all ripen at the same time This fact prevents coffee being largely planted for commer cial purposes throughout the Northern States of Brazil.

Mexico.—The latest report of the British Consul states:— The export duty on coffee is levied on the actual weigh thus a very fair idea can be obtained of the production of th country, as the consumption can be calculated, as the minimum to represent at least one-third of the amount exported, makin the consumption to be but an average of ½ lb. per head pe year. This figure of the consumption is undoubtedly ver

much under-estimated, considering that coffee is one of the staple articles of food among all classes, whether natives or foreigners, rich or poor, the latter using it at least twice a day, and the former three times a day, taking it in the form of a strong extract, and not in the diluted state used by the working classes. The consumption of this commodity can certainly be estimated at ¼ lb. per head per day, taking one class with another, which would give an annual amount of 9,750,000 cwts., the amount exported being supplied from the surplus over and above the demand for home consumption. It can, therefore, be considered that the production of coffee in the Republic could be estimated at an average of about 10,000,000 cwts. per year. The returns of production as published in the Year Book of Mexico, have so far been very incomplete (owing to the reasons given in previous reports, namely, that growers will not give the actual production of their estates for fear of being heavily taxed), consequently these figures, instead of assisting in the preparation of statistics for public information, only serve to give an erroneous idea of the prosperity of this or any other industry or product. This publication is, however, being very much improved, and there is every reason to expect that the figures contained in it will soon be very much more correct than they are at present. The exports of coffee in 1899 amounted to 357,113 cwts., as against 380,714 cwts., which though showing a smaller amount exported, cannot be considered as a decrease in the production. The formation of new plantations in the States of Vera Cruz and Oaxaca, by American Colonisation Companies has served to give an impetus to this branch of agriculture, and though at present the crops are small, each succeeding year will undoubtedly show an increase. The largest amount of coffee is sent to the New York market, which serves as a distributing centre for this article. The State of Colima, where a coffee known as "Caracolillo," and which resembles "Mocha" coffee in shape, size, colour, and flavour, is extensively grown, will be able to find new markets as soon as the new branch railway from Guadalajara to the town of Colima is finished. The value of the coffee exported in 1899 was 789,188*l*., as against 919,362*l*. in 1898. The average price in the New York market during the year 1899 for Mexican coffee varied from 5 to 15 c., according to quality ; the price for cleaned or washed coffee being 11 c. per lb.

The Bulletin of the Bureau of American Republics says—The exports of coffee from Mexico to the United States in 1898 aggregated 30,620,071 pounds, valued at $3,010,893. In 1899 the number of pounds exported was 31,657,552, worth $3,026,624. The exports in 1900 were 30,010,567 pounds, with a Customs house valuation of $2,859,690.

"Modern Mexico" states that the altitude at which coffee can be raised in Mexico depends upon the latitude of the location. The farther north the lower the line becomes at which trees will be safe against occasional frosts. The number of trees planted to the acre varies from 350 to 700, the latter figure being probably the limit on land that is not fertile, and where trees will not grow large. Five hundred trees is about the average per acre. Estimates of production made from the yields of individual trees are not safe guides upon which to figure the production of a plantation.

"Expert writers, in reports recently issued by the Mexican Government, after investigating many plantations in bearing," says the journal named above, "give it as their opinion that the average yield of coffee trees in a Mexican plantation should be figured at one-half a pound. On some of the highest grade plantations this average runs nearer to a pound, but on others it decreases to as low as two ounces to a tree, and they decide upon a half pound as a fair average for coffee trees upon good land, well cultivated. The smaller the production of coffee by a tree the better, as a rule, will be the grade."

A general estimate of the cost of raising, picking, and preparing coffee for market, the same authority states, is about $7 (about $3·50 in United States currency) per 100 pounds, presumably in Mexican currency Assuming that there are 500 producing-coffee trees on an acre of ground, and that they average one-half pound per tree the product will be 250 pounds, and at 9·53 cents per pound, the average price of the coffee imported from Mexico by the United States in the calendar year 1900, the gross returns from one acre would therefore equal $23·83. The net returns in United States currency would be $15·08 per acre.

Nicaragua.—A British Consular report for the year 1900, states that the coffee crop has been very good, and estimated at 200,000 bags ; this appears to be the largest crop ever yet obtained ; it is almost double that of 1898 or 1899 In the same report, however, it is remarked :—"With the present low price of coffee, planters and their Estates are anything but flourishing, and had the crop not been so good, many would have had to give up their Estates." Nicaraguan Coffee is shipped principally to Germany and the United Kingdom.

NOTES.

London Tea Sales. There was no tea sale in London during Whitsuntide.

Java Cinchona. The exports from Java for the first half of May, 1901, amounted to 228,000 Amst. lbs., against 481,000 in 1900, and 225,000 in 1899.

Colombo Tea Sales. At the public sale of tea at Colombo on the 29th ultimo 13,772 packages = 1,154,419 lbs. were offered, of which 10,230 packages = 872,210 lbs. were sold.

Consumption of Coffee in Brazil. Capt. Carvalho, of the Docas Nacionaes, calculates that at 5% of entries local consumption has risen from 1,600 grammes per head in 1894 to 2,000 grammes in 1900.

Java Quinine. At the quinine auction at Batavia on May 15, 3,000 kilos. (105,000 oz.) of Java make (Ed. II.) sold at an average of fl. 23⅞ per kilo., against an average of fl. 22¾ paid at the April 3 auction. The next auction to be held there will take place on June 19.

Low Grade Coffees. At a meeting influentially attended at S. Paulo it was decided to recommend planters to stop shipments of low grade coffees known as *escolhas* and to store as much coffee as possible at the plantation instead of sending to Santos so as not to swell visible stocks.

The Ceylon Tea Cess. Writing to the *Ceylon Observer*, J. W. remarks that the cess is inadequate to the requirements of the tea industry. Were the

cess double the amount, other fields and other methods of working could be taken in hand, which cannot be considered now for want of funds.

Coffee in the U. S. The Government report for March makes the imports of coffee 112,604,053 pounds, valued at $8,043,229 pounds ; total for nine months, 617,343,868 pounds, valued at $45,218,119 ; same time the previous year, 633,589,722 pounds, valued at $40,508,195. Exports during March, 4,384,674 pounds ; total for nine months, 28,056,877 pounds.

Coffee in Trieste. The union of Coffee Merchants of Trieste have transmitted a petition to the Ministry of Commerce begging that means should be taken to give coffee an official quotation at the Trieste Exchange on account of the absence of such a quotation. Trieste is in a less favourable position than Hamburg and Havre, its principal rivals in the coffee trade.

Crowded Out. The *Brazilian Review* says :—Sr. Francisco Candido Rodrigues Bueno, planter of Campo Alegre, has given notice to the employees on his fazendas that they must seek other employment as he has resolved to abandon the cultivation of coffee, owing to the low prices now ruling, which he says do not suffice to pay expenses. Sr. Bueno is said to be a man of means.

Coffee in Brazil. Irving Sprague, an authority on Brazilian coffee, is of the opinion that the advance in Brazilian exchange is making returns to the planters so small that it may not pay many of them to pick their crops. There may not, after all, be an 11,000,000-bag harvesting, even if there is to be an 11,000,000-bag ripening. Speculators better get under the trees and watch for results.

Venezuelan Coffee. Oscar Schramm reports a decline in the output of Venezuelan coffees. Exports are : 1900, 900,000 bags ; 1901, 700,000 bags. The decline has not affected price, as the totals represent so small a fraction of the world's coffee supply. There is talk of the repeal of the export duty—about 60 cents. per 100 pounds—especially as the Venezuelan is beginning to see that he, and not the " Yank," pays the piper.

Castilloa Rubber in Matale. Major Gordon Reeves writes to the *Ceylon Observer*, as follows :—" About Castilloa Rubber, this tree grows luxuriantly on suitable land, not only two miles from Matale, but on clearings opened ten miles to the North. " Year-old plants are having a growth of 3 to 4 feet. Our experiment in tapping at Wiharegama gave us a yield of about 2 lbs. per tree *good* rubber ; valuation of which has already appeared, *viz.*, 3s.6d. per lb. This was tapping from October to June. Latex does not flow in dry weather. These trees are about 10 to 12 years old and girth about 36 to 42 inches at 4 feet from ground."

Coffee Prices. The *Brazilian Review* of 23rd April remarks :—From January, 1840, to date the only occasion that quotations for fair Rio coffee ever fell below those now current was in July, 1849, when they reached 6 cents per lb. in 1882 when currency prices fell still more N. York quotations were never under 8 cents. There have been eight different periods when prices fell for some-time below 10 cents per lb. in 1840 ; 1841 to 1850 ; 1851 1853 ; 1855 ; 1868 to 1869 ; 1882 to 1883 ; 1885 to 18 and 1887 to date. Previous, however, to 1865 Americ quotations were made in currency and only after that date gold. The highest quotation ever reached was 25 cents lb. in 1874.

The Calcutta Tea Sales. The Calcutta season opened on 31st ultimo with the sale of 8,0 packages, most of which were disposed of. The sale almost entirely composed of Darjilings, Terais and Dooa Darjilings predominating ; very little tea indeed having come to hand from the other districts. The quality genera was fully up to the average ; if anything, better than year. The trade showed their appreciation by keenly co peting for all attractive liquoring kinds, which realised values. Plain, pointless descriptions were rather difficult move, except those grades showing even style and ma which were well supported. It is stated that well-ma Pekoes are wanted for Central Asia.

Ceylon Green Teas. The following figures collated the Ceylon Customs Department sh the actual exportation of green tea from Ceylon during present year :—January, 44,248 lbs ; February, 47,447 lb March, 223,964 lbs. ; April, 99,784 lbs ; making a total 415,444 lbs. The countries to which the exports have tak place are as follows :—Canada, 189,171 lbs. ; United Stat 110,981 ; United Kingdom, 88,599 ; Burma, 14,308 ; Brit West Indies, 7,150 ; China (Haiphong), 4,450 ; and Brit India, 785. In the Chamber of Commerce returns are s to be taken from manifests which are not so detailed as the Customs declarations, and do not sufficiently distingu between black and green tea exports. For the purpose the Customs Department each exporter has to furnish detai particulars of his export, which enables accurate totals be kept.

Coffee in Holland. The total importations of cof into Holland in the year 1900 w about equal to those of the previous year, reaching 1,563,3 bags, of which 624,666 bags came from the Dutch E Indies, and 939,730 bags from Santos and Central Ameri etc. The last-named importations continue on a very lar scale. At the beginning of the year there was some appe ance of a rise in prices, owing to the diminished stock, quotations soon began to give way and the tendency duri the whole of the year was downward. Good ordinary Ja opened at 6¼d. to 6⅜d. per lb. in January, gradually recedi to 6d. and 5⅞d. per lb. in December. Good average Sant on the other hand, which opened at 3¾d. to 4d. per lb. January advanced in July and August to 4½d. and 5d. lb., closing in December at 3⅞d. to 4d. per lb. Liberi coffee, in consequence of the improvement in its appearan and quality, was in fairly good demand throughout the ye though at a low figure.

Japan Tea in Canada. The course of the Canadian mark for Japan teas since Christmas h says the *Canadian Grocer*, been difficult to understand. spite of a very material diminution in the amount of impor and in a face of the evident fact that the market was bare low-grade teas, prices rather weakened than stiffened. Th may have been due in its entirety to a slow demand country account, which affected other products such as cann

goods. But there are those who have other reasons which may account for the strange turn events took. They attribute the dull market to the three forced sales, all of which were important inasmuch as they involved the property in teas of three very important Montreal houses. The insurance companies alone put $60,000 worth of tea on the market, and while this would not have done the market harm if prices had been held, yet, the throwing of this large quantity of damaged goods into retail trade at low prices injured the sale of reasonable priced goods.

Cacao Pods.

"C. P." writes to the *Ceylon Observer*:—Since writing my first report on Cacao pods and seeds, I have received a pod said to be a new variety called *Puerto Cabella* and sold by one planter at 30 cents per pod. I have been asked to say whether that pod was anything like the pods I gave an account of. This pod was 7½ inches long, 10½ inches circumference, weighed 1 lb. in all; seed 12 roundish and 28 flattish; weight of wet seed 4¼ oz. and colour of pod, shape and seed when cut open as near as possible to what I described as No. 2 Cundeamor. This latter was the name attached to the original plant received by me from Trinidad in 1878 and there is now many trees of that variety in Ceylon, planted from seed of that original plant. The pod I described was larger, more in weight, number of seed, etc. Another pod has been sent to me, this is from a Ceylon cacao estate and is also a *Cundeamor*, but grown on poor soil, weight of pod ¾ lb., 41 seed 2⅜ oz. only (wet).

Coffee.

Although the deliveries during April both in Europe and the United States were quite equal to the average rate, the arrivals were rather heavier than last year, says the *Produce Markets' Review* of 11th ultimo, and the stocks showed on the 1st instant a slight increase. On the other hand, the world's visible supply was reduced in the same period by about 5,000 tons against 7,000 tons last year, the total stock being now given as 432,300 tons against 364,440 tons last year. This heavy weight continues to press on all markets, and must do so until there is some prospect of the production being checked. The auctions have continued with the same heavy weight of Central American and East India growths, but the very low rates have attracted more attention, and there has been some recovery. Medium and fine Costa Rica are from 1s. to 2s. dearer, and Guatemala also is about 1s. higher. East India cannot be quoted dearer, and some remarkably cheap parcels have been sold this week at prices which have certainly not been seen for the last twenty years. The present low range must attract buyers both from the home trade and from the continent, and we hardly think that rates can be maintained long on this basis.

The London Market.

Latest advices by mail show that as regards coffee the low prices have attracted attention and a good business has resulted, prices improving 1s. to 2s. per cwt. At the Dutch sale on the 14th ultimo 17,202 bags Java sold at rather below the valuations, the price of good ordinary being 31 cents. A quiet tone has prevailed in the market for Futures and prices are slightly easier for the week. Santos on 17th ultimo opened at 31s. for May, 31s. 3d. July, 31s. 6d. September, and 32s. for December—Indian tea has experienced little alteration. Common red leaf kinds were quitted at low rates, and medium sorts showed no improvement; the best Broken Pekoes, on the other hand, were generally well supported. Recent reports from India point to the output being materially retarded by drought in the Dooars, Darjeeling, and Assam.—Ceylon tea, at the auctions, ruled irregularly and previous prices were barely supported. The spice market has been quiet. Black pepper is dull and easier; of Singapore sales of fair have been made on the spot at 6$\frac{3}{32}$d., July-September shipment at 6$\frac{7}{16}$d. down to 6$\frac{13}{32}$d., and May-July at 6$\frac{5}{32}$d. White is quiet, and no sales for arrival reported; Penang July-September shipment offers at 8$\frac{15}{16}$d., and Singapore distant shipment at 9½d. Ginger, dull of sale.

Ceylon Tea in Germany.

Mr. J. H. Renton has sent the Planters' Association of Ceylon the following statistics:—

TEA ENTERED FOR HOME CONSUMPTION IN GERMANY.

	1899. Kilos.	1900. Kilos.
From Great Britain ...	302,300	322,500
British East India ...	370,500	235,100
Ceylon	included in India	116,700
Holland	123,100	104,000
Dutch East India ...	300,200	380,800
China	1,828,700	1,831,200
Elsewhere	34,100	63,200
	2,958,900	3,053,500
	Say 6,509,580 lbs.	Say 6,717,700 lbs.

Ceylon has only been kept separate from India since September, 1900.

EXPORTS.

	1890. lbs.	1900. lbs.

Costa Rican Coffee in Frisco.

Consul-General Joseph M. Tinoco, of Costa Rica, residing in San Francisco, charges that certain unscrupulous dealers are taking advantage of the similarity of Mocha and Costa Rican coffees to charge consumers a higher price for the Central American product. In his opinion the public needs instructions concerning coffee. During the last four years the world's consumption has increased at the rate of about 1,000,000 bags per annum. In twenty-five years the world's demand for coffee has just about doubled. The *New York Journal of Commerce* observes:—Mr. Tinoco referred yesterday to the report of J. B. Calvo, Minister for Costa Rica at Washington, which has just been published in English by the Bureau of the American Republics, for figures. Minister Calvo writes: "Costa Rican coffee when passing into third hands, is sold under the denomination of Java or Mocha, its resemblance to these products being evident. While this is considered to be flattering to the Costa Ricans, it is to the interest of Costa Rica that its coffee should be known under its proper name to the general public, and particularly to the consumers, just as it is known to the importers and the general wholesale coffee merchants." Consul-General Tinoco has received a copy of Minister Calvo's report. In calling attention to it he thinks that the prime purpose of showing that the Costa Rica coffee is not as widely known under its own name as it ought to be, is likely to be subserved.

GENERAL ARTICLES.

SOME CONDITIONS OF COCOA.

ATTENDANT ON THE GROWING OF SUCKERS.

The following is a paper on the above subject read before the Uva Cocoa Committee on the 11th May by Mr. L. Haweis :—

MR. CHAIRMAN AND GENTLEMEN,—There can be little doubt that, if canker had never made its appearance, the question of growing suckers on cocoa had never cropped up; therefore, at the outset, sucker-growing should be regarded as a method of defence against canker, and in no other light. Incident on the growing of suckers, however, it has been noticed how, generally speaking, the spread of a tree may be increased and its height curtailed, and as this introduces quite another element into the question, the original motive for their cultivation is apt to be lost sight of, and even sacrificed to what at existing distances must be the very uncertain advantage of growing a broader tree. This advantage, or possibly disadvantage, I will not dwell on here; suffice it to say that sucker-growing for purposes of yield is contrary to all tenets of fruit-culture, and we have yet to learn that these do not apply to cocoa. I allude to the fact that fruit-trees bear best when kept to the primary branches; and if "spread" is the objective, the means must be sought not in sucker-growing but in pruning.

There is an idea that the less the knife is used upon cocoa the better. It is obvious that any excess of its use must be deleterious, but to avoid excess it is not necessary to go to the opposite extreme; that is no logical or sensible conclusion.

PRUNING.

In the West Indies, I believe, the cocoa tree, like fruit-trees all the world over, is subject to a certain amount of pruning; and pruning, as pruning, is not confined to what in relation to cocoa we call "suckers" and "gormandisers." The reason why the opinion that it is prevalent in Ceylon is owing probably to the fact that cocoa—Caraccas, at any rate—if carefully tended from its youth up, requires very little pruning of the larger branches, and we have consequently been misled into the idea that the pruning of these larger branches is wholly unnecessary. Further, it is said that every cut in a cocoa-tree is a door for a parasite to enter, but this applies chiefly, I take it, to the older wood, and, considering the small amount of pruning needed, it is not absolutely unpractical to suggest that all larger cuts be treated with tar or some other preservative less injurious to green wood. On the other hand, the objection strikes me as being of academic interest in comparison with the immense good obtained by a judicious use of the knife: theoretically the door is open, practically it is comparatively, rarely utilised, except possibly by white ants—(and white ants do not like tar, or a kerosene emulsion)—while borers of all sorts show no particular preference for a cut surface, put prefer rather their own insidious method of the combined gimlet-and-corkscrew variety in greener and softer wood. But it is also a fact that very old wood is often actually softer than younger wood, and this may help to explain why such old wood does in many cases actually fall a prey to all sorts of insects—scavengers and others. This brings me round to my original point, for when the old wood arrives at the stage when on account of its softness it attracts pests, it seems fairly reasonable to cut it out. And this wood it is which most planters will believe with me to be most subject to canker.

CANKER.

Canker having left its card in yellow leaves and impressed its seal of the familiar claret-hue, nature's first impulse is of reproduction. This effort may take the form of fruit or "suckers," or both. When the process of dying is rapid the tree has time for no exhibition of this kind; but when it is long-drawn-out. fruit or suckers, or both, may appear, according to the virility and general condition of the tree. In the case of suckers, as in the case of fruit, they mature according to the extent they are unaffected. If affected badly, the pods turn black, and the tips of the suckers droop and follow suit; but the suckers rarely die back in this way unless the process of dying is going on fast.

The process of dying, however, may be delayed and, under certain conditions, arrested by proper treatment, when the life of the suckers is saved, and we get new wood from the old root. It often happens, too, that the old tree recovers, and, if not too many suckers are allowed from the base, continues to bear as formerly. But if the tree is aged, the old wood gets weaker and softer, whole of its strength being absorbed by the suckers. When this the case the old tree should be cut out to give the suckers eve chance, and then?—then we have lost all crop from that tree fo year or eighteen months, until the suckers have matured.

This, I think, is a fair statement of facts, and this it is wh has turned planters' attention to growing suckers, not merely diseased trees, but on healthy trees also, in order to be prepa for a possible attack of canker.

Now, what is the effect of canker in the old tree upon the sucke It is clear, that if the suckers are to justify their existence, th must be kept from canker. A certain sacrifice of crop may ha been, and generally is, the immediate result of growing these sucke Therefore their well-being is of paramount importance; for, sho they become diseased we shall have lost both crop and suckers, a from every point of view this is disastrous. Then comes the fa question, can we cure the canker in the old tree? If we can, must do so; if we cannot, the old tree must come away; for to k tinkering at the tree while the canker is possibly spreading to suckers is not to be recommended. The risk is too great, for o the suckers are gone our labour has been in vain. As scarcely boldest, and youngest, planter would guarantee, I imagine, to "c the canker," let us suppose the old tree is cut out. The immedi effect is probably diminution of crop, the ultimate effect the rott away of the old stump. If the old stump rots away quickly suckers are again in jeopardy. Suckers, however, if close to ground, or if the earth be heaped up around them, will throw do fresh roots, which very usually are not strong enough at first to b their own weight. Sometimes, perhaps, in the majority of ca nothing will induce them, short of props, to retain the perpendi lar, and the weight of any pods they may bear generally bri them down in spite of the props which are seldom free from wh ants. So, what are we to do? We cannot honestly trust 75 per ce of these suckers, so that the need of putting in a supply becon obvious. What is even more obvious is that the supply sho have been there six years before.

The effect of canker on a medium-aged tree is not dissimilar eminently more hopeful. There is little doubt that the best "bu cocoa," that is to say, the bush the suckers may be trained i after the old tree is cut out, is grown from medium-aged tre Their luxuriance of growth nearly always infects the old stu which is not so liable to decay, but they are by no means so apt throw down roots of their own. The case appears to be one m of adaptation to circumstances than of independent action, it is possible that on this very account, perhaps, they are more to be relied on than suckers from aged trees. A medi aged tree, then, provided that the main stem is cut out in ti has a fair chance against canker, but the suckers rarely b under the year.

"BUSH-COCOA."

It is a curious thing, and I wonder if others have noticed it, t suckers in bearing while the old tree is still alive, when it is out, do either one of two things, but rarely both; either t continue to bear putting on leaf very slowly, or they expend increased energy they obtain from the large root, deprived of main stem, in growing out into a fine spreading bush the branc of which cease bearing altogether, save for a pod or two, until t are fully matured. This applies to suckers on old and medium ag cocoa alike, and points to the fact that "bush-cocoa" can be gro only at a sacrifice of crop, illustrating the old and unexplo dictum that suckers on fruit-trees are deleterious.

But a tree in bush-form has the advantage, not of being any subject to canker indeed, but of having several more stems th nature usually supplies; so that it is often possible to cut av half or three-quarters of the bush, and still have something to sh in its place. That such bushes bear as well as the original tree n be doubted, but that they do bear at least fairly well is undisput and, possibly, under a modified system of culture, they may almost as remunerative. At any rate, experiments are encouragi

So that, as it is obvious that a young plant, in bearing, if possi should be ready to take the place of an old cankered tree, it occurs to me to ask whether it would not be desirable to be re with a tree in bush-form.

Now, the growing of bush-cocoa introduces variations on meth and results, with which we are not entirely familiar.

Anyone who has cocoa at 12 ft. by 12 ft.—and we all have—kn that well-grown Caraccas trees interlace at that distance; the

ore greater spread on our old fields we do not want. On the other and, most of us are now replanting with Forestero, of altogether arger growth, and I am aware of an instance of a proprietor having lanted Forestero at 18 ft., who complains of being laughed at. Some of you, gentlemen, at least will know of Forestero at 12 ft. nd also that 15-year old trees have an average perimeter of at east 20 feet; but I am not aware except in one or two instances of ny practical conclusions having been drawn from that significant act. On the contrary the piling of pelion on assa is common, for n a certain such field I have in my mind the V.A. ordered suckers o be grown.

If, therefore, it is proved advisable to start the cultivation of "bush-cocoa" in good earnest, the usual distance of planting is manifestly inadequate for even Caraccas; how much more so, then, or Forestero?

THE "RULE OF THUMB."

And now I am going to be heterodox. Nothing is more noticeable in the story of Ceylon cocoa than the "rule of thumb." Cocoa n Ceylon was originally planted—I speak generally—without shade. Something occurred—probably helopeltis—to show that shade was beneficial. Everyone planted shade—even planters the condition of whose estates left nothing to be desired. I will not dwell on what distances that shade was planted; everyone knows that; it was overdone. Then canker came; light was pronounced inimical to canker; the shade was cut out. Neither will I dwell on now that shade was cut out; everyone knows that, too. In many cases it was overdone. But canker has taught us something else; t has indicated that Forestero is the hardier (if less valuable) variety of the two; and as Caraccas dies out Forestero is now being almost universally substituted. And what I want to ask is whether this also does not threaten to be overdone. Unless Forestero is as remunerative as Caraccas and as at present cultivated it certainly is not, it is quite possible planters will regret the universal adoption of it. Incidentally, it occurs to me to ask what would a large majority of estates have done if, instead of Caraccas, there had originally been planted Forestero? There can be little doubt that the wonderful bearing qualities of Caraccas have done for cocoa in this canker crisis what Forestero, as known at present, can never do. There is, however, good reason to suppose, that many varieties of Forestero, hybrids, besides being hardier, (a fact which has not been indisputably established) are quite as remunerative as Caraccas. But they have yet to be sorted out and this has not been done. Moreover their great irregularity of form largely augments the difficulty of their cultivation, and it is well-known that Forestero suckers act in a very different and far more irresponsible manner from Caraccas suckers. To grow a fine bush from a felled Forestero tree is infinitely more difficult than from a Caraccas tree, so that it almost seems that suckers, if grown at all, were better started during the new clearing stage, and it has yet to be proved that suckers on new clearings, however, carefully tended, do not increase the non-bearing period a full year, or even two.

GROWING SUCKERS ON NEW CLEARINGS.

The question of growing suckers, then, is a much deeper one than on the surface appears. In the latest stage they are untrustworthy, and as canker generally attacks the oldest trees first and worst, it would be well if at the age of, say, ten or twelve years, all fields were planted up again, especially as cocoa planting is not an expensive item, and this system would be an excellent preventive against at any rate the spreading of canker, for we could well afford to cut out the old trees for the sake of the new ones. But a tree at ten or twelve years of age is at its prime—just the time when the most successful bush may be grown; the growing of it into a bush at this age in the event of canker making its appearance does not, however, obviate the necessity of supplying up.

Remains, then, the question whether planters are willing to start suckers on new clearings. I confess to a great reluctance on this point, and in view of what may be done in the way of planting up afresh and cutting out later, the matter scarcely seems worth as much consideration, except as a counter to canker, as whether Caraccas should not again be planted up rather than Forestero.

THE MERITS OF FORESTERO AND CARACCAS.

Gentlemen, it has been said, and said truly, that the wisest minds are open to doubt; and I would point out that there is even more doubt in the cultivation of Forestero than in that of Caraccas, about which latter we certainly ought to know more. Whatever advantage Forestero can legitimately claim at this present over Caraccas it is almost entirely speculative; for not even greater immunity to canker has been proved. Yet I am willing to cede this point, considering all things, and in ceding it I will quote against its height, twice and three times the yield, plus as near total immunity from canker as may be obtained by cutting out at a suitable age in favour of a younger and more vigorous tree

With regard, then, to what is going on around us, I mean the almost universal adoption of Forestero, I would ask you to decide, if possible, upon something definite. I would ask you to weigh carefully all the pros and cons, and to judge whether Caraccas has indeed merited the disgrace heaped upon it. It has done us more good than ill. Whether canker has come to stay or not, it will not do, however, to be unprepared for it; but neither is it advisable to deceive ourselves into thinking that sucker-growing on old trees is an effectual counter-policy. I have tried to point out that as a makeshift it passes muster, but that it cannot obviate the necessity of eventful supplying up. And I know of too many instances to the contrary to be convinced that sucker-growingon new-clearings is satisfactory. There can be little doubt that they delay crop, and there can be no doubt at all that should the tree be attacked by helopeltis, it suffers more through being killed back from six extremities than one. To carry the idea a little further is to introduce a possible absurdity, but it is worth noting that the abundance of extra flush may even be regarded as the finest attraction for helopeltis human ingenuity could invent.

So that, except as a makeshift against canker, I have no good thing to say for sucker-cultivation—least of all for Forestero suckers, which, after abusing every confidence and baffling every hope, not seldom remain to delude the trustful superintendent into apologising for them in the name of experiment.

On the other hand, and in conclusion, I have heard it mooted (I believe in connection with Samoa) that suckers on new-clearings actually induce the tree to bear earlier! I do not know what truth there is in this, but we do know it is contrary to all cocoa planters experience in Ceylon, and I am inclined rather to be content with those ills we have, and to make the best of them, than fly to others we may end by regretting even more.

THE CEYLON COMMISSIONER ON THE AMERICAN TEA MARKET.

The following letter has been addressed to Mr. E. Tye, the Secretary of the Indian Tea Association (London):—

DEAR SIR,—As requested by you, I send a short report on our tea business in America, as I found it during my recent visit there. Although the progress made in the introduction of Ceylon and India teas has been, I think, very considerable during the last seven years, it might have been very much more so were it not for the many unforeseen obstacles we have encountered. Four years ago "standards" with a sieve test were sprung upon us, in order that leading American houses might, by keeping out low grade teas, sell an immense quantity they had in hand. The success of this political move will be understood when I say that the value of their stocks rose from 4 cents per lb. to 10 cents, as soon as the law was passed. Then followed the 10 cents duty, which has lowered the consumption of tea in the U. S. by $\frac{1}{3}$rd lb. per head, or nearly 25,000,000 lbs. per annum. Our teas are the only kinds which have not fallen away, but on the contrary have increased year by year. Last year the war in China threw an immense surplus supply of China Congous into the States. This tea cost an average of 10 to 11 cents in New York, but owing to quantity, the price fell at once to 8 to 9 cents, and cheap as our blacks have been, they could not compete. Houses already loaded with Congous could not purchase other black teas, however cheap.

The imports to the States and Canada during eight years of Ceylon and India tea have been as follows:—

1894, 4,723,000; 1895, 7,792,000; 1896, 9,474,000; 1897, 11,361,000; 1898, 13,608,000; 1899, 16,700,000; 1900, 16,130,000. This last year shows a slight falling off, but very slight indeed, considering the statistical position of China Congous. The fall has been entirely in Indian, Ceylon showing a good increase. Can this be due to India's withdrawal of funds? Ceylon: 1899, 8,298,000; 1900, 9,173,000, India: 1899, 8,487,000; 1900, 6,958,000. In the teeth of all those obstacles, and especially considering the enormous decline in the U. S. consumption of tea generally, I think the expenditure

incurred by Ceylon and India, in introducing their teas into America, has been amply justified by results. Subscribers should not be misled by such appeals, calculated to cause discontent, as may be found inserted editorially in the *Colombo Observer*. In that paper last month, referring to Messrs. Gow, Wilson & Co.'s table of re-exports, it is said: "This record deserves the serious consideration of the Thirty Committee and all proprietors, who pay the cess. For, unfortunately, America, which has absorbed so much of the Ceylon cess during the past five years, did very little better for us in respect of her purchases of our tea from London in 1900 than in 1896—at least, if Canada has advanced, the United States have gone woefully back.

"Ceylon tea exported from London :—

	1896.	1900.
Canada	1,265,906 ...	1,820,521
U. S.	1,408,084 ...	987,500
	2,673,990 ...	2,808,031

With this, however, we should compare the direct shipments from Ceylon, Canada, and U. S. A. 1896, 502,713 lbs.; 1900, 3,980,000 lbs." What need the payers of the cess care whether the teas go from Colombo or London? If amounts fall away in one place, they grow in the other. For instance, shipments from Colombo this year to the end of March are far below those of last year, but mark the increase from London direct and transhipped:—

	1900.	1901.
Ceylon, three monhs to end of March ...	948,000	1,735,000
India, do. do. ...	888,000	1,474,000
	1,836,000	3,209,000

America buys in what it considers the best market.

The imports of Congous last year were over 19,000,000, against 11,300,000 the previous year. These figures are the shipments from Shanghai and Foochow and with, say, 16,000,000 from India and Ceylon, represent the consumption of black teas in the States and Canada. Of green teas, and partly fermented Oolongs and Formosas, the imports are about as in this table:—

	Lbs.
Green Japans	36,000,000
Green China	15,000,000
	51,000,000
Oolongs and Formosas	17,000,000

We have already got the market for 16,000,000 lbs., out of an average consumption of about 28,000,000 lbs, of black teas. Not the taste of the consumers, but his indifference to quality of tea and the vested interest in the East of the old established importers prevent us from rapidly acquiring the greater part of the remaining 12,000,000 lbs. Now as to green teas and partly fermented teas, where the field is 68,000,000 lbs., as against 28,000,000 lbs. of blacks—here again I must warn planters against the assertions of disappointed editors. The same paper above mentioned, in writing of my work with greens, says: "More black teas are consumed in America than green teas." Let the above table be proof against this statement. It also says, on April 19th: "The total export of green tea up to same date (April 16th) is given as 15,850 lbs. of which India took 3,890 lbs., and America 12,000—same as it was four weeks ago." These figures it has given several times, apparently to pour cold water on my advocacy of greens. A moment's thought or inquiry would have convinced the editor that this is absolute nonsense. To London alone more than this amount has come. There is one firm in Colombo that executes a contract with a Toronto house for 20,000 lbs. of green tea per month. This same firm landed 1,000 chests in America last week, in execution of an order entirely independent of the above Toronto firm. If only 16,000 have been shipped, what has become of the 4 to 500,000 lbs. on which duty was paid during December and January, February and March? I think there are four firms doing extensive business with Canada, who can account for most of it. I notice those editorial attacks only to show how difficult it is in the face of them to induce those interested in it to continue patiently the manufacture of green tea, until it becomes a factor on the American market. The enemy is in our own household. But, notwithstanding, I am more confident to-day of the ultimate success of Ceylon and India greens than I have ever been. I have had numberless opinions of its quality and merits from dealers able to judge, and except the coarseness and ugliness of the Pekoe Souchong, made when coarse plucking was in vogue. I have had only one complaint—that for the Quebec Province, the liquor was too fine. Of course th are very strong obstacles—the strongest being the vested inter in the East (China and Japan) of those who control the grocers brewers do "tied houses." These few firms are more united opposing our greens than they were with the blacks, because th trade in greens is so much larger. A second obstacle is difference. A Montreal gentleman, who has been pushing greens, writing a fortnight ago, says: "It is not so much pub indifference as it is trade indifference, because Japans have established sale, and for Ceylon greens missionary work is nec sary. Then the wholesale trade are showing a much more interes front in reaping out the greens; their travellers poison the groc minds against giving our teas a chance. In dealing with grocers we are not dealing with business men, but with mildew fossils, who will not draw one tea against another. If they they would be speedily convinced." Another writing me s months ago, and he had bought a few hundred chests: "The liq of Ceylon greens, in our opinon, is excellent, but the leaf of Ceylons being so different will make them hard to introduce. you not imitate the dry leaf more closely. Try to please the eye well as the palate. This is the time to push them, one dollar sp now is worth double or treble six months hence, when Japans n be cheaper, and the sentiment for British goods not so stron True, but I can spend nothing while I get nothing, I can o include "green" with "black" in advertising. A few small sub dies just now would greatly help to remove prejudice. I beli the difference in appearance of dry leaf is merely a matter machinery. A roller need not necessarily twist. Another obsta is the way business is done in America. When our teas are bou in Calcutta or Colombo they are consigned to an agent or brok say in Toronto. This agent *must* sell to a wholsesale house, no be the grocer direct. Now wholesalers in the States and in Can (French and English) have told me repeatedly they never handl new article until the grower or manufacturer has made a mar first. They will not do missionary work, their travellers object it, as while engaged in educating, another firm's travellers sell grocer what his customers have been accustomed to take. Tr ellers have to earn their wages, which depend on sales. Now had been making green teas in some quantity in Ceylon for months before I reached Toronto in March. Nearly all those t had been consigned to about six brokers in Toronto and Hamilt I had been warning the Ceylon Committee almost every mail t their bounty and the very low prices for black teas would, combin cause an accumulation in Toronto as we had no money to h to make sales and overcome the obstacle of the wholesaler, and travellers. I found it so. True some string packet tea firms w pushing the green tea, but they drew most of their supplies dir from Colombo. A few houses had bought some which were chie used in packets. But the brokers were all loaded up and had wi to stop shipments from Colombo. Things looked very blue, a the only encouraging features were that the packet people w hopeful, energetic, and full of praise of the quality, and that Jap were scarce and dear. One importer suggested to me to ge number of ornamental canisters made large enough to hold 50 60 lbs. of tea, and offer one to each wholesaler for each 100 lbs green he bought. This canister to be given to any grocer w bought 100 lbs. of green and photos of the canister to be given the travellers to show the grocers. I had 1,000 canisters ma marked "Ceylon Greens Teas" in large letters, and the accumu tion of teas was swept off in a fortnight. I returned to New Yo and when there I had letters from various Toronto brokers to effect that they had sold their stocks, and all afloat. One of th wrote:—"I wired on March 10th to double my order and on 20th instant to treble it. These canisters are standing adv tisements for Ceylon greens in perhaps 1,000 shops. In Mo real no wholesaler would listen to me as they are much m conservative there. But I hope to break through the ring th before end of this month. I have been waiting for greens to arr from Colombo, as there were none left in Canada. In New Yo I will only say that I was surprised by the favourable recepti our greens were receiving about end of March, and I ha had most encouraging news since I returned. I could give ma pages of quotations from letters from many sources, all which are encouraging. But I must confine myself to a f From New York, a fortnight ago:—"The only thing we ha to fear now is cheap inferior teas being sent from Colombo to

rices, destroy profits, and disgust our friends." This is from a trong New York tea firm. From Buffalo: "Our trade in this ity in blacks is 1,000 lbs. a week. With the same trouble we hould do 5,000 in greens. In Utica and Syracuse 'green' is the reat factor, see enclosed orders." He strongly recommends our oing something to attract attention during the Exhibition at uffalo, but, unfortunately, there is no money. From Toronto: One of our travellers sent us nine orders this morning, six of hich were for greens. Another Toronto man writes: "I am get-ng on well with the greens; had orders for 400 lbs. this morning" nother grocery firm in the country beyond Toronto writes:—"We ad 100 lbs. green Ceylon first week in January, 500 lbs. in end of anuary, 500 lbs. early in March. It is the finest tea we ever tasted, nd we have yet to hear the first complaint about it." These are amples of scores, all sent unsolicited. They may be deceiving me, ut I think not. Many grocers have ordered them a second, third, ourth, and even fifth time, while, of course, others return theirs. t seems to me there are two ways of getting the teas introduced.

1. Make a large quantity and send it over to be sold for what would fetch. If 2,000,000 lbs. were made in India and dumped in n America at 1d per lb. loss, it would cost India £8,000, which he industry could well afford. It would relieve the Engitsh narket, and be an introduction to the American one.

2 That companies should agree as to who should make the tea, hat the makers should blend the standards in large lots, and that ea instead of making a loss of 1d per lb. as in the first method, the eas should be held for paying prices, the 1d per lb. being used to rease the wheels of distribution, as I did with the canisters in oronto. Tere are many other important matters of which I do ot care to whrite, but over which I would like a talk with you.

Yours truly,
W. MACKENZIE.

P.S.—What is wanted is a regular supply of green teas for merica. Spot teas can be sold, but orders for teas to be delivered our to six months hence cannot be obtained. At present it is the upply; not the demand, that fails us. Since I wrote the above etter I have had two instances of valuable progress with those reen Ceylons. A New York firm bought 25 chests six weeks ago, he first they had handled. Within a month they had opened up 0 accounts with grocers who had not handled any Ceylon green efore, and they had increased their purchases from 25 to 300 hests. Another firm in New York bought 25 chests three weeks go—their first order. I have just learnt by wire they have ought another 150 chests.

SISAL GROWING IN THE SURMA VALLEY.

J. writes in *Capital*:—

A good deal of attention has been given lately to the subject of growing fibres in the Surma Valley delta, but, so far as we can learn, there is very little reliable information on the subject. It has been proved indeed that sisal will grow and that the fibre, if well dressed, brings £30 and upwards per ton. Beyond this there is nothing trustworthy forthcoming. We know that Mr. Joseph Chamberlain put a large area (some 6,000 acres) under plant about 10 years ago in the Bahamas, but nothing further has been heard regarding this, and there lurks a suspicion that the returns have not been what they were expected to be, or we should have heard more on the subject. The period of ten years is too long a one for any gold mine not to have been found out, the secret would have leaked out long ago. Dr. Prain, the present able Superintendent of the Royal Botanical Gardens, is of opinion, we believe, that, as an industry by itself, it would not pay, but that it might do so as an auxiliary to tea, or indigo, where there would be enough steam power on the spot, which could be utilised for the extraction of the fibre without incurring original cost for expensive plant which could not be employed profitably throughout the year, unless the plantation was on a very vast scale. A writer in *The Field* throws some light on the subject of what return may be expected, always provided our climate is equally suitable to the growth of sisal, as that of the Bahamas, or Windward Islands and there is no reason to suppose that much difference exists, for both places are more or less tropical. Judging then from what this writer says, the outturn would indicate a crop of dressed fibre of 900 lbs. per acre, or considerably less than half a ton. We have no statistics to say how much can be got from the plant in Assam, but we do not imagine that it would be safe to calculate on any larger output nor would it be safe to calculate upon £36 sterling as a price per ton. Before the Spanish War the same fibre was selling at £18 to £20 per ton, and now that peace has been proclaimed, and the ploughshare taken the place of the sword, the natural inference to be drawn is that the fibre will revert to a normal and not an inflated price, in which case, if our forecast is correct, it would be unwise to calculate on more than £25 of the dressed material, so that the nett result financially upon the abovementioned calculations would read just over £10 sterling, or Rs. 150 per acre. Dr. Prain, we believe, estimates 4 per cent. a good return of fibre to the raw material that has to be handled, so that the cartage from a large area would be a most costly item of expenditure, as only 4 lbs. of fibre would result from the handling of 100 lbs. of the raw stuff. If fibre is to be grown at all as an industry by itself, a plantation of less than from 600 to 1,000 acres would not be worth entering upon, so that taking 640 acres to the mile, if the factory were situate even centrally the cartage from the field to the factory would be a costly item; as, for every ton of fibre, about 24 tons of leaves would have to be handled, which is an enormous weight, and for cartage alone would mean a serious item in expenditure, nor, it would seem, can any product be evolved from the crushed pulp. No doubt in time some profitable use might be found for the enormous mass of pulp left at the decortication. The amount of gummy substance exuding might be utilized chemically, but, so far as we have gone in the way of experiment yet, no such discovery has been made, and we cannot therefore include this as an item of income. In fact the only one item that we can safely count upon is the £25 sterling we get for the fibre per ton. True, the cultivation of the sisal requires no expenditure after the original cost of planting is met, but there must be a gang kept on any plantation for the purpose of filling in, for this must be kept up steadily, else the supply of leaves would soon cease. Suppose a plant lasts say three years after maturity, then this means filling in the whole area in three years, but it would be out of the question to keep a continuous supply of leaves to be acted on, and it would be necessary to have 3 rows or lines of plants coming on, *i.e.*, if the sisal plant takes five years to mature before cutting begins, the planter would require to run in one row between the others a little to one side of the original one, so as not to interfere with the growth of the sucker or bulbs put in, nor with the cutting of the leaves of the mature plant; two years after the original planting had been done, and again another in the fourth and fifth years, or the source of supply would soon get exhausted. Thus, although the actual cultivation would not require many attendants, still a considerable staff would be necessary for supplying or filling in cartage and decortication. To meet this, we have an income of Rs 150, and in addition have to pay for freight, pressing insurance, brokerage, etc., so that if one considers all the different items of expenditure calmly, it makes one think Dr. Prain is right, and there is not much in the fibre growing after all the fuss that has been made over it. It may be contended that the price we have quoted is a pessimistic one. Let those who argue this way remember that we have taken an average between an inflated and a depressed market, and, we think most reasonable people will agree it is a fair way to calculate. We have purposely avoided entering into any figures with regard to cartage, etc., let those who feel inclined to invest make their own. We have put bold facts before them, and they can fill in the gap for themselves as rates differ so much in different parts of India.

MILD COFFEE.

The well-known and popular firm of James W. Phyfe & Co., whose years of experience in the East India coffees especially qualify them for accurately diagnosing mild coffee conditions, announce a shortage in production of 30 to 40 per cent. The entire crop of Java in 1900 was 542,000 piculs; in 1901, 383,000 piculs (133⅓ pounds). Totals of other East Indian brands in like proportion.

A natural influence would point to advanced prices; but several conditions are neutralizing the effect of the crop shortage. While a strictly fine Java is completely side tracked, there is a big stock of Padang Batavia, Macassar, etc., in New York.

Demand has not been quickened materially, because retailers can realize greater profits by selling mixtures (largely compounded of Stantos coffees), instead of the genuine East Indian goods. Bourbon Santos, which is a twin brother of Mocha in looks, can be bought for 10 cents per pound; Mocha (green) costs 18 cents. Best grades of green Brazilian bring 8 or 9 cents, while green Java calls for 20 to 25 cents.

It is no wonder that an old New Yorker the other day lamented that, while he was willing to pay for it, he could not purchase the fine fragrant blend of genuine Java and Mocha that gladdened his nose and cheered his "innerds" a dozen years ago. We confess the substitution of the poorer for the better is widespread, but we are sure there are yet a goodly number of retailers who can and do give their patrons the real thing.

We hope our "old New Yorker" will try again and discover the fragrance and flavour of his early love. It is to be had, but only from those dealers who conscientiously make quality the first consideration. Coffee is to be had, in this city, of exquisite body and flavour, and fully equal to that which tickled the palates of our fathers and grandfathers.—*American Grocer.*

"FOXINESS" IN COFFEE.

Mr. Howard O. Newport writes in the *Queensland Agricultural Journal*:—

The matter of "foxiness" in coffee is receiving some attention in some of the coffee-growing centres at present, where various opinions are being expressed, and theories propounded regarding its cause as well as suggestions for its prevention.

This is an important matter that has received too little attention here hitherto. I have found it necessary to emphasise this point in curing, in demonstration in the field on several occasions, and have also touched upon it in various articles, but a few connected notes may be of advantage for reference.

"Foxiness" is a term applied to coffee in its cured state, when it appears of a uniformly dull or blotchy reddish-brown colour, instead of a blue-grey or semi-transparent and clear slate. This foxy colour indicates a very material change in the flavour, and consequently considerably reduces its value.

Several ideas about the cause of foxiness in coffee would seem to be current, such as that it is caused by the adhesion of the silver skin, that the red colouring matter of the skin has sunk into the seed, that foxiness is caused purely by picking when over-ripe on the trees, etc., which on investigation prove only to be half-truths, or quite without foundation.

A careful study of the matter will reveal the fact that the reddy-brown colour of foxiness is always due to fermentation in some form or other, and is generally occasioned during some portion of the curing process. The adhesion of the silver skin may be caused by undue fermentation, and so may be one of the effects of foxiness, but it does not cause it; nor is the fact of the silver skin adhering to the bean necessarily evidence of foxiness.

The red colouring matter of the skin is exceedingly difficult to extract at any time, and will not readily sink or soak into anything, while the colour of foxiness can be readily obtained after the skin or pulp has been removed entirely. Picking when over-ripe though often the cause, is not by any means the only, or even general way that foxiness is caused.

A foxy sample of coffee may be due to any of the following causes:—1. Picking when over-ripe and fermentation has set in under the skin, when if intense, as in most hot, moist conditions, the inner bean is affected. 2. By drying in the cherry. 3. By delaying in pulping after picking, when fermentation again takes place, encouraged by the heaping of the cherry. 4. By fermenting in water, or by insufficient drainage of the fermenting vat, whereby the fermenting water soaks into the bean, mostly at the fold. 5. By over fermenting. 6. By under-fermenting, whereby the process of fermentation continues after washing, owing to the presence of small particles of saccharine matter. 7. By irregular fermenting, usually due to thin metal or wood fermenting vats; insufficient covering or protection from varying temperatures, etc., whereby the centre of the heap is over fermented while the outer parts are insufficiently done. Irregular fermenting may also be due to bad pulping and the presence of a quantity of unpulped cherry, or pieces of pulp, in the fermenting vat, around which t process is quicker than elsewhere. 8. By bad drying, especially over or under fermented coffee, the retention of dirty water washed parchment (in wet weather when drying is difficult), or dirty trays or receptacles for the newly-washed parchment, where a re-fermentation is induced.

While foxiness is thus easily, and in many ways, induced, it comparatively easy, with a little care, to avoid it. When a bat by some chance or other, has become foxy, however, it should kept separate and not mixed with the "A" or first quality parchment or clean coffee. Even a small percentage of either c foxy, discoloured, or broken beans will make an appreciable diff ence in the value of the sample. Because of some such accid the grower need not conclude that his coffee is hopelessly spoilt valueless. It is true that one foxy, it cannot be remedied, but t process of fermentation that is inducing the foxiness may be, a should be, arrested as soon as noticed. There are degrees of fo ness. The fermentation may have commenced, or proceed through or under the parchment skin, from any of the abo causes, and yet have only discoloured the silver skin, or caused to adhere to the bean, though not have affected it, or only ve slightly done so. A foxy silver skin may adhere to the bean a require careful and extra "polishing" to remove, and yet t sample not have necessarily deteriorated.

To prevent foxiness, therefore, attention must be given to picki fermenting or curing, and drying, and not to one process on for all the advantage of careful work in one direction may be l by inattention or carelessness in another.

The colour of coffee is a matter apart, and is, as I have alrea stated, rather a thing to retain than to obtain. The yellow-bro colour of coffee, too quickly dried by artificially means or "sweate must not be confused with foxiness. This colouring is due to qu different mechanical effects, and, though very similar at fi sweated coffee, sooner or later, turns white or patchy in colour.

Foxiness is one of the chief points that determine high and l grade coffees, and, as it is very necessary to produce a high-gra article, is a matter especially worthy of attention and care.

That foxiness does affect the flavour will be obvious to any grow who will take an undoubtedly foxy sample and taste the liqu produced from it side by side with that of a good-coloured samp The smell and taste so well known to growers in their pulpi houses will be apparent, though of course in a lesser degree.

The delicate differences will not be readily noticed, however, the grower, where the trained and expert coffee-taster will not o detect the slightest taint, but value the sample of coffee according to a fraction.

Coffee-drinkers may be met with who profess a preference the flavour of foxy coffee, and maintain that such coffee is in way inferior in quality. Such, however, are in the minority, a that foxiness in coffee is an evil to be avoided, if possible, growers is sufficiently shown by the fact of such coffees obtaini lower prices in the open markets.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange, *April 20th*, 1901.—Ninety days' Bank rate on Lond opened on Monday the 15th, at $12^5/_{32}$ and $12^3/_{16}$ and closed t evening steady at $12^3/_{32}$ to $12^7/_{16}$th for the market. In spite determined efforts of one of the banks to keep them down, as so as the pressure of certain large liquidations was removed ra reasserted themselves and closed firm with every appearance o further rise.

The banks are said to be acting prudently and to discountenan anything in the shape of last year's reckless plunging. Sales delivery at long dates are, therefore, discouraged and even *repo* from one month to another are not easy. Should such prud counsels prevail it is possible that exchange may rise on its o merits and, speculation being thus confined within narrow limi without serious reaction. There is no doubt whatever that up the present Exports have been ample to supply all the bills nec sary for the market's requirements; nor, unless imports shou suddenly increase, is there any reason to believe they will continue to do so for some time to come at least.

The value of coffee shipments, *embarques*, during the past week was £269,000 as compared with £328,000 for the previous week and £251,000 for the corresponding week last year and, judging from the declared sales (212,000 as against 140,000 of the previous week), will be still larger during the current week. Rubber bills seem to be failing but even so the probability seems that there will be at least 2,800,000 bags of coffee available for export up to the end of the current crop that will yield at a low estimate £1,000,000 without counting on the almost certain increment of bills that anticipation of the new crop will bring.

The value of imports during January and February, that will be payable about May or June, is known to be particularly small and, though they seem to be now increasing, the effect on exchange will not be exercised until July, when bills should be particularly plentiful.

It is likely, however, that the supply of ready produce bills will fall off for a month or so, but even so the supply will be ample to meet demand and that even of exchange do not rise, there is every probability of its keeping steady. Indeed it would be far better for everyone concerned that it should do so, as such violent oscillations whether upwards or downwards cannot but be injurious to the interest of most of the industries of the country.

It is, however, scarcely to be expected that such will be the case, and all that can be hoped is that the Banks will do their best, as they seem to be doing, to discourage plunging and maintain rates as even as possible.

Coffee.—Whether the shrinkage of entries noticeable at Santos last week really indicates the long looked for falling off is difficult to say with any certainty, but in the present congested state of the market every little helps and a reduction of 14,751 bags, compared with the previous week's, arrivals total can only be a matter of congratulation, although it. even so, represents an increase compared with last year of nearly 84 per cent. Still it is usual for entries to fall off very rapidly from now to the end of May, and, even if the crop prove as early as is anticipated in some districts, some reduction must be looked for. It must be confessed that the current crop has proved a surprise to everyone and shows that the new coffee that comes into bearing year by is a factor that, for want of proper statistics, is practially incalculable but that, nevertheless, even more than the weather, practically determines the volume of crops.

In Rio and Minas. where there are very few trees under six years, the tendency is towards a regular shrinkage of volume. This tendency may be exaggerated by unfavorable weather, as this season, or counteracted by good weather as will be the case next season, but the tendency unquestionably exists and is not appreciably affected by new coffee, which is insufficient, generally, to even make up for the loss from trees ceasing to bear that are not replaced.

At S. Paulo it is different. There, the number of young trees coming yearly into full bearing is enormous and exercises a determining influence on the volume of the crop. When to this circumstance is to be added the fact that the weather has been throughout exceptionally favourable, there seems every reason to believe that the coming crop will be at S. Paulo as in Rio, Minas and Espirito Santo, the best on record. It is possible, of course, that the present heavy crop may be followed at S. Paulo by a smaller one; but not likely, because, whatever may be the case on the tired lands of Rio and Minas, the greater part of the S. Paulo plantations are not old enough yet to have exhausted the soil in a manner likely to affect bearing.

When reports from every district in the States of Rio, Minas and Espirito Santo are unanimous in their description of the coming crop the biggest on record, it is asking too much to believe that an imaginary frontier line could exercise an influence powerful enough to reverse climatic effects altogether. It is not disputed that the weather has been unexceptionally favourable in S. Paulo as in the rest of the country, and we fail to see what grounds there are to expect that the coming crop in S. Paulo will not be as proportionately larger than the current one as in other parts of the country.

As regards weight nothing can be said with certainty. Last year the weight of coffee was certainly extraordinary, but there are no reliable indications so far that it will not be so again this year; that can only be known when the coffee is actually gathered. Whether all the crop will be marketed is another question, that depends on prices. At present prices we are of opinion that it will not; though the amazing manner in which coffee continues to be sent down especially in São Paulo, in spite of prices that a short time ago seemed absolutely prohibitive, is certainly confusing. What is the minimum cost of delivery at the coast; or is there any minimum at all? Such are the questions that are exercising and disturbing the minds of dealers here and everywhere else. One thing is absolutely certain. As soon as existing stocks are disposed of, should exchange continue to rise sterling prices must rise too.

The tendency of exchange is certainly upward. Can that tendency be preserved until sterling prices are forced upwards under the pressure of short supplies? On that practically depends the future not only of coffee but of exchange itself. Unless it be so, and if instead of coffee rising exchange have to give way under a short supply of bills, the situation might become extremely dangerous, because, though the fall of exchange would tend to stimulate exports, prices might be still further depressed abroad and a simultaneous bear speculation be started in coffee and exchange that might prove irresistible. The only hope of securing better sterling prices for coffee under such circumstances is by maintaining the balance of payments in our favour at all risks, so that the shrinkage of sterling coffee value shall be compensated by the reduction of sterling obligations.

At present there seems some danger of imports being unduly stimulated by the rise of exchange, whilst the renewal of specie payments, though remittances are not absolutely enhanced thereby, will make relief on that side impracticable. So long as there are plenty of bills, speculative or otherwise, no doubt rates will be rising and, probably, continue so until July or August, when great part of the coffee crop will have been anticipated and the reaction commence. Then the danger will begin, that may, unless provided against, become a *débacle*.

During the past week the market at Rio was weaker throughout, sales having been made as low as 6$300 for May options. On Saturday the feeling was somewhat better in consequence of a slight reaction at New York, but the sentiment of the market is of simple dismay at prices which were lately regarded as impossible. Most of the coffee now coming down here is said to have been previously bought for shipment in the interior, but, however that may be, it comes down both here and at Santos even at 6$000.

Colory coffees for Europe were scarce and commanded 200 to 300 réis premium numbers 7 to 8 being chiefly offered. From Juiz de Fora it is reported that new crop coffee may be expected in fair quantities in May, as also from some districts of Espirito Santo.

We quote 29s. cost., freight and commission.

Declared Sales at Rio during the week ended 19th April were 212,000 as against 140,000 bags the previous week and 114,000 for the corresponding week last year. Up to 19th April sales of 7,404.000 bags were declared out of entries of 9,786,410, or only 75% as against 87% last year.

At Santos the market was weak and declining throughout the weak without sign of a rally. Dealers at times were anxious sellers, being at length convinced of the uselessness of waiting for better prices with such large stocks and enormous entries. Transactions were large, as exporters got plenty of orders at each successive decline. On Friday the fall of prices seems to have stopped both in the States and in Europe.

We quote 1$200 for "superior" and "primes" 200 réis premium; "goods" 200 to 300 réis discount and on "regular" 400 réis discount.

No special demand was noticeable, as usual in demoralised markets, but "superior" seemed to be mostly wanted. Peaberry continued neglected, and receipts continue too large to admit of an advance of prices. Shipments from now onwards will be heavy, especially for Havre, the market that has lately been the principal buyer Stocks will probably be below 1,000,000 bags by the end of the month. New York with the exception of a few large lots was practically out of our market, nor was Hamburg particularly enterprising.

Sales were effected at:—

30s.	to	31s 6d	for	superior.
31s.	,,	32s 6d	,,	primes.
29s.	,,	30s 0d	,,	good average.

After a spell of good weather, rain has set in again that, if continued, must interfere with harvesting. Present low prices are said to be causing trouble between labourers and planters, as the former are getting doubtful as to their being paid and asking for guarantees. Reports regarding the empty nature of fruit are confirmed from many districts, where quality is likely to suffer in consequence.

All sorts of schemes are being put forward to relieve the unbearable situation, the most sensible appearing to be the increase of

export duties on lower grades, say down to No. 7 to pay 11% as at present; coffees like No. 8 to pay 15 to 25%; and those corresponding to No. 9 and below to pay 25% or more. Such a measure would exclude from export about 10 to 12% of the present yield and improve the value of the balance, besides raising the standard of Brazilian coffees. The scheme, it is said, will be brought before Congress and probably become law this year.

Last year joint Entries at Rio and Santos from the 19th April to 30th June amounted to 844,660 bags. At 184% of last years entries, last week's proportion, entries for the corresponding period this year would amount to 1,554,174 bags, even without allowing for the earlier nature of the new crop, which with existing stocks would give a total of 2,800,000 bags to be disposed of before the heavy entries expected in July. Can it be done? If so, exchange will rise on its own merits, as whatever sterling prices may be, the supply of bills will certainly exceed demand, and then sterling prices, abroad would be forced to rise *pari passu* with exchange, under menace of insufficient supplies. In our opinion the *crux* of the question lies in getting rid of existing stocks, no matter at what sacrifice.

COST OF COFFEE PRODUCTION.

There has been a little interesting correspondence in *The New York Journal of Commerce* in regard to the cost of coffee production. One of the most interesting letters is the following, dated Philadelphia, April 15, and signed by Daniel K. Young :

"According to the statements of the owners, the cost of producing Santos coffee on the Fazendas Schmidt and Dumont, which probably have more coffee trees than any other plantations in the world, is four cents per pound bagged, ready for shipment on the plantation; five cents per pound in Santos; six cents per pound on board the ship and six and one-half cents per pound in warehouse in New York. At this price nobody makes any money except the brokers, railway companies and steamship lines. These figures are based on the average product of the plantation, which, would probably be somewhere between numbers five and six, New York exchange standards.

"Of course, the smaller plantations cannot produce at the same price as the larger ones as the question of the survival of the coffee planter is getting to be largely a matter of transportation. Undoubtedly many coffee planters will be forced out of business from mere inability to pay their laborers for the picking of the coffee and the care of the plantation. Probably the first decrease in production will come from this reason. The planter who shipping facilities are close to a railroad can perhaps make expenses at the above figures, but the one who must cart his product five or twenty-five miles to a railroad station must go to the wall. Of course, this applies with greater force to those planters in Mexico, Venezuela and Colombia, who must put a couple of bags of coffee on a 'burro' and take anywhere from one day to five days' journey before they can reach a shipping point. All of them are at present losing money largely and it is only a question of time when they must stop.

"On the other hand those large plantations along the line of the Tehuantepec railroad in Mexico have a rate of freight of 50 cents per hundred pounds from the plantation to New York, as against 250 cents. for the planter in Sao Paulo. These Tehuantepec plantations claim that they can put washed Oaxaca coffee in New York at a cost of five and one-half cents per pound. Now suppose the Brazilian planter receives nothing at all for his coffee on the plantation. It still costs him two and one-half cents per pound in New York in actual transportation expenses. It is probable that no one will dispute the statement that washed Oaxaca will always bring at least three cents per pound more than the average Brazil coffee. Consequently while the Brazilian was getting two and a-half cents per pound for his coffee which would only pay the transportation expenses, the Tehuantepec planter would obtain five and one-half cents for his coffee at which price he could live, but not pay any dividends on his stock. There is no place in the world that can compete with him in coffee production, largely on account of his superior transportation facilities, and the superior quality of his product. Moreover, he can also raise rubber, pineap, sugarples, oranges, lemons and other products which pay a profit to reduce the cost of coffee production. A rubber tree shades his coffee tree and it costs hi five cents per pound to produce the rubber after the tree matured. The rubber sells for 65 cents. A handsome pro surely.

"Fortunately for the Brazilian the area suitable for coffee plan ing in this region is limited or the Brazilian would have hard competition than he ever had before. There is no doubt but th were there area enough in Mexico along the line of this railway other coffee planters would be driven out of business, and no o in the world could compete with such plantations as the 'Doa Rio and 'Ubero,' run by American capital on American business pri ciples, with a stable government and a railway depôt on the pla tation itself. Moreover they have two outlets, one by way Coatzacoalcos to New York and Europe, and the other *viâ* Sali Cruz to San Francisco and the Pacific Coast. This road is no being four-tracked so that it will be able to handle all the freig which is presented to it with facility, even to the extent of compe ing with a Panama canal, because the saving in ocean travel several days in favor of the more northern route.

"The practical question of decrease in coffee is: 'How long the purse of the planter?' and 'How long will he fight again what appear to be hopeless odds?' and 'How can he pay h laborers for picking his product?'"

DISTRICT ASSOCIATIONS.

SHEVAROY.

Proceedings of the Quarterly General Meeting of th Shevaroy Planters' Association, held in the Victoria Room at 1 p.m., on Monday, the 3rd June, 1901. PRESENT :- Messrs. W. J. Lechler, C. Rahm, W. Rahm, J. C. Larg S. Campbell, Gilby, C. G. Lechler, C. Dickins, E. Dickin R. Gompertz, *Chairman and Honorary Secretary, S P. A.*

1. Notice calling the meeting was taken as read.

2. Read letter from Mr. C. G. Lechler giving notice that he wou propose that the subscriptions to the S. P. A. be reduced to Rs. per annum.

After some discussion it was resolved that the subscriptions reduced to Rs.12 per annum as a temporary measure from th 1st proximo.

3. Read letter from Collector (replying to our request that a lette box should be attached to the wall of the Cutcherry for the receptio of letters arriving in the absence of the Tahsildar) stating that th Head Clerk had been ordered in future to receive all such communic tions.

N.B.—This letter has already been circulated to all members o the Hills.—*Recorded.*

4. Read letter from Chairman forwarding copy of a telegra from Mr. Chailley Bert, President of the Union Coloniale, to th effect that the minimum tariff on coffee imported into France w likely to be continued.—*Recorded with satisfaction.*

5. Read letter from Secretary, U. P. A. S. I., asking for statisti of coffee under cultivation. Distributed forms to all present.

The following letters were read and recorded :—

Circulars received from Secretary, U. P. A. S. I., during the mont of May, 1901.

No. 38/01. Madras Chamber of Commerce is prepared to associa itself with Wynaad Planters' Association in securing the abolition duty on tea imported into Ceylon.

No. 39/01. Forwarding copy of our letter and correspondenc between Messrs. Stanes & Co. and the Traffic Manager, Madr Railway, about high freight charged for coffee.

No. 40/01. Forwarding alterations in the Labour Act proposed b Goverement of India.

No. 41/01. Proposes 29th July for commencement of Annu General Meeting of the U. P. A. S. I.

No. 42/01. Forwarding suggestions from Mr. Acworth for pushi and controlling the sales of tea.

No. 43/01. Forwarding letter from Secretary, I. T. A., to be ci culated to those Associations who are interested in tea.

Letter from Mr. Clegg thanking the Association for electing him Honorary Member of the S. P. A. and stating that he will be please to attend meetings whenever he is at Yercaud.

Letter from Mr. C. G. Lechler requesting that the Secretary, J. P. A. S. I., be asked whether shippers from the West Coast ports re bound, as those in Madras, to ship by special combined lines of teamers, to entitle them to the 10% rebate on freight, etc.

Victoria Memorial Fund list.

Books and papers received during the month:—

Planting Opinon, dated May 11th, 18th, 25th and June 1st, 1901.

Brazilian Review, dated March 19th and 26th, April 2nd, 9th and 6th, 1901.

Proceedings of Indian Tea Association, dated May 6th, 7th, 11th, 4th and 16th, 1901.

Proceedings of the South Mysore and Nilgiri Planters' Associations.

YERCAUD, *th June*, 1901.

R. GOMPERTZ,
Honorary Secretary, S. P. A.

NILGIRI.

Extracts from Proceedings of Annual General Meeting of the Nilgiri Planters' Association, held at Masonic Hall, on May 4th, 1901. PRESENT:—Messrs. Barber, Crum, Hodgson, R. L. Kindersley, F. T. F. Wilson, VansAgnew, Phillips, Alexander, Wilbraham, and J. Liebenrood, *Honorary Secretary*. *Visitor* Mr. M. Clementson.

Mr. Crum was voted to the chair.

The Honorary Secretary's report.

GENTLEMEN,—On reviewing the past year's crops and weather, I am thankful to say, we have on the whole had good crops as regards tea and coffee; crops that have mainly been above the average, and the weather of the past year has been much more favourable than the two preceding ones. But when we turn to the prices obtained by our produce, we are face to face with prices that I think I may safely say are the lowest we have ever had to do with. As regards coffee, the market is in an overstocked state, Brazil having shipped an enormous crop, which will probably exceed their record and their following on several years of large shipments has driven down prices. Only the best grades and market fetch anything like paying prices, whilst the ordinary run of East India coffee realizes such prices that it is hardly worth sending home. In view of the state of the market, a proposition was made that coffee planters should raise a fund by a cess on acreage. This was not supported by all the District Associations, but the proposal of pushing sale of coffee by a shop in Paris met with more favour, but so far nothing definite has been done. Of the 50 members of our Association interested in coffee, 25 agreed to the cess conditionally, 3 negatived, and 22 expressed no opinion. Turning to tea we find this product in the same state, over-production handicapped like coffee by an enforced high exchange, and further, not helped by the extra taxation imposed last year in England.

But tea planters have been working to clear the markets, by pushing the sale of tea in new countries, and have shown their willingness to help this work, by almost unanimously advocating Government being asked to impose an export duty on tea, such money to go to pushing sales. Seven of our 18 tea members are voluntarily subscribers to the Indian Tea Association as regards the compulsory cess, 11 owners representing 1,700 acres have expressed themselves in favour; 2 representing 115 acres, have negatived; 1 has referred home; 4 have expressed no opinion, hence are I suppose indifferent as to what is done.

One of the subjects for consideration of the meeting will be the choice of delegates and instructing them as regards the feeling of Association in respect to coffee, and tea cess, and I would further suggest that you might instruct them as regards taking action with reference to the following. Rates charged on tea and coffee on Madras and South Indian Railways, whether they could see their way to making a reduction. Curing charges whether the curers could not be asked in view of the low rates ruling to make a reduction in their charges. The suggested movement in favour of agitating for an import duty, on foreign grown teas, in India. And the need of the appointment by Government of a specialist to report on bug.

As regards the financial position of the Association we are in a fairly strong position. In answer to an appeal issued last year some 23 members subscribed 410 rupees, 31 members paid up back subscriptions so that we were enabled to pay up our back debts to the United Planters' Association, Southern India, of Rs.647, and Rs.100 to a delegate of 1899, and closed the year with a balance of Rs.9-6-4. Since October 1st the Honorary Secretary has dispensed with the services of a writer, thus saving Rs.240 per annum to the Association and as Honorary Secretary *pro temp.* I should like to ask members to answer circulars, etc., when necessary, by return post, thus doing away with the necessity of your Secretary having to repeat letters. Owing to delays in answering important circulars, the whole work of the United Planters' Association, Southern India, is delayed as they cannot obtain the information they require.

As regards our position for the current year, if all members pay up their subscriptions we shall have an income of 630, which will allow us to pay our usual subscription to United Planters' Association, Southern India, of Rs.400 and leave a substantial balance to carry on the work of the Association.

Mr. Hodgson in moving that the accounts should be passed, made a few remarks on the need of supporting the United Planters' Association, Southern India, and called attention to an article in the *Indian Gardening and Planters' Gazette*, in which the writer called attention to the good and business-like work done by the United Planters' Association, Southern India. He also proposed a vote of thanks to Mr. Liebenrood for having taken up the work of Honorary Secretary, Mr. Wilbraham seconded him.—*Passed.*

Mr. J. Liebenrood was elected as Honorary Secretary for the ensuing year, and the following gentlemen were elected as Committee:—

Messrs. A. W. Brodie, A. S. Crum, W. C. Deane, W. L. Edmiston, F. W. Groves, H. P. Hodgson, R. James, T. Kenna, A. M. Kinloch, L. C. Liebenrood, W. Mullaly, A. G. Nicholson, J. W. Pascoe, B Phillips, J. T. F. Wilson, E G. Windle, and H. D. Wilbraham, J. Liebenrood (*Honorary Secretary*).

Mr. Barber proposed, Mr. Wilson seconded, that Mr. Hodgson and Mr. J. Liebenrood be elected as delegates to the United Planters' Association, Southern India.—*Passed.*

Coffee Cess.—Read correspondence on this subject, after some discussion, Mr. Barber proposed and Mr. Wilson seconded.

That this Association approves of the coffee cess, and that the matter be left in the hands of our delegates.—*Carried unanimously.*

Coffee adulteration.—Read report of London Committee, also letters from the Madras Chamber of Commerce, Malabar, C. C. stating their willingness to support planters in taking action.

Mr. E. F. Barber proposed and Mr. A. F. VansAgnew seconded. That in the opinion of this Association every effort should be made to combat the adulteration of coffee, and that our delegates be empowered to take steps in their matter on the lines of the resolution passed by the London Committee.

Resolution of London Committee.

That in the opinion of this meeting it is desirable that Indian planters should make representations in regard to the Coffee Trade and its consumption in the United Kingdom to the Indian Chambers of Commerce and to their local and central Governments, and by them or through them to the India Office, the Board of Trade and the Chambers of Commerce of the United Kingdom.—*Carried unanimously.*

Madras Freight.—Proposed by Mr. F. T. F. Wilson and seconded by Mr. R. L. Kindersley.

That this Association warmly approves of the action being taken by the Madras Chamber of Commerce in the direction of reducing freights and accords its support, assuming that if any tarriff is arrived at, it will include other Coast Ports besides Madras.—*Carried unanimously.*

West Coast Harbour.—Read correspondence. Proposed by Mr. Barber, seconded by Mr. Kindersley, that this Association strongly urges the necessity for a harbour on the West Coast and leaves the discussion as to the locality in the hands of the delegates to United Planters' Association, Southern India.—*Carried unanimously.*

Read correspondence between Madras C. C. and Government with reference to improvement of Madras Harbour —*Recorded.*

Bug.—Resolution proposed by Mr. Wilson, seconded by Mr. Wilbraham. That this Association regrets that Government has not been able to assist in the matter of an entymologist, and again urges the necessity of state assistance.—*Carried unanimously.*

Mr. Hodgson speaking of the subject of Tea Cess and the failure of the scheme, originated in Ceylon, of reducing the output in India and Ceylon by so many millions of pounds, pointed out the possibility of largely increasing the overland tea trade with Russia.

where there exists a strong antipathy to sea-borne tea and the need of supporting the Indian Tea Association.

Resolved by Mr. Barber, seconded by Mr. Wilbraham that this meeting is in favour of compulsory tea cess and that the delegates be asked to press the matter at the United Planters' Association, Southern India, meeting and that the idea of restriction of output be allowed to lapse.—*Carried unanimously.*

Exploitation of Indian and other tea markets.

With regard to circular 36 of Indian Tea Association members felt it was too much to expect of South Indian planters not only to give tea, but to pay freight so far as Calcutta, when there was a large market in South India open for exploitation, but that no doubt that when this was pointed out to the Indian Tea Association they could formulate some scheme to meet this.

Mr. Clementson, who was present as a visitor, then spoke on the subject of tea in Russia and Persia. He stated that he had made enquiries as to all the roads and prices, and that he was willing to personally conduct a caravan of tea if tea planters would forward and give him tea to take with him. He would pay all expenses in taking up the tea and eventually divide profits.

The annual subscription to the United Planters' Association, Southern India, of 400 rupees was confirmed and Rs.100 to the expenses as delegate of the Honorary Secretary.—*Passed.*

A vote of thanks to the chair terminated the proceedings.

IF SMITH HAD EXPLAINED.

My wife says, and she says it with a snap, that never, *never* again will the Smiths get an invitation to eat at our house. And when she once makes up her mind to anything, she sticks to it like shoemaker's wax to a bit of woollen cloth.

You see the Smith's, man and wife, were old and intimate friends of ours. We lived within a stone's throw of each other for many years, and were as thick as treacle. As to our worldly estate, we were about on a level, in very moderate circumstances.

Between two and three years ago Smith's employers sent him to America on some business errand; he would not tell us what. A fortnight since he turned up at home and gave out that he had made a trifle of money for himself while he was away.

Last Tuesday we had them to dinner; the best dinner my wife could get up. And it was a good one, if I do say it myself. Yet, socially, it was a failure. In the old times Smith had the appetite of a cab-horse. Now he picked and winced over the very dishes that used to be his favourites. As my wife pressed him to taste this or that, he thanked her politely, but he dindn't eat. Mrs. Smith apologised for her husband, and said he had been ailing somewhat since his return from America. So the dinner ended in disappointment, and the Smiths went home early.

"Poor Smith is ill," said I. "No" said my wife, "he isn't ill. He's proud. He thinks his old friends aren't good enough for him; that's where it is. He's rich, and we are poor, and——." The worried woman here broke down and cried, and I went out for a consolation smoke.

And yet bless your soul!—wait a moment however. If Smith had been perfectly frank and said, "I am not the man I was. I lived high in America, and I'm all gone to pieces with inflammatory dyspepsia, and this splendid dinner will half kill me if I eat it." If he had said that we should have pulled through without a break. Why didn't he say it?

Here is a lady who does not hesitate to tell us her experience with that wretched ailment. Miss M. J. Barton is her name, and her home, 56, Sorby Street, Sheffield. In a written statement dated September 19th, 1900, of which the following is the sum and substance, she says that it is now rather more than two years since her health began to fail. At first, she thought it was only some trivial ailment that would soon pass away, for beyond loss of appetite and a feeling of langour and weariness, there did not seem to be much the matter with her.

So she struggled on with her work as do countless thousands of brave women every day, hoping to be right again in a short time.

But alas! her hope was short lived, for Indigestion, that demon health-destroyer, had got her in its iron grasp and would not set her free. Instead of getting better, she became worse.

Her tongue was now always foul and nasty, and after taking food —no matter how little—she experienced such a sense of fulness and tightness in the chest that she could scarcely breathe. "It seemed," she says, "as if some heavy weight was resting on my chest pressing in my ribs." Indeed her chest became so sore and p ful that she could scarcely bear anything to touch it, and was al afraid to walk about, the slightest jolting hurt her so.

This feeling of weight and oppression in the chest is one of most distressing and common symptoms of Indigestion Like red flag of the railway signalman it counsels caution and warn danger ahead. What untold pain and misery might be avoide only we heeded these danger signals of nature, but there, wh the good of moralising. We *don't* take warning, therefore su in consequence. Miss Barton did for she goes on to say:—

"At times, I suffered intensely from wind spasms, and was c stantly vomiting sour water. Sleep no longer refreshed me, fo only came in snatches and was disturbed by horrible dreams. prived of proper rest at nights, and afraid to eat much becaus the fearful pains that were sure to follow, small wonder I got weak and thin, that at last I was forced to give in and take to bed, where I stayed for six weeks. During that time I vomite quantity of blood.

"The doctor said I was suffering from Indigestion and an ul ated stomach. His medicine enabled me to get down stairs ag but did not cure me, for I still suffered great pain after eating, was always tired and weary.

"In this condition I remained for several months, despairing ever being well again, but providentially I was led to try Seig Syrup, and to that medicine alone is due my present good hea Now I can eat heartily and enjoy my meals without fear of p and feel brighter and better in every way than I have done for o two years."

Why Mr. Smith didn't mention his illness at our dinner, I d know. He admitted it afterwards to me. Still my wife ha forgiven him. "Happy," says Homer, "are those who died un the high walls of Troy." Happier yet, say I, are those who and can eat what is set before them.

MARKET REPORT.

[*Per Mail advices of* 17*th May* 1901.]

COFFEE.

The London Commercial Record says:—During the past sen'ni there has been a decided improvement in the tone of the mar and the bulk of the supplies at auction has encountered a be demand, and was chiefly sold at firm prices to an advance of 1s 2s per cwt. for all growths, except Brazil. The low range of pr which has prevailed of late has at length attracted the attentio buyers both for home trade and export, and the public sales h passed with more spirit than for some time past. A quiet tone prevailed in the market for Brazil futures and prices are sligh easier, owing to relatively large receipts and a fall in excha

To-day good colory coffee in fair demand and full rates p Medium and ordinary qualities quiet. Guayaquil 6d per cwt. lo To-day's auctions supplies consisted of 2,579 bags East India barrels Jamaica, 1,170 bags Costa Rica, 516 bags Salvador, 244 b Guatemala, 234 bags Ecuador, 304 bags Mexican, and 503 b Vera Paz.

* These lots were sold since the sale.

TEA.

China.—At auction during the week 2,023 packages have been offered, and with an extremely slow demand only a very small portion sold, and then at easier price. Formosa Oolong realised 7d to 11½d, Lapseng Souchong 4¾d, Panyong 4d, broken leaf 2d.

Indian.—Only small sales were held, amounting to 12,600 packages, compared with 15,300 packages in the former week and 13,900 packages a year ago.

A quiet tone prevailed, and although there was fair bidding for good liquoring grades, other descriptions, particularly those with mixed red leaf, were neglected and realised very low quotations.

South India was represented by 1,280 packages, mainly from Travancore, among which were some useful shipments which commanded attention from buyers.

For 10.400 packages on Estate accouut 6d per lb. was obtained.

Ceylon.—Catalogues comprised 19,600 packages contrasted with 18,800 packages on the 7th instant, and 27,000 packages at this time twelve months since.

On the whole not much change occurred, though competition was to a great extent concentrated on the most desirable invoices. Common Pekoe Souchongs and Pekoes did not always bring previous rates, and there was less demand for inferior Broken Pekoes, but the better lines of these were in several instances firmer.

The average is 6⅜d per lb. On the 9th instant it stood at 6½d per lb. and 7½d per lb. in 1900.

Java.—Rather over 1,700 packages of direct import were brought forward and passed without showing any marked alteration in values.

Deliveries.—The clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 14th May,	1901	...	...	4,811,585 lbs.
Do. do.	1900	...	...	5,969,072 „

During the week the following have been printed for sale by public auction:—

	Sold. Pkgs.	Withdrawn. Pkgs.	Total offered. Pkgs.
India	10,784	1,800	12,584
Ceylon	17,619	1,956	19,575
Java	1,259	488	1,742
Total ...	29,662	4,239	33,901

Also 655 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated May 17th, 1901, says:—

Quantity brought to Auction in London from 1st June to date.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1900-1901	1,650,189	1,247,549	62,360
1899-1900	1,651,216	1,191,440	61,406

13,195 *pkgs.* Indian, 19,964 „ Ceylon, 1,742 „ Java } Total 34,901 packages were offered in public auction this week.

The gradual expansion which has occurred in foreign and colonial markets for Indian and Ceylon Tea is shown in the following table:—

Statement showing the amount of Indian and Ceylon Tea taken outside the United Kingdom for the last five years.

The increases in some of the principal outlets are very marke especially Australasia, "Russia and Germany" and North Americ

With regard to the latter market there is strong ground for b lieving that when India and Ceylon can manufacture suitable Gree Tea, progress will become considerably more pronounced.

Indian.—The small auction passed with some lack of animatio and a rather dull tendency, 308 "last of the season" Invoices hav been disposed of against 377 at the same date last year. Th official telegram gives exports to U. K. for first half of May a 466,000 lbs., against 700,000 lbs. in the same period, 1900, and fro 1st April to 15th inst. as 661,000 lbs., against 1,100,000 lbs. in 190

Week's average of Tea sold on Garden Account 1901, 10,535 pkgs av.6·03d. 1900, 8,096 pkgs., av 7·25d.

Total Tea sold on Garden Account 1st June, 1900 to date, 1,365,53 pkgs., av. 7·21d. 1900, 1,301,302 pkgs., av. 8·24d.

Ceylon.—Competition was good at rates current last week, bu no improvement can be recorded in prices, although a generall steady tone characterized the markets for all grades.

Private telegraphic advice gives the quantity exported to U. K for the first half of May as 4,500,000 lbs., against 4,500,000 lbs. la year, and estimates the quantity for the month as 10,000,000 lbs against 10,500,000 lbs. shipped in May, 1900.

Average for week 6·38d., against 7·12d. in 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 483,02 pkgs., av. 6·64d. 1900, 478,050 pkgs., av. 7·46d.

Java.—The Teas brought forward were mostly sold with fa demand and without material change in quotations.

Bank Rate 4 per cent. Exchange on London three months' sight:— Calcutta 1/4 7/32. Colombo 1/4¼.

COCOA.

A slightly better feeling in West India growths was noticeabl at the auctions on Tuesday, but other kinds were unchanged; 3,46 bags were catalogued, of which about 1,550 bags sold. Only 26 bags Trinidad were brought forward, and these mostly sold at advance—good to fine red 70s to 70s 6d. 384 bags Grenada sold a 65s 6d to 67s 6d for good to fine, and 62s to 64s for common to fai or 1s over valuations. 47 bags Jamaica mostly placed at 58s to 63 whilst 11 bags St. Vincent brought 61s to 66s, and a single lot Dominica 62s. Of 1,322 bags Guayaquil 620 bags found buyers a steady rates—70s for Arriba, and 63s to 64s for Caraquez an Machala. Ceylon continues much neglected, especially Estat kinds, and of the 1,085 bags offered only 250 bags of odd lots sol 231 bags Samana and 100 bags Puerto Cabello were bought i Private sales embrace 200 bags Trinidad—good red 69s to 70s, fi 71s to 72s, 50 bags Samana at 59s, 35 bags Puerto Cabello a 102s 6d, 500 bags Guayaquil—Machala at 65s, winter Arrib at 66s to 68s, early summer ditto 70 to 74s, and a few lots of Ceylo at 83s for fine, and 70s per cwt. for good bold.

PEPPER.

Black.—The market is dull and business has been done at easie prices—at 6 3/32d for fair Singapore on the spot, at 6 7/16d down t 6 13/32d for July-September shipment, and at 6 5/32d for May-July.

At public sale on Wednesday 21 bags Singapore sold at 6⅛d fo dusty. Of 394 bags Malabar, 309 bags sold—bold dullish heav Tellicherry 6⅛d, small heavy brownish Aleppy character 6d. 20 bags Penang bought in at 5⅞d for 3 lb 4 oz., dust 5·32 % per gallo also 92 bags Lampong at 6d, and 8 bags Ceylon at 6¼d per l 94 bags shells bought in at 3d per lb.

Black Pepper firm.—*To-day* 25 tons Tellicherry August-Octobe shipment sold at 56s 9d c.i.f. (London).

Of white, 5 tons Penang sold on the spot at $8\frac{13}{16}$d, and 10 tons ingapore at $9\frac{3}{8}$d. For arrival no sales reported.

Zanzibar Cloves dull and no sales reported.

The shipments of Black Pepper for the first half of May, ompare as follows:—

		1901.		1900.	
.K.—Singapore ...	50	160	160	320
„ Penang	110		160

GINGER.

COCHIN.—81 cases 50 bags were brought to the hammer but nothing sold, medium and small cut retiring at 65s, native cut at 54s to 55s, and good washed at 45s per cwt.

Sales to-day of C at 50s c.i f. May-June shipment Hamburg.

BENGAL.—94 bags withdrawn.

JAMAICA.—570 barrels were offered, and 250 barrels found buyers. Fair to good bright washed realised 53s to 63s, middling to good middling 45s to 50s 6d, common to good common 40s to 44s per cwt., these prices being in buyers' favour. 2 barrels St. Lucia sold at 36s 6d per cwt.

QUININE.

Dearer. The improvement reported last week has been well maintained, and a considerable business is reported from second-hands at advanced rates. B. & S. or Brunswick has sold on the spot at from 1s 4d to 1s $4\frac{1}{2}$d, June, 1s $3\frac{7}{8}$d to 1s $4\frac{1}{8}$d, July, 1s 4d, August, 1s $4\frac{1}{8}$d to 1s $4\frac{1}{2}$d, and October, 1s $4\frac{3}{8}$d to 1s $4\frac{7}{8}$d; a sale of 10,000 oz. Zimmer has been made at 1s $4\frac{1}{2}$d, and P. & G. brand has been advanced to 1s 5d. The market quieted down somewhat on Wednesday, and only a small business was done at previous rates. To-day the market is again quiet, and little or no business has been done. The speculation is, of course, due to the small bark shipments for the first half of the month, and the improvement in the unit at Amsterdam last week. It is reported that agents for the B. & S. and Brunswick brands have refused orders from brokers at 1s 5d, while druggists' orders are accepted subject to approval.

Rs. 1/12 *nett.*

The Victoria Edition Postage Stamp Albums.

THE IDEAL ALBUM FOR BEGINNERS.

This Album has been compiled and arranged on a new and original system, excelling all others yet published in so cheap a form. It contains illustrations of all the different designs of every Postage Stamp issued, and the various values are printed underneath such Stamps as are of the same design.

The illustrations in this new Victoria Edition, although on a reduced scale, are sufficiently distinct and correct reproductions. They are printed on the margin of each page, leaving the spaces blank in which the Postage Stamps are to be placed. Only one illustration appears of such Stamps which, although of different values, are of the same design; and in these cases the former are printed underneath each impression, thus at once forming a complete Catalogue in conjunction with the Album.

Munzerabad.

June 5th.—Weather—Dull days with showers; wind has been set from the South-West for some days. *Coffee prospects*—very poor this year on most estates. *Health*—Universally bad throughout the district. *Labour*—Abundant. *Interesting item*—The rice crops are looking this year as well as can be wished. *June 10th.—Weather*—The monsoon broke on last Saturday the 8th very mildly. *Works*—Weeding now engages a good deal of attention. *Plant diseases*—Borer bad. *Health*—Bad. *Labour*—Abundant. *Interesting item*—Mr. Wetherall, our Sub-divisional Officer, and the Amildar are now prosecuting the jummabundi throughout the district.

Coorg.

POLLI BETTA, *12th June—Weather*—Monsoon set in mildly on 5th. Since the 7th it has been severe, over an inch being gauged daily. It seems to be easing off now. *Plant diseases.*—Borer has been severe again this year. One circuit of the Estates removing the stricken trees has been completed. Supplying and weeding are now monopolising attention. *Labour* is plentiful, and *General Health*—fair. Prices of grains easy.

THE TEA CRISIS.

THE variety of opinions expressed with respect to the present Tea Crisis is bewildering. In the first place, planters have not fully agreed as to the cause or causes, so it is hardly to be expected that they should agree as to the most likely remedy. Here we have over-production urged as the chief cause, in another place this view is contested; there we have the Exchange question brought to the front again, only to be met with the argument that when supply exceeds demand there must be a loss to the producer. One contemporary endeavours to make an exhaustive analysis of causes and to give useful hints as to what should be done. Others promptly

fall upon him, pull his statements to pieces and demonstrate to their own satisfaction that all his chief assertions are erroneous. To the outsider it must be amusing, to the insider the tea-planter it is not merely perplexing but aggravating. He is not even left to lose his money quietly. He is called little less than a fool for not having foreseen and guarded against this, that and the other. He is patted on the back as an enterprising fellow and told, the while, that his energy and enterprise have been so misdirected as to prove that he ought to have been in a lunatic asylum long ago. He will be there soon if he attempts to weigh, the one against the other, all the arguments and counter-arguments, all the advice, all the warnings put before him. Unless he has very strong opinions of his own he will even waver as to whether it is best for him to produce fine quality, with the expected result of improved quality and improved prices, or to go in for plentiful production, relying upon the demand that there always is for low-priced tea.

If the planter wishes to remain sane, and at the same time to plan out a reasonably fair future for himself, he has first to bear in mind two points: (1) his tea must be grown and manufactured, whatever its quality, at the lowest possible cost, consistent with the production of the quality he is able to turn out; (2) the market for tea, his teas in particular, must be developed to the highest possible extent, always subject to the proviso that the cost of developing it beyond its present dimensions or activity must not exceed the benefit to be derived from any extra expenditure undertaken. What is termed "over-production" is not altogether prejudicial to his interests, for, speaking generally, the larger a man's production the less its cost per pound. On the other hand, restriction of production, if carried to excess, might easily entail curtailment of consumption, by causing many buyers to discard tea in favour of something cheaper. There are at least two classes of consumers: one desirous of having really fine tea, and not very particular as to price; the other not very particular about quality provided the price is low and the infusion from the leaf bought not unpalatable. Whatever eventual profit may be anticipated from attempts to "educate" the popular palate, planters must not entirely overlook the fact that education, if fruitful, usually costs money; it is often costly and fruitless. The average consumer of tea thinks he knows just as much as any planter about "desirable" quality, and he will be reluctant to change from one kind of tea to another, even if both cost him the same. If invited to pay more in order to gratify the predilections of someone else he will probably wink, and suggest that he is a little wiser than to follow that course.

The solution of the great problem before tea producers cannot be effected by sentimental methods. Practical means must be adopted. There are millions of people who never even heard of tea, many millions who have never tasted it. Let it be brought to their notice. There are tea-drinkers who know the China leaf but not the Indian; they should be converted. There are even some consumers who will drink Ceylon tea, not Indian. Here comes the parting of the ways in the campaign of the Ceylon and Indian allies. It is all very well for these allies to assert that every extra pound of tea taken from either of them benefits both, but this style of argument is not very convincing to most of us. In fact, an advance upon lines such as this suggests inattention to the old proverb about saving the pence. Advance step by step, and in the end considerable progress will be achieved; try to advance by grand strides, and a fall is the most proba consequence. It is essential that planters should band the selves together, but it is equally so that they should bear mind that an alliance with Ceylon can only be equally be ficial to both of the high contracting parties if the ter arranged are equitable and the burden of effort fairly sha by the two. Up to the present time this has not been the ca Moreover, we do not think the plan of campaign adop has been the best possible. Whether we regard the succes attained as the direct result of this campaign or not, cannot shut our eyes and ears to the fact that, notwi standing enormous outlay, complaints are rife. The Russ market, one of the finest in the world, is almost untouch the main effort has been to "capture" the American, wh may yet assume greater importance than it at present posse es, but which cannot be regarded as equal to the Russi Again, in India, it has been suggested that the Railw stations should be bombarded with Indian teas. An admira suggestion in its way, but narrow. A poor suggestion wh coupled with a hint that funds hitherto provided for veloping much wider fields should be entirely devoted to cost of this bombardment. The above are points that consider worthy of tea-planters' notice. We wish we co feel that we had come near the end of the list; but, unfor nately, there are many more. It is to the community th bears the largest number of them in mind and happily h off what should be done to meet the difficulties and to gath in the potentialities they indicate, that the chief success w fall in the present effort to solve, or dissolve, the Tea Cris

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S.

Sale of Tea in India.

The Indian Tea Association (Calcutta) has issued the follo ing circular, dated 7th June, 1901 :—

I am directed by the General Committee of the Indian T Association to invite your attention to their Circular No. of 4th April upon this subject.

It will be within your recollection that in that Circular description was given of a scheme for extending the sale tea in India, which it was proposed to put into practice. A appeal was also made to Tea Companies and Proprietors f voluntary contributions of tea, upon which, it was explaine the scheme would be entirely dependent.

I am now instructed to inform you that in response annu contributions amounting to about 300,000 lbs. of tea—amo them being a generous offer of about 200,000 lbs. Messrs. Finlay, Muir & Co. on behalf of the companies whi they represent—have been promised. But in the opinion the General Committee, as also in that of the Sub-Committ appointed to deal with the subject, this quantity is n sufficient to warrant the establishment of the proposed Distr buting Agency. They consider that at least half a milli pounds annually must be guaranteed before distributi operations can be commenced. There can in fact be doubt as to this, because if the business is not sufficient extensive to make the terms and conditions of the appoi ment of Superintendent as attractive as possible, it will difficult to secure the services of a competent man.

I am accordingly again to appeal to all those Tea Co panies and Proprietors who have not so far replied to t

Circular. In doing so I am to point out that a considerable proportion of the promised contributions—including that of Messrs Finlay, Muir & Co.,—are conditional upon the scheme being generally supported by the industry. At present the scheme is not being so supported ; and it is consequently of the highest importance—if the Agency is to be established—that further offers of tea should be forthcoming without delay. It is only reasonable that every tea producer should be called upon to contribute; for if the scheme can be successfully worked the resulting advantages will be shared alike by all.

The Sub-Committee have been recently making enquiries respecting the different parts of India where a demand for tea is believed to exist. It seems to them that in the Upper Provinces the demand is probably greatest. In fact they think there is little doubt that large quantities of tea might be disposed of in the principal northern centres, such as Delhi, Cawnpore, Lucknow, Agra, Meerut, Amritsar, Umballa, and elsewhere. It is also asserted by dealers and others that brewed tea could be extensively sold at the chief junction and terminal stations in the Punjab, the North-West Provinces, and in Bengal. Other parts of the country to which the attention of the Sub-Committee has been drawn by a most competent authority are the districts of Eastern Bengal and the Western Punjab. In Eastern Bengal there is a population of approximately twenty-five millions of Mohammedans. They are well-to-do agriculturists; and are said to be better able to afford small comforts such as tea than any other rural population in India proper. The Western Punjab is also a promising field. The people there number about ten or twelve millions. They are practically all Mohammedans ; and will, it is stated, readily take tea if they can procure it. The markets of Southern India—where the Travancore Planters will co-operate with the Agency—are likewise reported to be capable of development.

The Sub-Committee have, further, good reason to believe that H. E. The Commander-in-Chief in India, and the other principal Military authorities will be pleased to give the weight of their influence and support to the Agency in attempting to create a taste for tea in the Indian Army. If tea can be popularised as a beverage for the native soldiers, a great step in advance will have been made. For not only will the Agency be required to supply considerable quantities at regular intervals, but a general increase in consumption is practically certain to result in those localities where the regiments are quartered.

The Sub-Committee would also draw attention to the following remarks from the last Annual Report of the Indian Tea Supply Co., Ld., *viz.*: "Judging by orders received we are of opinion that the consumption of tea is rapidly on the increase throughout India, and the low prices current during the past year have given a very natural impetus to the naturally increasing demand."

Looking to the foregoing facts it can hardly be doubted that much useful work may be done in the way of developing the local markets if the Sub-Committee's scheme can be put into operation. All that is required to enable a start to be made is the liberal support of tea producers. If that be promptly accorded there is no reason why an expert tea distributor should not be engaged, and the work of the Agency begun during the current season. In the present state of the tea trade the need for immediate action is evident ; and the General Committee therefore trust that if you have not already promised your support to the scheme you will be able to see your way to do so with the least avoidable delay. A form of undertaking is appended to this letter.

NOTE :—*An additional contribution of* 80,000 *lbs. of tea has been promised since the foregoing was written.*

To

June, 1901.

THE SECRETARY,
Indian Tea Association.

DEAR SIR,

Sale of Tea in India.

I / We undertake, in behalf of the Estate / Company, Ld., to make over without charge to the proposed Tea Distributing Agency lbs. of tea annually for the years 1901, 1902, and 1903, for distribution in India with the object of developing the native market.

The tea to be delivered free in Calcutta.

Yours faithfully,

COFFEE IN DISTANT LANDS.

XXIX.

Costa Rica.—An ex-Ceylon resident writes to the *Ceylon Observer* :—Coffee planting and curing are carried on in this country in ways and under conditions peculiar to it. The only one which resembles it in some respects is the sister republic, San Salvador, as regards the size of the farms, and their being owned principally by native farmers who, with few exceptions, do all the manual labour necessary on their own lands, besides going out to look for work on larger estates when not too far off. The farmer sells his crop to different curing stations, and between these a lively competition has at all times existed, thus securing to the producer a lion's share of the profits, which would be much greater if he were to undertake to increase the productiveness of his land by an effective system of manuring, which alas is almost unheard of, and cannot be hoped for. The present generation shut their eyes and ears to the most convincing of practical proofs. By this it can be inferred that coffee culture in general is not in a prosperous condition as regards crops produced, or prices of the same ; the world's markets naturally being the cause of the drop in these of late years. With some exceptions, in the neighbourhood of the cities, the land under cultivation is owned by the small farmer who plants his coffee in lots which range from one acre upwards, and cultivates it in a manner which can well be termed orthodox, his principal implement being the broad shovel, in the handling of which he is an adept, so much so that no imported labour is employed to any extent, as all trials in this direction have resulted in failures. The cost of keeping up a manzana ($1\frac{7}{8}$ acres) is between 30 and 40 colones per annum and means four cleanings a year in most cases, the colon being worth $46\frac{1}{2}$ cents American gold ; this means to larger estates where a day's work is the way labour is employed and paid for. In the centre of the republic native labour is scarce only at certain times—in June when the maize-fields have to be cleaned, and in October when Summer beans are planted,—the labourer prefers to work in these districts for less wages than are paid on banana farms or in districts nearer the coast line.

MANURING AND PRUNING UNKNOWN.

As manuring may be considered almost an unknown feature, the same is true of trimming or pruning, it being almost impossible to follow the native farmer when at this kind of work, and establish a fixed idea, the tree in most parts being *shuck*, which becomes more scraggy in appearance as each succeeding crop is taken from it. There are ideas pre-

valent that the introduction of plantains and different kinds of shade trees are of benefit to the plantation, the first being an article of food, and therefore the origin of the idea ; the latter, though planted with the object of giving shade to the coffee, is useful principally as a wind-break, during the dry months from December to April, when the northerly winds are most violent, and also for firewood in some cases. Both however have their disadvantages, as at all times the plantain needs constant care to see that the stalks do not fall on the coffee, to say nothing of their being exhaustive of the fertility of the soil ; while the cutting of firewood is also attended with damage to the coffee tree.

One crop of coffee is hardly picked and sold, before the farmer begins to think of

RAISING A LOAN

on the coming one, and has immediate recourse to some curing station, where it has long been the custom to make these advances for the purpose of securing as much as possible of the crops. This transaction, barring some risk, gives most of its advantages to the money-lender, whose rate of interest is often 1½ per cent. a month, sometimes more ; capital and interest payable in coffee of stipulated good quality in fruit at current prices, the failure to deliver this incurs an additional fine of 20 per cent. or more in case cash is taken instead of coffee ; a backer's signature and pledge is exacted in all cases. This borrowing in advance has sent many a poor farmer to the wall, legal prosecution often following the non-fulfilment of such agreements.

Perhaps the most onerous of burdens laid on the farmer is the Government

EXPORT TAX

which is levied when the coffee is shipped out of the country ; it amounts to about one cent American gold per pound which means a considerable fraction of its value as prices are at present. No complaints are heard of however on this point from the farmer, as it does not come from his pocket direct, but is paid by the exporter on whom he lays the blame of all reductions in his selling price. The daily papers often publish inflammatory articles in the same strain. When coffee begins to ripen, everybody is on the alert, in ascertaining prices paid in the neighbouring stations, to make sure of not having to sell at a lower price than is possible, and soon afterwards men, women, and children are out with baskets and cloths, some picking from higher branches, others from lower branches and what is on the ground, and everything is delivered to the stations all of a rush, which puts some of the receivers into a squeeze to know how they can take care of it all. Picking is done in December on the lower levels of 2,500 and 3,000 on the Pacific slope, and in January on the upper levels of about 4,000 feet elevation.

The disheartening effects of

THE FALL IN PRICES

of coffee are felt alike by farmers and purchasers, many manzanas being abandoned of late years, on account of low prices and small crops ; the first being unavoidable, the second, however, seems to have found a remedy in what few farms have practised,—chemical manuring. Coffee manured thus by a brand of manure well known in the London market yields 30 fanegas to the manzana, of high quality (the fanega, equal to 4 hectolitres, giving 116 lbs. of cleaned coffee), leaving clear profit of 300 colones upwards to the manzana Taking coffee at its current price, as delivered in fruit, this cannot be called a low return, and is only an exceptional case on account of the use of manure. This being so, many owners of coff estates near the capital have realised similar returns fro land that was supposed to be exhausted long ago. T introduction of manures into the country is free of duty, a obtains also 33 per cent. reduction in railroad freight. Wh is wanted, as Professor Voorhees expresses himself in t preface to his "First Principles of Agriculture," is t teaching of the use of manures in public schools according practice and theory : every inhabitant of the country cou have a manzana of his own whose yield would not alter t markets of the world one single point. As it is, the form in despair has abandoned some or all of his coffee, and h devoted himself to sugarcane and yucca, the produce of whic has to be sold in the Republic, both of them following t downward drop in prices. Indeed, some are at their wit end to know what to plant, and talk about leaving off plan and taking to long shirts like the aborigines. In the interi of the country coffee may be said to be the only exportab product, and this is the part of the country where the farm will always live if he can.

When coffee was at a good price, four and five years ag several large lots of land were taken up on the Atlantic slop close to the railroad by capitalised firms, principally in t Turrialba and Juan Ninas districts : at elevations of 2,50 and 3,000 feet, the climate, one of almost continuously dail rainfall all the year round, is not favourable to the develo ment of a single uniform crop, as on the Pacific slope, but ha to be picked two or three times a year. The price of labou is here fifty per cent. and seventy-five per cent. higher also and last, but not least, the quality of the produce after a fe crops does not fetch such good prices as at the start, bligh in the crops being often heard of.

NOTES.

Austria. The Austrian Government is sai to be contemplating an increase o the duties on coffee of every origin.

The Indian Tea Crop. The estimate of the new tea crop is not likely to appear before Sep tember next. Usually the estimate appears in May-June an a revision in September.

Indian Tea for Indians. With a view to encouraging th natives of India to drink tea, th Simla Municipality have, says *Indian Gardening and Plantin* decided to allow that article to enter the station free octroi duty.

Average Prices of Tea. In Messrs. Gow, Wilson & Stanton market report published to-day wi be found an interesting table of the average prices of tea grown in each district. The latter embraces rates during th last three years.

Rail Freight in Brazil. The Paulista Railway has deter mined to reduce its tariff for coffee t the maximum rate of 1$500 per arroba and, moreover, ha reduced its sliding scale 15%, which will henceforth be ca culated on the basis of 15 pence per mil réis.

Tea Imports in the U. S. Imports in March were, 3,657,76 pounds, against 4,458,974 pounds i same month of 1900 ; imports for nine months ending March

,451,790 pounds, against 77,093,826 pounds in 1900, and ,228,683 pounds in 1899. In warehouse, 48,606,214 pounds, gainst 40,956,693 pounds at same date last year. Held in ew York, 32,833,365 pounds, against 28,565,512 pounds at rresponding date in 1900.

---

adras Cinchona.

We give to-day an interesting extract from the *Chemist and Druggist* wherein Mr. F. L. Seely, Secretary of the Paris edicine Co., St. Louis, Mo, has set down some of his experiaces during a visit to India, one object of which was to quire into the future of the supply of quinine, which is rgely consumed by his Company. We regret that we cannot produce the illustrations with which Mr Seely's feet is terspersed.

---

eylon Green Tea in Canada.

Writing to the *Canadian Grocer*, Mr. P. C. Larkin, of Toronto, states that the strongest factor of all in ringing about the decrease of the demand for Japan tea, is, he green teas of Ceylon. He says :—Every wholesale house as, by this time, recognized the fact that there is no future r Japans, and that there is a great future for Ceylon greens Canada. Consequently, not only the wholesale houses, but very bright retailer as well, are afraid to stock up with apan teas, wishing rather to adopt a hand-to-mouth policy.

---

orneo Coffee.

The Borneo Coffee Company's Agents in London, Messrs. Shand, aldane & Company, reported lately :—" We are glad to be ble to tell you that the 17 bags of coffee have arrived in ood order. This makes a good sound drink and @ 1s. 3d., he price we are charging, we think it will compare favourably ith other coffee. We began sending out our circulars this eek and in the three possible days Wednesday, Thursday, nd Friday have sent out 140 lbs. of coffee nearly all in 1st ial orders. This is not a bad beginning and we hope orders ay result for larger quantities."

Chance for Tea in Italy.

According to the *Gazetta degli Esportatori*, the trade in tea in Italy at the present time is a monopoly in he hands of one or two firms who supply shopkeepers, and so private customers directly, at extremely high prices, ough the quality is not always good. Quite a low quality tea, the *Gazetta* asserts, is sold at the present time at out 3s. 6d. the pound. In its opinion, an enterprising firm lling Indian and Ceylon teas, which would open branches Italy, and content itself with a moderate profit, would soon able to control the Italian tea market, reaping handsome ofits for its enterprise.

---

new Tea Kiosk in Colombo.

A correspondent of a Ceylon paper remarks :—The much-talked-of tea Kiosk for the Australia Building has hung fire" for a long while now, with the result that two nterprising Australian ladies have opened a tea-house in the ictoria Arcade between the offices of Messrs. Cook & Sons nd Beato, Limited. The verandah has been set out with ts of fern and the large cool room inside is being tastefully corated. It will be opened to the public on Thursdays and ay not inappropriately be known as "The Tea-house of Ten housand Joys" for it is said to be greatly favoured by even e chief lady in the land.

France as a Tea Buyer.

Are Indian Ceylon planters' efforts at the Paris Exhibition to be thrown away? M. Dormer, Governor-General of Indo-China, speaking at Paris on the 16th ultimo at a lunch in his honour by the French Society of Industry and Commerce, said that hitherto Indo-China furnished all the pepper consumed in France, and would soon furnish all the tea. He, however, deplored the fact that the French only control one-fourth of the commerce of the colony. The Far East promises a magnificent field for France, and all that Frenchmen need is self-confidence. M. Dormer is seeking to form a company here to build a railway from Indo-China to Yunnan-fu, and it is believed that he will be successful.

Rubber Cultivation in Burma.

In the House of Commons on May 18th, in reply to Mr. Sharpe (Kensington, N.), Lord G. Hamilton (Middlesex, Ealing) said,—The Government of India have recently authorised an extensive experimental plantation of the Pará rubber tree in the Tenasserim Division of Burma, where the climate and other conditions are believed to be favourable. I am aware that attempts are being made to develop the production of rubber in Ceylon and elsewhere by private enterprise, but I do not think that this is a reason why the Government of India should not do their best to develop their resources of that country and encourage private enterprise by showing that this tree can be profitably cultivated in parts of India.

Indian Tea.

The Indian Tea Association has reported to London that in all districts the weather is unfavourable generally. The Assam outturn last month was very poor, except from Dibrugarh. The Cachar and Sylhet outturn at the end of last month was stated to be forty per cent. under that of last year. The Duars and Terai outturn last month was very poor. The Darjiling outturn to the end of last month was twenty per cent. under last year. The tea entered for export from Calcutta to the United Kingdom for the second half of May, 1901, was 727,673 lbs., and in the corresponding period of last year it was 1,960,249 lbs. From the 1st April, 1901, to the 31st May, 1901, the quantity stands at 1,389,932 lbs., against a total for the same period of 1900 of 3,084,306 lbs.

The "Rest Question."

Indian Gardening and Planting writes :—" Our Madras contemporary, *Planting Opinion*, writes : ' We observe that our Calcutta contemporary, *Indian Gardening and Planting*, claims to have been the only opponent of the 'resting' scheme some months ago. We are glad to be able to state that we opposed the scheme *ab initio* and that South Indian planters, almost without exception, did likewise.' We were alluding more particularly to our northern contemporaries, but we are glad to acknowledge on examination that *Planting Opinion* held a very sound view of this question throughout, and was as much opposed to the dangerous scheme as we were. Nothing less could be expected from an organ that reflects the opinions of practical men such as the South Indian planters have shown themselves to be."

Roasted Coffee.

Mr. Schmelzel, of E. J. Gisell. & Co., says : " Roasted coffee, especially in package, has pretty effectually knocked out the sale of green coffee to consumers. 'Tis not so very long ago that

Farmer Jones, Villager Smith, and more or less of Townsmen Brown bought their bean in the green, the *frau* giving it a variegated roast over the opened holes in the cook-stove. The quality of the raw bean was usually good, but the roasting was as demoralizing as dyspepsia after a baby pig dinner. The Southern tiller of the soil still swears by the green, but the triumphant march of the package of roasted increasingly heard in Dixie. Package, though, can't get a footing or drinking in New York. Gothamites don't like Rios. The Metropolitan palate demands milder, more fragrant coffees."

The London Tea Market.

In their weekly telegram, dated 6th instant. to Colombo, Messrs. Gow, Wilson & Stanton reports that the market generally is weak, and that the market for medium liquoring Pekoes and Broken Pekoes, as well as for Common Pekoes and Broken Pekoes is also weak. The price of fair liquoring Ceylon Pekoe Souchong is 5d. (same as last week) and the average price of Ceylon tea sold on garden account this week was 6½d. (one-eighth of a penny down). Reuter reports that fine qualities of Ceylon tea are firm, but common rather easier. Pekoe Souchongs are quoted at 4⅜d. (the same as last week) and the average for the week at 6½d. (⅛d. down). 28,000 packages of Ceylon tea were offered for sale, of which 26,000 were disposed of; while of the 1,000 packages of Indian tea offered, 9,000 found purchasers.

Colombo Tea Sales.

At the public sale of tea at Colombo on the 5th instant, Chamber of Commerce room to-day 13,712 packages = 1,105,542 lbs., were offered, of which 11,165 packages = 919,122 lbs. were sold. According to the *Times of Ceylon*, the sale passed off well, all grades being in better demand and dearer. Good medium Broken Pekoe, and common to medium Pekoes and Pekoe Souchongs were from two to six cents dearer. The quality in a few cases showed a marked improvement, though the bulk of the offerings still consists of poor liquoring teas. Another report states :—"The general tone was distinctly better, and buyers showed more inclination to operate. Leaf teas were firm, common Pekoe Souchongs selling at a slight advance; while Broken Pekoes generally were in strong demand and realized higher prices all round."

Indian Tea Prospects.

In connection with the telegram sent by the General Committee of the Indian Tea Association in India to the Committee in London, stating that the weather had been unfavourable for tea in all districts, the meteorological returns up to the end of May show, says the *Indian Daily News*, that the rainfall during the spring was very much in defect in all the tea-growing districts. Thus, at Sibsagar, at the end of May, the total rainfall between the 1st of March and that time was only 16 inches, instead of the normal 27 inches, and in the Dooars, only 12 inches, instead of 17½ inches. At Darjeeling, conditions were less unfavourable, the deficiency having been only 2 inches during the three months, March, April, and May. In the Cachar districts, however, the rainfall was even worse than in the Assam Valley, and the station of Silchar reported only 23 inches during March, April, and May instead of the normal 40 inches.

Malay States Coffee Co., Limited.

The report of the Directors for the year ended 28th February, 1900, says:—That during the year 79·97 piculs of coffee were secured netting Rs.2,385·59, this being sligh in excess of the amount estimated. The balance of the cap has now been called up and it is calculated that the funds hand will be sufficient for the working of the estate u March, 1902, when it should be self-supporting. The cu vated acreage is now as follows—144 acres of coffee, (fr which 300 piculs is estimated as the crop for season 19 1902), 50 acres of rubber planted 12″ x 12″ total 194. acres of the coffee has also been planted with rubber 20″ x and with cocoanuts 54 trees to the acre ; the remaining acres of coffee bas likewise been planted with rubber 20″ x and with cocoanuts. The rubber is all coming on well a we are advised by the Superintendent that the older trees branching out, 8 to 10 feet up the stem.

GENERAL ARTICLES.

A VISIT TO THE CINCHONA-PLANTATIONS I MADRAS.

Mr. F. L. Seely, St. Louis, Mo, writes in the *Chemist a Druggist* :—

Two months ago in company with my wife I arrived at the li town of Conoor, the upper terminus of the cog-wheel railroad wh takes you from the hot plains to the mountain-top in South India. From Conoor we took a "jonga" (which is the name o two-wheeled carriage used in India), for a distance of ten miles, Ootacamund. Here we stopped at a very comfortable hotel, wh we found that in lieu of the suffocating heat we had left in morning we needed top-coats and grate-fires. We remained some days at this place, which is the home of Mr. William Standen, the Director of the Government cinchona-plantations the Madras Presidency, he occupying a delightful little nook wh is appropriately called "Cinchona Villa." Mr. Standen and family, however, were out at the quinine-factory, which is in midst of the cinchona-plantations at Nedivattam, twenty-th miles distant from Ootacamund, where he spends a large par his time managing the laboratory and cultivation. As I wanted see the plantations I set about to find transportation, and fina made arrangements with a teamster to take me out and back. was necessary for him to station fresh teams along the road, a the day before the journey teams left Ootacamund and were waiting for me at proper intervals, so that, except the stops change horses, I made the twenty-three miles each way with allowing the animals to reduce the speed to a walking pa Having started before it was light I reached the bungalow in go season, and, after a very pleasant reception by Mr. Standen a his good companion, we started off through the cinchonas for laboratory.

I was greatly surprised to find such a well-established facto and still more surprised to find that quinine sulphate, as be produced, when placed side by side with the European ma could not be distinguished. The factory was undergoing extens changes at the time, and very shortly will be a most modern ty of quinine-laboratory; indeed, the most modern methods of ma facture are used, the quinine being taken from the bark with and obtained as a pure white product with great economy. machinery is operated by a water-wheel, the power for which, course, costs nothing.

Mr. Standen is making about 10,000 lbs. of quinine a year, wh is largely sold through the post-offices in 5-gr. powders. T feature of the British-Indian quinine-industry is most credita and pleasing, for it places quinine, which is almost as essential bread to the natives, entirely within their reach at about act cost.

The quinine, after completion at the laboratory located Nedivattam, is brought into the offices of the director at Oota mund, where it is accurately weighed into 5-gr. lots, and each plac in a little envelope, on which is printed all necessary informati for the native. The envelopes are printed in many tongues a dialects, each section of the country receiving its quinine

packages printed in its own familiar tongue. The little envelopes are tied up in bundles of 100 each, and sent to all post-offices. The price charged is barely sufficient to cover actual cost of production. Persons not familiar with the country and people can hardly appreciate what a blessing this act is on the part of the Government.

There is usually a surplus above the requirements for post-offices and hospitals, and this surplus is sold, if anyone wishes to buy it, though the price charged is sometimes higher than market-price, by reason of the fact that a price is decided upon by the Government at the beginning of the year, which price shall rule through the year—and the fluctuations so common to quinine frequently go below the Indian price.

As to the plantations, they are very large and contain some very old trees, as well as a variety of species. The Government plantations have by far the best cinchona, but they are reserving most of their trees and letting them grow while bark can be purchased so easily from the planters. This is a help to planters too, as they receive the same price as they would in London, and have not the expense of sending it there, while the Government trees are being held for a "rainy day."

The finest trees are those at Dodabetta plantation. These trees have been shorn of their bark twelve times, and now have a good coat on again, but the practice of barking live trees has been stopped, and the trees are cut down, as is done in Java.

In addition to cinchona-cultivation and quinine-making I was much surprised to see fine beds of jalap and digitalis growing. Digitalis in full bloom is a beautiful thing, and made such a striking picture that I photographed it. This photo is of the Dodabetta plantation, where they are producing sufficient of these drugs to supply the medical stores of India.

This enterprise being entirely a private one, belonging to the British Indian Government, makes it impossible to say anything from a commercial standpoint; but I hope to return to the subject in connection with Java later.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange—*April 27th*, 1901.—Ninety days' Bank rate on London opened on Monday 21st at 12 7/16d. and closed this evening at 13 1/16d. . . .

Telegrams from Pará advise that shipments of rubber to the value of about £500,000 may be expected in May, which, if coffee continue to go forward on the same scale as this month, will give about £1,800,000 in ready bills, as against £2,600,000 in March, and £2,300,000 in February. Imports for February were nearly £1,400,000 and are expected to be larger in March; so that, allowing for Government requirements and private remittances, it seems possible that the balance of foreign payments may turn against us for a time until heavier shipments of coffee are renewed. The question, however, arises, whether shipments will really increase very much with the new crop?

At present they keep abreast of entries, but make little impression on stocks. Will they do so later? If not, a slump in exchange would sometime be inevitable. Shipments (embarques) during the past week were heavy, giving a value in sterling to be drawn-for of £400,000, as against £269,000 the previous week and £162,000 for the corresponding week last year. Rubber shipments from 1st to 26th April were 1,240 tons, of the value of about £400,000, or say £100,000 per week.

In the present temper of the market such considerations are scarcely taken into account, much more importance being attached to rumours of loans and such like. But, nevertheless, sooner or later their effect must be felt unless compensated as may easily be the case, by money from Europe. . . .

It cannot be too carefully borne in mind that at present prices coffee will give considerably *less* than last year even if the crop reach 12,000,000 bags, that rubber prices are falling and that the rise of exchange is certain to stimulate imports, and inflate payments due on their account towards the end of the year. With shrunken values for produce and all the bills taken up by speculators in advance, how is the market to be then supplied? Then will be the chance of the bears, unless, we repeat, the banks act in such a manner as to prevent it. So far, we believe, little harm has been done. But the market is warming-up and speculation extending in a manner that threatens at any moment to become as feverish and uncontrollable as last year.

A Correction.—In our Money article of last week a compositor's error of some importance was overlooked, by which the value of the probable amount of coffee available for export up to the end of June was given as 2,800,000 bags and their value as £1,000,000 instead of £4,000,000.

Coffee.—Entries at Rio and Santos during the week ended April 26th, were again slightly smaller, being 2,938 under those of the previous week but still 80,418 or 144%, over those for the corresponding week last year! Where all the coffee comes from is a mystery that has puzzled the whole market! It is noticeable that the falling off this week came entirely from Santos. Entries for the current month up to the 26th amounted to 504,970 bags, as against 214,999 last year, and since 1st July to 9,922,425, as against 8,453,915. At this rate there seems every prospect of the entries for the season at Rio and Santos reaching 11,000,000 bags, including new coffee expected in May. This, however, may be interrupted and thrown back by the rains which have recommenced and appear to be pretty general.

The Rio market during the past week was weak throughout at prices ruling from 6$700 to 6$100, at which business is said to have been done. Business, however, was very limited and mostly for orders for special European kinds, the States market being completely paralysed. For good colory coffees Nos. 7 to 8 we quote c. f. & comm. 6$300 to 6$000, equivalent to 29s. 3d. or 6 1/16 cents.

The big roasting houses have been buying steadily all week.

The conference lines have reduced freights to New York from 50 cents and 5% to 35 cents and 5% in consequence of competition *viâ* New Orleans, where coffee was being shipped at 25 cents. The reduction as far as we are concerned is of little or no value, as in the overstocked state of the market it can only result in lower c. & f. offers from this side, the consumers getting all the advantage, as they will also from the reduction of railway rates.

Up-country purchases have become almost impossible as the prices asked are far above parity and out of all proportion to real value. In spite of low prices low grades and even "escolha" continue to come down as much as ever.

At Santos the market was steadier but extremely nervous, with wide fluctuations. Dealers who sold heavily the previous week are inclined to look on a bit, although receipts continue heavy. We quote 4$100 to 4$400 for "superior", other qualities being quoted at the same differences as last week. No special demand was noticeable but "superior" seemed to be preferred whilst that for peaberry also improved. Receipts continue large and as there seems little hope of a rise of prices, planters pour their stuff down for whatever they can get, even at a loss, if only to repay some of the expenses.

This however can be no criterion as to what may happen with the coming crop; nor can it be concluded that new coffee will be sent down in the same way. On the present crop the cost of production has been paid long ago and all that remained for the planter to do was to pay the freight. So long, therefore, as prices would have left something over after that was done the coffee was bound to come down. With the new crop it will be different; and how the planters are to manage to even pay expenses at such prices is difficult to understand.

Coffee from Parana.—Arrangements are being made for collection of export duties on coffee from the State of Paraná at the Revenue Offices of the State of Sao Paulo. It is not generally known that the cultivation of coffee in the frontier districts of Paraná and São Paulo is considerable and growing in spite of the difficulties of transport.

Coffee and Exchange.—A correspondent at S. Paulo has favoured us with the following interesting communication:—

"That silly theory that rising exchange should also bring about a rise in coffee, regardless of supply or demand, is at last thoroughly exploded, I suppose, much to the regret of Mr. Murtinho and the speculative crowd in Rio. The eyes of those unfortunate importers in Europe and the States were at last opened to the fact that the rate of exchange will not command coffee prices for any *length* of time, especially when supply is so overwhelming as it is now.

"Things look very gloomy here amongst *fazendeiros* and *commissarios* and nobody can even form an opinion, as to what will be the ultimate result of all this or in what way things will right them-

selves A large number of the planters cannot produce at such prices; and even the writer of that unnecessarily sarcastic letter in your last issue fails to convince me that by the mere substitution of one weak man by another, if stronger, the difficulty can be solved. The strong man will simply get weak too at present prices, especially if the Central Government persists in its present mistaken fiscal policy and, with the help of the Banco da Republica, drives exchange still further. It is never wise to strain the bow too much and I am afraid we are already near breaking point. *Commissarios* here who have advanced money to planters on mortgages are doubtful as to whether they will ever get their money back, whilst taking plantations over at their present value, would leave them an enormous loss apart from throwing numbers of useful and active members of society on their beam ends.

Consumers have restricted their advances for working plantations very much indeed, and I think the ultimate remedy will prove to be a smaller output next year, as at prices of 4$000 only few can pick and market their produce. Yet I do not see how coffee prices in gold can rise materially, as the visible supply is too large to admit of an advance, substantial enough to counteract the effect of exchange.

Altogether there seems no other remedy than a still lower rate than even that at present ruling, and circumstances will bring this about and very forcibly too; but it would have been far better had a little more foresight been shown by the governing class and speculators been prevented from pushing the rate to its present level. If the rate go down now, the gold price of coffee will follow. After the first blunder in November, when the rate was also pushed to celebrate Mr. Petersen's advent, everything went well and smoothly. Europe and the States which had not large holdings were forced to come to buy daily in our markets and, notwithstanding large entries, the heavy stock was admirably held and the slow disposal of it well managed by our *commissarios*. It is utter fallacy to put the blame of previous low currency prices on the large accumulated stock here, because, if that stock had been half held and the other half disposed of to Europe and the States before, the big speculators there would simply have forced prices down with such surplus supplies on their hands, and have frozen out all the smaller dealers by manipulating the future markets for which the continuance of heavy entries here would have been used as a handle. Only the fact that the stock was held on this side and consumers had to buy as requirements, or at least 2/3 of them, equal to about 30,000 bags daily, in order not to let their own stock run down too much, maintained the gold price as well as the currency price. Otherwise the former would have gone down in February to 26s. or 27s., had *commissarios* and planters not stuck to their coffee. Then in February the upward movement of exchange commenced and all these efforts were frustated.

THE AMERICAN COFFEE TRADE.

Coffee—good, bad, and indifferent—reaches our country and the stomachs of its people; but, says the *American Grocer*, it is somewhat of a reflection on the United States that the demand for the lowest grades (*alias* "bad") is so much in excess of supply—great as the supply is—that prices are paid for the poorest grades, out of all proportion to their real value, while the demand for the higher grades is so limited that they do not realize to the planter their intrinsic worth.

A prominent broker—Mr. Arnold Schramm—an authority on coffee—deplores the depraved taste that forces such a contradiction in values. He attributes the anomaly to the fierce unprincipled competition that compels the sacrifice of quality on the brazen altar of a low-down cheapness.

Unfortunate it is for the highest good of the populace that the bargain counter has become a fetish, receiving the reckless homage of the thousands. Cut prices, especially in the coffee line, slash the taste, stomach, and nerves out of all resemblance to a healthy model.

Ergo! neighbour grocer, give your patron the best coffee, and you bathe his interior with a nectar of the gods, infuse life into his nerves, make yourself a lifelong friend, and fatten your pocketbook with bigger profits.

An expert in the coffee line claims that there is more in the making of coffee than in the quality of the bean; that is, a first-class coffee-maker can get a better drink from a low-class bean than a low-class coffee-maker from a first-class bean.

A representative coffee firm that has been roasting the inspiring bean for fifty years ought to know something about the "steeping" end of the coffee business. Here is their prescription for boiling in a common coffee-pot: "Grind coffee as fine as possible; use two teaspoonsful for each cup of cold water. The moment it boils to top set aside for ten minutes. Then pour off carefully into another vessel for serving.

"In French pots or muslin bags grind coffee like granulated sugar; place two teaspoonsful for each cup needed in a bowl. Pour on just enough boiling water to thoroughly swell the grounds. In about five minutes place these dampened grounds in top part of coffee-pot or muslin bag, and pour fresh boiling water through slowly; then re-pour the entire liquid through the grounds again. Let stand for ten minutes, and pour off carefully into another vessel for serving. Cream is best to use with coffee; condensed milk next, warmed (but never boiled); milk next. For after dinner (*demi tasse cafe noir)* use half as much again."

COFFEE *vs.* CEREAL CRANK.

Mr. G. Edward Fuller writes in the *American Grocer* :—

There never yet was an exposition where the food crank did not try to have his innings. The Pan-American is no exception to the rule. One of the Exposition officials has suggested that the greatest show of the season might be had if they could all be corraled into the Stadium some fine day for a heart-to-heart talk. They would be sure to pull each other's hair and call names before the meeting adjourned. They are combative, like all souls with a mission.

The management has tried to sort out the crank, but it is pretty safe to predict that some of the food exhibitors will be of that class. The difficulty is to tell a crank from a scientist. They use the same jargon. The world confounds them and pays them equally well. It takes an expert to classify them, and he is deceived sometimes.

We pass by the vegetarian crank, the cold-water crank, the two-meal-a-day crank, the no-breakfast crank, and a score of others, because they have no wares to exhibit, and will not be permitted to lift up the voice of warning or exhortation at the Pan-American grounds. The gospel of pure food and right living will be quietly but thoroughly handled, however, by dealers in cereals, bread, coffee, baking powder, and prepared milk from their little pulpit-booths on the floor.

There is a lot of conscientious buncombe in the world. The food crank dispenses much of it most advantageously to himself. He has not only a good commercial return to pay him for his trouble, but the sweet thought that he is benefiting the race.

The crank who depends on cereals for his advancement has a good thing. His is a plausible theory. Not being naturally enthusiastic over a cereal diet, mankind is prone to think it very wholesome because not particulary agreeable. Hence its popularity as a "food for babies." Nothing that a child likes is supposed by the truly orthodox to be good for him.

The cereal crank trespasses on the coffee field now-a-days.

There is an idea abroad in the land that it is much more wholesome to drink a hot liquid made of barley and wheat and molasses than to imbibe an extract of the pure coffee. It may be, as a change, for some, less injurious for awhile, but my observation leads me to believe that, if cereal coffee is drunk for any length of time, it weakens the tissues of the stomach and induces a flatulent condition, as the long-continued use of hot water does. They both lack the tonic qualities needed in a steady drink. If a man wants to abandon the coffee habit, he can break himself gradually by the use of cereal coffee. But hot water would do as well. As to the nutrient value of cereal coffee, it has been shown, by recent expert dietetic examinations, that a fellow would have to drink four and one-half gallons to get as much food as is contained in a quart of skim milk.

It is a curious fact that coffee has no injurious effect on the man that smokes tobacco. The effect of either one, bad in itself, as it may be if abused, seems to be counteracted by the effects of the other. Better than cereal coffee is a mixture of coffee with chicory root. Statistics show that the coffee drunk by the greatest coffee fiends in the world—the Germans and the French—contains a large per cent. of chicory, in comparison to a very small per cent. used in America. If I had a sluggish liver, I'd put chicory in my coffee

rather than drink any of those cereal combinations. Or if my nerves were too much stimulated by coffee, I'd mix it with cocoa. One who has never tried that mixture can't know how delicious it is.

Coffee is least harmful to most people when taken clear. The Portuguese who said he wanted it black as ink, sweet as honey, and hot has hell had an idea. Also better than cold cream as an adjunct is hot milk in the French fashion, but the trouble in either case lies not so much with the coffee as with its accompaniments. When it comes alone with a roll or toast and eggs, the stomach bids it welcome. With beefsteak and griddle cakes and all the other horrors of an American breakfast in its train, it is an unwarranted guest in the digestive tract. The sturdy citizen who toils all day in the open air is none the worse, but the pallid sedentary with a liver like a cinder would better banish either coffee or beefsteak from his morning meal.

The Jews made a strange discovery thousands of years ago. According to the tenets of their religion, it was not well to drink milk within an hour of eating meat. That was no baseless superstition. Within recent years French scientists have discovered that milk and meat brought together in the stomach are likely to produce a harmful germ. I very much question the wisdom of milk as a food for adults.

Of all the food cranks, none is more persistent and plausible than the bread crank. Sometimes he says that wheat bread is absolutely barren of nourishment, sometimes he declares that rye and graham breads are too soggy, and that only porous white bread is wholesome. Between the two extremes, a conscientious consumer must make his way as carefully as an ancient mariner between Scylla and Charybdis.

One of these staff-of-life cranks wants the Exposition management to hire him to lecture to the populace this summer. He says that if his ideas about bread are put into practice, not only will the citizens be better nourished, both physically and mentally, but the taxation of the city may be greatly lessened through the reduction of pauperism and crime. He goes to the length of saying that if Christ were living to-day and eating the food of our times, he would be a very different man from the humble Nazarene.

THE CESS (FOR INDIA) AND THE TEA CRISIS.

"A. C." writes to the *Ceylon Observer* :—

I have received, and gone through, the May number of the *Tropical Agriculturist*. You have never been backward in giving *all* the news on planting topics, but still a stranger reading that number from cover to cover would not learn that there is a "Tea Crisis." The article on page 759 by a specialist touches lightly on the matter. Your specialist was not in favour of resting tea; he would advise estates to "abandon outright" any unprofitable area. This is a remedy for each estate, and not for the industry. On page 751 you have a letter to *Planting Opinion* from Mr. Ashton who decries the voluntary system of subscriptions and says that a Cess is necessary. Mr. Ashton is the Chairman of the I. T. A., and this letter, "*ex-cathedra*," gives his views. He points out the way to safety. He says that money is required and cannot be obtained by voluntary subscriptions. This letter was written in March; subsequent to that time the reduction scheme was adopted and dropped owing to the failure of Ceylon.

On page 371 of *Indian Gardening and Planting* I have found a fresh scheme proposed by other members of the I. T. Association. They ask for

FREE GIFTS OF TEA

this in the face of the declaration by their Chairman that the voluntary business is a snare and delusion. The scheme proposed is one which is sure to succeed in its object, *i.e.*, to make profits for the subscribers, but everyone knows that private sale of tea is certain to succeed, if undertaken on sufficiently large a scale —*vide* Lipton, Mazawatte, etc. But this will not help the industry. The dead silence which has succeeded the letter by Mr. Ashton has encouraged me to take up the cudgels and I am endeavouring to stir up all concerned; I have dreaded attacks on my "blooming cheek," but am ready to face anything. In his interview with *Tea* (the new paper), Mr. Rutherford said that there would have been no over-production if India had had a Cess. This is a "tall" saying because after all India *did* subscribe a considerable sum, and the small difference between the amount subscribed and what would have been obtained from a Cess at the *same rate* as Ceylon would have made practically no difference in the great surplus which we failed to place on New Markets.—I am a plain, practical planter like hundreds of others who toil, and have toiled, to make the industry what it is. We—I dare to speak for the rest—do not understand the cause of the failure to produce and adopt any scheme which shall at least give hopes that prices will improve. How is it—we ask—that the only scheme which met with any pronounced favour —the reduction scheme—has been so universally condemned? We have absolutely come to the end of our tether as regards quality. We can, and do, change the quality of our teas to meet the requirements of the markets, but we invariably make a thorough mess of it. The market howled for coarse tea and paid up to 6d. for it; with great joy, we responded. The extra duty was imposed, but tons of coarse tea were on the sea and in our tea houses—*it had to go on.*

Then came such foul abuse regarding quality that every decent manager began to blush, and it ended up by Mr. Skrine setting up a cry of "stinking fish." He got a special man to find microbes on *dry* tea. The tea they got hold of was dry, yet rotten. May the Lord help us and give us peace because, as the sentence goes, "there is none other to fight for us." I am speaking out on behalf of tea managers, myself included.

I have done all that *can* be done. I have reduced my expenditure, and forfeited the greater part of my commission. If this state of affairs lasts much longer, the quality of my tea must suffer. I shall have to reduce rolling, and fuel, and labour in the tea house. My garden receives the minimum of cultivation, and will have to do with less. I shall soon have to reduce my own pay, or look for fresh work.

None of this is *my* fault (I speak for hundreds of managers); the fault lies with *you* (*the owners*). I tell you, out straight that, unless you get a Cess, and a heavy Cess, your properties will be closed. Some of you—like Mr. Rutherford—own properties that may weather *any* storm. Will you refuse help to us who have been less fortunate. Some of you have helped in the past, and are willing to help in the future, but naturally you do not move heaven and earth for redress. When it comes to the vote will you help us?

There is room for all, and for double our present area of tea. If Ceylon and India will combine and have a Cess worthy of the industry we shall be able to conquer the Tea world.

If Ceylon will let good Indian tea in free of duty, she would be able to blend her poor teas and make them valuable.

COLOMBO SHOULD BE OUR DISTRIBUTING CENTRE FOR AMERICA AND AUSTRALIA AND RUSSIA IN EUROPE.

If it comes to a fight, India is *much* stronger than Ceylon. We shall be able, by means of cheaper labour, and bigger ventures, to crowd you out. You supply 37 per cent. to our 53 per cent. to British consumption. We shall be able to run you down—down—down as we did China, by being more capable of expansion than you are. It will be a dreadful fight, but we are bound to win. "We don't want to fight" but by jingo if we do,! etc., etc. Again I appeal as a manager—to the owners; why cannot you agree? and pull together, and make our work *certain?*

Up to now, you—the owners, directors, agents, of tea properties—have pocketed the proceeds. It is time now to think, and to think seriously; to formulate some plan and *stick to it*. In the past your managers have pulled you through each crisis as it came up. I have recently learnt the reason why we cannot help you any more. It is because there is only seven million pounds of China tea to be displaced in British markets. We can no more prevent our expansion than can the school-boy. We stick out at each end and our chests are cramped by our clothes. You have to get us a new suit, and if you imagine that a new suit costing seven lakhs of rupees will cover our partial nudity you are mistaken. But it will relieve the pressure on the chest and let us breathe. I beg to be excused if I am too outspoken, or frivolous, or for any other fault. I understand that there is a crisis, a bitter fight for existence. I cannot understand this lethargy, this utter apathy, this heathenish way of sitting down to meet our fate.

We, the managers, have *trusted* the owners to find a solution of the difficulty. If they will not or cannot find it we shall be better employed in serving men who *can* manage their business. If another war was to the fore, I believe that we could organize a

managers' strike, and take the best brains out of the country. At present men are *waiting;* some of them will lose their reason from the strain, many their lives, and more their employment; a large proportion of owners and shareholders will lose their properties. A few will gain in the end, and tea will become an industry of bloated properties and trusts. Am I placing more than the truth before you? If so, the papers lie. I glean my forebodings from them. Have I exceeded my station by an inch? If so, it is for the benefit of my fellow-managers. We, the managers, cannot "strike," but let us speak out, and blow the consequences; nothing worse can happen than what we *have* to face in 1901, if our owners are asleep.

THE BULGARIAN OTTO-OF-ROSE CROP.

A Kezanlik correspondent writes to the *Chemist and Druggist*:—

The general outlook of this year's rose-crop is, on the whole, pretty fair. Of course, no one in Kezanlik expects a rich crop like last year's. That was a wonderful and exceptional one, the like of which happens only once in every decade. Even under the most favourable harvest weather the present crop can only be an average one. On account of the early spring and the warm weather in March the crop is rather in advance, and the distillation throughout the whole district promises to begin about a fortnight earlier than usual. It has already begun in the most southern localities, but in the Balkan valleys of Toundja and Strema it will hardly commence much before the end of this month. The budding season is now over, and, judging from the yield of rose-buds, the crop will probably be 25 or 30 per cent less than last year. While last year's crop was variously estimated from 115,000 to 130,000 T. oz., this year's may be only about 80,000 T. oz. The rose-bush is a delicate plant and most susceptible to the changes of the weather. March was rather warm; but all through April we had very abnormal weather, accompanied with snow and frost. This considerably affected the yield of rose-buds, and instead of having clusters of seven or fourteen rose-buds, which is usually the case when a crop is rich, this year's clusters rarely show more than five buds. In addition, many rose-plantations have suffered from hailstorms, spring frosts, and destructive caterpillars, and nearly all the old rose-plants are more or less damaged from the winter cold. The main factor, however, which affects a crop is the weather during the harvest-time, when the rose-flowers are being gathered and distilled. This is yet to come. It may change, and upset all previous calculations and early forecasts. As last year's wonderfully fine crop sold at a very low price nearly the whole of it was bought up by the exporters, and very little old otto is left in the hands of the growers; but some of the exporting houses have fair stock on hand. Small lots lately sold here have realised prices from 16s. 6d. to 17s. 6d. per T. oz. We shall send you full and definite information after the harvest.

THE COST OF PRODUCTION OF COFFEE.

A correspondent writes to the *Brizilian Review* from S. Paulo as follows:—"Your estimate of the cost of production is disputed all round here, it is said that some very favoured planters can raise coffee at 4$000 per *arroba* on their farms, but not delivered in Santos, and of these farmers there are not very many.

"A bag of corn costs here 10$000 and a bag of coffee 26$000, of which practically everything goes to the labourer or Railway Co. Consequently, the balance of trade must go against us very soon, as the Italian labourer will remit his earnings from gathering coffee as well as from selling the corn he planted, and the Railway Companies also remit in the shape of wages and in payment for coal, etc.

The followiug statement gives cost of production on a fazenda yielding 65 *arrobas* per 1,000 trees, which is more or less the average, and another yielding double that amount, which is exceptional. Nothing has been allowed for administration, as you will perceive.

From the first two items nothing can be deducted: the third might be reduced a trifle, but only for big concerns with their own machinery, which on most plantations is not the case. The 4th item may be increased largely and only in a few cases will be less. The 5th may be smaller, but not much in most cases. Those fazendas which are still new and yield heavy crops have in most cases to pay more freight. With regard to items 6 and 7 no reduction can be admitted.

Cost of production of 100 *alqueires*, equal to 65 *arrobas* per 1,000 trees:—

1.	Treatment of 1,000 trees	90$000
2.	Picking 100 *alqueires* at 800 réis	80$000
3.	Cartage from the fields, drying, hulling, etc. ...	70$000
4.	Transport to the station	13$000
5.	Railway transport, 1$400 per *arroba*	91$000
6.	Cartage in Santos	5$000
7.	Commission, 3% on 409$530	12$000
	Total ...	361$000

Yield of 65 *arrobas* at 6$300 per *arroba*, equal to 409$500.

Cost of production of 200 *alqueires* equal to 130 *arrobas* per 1,000 trees:—

1.	Treatment of 1,000 trees	90$000
2.	Picking 200 *alqueires* at 800 réis	160$000
3.	Cartage from the field, drying, hulling, etc. ...	140$000
4.	Transport to the station	26$000
5.	Railway transport, 1$400 per *arroba*	182$000
6.	Cartage in Santos	10$000
7.	Commission, 3% on 819$000	25$000
	Total ...	633$000

Yield of 130 *arrobas* at 6$300 per *arroba*, equal to 819$500.

THE AMERICAN TEA TRADE.

A BID FOR TEA.

Have you ever attended a tea auction? If not, says the *American Grocer* to its readers, it would interest and likely pay you—if you bid wisely—to visit the capacious auction room of the Montgomery Auction and Commission Company, located at No. 132, Front Street, New York.

On the fifth floor will be found the large, high-ceilinged aiyr, well-lighted chamber, that once a fortnight resounds with the bids of the tea buyers.

May 1, under the gentlemanly, business-like superintendence of the auctioneer, Mr. Thomas, there were sold 337 packages Moyunes; 316 boxes Pingsueys; 585 half-chests Congous; 224 packages Indias. Ceylons, etc.; 486 half-chests Foochows; 2,089 packages Formosas Prices realized were very low, in face of the fact that the general trend of the market is upward.

Sample packages of each particular tea named in the liberally-distributed catalogues are arranged around the sides of the room—some with a two-inch hole bored in the side; others with tops removed. Ample choice is thus given intending buyers to compare qualities and conditions, and make identification entries opposite catalogue numbers pre-requisites to intelligent bidding. At 12 noon sharp the tea-seeking audience seats itself on comfortable camp-chairs; the sturdily-built auctioneer mounts a platform, which, with a desk in front, is mounted on rollers, and the fun begins. So rapid is the utterance of the "Going, going, gone" gentleman that a stenographer would be distanced, and the tyro in auction tea dialect can hardly distinguish the words. With great rapidity the 4,037 packages are knocked down to the highest bidders. Then the buyers fish a pound or two of tea from the representative package of each lot they have secured. These samples are for comparison with the lots purchased, and for supplying salesmen with specimens in advance of receipt of goods.

Most of the tea is sold in bond, purchaser paying the duty—10 cents per pound. You need ready money if you bid, for the terms are net cash on delivery. You have ten days to examine, accept, or reject your purchase. All teas are guaranteed equal to auction samples.

The next regular tea sale will be held on Wednesday, May 15.

In the list of special sales noted by Joseph R. Peebles' Sons Company, Cincinnati, O., is the following: "We buy teas for their quality in the cup, the choicest early growth, picked and cured while the leaf has its most delicate flavour and fragrance. Such teas are limited in quantity, but we have them. Formosa Oolong; Gunpowder; Moyune Young Hyson; Mixed; English Breakfast; Japan (early gardening pickings). $1·00 grade, 80 cents; 75-cent grade, 60 cents; 50-cent grade, 40 cents. This week only."

That firm has learned the secret of a growing tea trade. Quality in the cup is the prime factor.

WILD VANILLA.

In an interesting article in last March number of *Chambers's Journal* Mr. Rowland W. Cater relates his experiences and adventures while gathering vanilla in Central America. The author, while staying at San José, casually fell in with a native trader, and together they undertook an expedition into the interior of Costa Rica with the object of collecting wild vanilla and other forest products. Port Limon was the starting-place, whence train was taken to Jimenez, a small settlement on the branch-line to Carrillo. Here the travellers alighted and struck into the bush, the passage through which was comparatively easy. On the second day out a wild vanilla vine was discovered hanging from a huge *zapotillo* tree, from which twenty-two pods were obtained, and by sunset that day the travellers had found nearly 250 pods, or about 12 lbs., and that within a distance of little more than six miles.

Mr. Cater gives a description of the wild vanilla vine (*Vanilla sylvestris*), which he says often reaches over 30 feet in height, and is usually about the thickness of one's little finger. The vine is round, knotted at intervals, and covered with dark-green spear-shaped leaves. It throws out a number of thin arms or aerial roots as it rises, which, attaching themselves to neighbouring trees, appear to derive therefrom such nutriment that the vines are little dependent on the soil. Occasionally the wild vines completely cover the branches of the tree, and, running from it into adjacent ones, they will hang in huge festoons and arches so thick that they seriously impede one's progress in the bush. The vines blossom profusely—usually in the Spring—the strange and delicate flowers, with their long, straggling, and pale yellow petals, springing from the angles were the leaves branch off. After a few days' existence the flowers wither and fall; and as their chance of fertilisation through any of the outside agencies on which they depend is a brief one, and precarious at best, very few of them are succeeded by fruit This takes the form of a large pod, and although the pods attain their full growth within fifty days from the fall of the petals, they take fully seven months to ripen.

The pods vary from 5 to 12 inches in length, and are about an inch across. In shape they resemble a knife-sheath; hence the word vanilla, which is a corruption of the Spanish word *vainilla*—a small scabbard. Each pod contains a quantity of small black granules, surrounded by a balsamic pulp whose peculiar combination of oil and acid is supposed to impart to the pods the delicious flavour and powerful aroma they possess. Altogether the travellers were in the bush eight days, and as provisions were giving out they hastened with their plunder to Tortugero, where Mr. Cater sold his portion to his companion at the current price in the settlement, and having paid his share of the expenses of the trip, he came out financially so far to the good that he was prepared there and then to set out on a similar expedition had the opportunity offered. Mr. Cater winds up with a detailed description of the systematic cultivation and curing of vanilla in Central America(*Vanilla planifolia*), about which so much has been written in recent years by consuls and others. It is a fact not generally known, however, that Mexico produces the finest vanilla in the world, and that practically the whole of it is consumed in the United States.

DISTRICT ASSOCIATIONS.

COORG.

Proceedings of the Annual General Meeting of the Coorg Planters' Association, held at the North Coorg Club, on Wednesday, 22nd May, 1901. PRESENT:—Messrs. W. M. Ball, H. F. Davy, J. D'Vaz, G. C. Garrett, W. H. Sprott, and A. Lambert (*Honorary Secretary*).

The President, Mr. Sprott, read out the Annual Report which ran as follows:—

Annual Report 1900-01.

GENTLEMEN,—It is again my duty to lay before you the Annual Report of our Proceedings during the past season, and to submit for your approval the accounts, which I trust you will find in order, as, through the circulation of printed copies of the minutes of all our meetings, every member who takes any interest in the affairs of our Association is, or should be, thoroughly cognisant of all that takes place at our meetings; it is hardly necessary for me to more than touch upon the principal matters which have come under our notice during the past year. The Annual Meeting of the U. P. A. S. I. took place as usual, at Bangalore in August last, and was of a most interesting and business-like character; but as your delegates gave you a full report of the questions which were of especial interest to Coorg, at our November meeting, and as moreover a complete account of the general Proceedings was published in the papers at the time; it is hardly essential for me to trespass upon your time unduly to repeat information which is, doubtless, already known to those who take interest in such matters.

The Railway Project is progressing favourably, and there is no reason to doubt its eventual successful accomplishment.

The Coffee-stealing Prevention Act.—We have no further information *re* this question, but no doubt in the course of another season or two we shall be able to decide. According to information received from other Districts as to the results of the working of the said Act, whether it is advisable to ask Government to introduce the same into Coorg.

New Markets for Coffee.—This scheme has unquestionably been the subject of much thought and discussion not only in Coorg, but in all the Coffee Planting Districts of S. India, and if only sufficient funds can be raised and the powers of advertisement directed into the proper course, it seems certain that some good results will arise therefrom. To what extent, however, the coffee

industry would benefit thereby it is impossible to tell until a fair and ample trial has been given to the project. But judging by the very satisfactory results of the efforts of both Indian and Ceylon Tea Planters in the same direction, I think it is safe to assume that such a venture is well worth an effort on our part. Therefore it appears to me that some plan for the effective raising of funds and some suitable system of advertisement having been agreed upon by all the Coffee Planting Districts of S. India it will become the duty of every coffee owner therein to subscribe to the Fund for pushing our staple in new markets. More especially in these days of low prices and keen competition.

Local Fund Board.—This innovation on the part of Government is by no means popular amongst our members, and though we strongly urged Government to allow things to remain on their old footing, we soon found that any efforts on our part were not likely to prevail, as we were given to understand that Government had fully determined to introduce a District Board into the Province. Now, however, that the Local Fund Board is a matter of fact, we must do our best to see that planting interests are well and rightly safeguarded, and we hope that our representatives on the Board will, to the best of their ability, see that such is the case. The question of the increase of planting representation will be brought up later at this meeting.

French Import Tariff.—This question which has caused much trepidation in many quarters may, I venture to suggest, be safely left in the hands of the Government of India; and I do not consider it at all probable that we shall ever be troubled by this extra import on our staple. It is with great satisfaction that I note the appointment of an Assistant Superintendent of Police to our Province. This has been a long felt, and asked for, want, and many and frequent have been the complaints carried to me against the Police. But I am bound to state that whilst admitting the general question of the complaints in my opinion much of the so-called want of Police supervision appears to be due to the Force being under-manned and in many cases badly recruited. Though doubtless Mr. Travers-Phillips when he has had time to settle down, and become thoroughly acquainted with the various Districts of Coorg will soon find out the real causes, and place Police matters on a better footing than at present, they apparently are with regard to the coffee crops and general prospects; the crop just picked has turned out a large one—which is a matter for congratulation, though I fear prices do not promise to be as good all round, even, as those of last season. Crops for the coming season will be small, as a rule, which perhaps, is only to be expected after the bumpers just picked. Our list of members remains much the same as that of last season, 71, though we have had some two or three resignations. We have, however to deplore the loss of Mr. H. Mann whose sad and untimely death has deprived Coorg of one of the most popular planters we have ever had amongst us. And that, also of the well-known and generally respected coast agent, Mr. R. Tatham, who was a member and supporter of our Association.

Roads and Communications. Hutti Bridge.—This, I am glad to say, is approaching completion. Though I am given to understand that the work has been delayed by the non-arrival of the girders from England. This, however, is, in a measure, an advantage as it will give the approach embankments time to settle down, several other bridges, notably those at Vriti and Ahtur have been renewed.

The Wynaad road is now open to within 1¼ miles of Wynaad, and this section would have been also open had not small-pox driven away the labour. I am informed that the open portion of the road stood the heavy traffic thereon very well during the current year. Work on bridges will now be put in hand. Nalknâd road, progress is being made with this as funds will allow. The general condition of our roads is good, I consider, and perhaps the one down the Periambady Ghât has never been in better order and condition. Complaints have been very few during this season, so I think we may again safely congratultate the officials in charge of our roads and communications on their satisfactory state.

With reference to the question of the unsatisfactory stacking of metal on the Polli Betta road, our Executive Engineer informs me that if the planters would sell to Government a few yards of land on the lower side of the said road, all reason for any annoyance or inconvenience arising therefrom would cease. It therefore seems as if the remedy for this evil lies in our own hands.

The following is the report for current season of the S. C. Coffee-stealing Fund which has been kindly sent to me by the Honorary Secretary, Mr. Fred. W. Gerrard. One coffee-steali case was reported during the season, and a reward of Rs. 25 was pa

It has been found necessary to make a call upon the members f the balance of the original subscription. In most cases this h been satisfactorily met, but I understand that there are so members who apparently decline to satisfy the demand. T accounts stand as below :—

A. LAMBERT,

22*nd May*, 1901. *Honorary Secretary, C. P.*

The ballotting papers for the election of a member of the ne Local Fund Board for South Coorg were then opened and M Parsons was found to have been duly elected.

Read correspondence from the Commissioner and others *re* t impost of the Local Fund Tax.

Police.—Mr. D'Vaz spoke at some length, and strongly, on th important subject, and quoted several instances of Police incomp tency which had come under his own cognisance. He attribute much of this undesirable state of affairs to the improper enlistme of the men, pointing out that the authorities should take eve precaution to ensure the enrolment of good men only, as at prese and he asserted that almost anyone is taken on irrespective of h merits or character, and that in some cases even constables we employed who did not understand the language common to t Province. Mr. Ball suggested that sales of manures collected Government roads, or on Bazaar sites, should be properly advertis and due notice of all such sales be given to all persons who ow land in the vicinity of the place where the said sales take pla Resolved to address Government on the subject. I now beg tender the resignations of your President, Honorary Secretar and Committee, and will ask you to open the ballotting papers f the election of new office-bearers.

The following is the result of the ballot :—

PRESIDENT—W. H. Sprott.

HONORARY SECRETARY—A. Lambert.

COMMITTEE.

North Coorg.	*South Coorg*
W. M. Ball.	A. Boponna.
H. F. Davy.	J. S. Gerrard.
I. W. Irwin.	H. G. Grant.
J. T. Morgan.	A. H. Jackson.
C. E. Murray-Aynsley.	J. Logan.
C. G. Maclean.	H. G. Parsons.

MERCARA, *22nd May*, 1901.

A. LAMBERT, *Honorary Secretary, C. P. A.*

MARKET REPORT.

[*Per Mail advices of 24th May* 1901.]

COFFEE.

The London Commercial Record says:—The improvement in the demand noted last week has continued and supplies at auction met a steady demand, a large proportion being disposed of at firm prices to further advance of 1s per cwt. for all growths. The public market closed on Wednesday for the Whitsun holidays and will re-open on the 30th May. There have been some fluctuations in the market for futures, a rise of 1s established early in the week, on moderate receipts and an upward movement in Exchange, being subsequently partially lost. July Santos rose to 31s 9d. fell to 31s, but rallied and close at 31s 6d per cwt. Yesterday business was done in September delivery at 31s 10½d. and in December at 32s 3d. We quote—

London ...	... Santos ...	July delivery	...	31s 6d.
New York	... No. 7 Rio...	,,	...	5·55 cents.
Hamburg...	... Santos ...	,,	...	31½ pf.
Havre ...	... Santos ...	,,	...	38¾ francs.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	STOCK.		IMPORTS.

Rio Exchange 12¼d, previous day 12 5/16d.

HAVRE, *May* 23.—Good average Santos May opened quiet at 37¾f. and closed quiet at 38f., September opened at 39f. and closed at 39¼f., December opened at 39½f. and closed at 39¾f., March opened at 40f. and closed at 40¼f.

HAMBURG, *May* 23.—Good average Santos May opened quiet at 30¾pf. and closed steady at 31¼pf., September opened at 31¾pf. and closed at 32pf., December opened at 32½pf. and closed at 32¾pf., March opened at 33¼pf. and closed at 33½pf.

NEW YORK, *May* 23.—Closing prices of No. 7 Rio were as follow:—

		May.	June.	July.	Aug.	Sept.
May	23...	5·45	5·50	5·55	5·60	5·65
May	22...	5·40	5·45	5·50	5·55	5·60

TEA.

INDIAN.—There was again a shrinkage in the quantity brought forward, which was 11,900 packages contrasted with 12,600 packages in the week before, and 14,700 packages for the corresponding period of 1900.

These limited supplies met with a rather better demand, though prices did not mark much alteration, enquiry being principally confined to the best liquoring parcels. South-India was represented by about 1,700 packages, some of the shipments being of a usual character.

Printed on importers' account in the month:—

1901.	1900.	1899.
39,900 packages	59,600 packages	39,600 packages (281 New Season's) (Including Whitsuntide)

making the amount passed through the Mincing Sale Room from 1st July last 1,619,000 packages, *versus* 1,609,000 packages and 1,497,000 packages in 1899-1900 and 1898-1899 respectively.

CEYLON.—Public auctions were larger, aggregating 24,600 packages, compared with 19,600 packages on the 14th instant. Twelve months ago 30,400 packages were offered.

Except for the more attractive invoices, bidding was somewhat less brisk, and the market showed considerable irregularity. Leafy kinds under 6d per lb. were not so much in request, in many cases favouring buyers; for medium to fine Pekoes and Orange Pekoes, however, steady rates were usually paid. Common broken Pekoes went easier, but those with good cup and the choice lines of broken Orange Pekoe realised higher figures. The average is 6⅝d per lb. On the 16th instant it stood at 6⅜d per lb., and 7d per lb. in 1900.

Total sold for the month:—

1901.	1900.	1889.
62,900 pkgs. (3 sales) (Avge. 6½d per lb.)	161,200 pkgs. (5 sales) (Avge. 7⅛d per lb.)	97,600 pkgs. (Avge. 8⅛d per lb.)

JAVA.—Slightly over 1,300 packages of direct import were submitted to the trade and taken up without material change, though at times quotations manifested unevenness.

The undermentioned were catalogued in May:—

1901.	1900.	1899.
4,900 pkgs. (Avge. 6½d per lb.)	8,400 pkgs. (Avge. 6⅜d per lb.)	1,500 pkgs. (Avge. 7⅞d per lb.)

Deliveries.—The clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 21st May,	1901	...	...	1,142,092	lbs.
Do.	do.	1900	...	9,308,013	,,

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	10,701	1,256	11,957
Ceylon	20,670	3,886	24,556
Java	635	697	1,332
Total ..	32,006	5,839	37,845

Also 551 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated May 24th, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO END OF MAY.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.

Dehra Doon ...						

The Season's average price of Indian Tea is far below any previous record. A glance at the above table illustrates the way in which Districts producing Tea of poor quality have suffered, owing to the recent heavy fall in the value of low grade Teas.

The last auction of Indian Tea before Whitsuntide was held on the 20th inst., and of Ceylon Tea on the 21st. The next sales will take place, respectively, on the 3rd and 4th prox.

INDIAN.—The small sale, comprising only 12,458 packages, showed rather better competition than of late, but no change can be recorded in quotations.

Week's average of Tea sold on Garden Account 1901, 11,051 pkgs., av. 6·35d. 1900, 5,269 pkgs., av 6·81d.

CEYLON.—Supplies were fairly heavy, comprising 24,761 packages against 19,964 last week, some of the Tea having probably been brought forward a little earlier than usual in view of the Whitsuntide holidays. No actual change can be noticed in the market, last week's prices being on the whole fairly well maintained.

The quality and character of the Teas coming forward are fairly good, and distinctly better than usual for this time of year; bearing this in mind, present market rates show as low a market as has ever been recorded.

Average for week 6·59d., against 6·95d. in 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 506,897 pkgs., av. 6·65d. 1900, 505,997 pkgs., av. 7·44d.

JAVA.—Javas were fairly well represented, 1,332 packages being brought forward on garden account, all of which were of Direct import. No material change was noticeable in the market although several parcels were withdrawn for higher prices. 216 packages from the "Goalpara" Estate realised an average of 9½d. per lb.

Bank Rate 4 per cent. Exchange on London three months' sight:—Calcutta 1 $4\frac{7}{32}$. Colombo 1 $4\frac{1}{4}$.

There being no Public Sales next week, our next Circular will not be issued until the 7th prox.

COCOA.

The better feeling noticeable last week for West-India gro developed further at Tuesday's auctions, when an advances to 2s per cwt. was obtained in some cases. A total of 7,758 was brought forward, of which about 3,950 bags found buyers. 995 bags Trinidad catalogued, 770s bags were placed, at 75s t for fine and very fine, and 69s to 72s for middling to fair improvement of 1s to 2s. 985 bags Grenada practically all good and fine realising quite last rates, although the less desir grades were rather easier; 64s 6d to 67s 6d was paid for goo fine, and 61s 6d to 64s for common to fair. 173 bags Domi sold at 60s 6d to 64s 6d for common to good. 43 bags St. L brought 59s 6d to 61s. Of 152 bags Jamaica 100 bags sold a to 64s 6d. 6 bags St. Vincent realised 61s to 66s. Of 416 Haiti 50 bags sold at 56s. 53 bags Colombian found a buye 78s to 80s. Of 2,691 bags Guayaquil offered 1,160 bags were pl at valuations—58s to 60s 6d for Esmeraldas, 64s to 65s for Carac and 66s to 70s for arriba. Estate growths of Ceylon cont neglected, but collected sold at very full prices; 1,799 bags catalogued and 550 bags sold—good bold red 83s, ordinary middling ditto, 62s to 72s 6d, good to fine small 62s to 72s 6d. ordinary to good collected 57s to 64s per cwt. Privately a 400 bags Trinidad sold at 72s to 73s 6d for good, also 150 African at 64s, and 500 bags Guayaquil—winter Arriba at 66 68s, good red 78s per cwt.

PEPPER.

BLACK.—The market has been quiet since our last, and ra lower prices have been taken in the business done. In all a 100 tons Singapore are reported sold, *viz.*, shipments near at h at $6\frac{5}{32}$d, and March-May shipment at $6\frac{3}{16}$d.

A good selection was brought to the hammer on Wednesday, the only demand was for Malabar Coast kinds, 574 bags of w were catalogued 500 bags selling at $6\frac{5}{8}$d for fine heavy bold, $6\frac{1}{8}$ $6\frac{1}{4}$d for smaller ditto, $6\frac{1}{8}$d for bold dullish, and 6d to $6\frac{1}{8}$d for heavy small. 10 bags Malakoff partly sold at $5\frac{3}{4}$d for greyish. bags Singapore were bought in, also 111 bags Aleppy at $6\frac{1}{8}$d, 140 bags Trang at $6\frac{3}{8}$d per lb.

WHITE.—Is dearer on the spot, with sales of fair Penang private contract at $8\frac{13}{16}$d, fair Singapore at $9\frac{3}{8}$d, and fair Sian $9\frac{5}{16}$d per lb. For arrival no business reported

At public sale on the 22nd instant of 92 bags Singapore offe 50 bags sold—fully fair $9\frac{3}{8}$d. 2 cases 4 bags Malakoff brou $11\frac{3}{4}$d to 1s for fine bold, and $9\frac{1}{2}$d for good. 199 bags Penang bou in at $8\frac{3}{4}$d to $8\frac{7}{8}$d, and 66 bags Siam at $9\frac{1}{2}$d per lb.

GINGER.

COCHIN.—The market continues devoid of animation, and th were practically no bids for the 1,145 bags brought to the hamm although some holders were apparently willing to accept mate reductions on recent range of values. The whole of the quan offered consisted of washed and brown rough, and the buying prices were 37s 6d to 42s per cwt., as in quality.

JAPAN.—278 bags offered and 78 bags sold at rather lower price good fair limed (1893 import) at 32s per cwt.

JAMAICA.—Was not in such good demand as of late, only 275 bar selling out of 844 barrels offered, and these went at lower ra especially for medium grades—good to fine bright realised 59 65s, fair 51s 6d to 55s, middling to good middling washed 43s to 47s 6d, common to good common 40s to 42s 6d, and dark Rhat 38s to 39s per cwt.

GREEN.—9 barrels bought in at 50s per cwt.

CINCHONA.

There was a very good demand at the auctions on Tuesday, w 4,072 packages were brought to the hammer, against 2,049 packa catalogued at the previous series. The bulk of the offerings s at an advance on the higher range established at the Amsterd auctions, the unit value obtained being 2d against $1\frac{7}{8}$d last year, $1\frac{3}{4}$d in 1899.

956 bales *South American* brought forward and 730 bales sol Bolivian cultivated Calisaya quill $7\frac{7}{8}$d to $11\frac{1}{4}$d, broken quill chips $8\frac{3}{8}$d to 1s 1d, flat $7\frac{1}{2}$d; Carthagena chips $2\frac{1}{2}$d, Cuprea 2d $3\frac{5}{8}$d, and New Granadian $1\frac{3}{4}$d per lb.

Of 635 packages *Ceylon Cinchona* offered 450 packages sold—Officinalis, chips and shavings 7d to 7⅛d, broken quill and chips 5d to 5⅞d, renewed chips 4¾d to 5½d; Red chips and shavings 3⅛d to 7¾d, chips 3d to 9d, branch 2d to 4½d, root 3½d to 5d per lb.

Of East India Cinchona, 1,915 packages were offered and 1,650 packages sold—Officinalis, chips and shavings 2¾d to 11⅝d, ditto renewed 4⅝d to 11⅝d, branch 3d to 6⅞d, root 4⅜d to 11⅜d; Succirubra, chips and shavings 2¼d to 8⅝d, chips renewed 4d to 7½d, broken quill 4d to 4½d, branch 2¾d to 5¼d, root 3⅜d to 7¾d; Ledgerian, chips 4⅛d to 8⅞d, broken quill 10½d to 11⅝d, root 8d to 11d per lb.

176 bales *Java Cinchona* mostly sold—Succirubra, root 4¾d to 4⅞d; Hybrid, branch 8⅜d to 8¾d per lb.

100 bales *African Cinchona* sold at 6⅞d to 7d per lb. for Succirubra quill.

290 bales *Jamaica* sold—Hybrid, chips 5⅝d to 6d, chips and branch 4¾d to 6⅜d per lb.

QUININE.

SULPHATE QUININE is dearer. About 100,000 ozs. best German makes have been sold during the week at 1s 4½d spot, at from 1s 4⅝d up to 1s 4⅞d for August, and at 1s 4¾d up to 1s 5d for October, HB or B&S brands.

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday the 28th instant. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Coorg.

Polli Betta, 19*th June*.—*Weather*—Monsoon still going strong. From ·50 to over an inch has been the daily record, except on last Friday when only ·10 inch was gauged. Coffee is looking very fine, but there is a good deal of borer. Some planting out of supplies has been done—supply-holing, filling, planting, and weeding are the works principally in hand at present. *Labour*—plentiful. *Health*—fair.

BRAZILIAN EXCHANGE.

Our occasional allusions to Brazilian presidential messages must not be taken to mean that we accept without reserve all that is stated in these messages. It is our desire to place before our readers official as well as non-official statements bearing upon points of interest to the planting community. We venture to think that many coffee-planters in India do—and that even more should—take a deep interest in such information as reaches them concerning the opinions, the policy and the utterances of the men who stand at the helm of Brazilian affairs. On the 3rd ultimo Dr. Manoel Ferraz de Campos Sálles, President of the Brazilian Republic, presented a message on the occasion of the opening of the second session of the 4th Congress. Naturally, this message contained a great deal that is of not the most remote interest to planters here. It also contained some remarks, however, that should be noted by these gentlemen. In two respects Brazilian affairs have a direct importance to planters here.

Firstly, Brazil is the chief coffee-producing country of the world, and all that affects cost of production, price, etc., in Brazil affects the coffee markets of the world; secondly, the first point is so intimately connected with the movements of Brazilian Exchange that any remarks made by the President with reference to Exchange deserve as close study as what he may say from time to time about Coffee apart from exchange. In Brazil, in like manner, Coffee, the chief product of the country, is of paramount importance. In its effect on exchange it exercises perhaps as momentous an influence indirectly as it exerts by its direct influence on the wealth or the poverty of the country. The State of S. Paulo, a portion of the Brazilian Republic, is the chief centre within the chief centre of coffee production, and thanks to the *Brazilian Review*, we have before us not only the latest message of the President of the Republic, but also that of Dr. FRANCISCO DE PAULO RODRIGUES ALVES, President of the State of S. Paulo, delivered to the Congress of that State on the 7th April last.

Although the general prosperity and consequently the general administration of the Brazilian Republic affects, and is affected by, the Coffee industry, we pass over all Dr. CAMPOS SALLES' remarks except those relating to Coffee, Exchange, railway rates and the financial problem before the Republican Government. As to railway rates it is merely observed that the notable improvement of exchange since June last year facilitated a reduction of 10 per cent. in the three most important classes of the tariff. Coffee also has thereby benefited to the extent of 19 per cent. on the normal rate. Naturally, the reduction of coffee rates must affect the revenue of the Railway, but with the object of mitigating the severe agricultural crisis, Government resolved to admit a reduction of 25 per cent. for hulled coffee, 30 per cent. for coffee in the berry and to fix a maximum rate of 1$200 per aroba, irrespective of distance. The wise principle upon which this reform is based was expressed by the President in an earlier message, in the course of which he pointed one that "it was to the interest of the Railways to do all they could for a product from which the greater part of revenue and profits was drawn." Certainly he now says, this is not the only remedy, but for the moment it is the most prompt and most efficacious. The powers of intervention by the Federal Government with regard to exports allowed by the constitution are very limited, but feeling that this commerce must always constitute the true strength of the Country, the Government have spared and will spare no effort to further such interests. Abroad, he says, Government has used its influence to remove the restrictions that embarrassed consumption and intends to persist in this policy. "Other and more energetic measures might, however, be undertaken by the Governments of the different interested States and, especially, by private parties. Secure in the possession of better elements for success than any of our competitors, let us never despair but resolutely face the issues." Doubtless the President realises that the raising of Exchange—a necessity forced upon him by the financial position of the Republic—is not the best thing for the coffee industry. Hence his desire to provide—as far as may be—a counterpoise. As regards finance, his most interesting remark to us, in India, is that the country is now fully prepared to return to the normal condition of specie payments. He anticipates no difficulty in maintaining payments regularly in future. While preparing to meet its engagements, the Brazilian Government has, he asserts, succeeded in also banish deficits from its estimates and has consolidated the situat of the Treasury on the solid basis of surplus revenue. debts accumulated in previous years have been grea reduced; all current obligations are paid up to date; wh not a single Treasury bill exists in circulation.

The President of the State of S. Paulo alludes to the l price of coffee as aggravating the financial crisis throu which the whole country is passing. He alludes to exp duties as unfit to serve as a basis for the finances of Union, yet it is to this alone that the States can at pres look for nearly all their revenue. Export duties in S. Pa yield, approximately, over two-thirds of the revenue. Th were reckoned in the last official year on the official value 268,040 : 060$125, those exclusively on coffee amounting 266,784 : 094$879. Well may the President remark that ag cultural interests are of the greatest importance. It shou be noted that he also says that despite the great difficult arising from the fall in the price of coffee, planters are d playing great activity in the promotion and development the economic forces of the State. He rebuts accusations excessive routine in the agricultural industries of the Sta while admitting that coffee is and must be the mainstay the State because at present it constitutes the greater p of its wealth and furnishes most of its revenue, besi providing most of the bills of exchange and forming t principal factor in the balance of Brazilian foreign trad His remarks on these matters are of such great importan that we give them in full elsewhere, and we may perha be pardoned for laying special stress on the fact that t President of S. Paulo says to Brazilian planters, much as have said to planters in India, that "to cut down worki expenses, improve their process and secure permanent a steady labour, should be the aim of planters." We trust th all he says will be most carefully studied by our readers.

CEYLON AND INDIA.

It has been urged in several quarters that Indian t should have free access to Ceylon so that arrangements mig be made for blending Ceylon and Indian leaf at Colomb Failing this, it is urged with equal force that Ceylon t should not be admitted into India while in Ceylon an impo duty is levied on Indian tea, unless it be subjected to an equ import duty in this country. How greatly the throwi open of Ceylon and the conduct of blending operations Colombo might affect South Indian teas, our readers w easily judge. It appears to be a fact that the Travanco teas—which would probably be the most quickly affected have not yet acquired any very distinctive characteristi Like the climate of England, they may be regarded "samples," little bits of all sorts. What is most wanted, planters rather than buyers are to command the market, the production of fairly even standard types. The odds a ends that must naturally be produced also should, as far possible, be utilised for the purposing of pushing sales in Ind where price will be of much greater moment than qualit Planters should dump their rubbish down near their ov gates—so as to keep cost of transport as low as possible, and only pay heavy freight, etc., on teas that do credit to t district in which they are grown.

INDIAN TEA FOR INDIANS.

One or two organs of the native Press of India have set their faces against any attempt to develop Indian demand for tea. They regard it as an attempt to train coolies and the poorer classes generally to the use of unaccustomed luxuries. They "are not sure that the thrusting of tea by artificial means on the rural population and on the poorer classes in towns will prove an unmixed blessing." The *Indian Spectator* writes :—

The thousands of agents that will soon be set to work will, of course, keep their eye on such paying markets as Delhi, Cawnpore, Lucknow, Agra, and so forth; nor will they miss railway junctions and terminal stations. But they will penetrate even into villages and force their article on the simple villagers. A Sub-Committee that has been making enquiries about the matter is said to have noted that "in Eastern Bengal there is a population of approximately 25 millions of Mahomedans; they are well-to do agriculturists, and are better able to afford small comforts, such as tea, than any other rural population in India." Then there are the markets of the Punjab and Southern India which will also be "developed." Now, these simple and poor people have gone on from time immemorial without the "small comforts" that European civilization is bringing into the country in such abundance; and nobody can say that they have been any the better for the money spent on these comforts in preference to the rough and rude plenty of former times. That the brass vessels of olden times, for instance, which would last for generations, should be replaced by glass or enamelled wares is bad enough, but what need there is for the villager to give up his simple, and in many instances nutritious, morning meal, which he takes before going out for work, and substitute the costly but by no means nourishing beverage of tea, we altogether fail to see. The drudging coolie cannot sustain the strain of a day-long toil on the strength of a cup of tea, taken at daybreak, probably without milk or sugar.

Of course there is truth in the above remarks; but the fact remains that India's millions, outside the coolie class and the people who cannot well afford the price of a cup of tea per day, are pretty numerous. If the great Indian "middle classes" can be reached, and induced to drink tea, the leaps and bounds by which Indian consumption of that article will increase will astonish the planting community and send all dread of over-production out of their minds. It *can* be done; the thing is, to do it.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

Trade with Persia.

The Indian Tea Association, Calcutta, has published for the information of members the following Communication from Mr. E. G. Foley, who is travelling on the Persian frontier in behalf of the Association.

Dated, Camp Merui, 276 Miles from Quetta, 11th May, 1901.

We are well on our way now; to-night we shall be exactly half way. We have got on fairly fast since we left the caravan, which is now some ten days behind us. We hope to reach the British frontier on the 21st May and to arrive at Seistan on the 27th. We have been obliged to take on four extra camels to lighten the loads for quick travelling.

2. We have overtaken a caravan belonging to a Pathan from Dehra Ghazi Khan. He has 27 camel loads of tea from Bombay and Dehra; and about 15 camel loads of country indigo from Multan; as well as piece goods, roughly tanned buffalo hides, etc. These loads are carried by Pathan camels, which are celebrated for their endurance and weight-carrying qualities. Each camel carries six and a half maunds of tea, and two cases of indigo weighing 8 maunds; while our hired camels are not on the average carrying four maunds each. The tea has been repacked in *bales* first, a wicker or mat-work basket; then a wrapping of cloth; then *raw* hide netted and sewn over with leather thongs; and finally a wrapping of gunny. These bales are as tight as drums. They hold $3\frac{1}{4}$ maunds each, and can stand any amount of knocking about. They measure in girth about 10 feet by 9 feet.

3. The Pathan is a trader in tea and a good judge. I gave him samples, or rather showed him some. He infused the tea, and said it was very good, and better than what he had got. He valued the Pekoe and Orange Pekoe at from 25 to 30 Krans per maund of 6 lbs. (a Kran is equal to $4\frac{1}{2}$ annas), and the price per lb. would therefore be about Rs.1-3-9 to Rs.1-6-6. The man is going to Meshed *viâ* Herat. He will meet me at Meshed and will introduce me to another Pathan merchant, from Dehra Ismail Khan, who, he informed me, does a business of over four lakhs of rupees a year. He also told me that our Pekoe, and particularly the Orange Pekoe, would be very much liked, throughout Eastern Persia and Herat. The people there are mostly Persians, and they prefer to drink black tea. I gave him a sample of Pekoe and Orange Pekoe with labels and marked the prices at annas 8 and 9 delivered at Quetta. I also explained to him that our object was not to go further than Quetta and compete with them in the various Persian and Afghanistan markets; but rather to leave the trade with its enormous profit to them as before. I added that by dealing with us they would have their wants supplied at Quetta, where all caravans for this route start. I hope to be able to do a very large business with this man and his friend yet.

4. The Punjab Bank at Quetta is I believe prepared to make advances to traders by this route to the extent of 50% on a lien of the goods—one-half of the goods remaining as security in a Bonded Warehouse until the other half is sold and the advance repaid. But the Bank want Government to build a Bonded Warehouse and to encourage their business. Negotiations were proceeding between the Agent to the Governor-General (Col. Yate) and the Bank Manager (Mr. MacBean) when I was at Quetta.

5. At Seistan itself there is not much to be done; but it is the emporium for Herat and other places in Western Afghanistan, where there is less extortion in the way of dues. From Cabul, Ghuzni and Kandahar on the other hand there is but one road; and at various places along it caravans are subjected to the grossest extortion, as much as Rs.500 being demanded for a single camel load of tea. On the Baluchistan frontier this is impossible; for the country is open, and to protect it the Ameer of Afghanistan —so I am told—would require 100,000 men. Extensive smuggling (which the Ameer is unable to prevent) is carried on all along this line into Southern Afghanistan. At Meshed Major Trench will introduce me to the principal Merchant and Banker; and from what Captain Webb Ware told me there is every prospect of a good business being done with him.

6. I propose to return the same way as I am now going. On returning to Seistan from Meshed, I shall travel either by riding camel or on horse-back, and will try and get *daks* laid for me the whole way, through the Political Agent, Captain Webb Ware.

Sale of Tea in India.

The following circular letter has been issued by the Secretary of the Indian Tea Association, London :—

"With a view to develop the market for tea amongst the natives of India, a Committee was recently formed in Calcutta to consider the question, and submit a scheme for carrying the idea into effect. The Committee recommended that the arrangements be made for establishing an agency under an energetic and experienced Manager, with headquarters in Calcutta, and employing travellers to visit the bazâr in towns and villages throughout the country, and induce the local dealers to take up the sale of tea, and also to arrange for its sale at railway stations, mills, coal mines, and other centres, where numbers of natives congregate or are employed. To enable the scheme to be carried out, proprietors are invited to make over to the agency, without charge, a certain quantity of tea annually for three years, for distribution, or, if preferred, a money contribution may be given instead. It is anticipated that it may take them four, or perhaps five years to develop a large market, but during the first year it is believed the Agency may be able to

dispose of about 2,000,000 lbs. of tea, or, say, rather more than 1 per cent. of the Indian crop, and the Association would be glad to receive promises of support on this basis for three years, during which time it is hoped that a market for the sale of tea to natives of India may be firmly established. I am accordingly to ask you to let me know, at the earliest possible date, the amount of the contribution, either in tea or money, which you are prepared to make towards the scheme annually for three years. In view of the failure of the proposed scheme for restricting output, it is of vital importance, in the interests of the industry, that everything possible should be done to enourage consumption, and find new markets for our teas, and the Committee trust that proprietors will give the support required to enable the present scheme to secure the large field for the consumption of tea, which is believed to exist in India, to be carried out. I shall be glad if you will favour me with a reply at your earliest convenience."

COFFEE IN S. PAULO.

THE PRESIDENT'S LATEST MESSAGE.

The following extract from a message addressed to the Congress of the State of S. Paulo by the President on the 7th April, 1901, is referred to in our leading columns:—

AGRICULTURAL INTERESTS.

Agricultural interests are of the greatest importance. They may even be considered preponderant in this part of the republic where we pride ourselves on our energy and perseverance.

Despite the great difficulties arising from the fall in the price of coffee, planters are displaying great activity in the promotion and development of the economic forces of the State which have already given good results.

Plantation of cereals is being carried on on a large scale.

In municipalities like that of Tatuhy production is already considerable and is said to be surpassed in others. The grape is cultivated in different parts of the State, in many cases with excellent results, Dr. Luiz Pereira Barreto, author of a valuable monograph on the art of Wine making, being worth of particular mention. Sugar-cane, manioc, tobacco, wheat, and lucerne are also cultivated in different districts, whilst fruit growing is increasing rapidly and has given good profits to small farmers. Aramina to planters seems to offer good profit and promises to revolutionise the spinning and weaving industries. Impartially considered, all these facts show how unfounded the accusation of excessive routine in our industries and of exclusive attention to coffee planting really is. Without doubt, coffee is and must be the mainstay of the State, because at present it constitutes the greater part of its wealth and furnishes most of its revenue. Moreover, it is coffee that provides most of the bills of exchange and is, consequently, the principal factor in the balance of our foreign trade. Coffee cultivation in the State is enormous and its value very considerable. During the last nine years shipments were as follows:

Financial years.	*Kilograms.*	*Official value.*
1892	245.456.719	251.815:025$228
1893	169.216.720	214.057:479$968
1894	174.444.912	232.346:430$888
1895	262.375 176	294.295:419$366
1896	240.395 503	272.506:960$749
1897	343.521.826	304.578:830$542
1898	346.077.280	252.827:639$560
1899	363 465.115	264.076:840$548
1900	368.700 935	266.784:094$879

It will be easily understood from these figures, how profoundly discouraged planters must have been by the fall of prices after having been so long accustomed to large profits. Long ago however, the tremendous expansions of plantation alarmed the authorities and impressed them with the necessity of finding new markets for these products.

In 1896, foreseeing the crises that the over-production was sure to bring, the Presidents of this State and of the State of Espirito Santo addressed to the governors of the other coffee States an invitation to a conference for the purpose of considering measu for a systematic propaganda in favour of the coffee in consum markets.

In his last message the President of the Republic referred complimentary terms to this movement although at the time action of the two governors were accused of having alarmed markets by calling attention to the increase of production; sin then the fall has been still more marked. coffee being sold at San at this moment at less than 5$000 per 10 kilos. Undoubtedly i a very low price especially with an equally large crop already up us, but the situation must be fixed without exaggerating their effe nor ceasing to struggle against them. Crises that originate excess of production such as this must form their own reme The fall of prices will thus stimulate consumption and restr further production by curtailing planters' means of extension even maintenance.

Undoubtedly other coffee producing countries will likewise f the fall and have to contend with difficulties as great as ou Planters in Java and Sumatra already complain of the damage flicted by the over-production of this country and maintain t the future of coffee will be everywhere controlled by conditi here. In Mexico, the West Indies and Central America complai are also heard that coffee is no longer profitable in consequence our competition.

After spending so much labour and money on raising the cof industry to its present proportions, it would be a tremendous m take to abandon the struggle when the exceptionally favoura conditions and the fertility of our soil and the tenacity of planters are the most certain guarantee of ultimate success. coffee cultivation has to be abandoned anywhere, it will not S. Paulo, where the conditions of resistance are better than a where else!

What is wanted is that planters, merchants, and Governm should work all together, and harmoniously for the common end a give no attention to fanciful measures that can effect no remedy and only make things worse.

To cut down working expenses, improve their process, and secu permanent and steady labour, should be the aim of planters th imitating the example of countries where production is far mo insignificant, but better prices are secured by better produc On the side of *commissarios*, they should aim at extending markets and opening new ones as well as at organizing lo elements of resistance to speculation and the eliminations of usel middlemen and consequent reduction of commission and dir dealing with consumers. The Santos market, important as it is now too narrow for operations so vast and branches of seve exporting houses have, we are informed, been already started America, and Europe, whilst a few planters have commenced selli direct to consumers with good results. Energy and agitation ca not fail to produce good results for planters if persisted in. By *Brésil* I observe that during the last few days a new house for clusive sale of Sao Paulo coffees was opened in Paris by Snr. C ceiçao. with the object of promoting consumption and raising the putation of Brazilian coffees so unjustly depreciated by retailer

The responsibility of the Government, deriving as it does nea all its revenue from coffee, cannot and has not been overlook By promoting immigration, improving the means of transpo reducing railway charges, funding agricultural schools, and enco aging mortgage banks and other cognate measures, the Governm has already done much to benefit the planting interest.

Above all it is requisite to know the precise position and ext of the Coffee industry here and elsewhere and for this end efficient statistical service is being organized.

Up to the present we have relied exclusively upon incompl information gathered from Consuls' reports, or supplied by hou heavily interested in the coffee trade. We must free ourselves fr so dependent a position by the organisation of a thorough trustworthy statistical service of our own. Something has alre been done in this direction and no exertions will be spared to arr at a thorough knowledge of the situation of Agriculture in t State.

We must go still further: the information afforded by Cons is not sufficient and a measure will shortly be proposed for organisation of more satisfactory statistics of the coffe trade industry outside as well as within Brazil.

NOTES.

Java Cinchona and the Volcanic Eruption. An Amsterdam bark importer states that, so far as is known in his city, the volcanic eruption in Java has not destroyed a single bark plantation.

Java Cinchona. The shipments from Java for the first half of May amounted to 228,000 Amsterdam lbs. and second half 502,000 lbs.—total 730,000 lbs., against 816,000 Amsterdam lbs. in May last year, and 666,400 lbs. in 1899.

Batavia Quinine Auctions. In reference to the auctions of Java quinine in Batavia, the *New York Commercial* under date of May 15 reports that a rumour is current that there will be no further sales, but why they are to be abandoned, as alleged, is not stated.

Coffee. The *American Grocer* waxes amusingly. It gravely announced on the 15th May, 1901 :—"The Java crop for 1901 is about gathered. Picking of Ceylon crop, also Brazilian crop, just beginning. Harvesting continues until September." The reference to the Ceylon coffee crop is distinctly precious.

The Glasgow Exhibition. The *Daily Graphic*, of May 17th, in a notice of the many attractions of the Glasgow Exhibition, says :—"Among the more curious and among the busiest is the Ceylon Tea Stall, devoted, as its name implies, to the cup that cheers and according to professor Victor Horesley, has no narcotic effect on brain tissue."

Pepper in Trinidad. Plants of *piper nigrum* in Trinidad have grown well but are not sufficiently advanced to produce seeds. The old plants have produced seed yearly. A demand has arisen for this, among European seedsmen for raising plants for the supply of some of the African Colonies. Crop has all been disposed of as growing seeds.

Messrs. Gow, Wilson & Stanton, London. This firm announces that it has made an arrangement by which Mr. A. S. Moore, late of Messrs. Porter, Moore & Co., will become associated with it from 1st June, 1901. Mr. Moore was for some fifteen years connected with Messrs. Moran & Co., of Calcutta, and during the last two or three years has been working in London.

Amsterdam Bark Market. The amount of bark announced for sale at the Dutch auctions in Amsterdam on June 13th, amounted to 3,869 packages, containing 330,531 kilos. (nearly 727,168 lbs.). The shipments from Java for the second half of May are reported to be, in round figures, 500,000 Amsterdam pounds which makes 730,000 pounds for the whole month.

Cheap Coffee. There was a time, observes the *American Grocer*, when dealers would pile up coffee in their lofts when it touched 6 cents; but now, when the area of production has been greatly enlarged, steamers supplemented by sailing vessels, machinery brought into play on the plantation and at the warehouse, the relation of supply to requirements becomes a somewhat uncertain factor. We find old experienced coffee importers saying: "I don't propose to load up with coffee until it touches 4 cents."

American Coffee Wanted. The *Evening Journal* of Albany, N. Y., writes :—"As there is ample room for the expansion of the coffee-raising industry in all the islands recently added to the United States, it is only a question of enterprise how soon this country will cease to be dependent for its coffee supply upon any foreign country, and the $50,000,000 or more which American coffee consumers pay out every year will remain in circulation among the people who live under the American flag." Yet the Americans will probably find it cheaper to continue to buy Brazilian coffee.

Cinnamon. The crops for 1900 were good, the result being an increase in export of quills to the extent of 163,080 lbs., and of chips to the extent of 34,279 lbs. Prices, notwithstanding the increased production, have been maintained. The export of wild cinnamon, which for a short time threatened to injure sales of plantation and garden cinnamon, has now practically ceased. The value of wild cinnamon in London is barely sufficient to pay the freight and dock charges there. In one or two instances wild cinnamon-chips have beenmixed to a small extent with usual chips, and exporters will have to very closely watch deliveries.

Packet Teas at Galle. A Galle correspondent of a Colombo paper writes :—"Hitherto the local retail prices of good estate teas have been prohibitive, or rather much above the average of teas sold at the Colombo sales. Regular consumers who could not afford to pay Re.1 to Re.1·50 per pound were forced to buy dust at 50 cents or very inferior coarse leaf at about the same price. Of late, however, a retail trade has sprung up in packet teas. Good Broken Pekoe, Pekoe and Souchong from some of the estates are being retailed in one-pound lead packets at very reasonable cash prices. It is to hoped the public will encourage the venture in every way.

The Hankow Tea Market. Recent advices state that the Hankow Tea market has opened, without much success in any direction. The buyers, British and Russian, have all arrived there and have been disappointed because of the bad quality of tea this year. The reason given for this is that in the Spring just gone by when the leaves were just coming forth there had been too much rain in the tea districts whilst at the time of plucking the leaves, a sand storm was experienced. Consequently, the majority of leaves became muddy and unclean. The market price for Ningchow or Oolong Tea (Black), varies from Tls 45 to Tls 50 per picul.

Prospects of Tea. A City Man wrote under date 18th ultimo to the *Ceylon Observer:*—The export from this country, you will see, has been increased a million pounds per mensem. If your March exports to this country from Ceylon are also a million more per mensem below last year, what more is wanted? India will, I have no doubt, follow Ceylon in restricting its output. The "Thirty Committee" should keep the Indian Tea Planters' Association informed of what is going on. Why not send them a list of

the estates that have agreed to pluck finer. The Russians will apparently get their usual supply from China. I hear the season has opened at Hankow.

Tea Culturé in Natal. A Home paper remarks :—To Mr. William R. Hudson, of the Clifton tea estate, the credit of the present tea industry is due, and the estate now comprises 3,000 acres on the Nonoyoi River, fifty-five miles from the city of Durban, the river furnishing the necessary water-power. Coolie labour is used in preference to that of the Kaffirs. A coolie can pick forty-two pounds of green leaf per day, the Kaffir only nineteen pounds. The picking season in Natal commences generally early in September and goes on till about the end of the following May. The months of June, July, and August are taken up with digging and manuring the land and pruning the plants. The tea is picked by the coolies, mule-carts in different gangs collecting the leaf. Men and women are employed in the picking process.

Tea in the U. S. A prominent tea firm of New York states that the quantity of tea received into United States is little larger than last year; quality better; prices lower. The *American Grocer* writes :—"There are lots of folk who eat anything without regard to taste, just because it is "suthin'" to chew; and there are lots of other folk who drink anything, tea included, without a thought of flavour, just because it is a warm drink. Between the swallowers, the tasters, and the discerning enjoyers, between 85,000,000 and 90,000,000 pounds of tea—mainly Chinese and Japanese—are used by all Yankeedom. The East dotes on black tea—the Congous and English Breakfasts. West of New York the Japans and the Greens tickle the palate, and infuse paradise into the myriad drinkers. Forty million out of eighty-five million pounds annual consumption are Japan teas."

Rubber in Ceylon. Mr. Francis J. Holloway writes from Kepitigalla, Matale, to the *Ceylon Observer* :—Now, as the price of tea has gone down and things generally are looking gloomy, most planters are on the look-out for some other products that would pay. And as it may be of interest to many planters, I enclose a report and valuation on a consignment of Pará rubber despatched from this estate, which speaks for itself. Sample of this same consignment is lying at your office :—Report and valuation on a consignment of Pará rubber sent from Kepitigalla estate, Matale, Ceylon :—"Good clean sheet valued at 3s. 9d. per lb. This is very nice rubber, as good, *or better than the finest Pará rubber*. Therefore, when you see the quotations for fine Pará rubber, you may assume that is the value of your produce. Rubber like yours is *readily saleable in any quantity*."

Coffee in London. Though there has not been a strong demand, says the *Produce Markets' Review* of 25th ultimo, the supplies brought to auction were all sold at steady to rather dearer rates. Notably is this the case with East India, the market for which has shown signs of hardening for some time. Naidoobatum met with particularly keen competition, and sold at 2s. to 3s. advance from the previous sales. A good supply of foreign cleaned Costa Rica attracted attention, and very full rates were paid, while Guatemala and other Central American sorts sold at pri quite equal to the highest point of last week. In the termi market there is hardly any change to note; a report that Brazilian Government would destroy a proportion of coming crop was not received with credence, and, though attempt was made on the strength of it to put up quotatio they were not maintained for long.

The London Tea Market. The weekly special telegram dat 15th instant, from Messrs. Gow, Wils & Stanton to Colombo reports that the London mar generally is steady, and that the market for medium liquori Pekoes and Broken Pekoes, as well as for common Pekoes a Broken Pekoes is also steady. The price of fair liquori Ceylon Pekoe Souchong is 5d and the average price of Ceyl tea sold on garden account this week was 6½d (both same last week) as against 6d and 6¾d respectively in the correspon ing week last year. Reuter reports that common kinds Ceylon tea are steady, and the others firm. Pekoe Souchon are quoted at 4⅜d and the average for the week at 6½d (bo same as last week). 32,000 packages of Ceylon tea w offered for sale, and all were disposed of; while of 15,000 packages of Indian tea offered, 13,000 found p chasers.

Ceylon Tea. The special correspondent of *Daily Telegraph* writes in the cou of his letters about the Royal Visit to Colombo :—The develo ment of tea cultivation has been marvellous. Wherein, th lies the secret of the marvellous diversion of a staple tra from an old-established centre to new and younger riva who, moreover, were handicapped in their dealings, owing the artificial rise in the value of the rupee, due to legislati which operated to the disadvantage of the Indian and Ceyl planter in competition with the Chinese manufacturer? T secret will be found in the value, purity, and cleanliness the tea manufactured under European supervision, and scien fically prepared by machinery, as compared with the primiti methods of Chinese hand labour. It is said by those speaki with knowledge that, if people at home knew how the Chi tea was prepared for the market, they would never dri it again.

A Hint to British Capitalists. In the *Mining Year Book for* 19 the author, Mr. Broomhead, remark —"It is a noteworthy fact that the world's total gold production in 1898—about £60,000,0 —over one-half, was obtained from territory now forming t British Empire, and considering the prospects of increas production in the Transvaal, Australasia, British Columb India, Rhodesia, and the West of Africa it is very proba that within the next few years the British Empire will responsible for appreciably more than 50 per cent. of t total gold production of the world. If Englishmen o realised the vast areas within British territory still unexplo or unprospected for the precious metal, they would still m confine their capital and energies to those regions, coveri one-fifth of the globe, where the British language, Brit freedom, law and justice, as well as the inherited colonisi energy of the Briton, prevail." We can but remark, He Hear!

Rubber Classification. In Brazil rubber is classed *Fina*, *Entrefina*, *Sernamby*, and *C*

ho, the *pauta* or official valuation of the different kinds being rrived-at from information furnished by buyers from which n average is struck. There are now only two official classifi-ations, *fina* and *sernamby*, that of *entrefina* having been offi-ially abandoned. For *Caucho* from Pará *sernamby* rubber prices are adopted. Manáos rubber is always quoted some-what higher than Pará in the local markets, because it is much drier. The Pará rubber coming from districts com-paratively close has less time to dry than the Manáos arti-le, which is only sent to market months after it has been collected in consequence not only of the far greater distance, but of frequent lack of communication when the waters of the upper branches of the Amazon are low. *Caucho* is sold on the market at prices slightly over *sernamby* and *sernamby le caucho* also enjoys slightly higher quotations than *sernamby le prancha*.

Quinine and Cinchona. Referring to the fact that only a short while ago everybody recommended purchases of quinine as a safe means of making money, The *London Commercial Record* says :—Those who have followed the advice have probably seen some small increase in value of their purchases, but hardly sufficient to induce them to realize, and now the movement has practically come to a stop, and all holders are in great trepidation lest the shipments of Cinchona Bark should increase, which would mean an immediate collapse of the little rise. There is no doubt the high value paid for Bark—2d per unit—is begin-ning to attract the attention of planters, and many are said to be considering seriously the idea of resuming its cultivation in Ceylon in preference to the overdone tea. Some time, of course, would elapse before the young trees would yield sufficiently, and before an area would be planted large enough to render its cultivation remunerative. The number of acres planted with Cinchona in Ceylon had receded to 1,189 acres in 1898, as against 64,000 acres in 1883, and 50 acres in 1867. No wonder, therefore, that the price per unit is now 2d. It will be very interesting to watch the future cultiva-tion of the Bark in order to see whether the determination of the planters is to be taken seriously or not.

Dr. Johnson in his Cups. The *Athenæum*, reviewing a work on the 18th century, has the following amusing extract :—"Cumberland relates how once at his house Johnson drank his dozen cups of tea :—"At the tea-table he made considerable demands upon his favourite beverage ; and I remember when Sir Joshua Reynolds at my house reminded him that he had drunk eleven cups, he replied : 'Sir, I did not count your glasses of wine ; why should you number up my cups of tea ?' And then, laughing in perfect good humour, he added : 'Sir, I should have released the lady from any further trouble if it had not been for your remark ; but you have reminded me that I want one of the dozen, and I must request Mrs. Cumberland to round up my number.' When he saw the readiness and compla-cency with which my wife obeyed his call, he turned a kind and cheerful look on her, and said : 'Madam, I must tell you for your comfort you have escaped much better than a certain lady did a while ago, upon whose patience I intruded greatly more than I have done on yours ; but the lady asked me for no other purpose than to make a zany of me, and set me gab-bling to a parcel of people I knew nothing of ; so, madam, I had my revenge on her, for I swallowed five-and-twenty cups of her tea, and did not treat her with as many words.'"

Cacao in Trinidad. The Superintendent of the Royal Botanic Gardens, Trinidad, reports :—Several trees of *Theobroma bicolor*, introduced from Nicaragua in 1893, have fruited successively during the past three years, and seeds has been distributed to other West Indian Stations. The species may now be considered as fairly acclimatized, and there is little fear of its being lost to our flora. The produce is of no use as commercial Cacao, and is chiefly of botanical interest. Several trees of *Theobroma pentagona* introduced at the same time have also fruited, enabling us to raise a goodly number of plants for distribution. The permanent plot of this kind at the Experiment Station, has made good growth during 1900, and the Depart-ment will soon be in a position to offer in quantity both plants and seeds. The beans produced here are quite equal in size to those produced in Nicaragua, and are nearly double the size of high class Trinidad Cacao. They are white in colour in the interior, take little fermenting and of excellent flavour. Another strain brought from Nicaragua with the preceding kinds is what is known as "Nicaraguan Creole." The trees planted by us have not as yet borne fruit, but from trees distributed to planters, I lately received a pod which was quite true to the type. The pods are not large, but the beans are very large, and of superior colour and flavour.

Indian Tea in London. There has been an improvement in the demand, says the *Produce Markets' Review* of 25th ultimo, the market showing greater steadiness, while for the better class teas firmer prices were in some cases noticeable. These latter grades are getting into a gradually smaller compass, and present rates will no doubt be maintained until a fair supply of the new teas arrives. This will probably be toward the end of July, which is somewhat later than last year, and the quantity shipped from Calcutta up to date is smaller than the previous season. The reports are favourable to an increased proportion of the medium and finer teas coming by the early shipments, and these will doubtless meet with a good reception and a distinctly improved demand, particularly as the duty-paid stocks will be materially reduced in the meantime. The common descriptions continue ample to meet requirements, and as Ceylon growths are coming forward freely and show on the whole superior value, the market is likely to be more favourable to buyers than otherwise. At any rate, there is a considerable surplus in the stock as compared with last year, the latest statistical return putting it at about 11,000,000 lbs., and it is evident, therefore, that any improvement in values, especially for the lower and less desirable sorts, is not likely for some time to come. At the public sales 12,453 packages were catalogued, mainly consisting of teas of ordinary quality, and excepting in a few cases the bidding was slow, and 1,084 were withdrawn.

The Batavia Quinine-Market. Although the results of the quinine-auctions in Java have been very satis-factory, according to the *Soerabaya Handelsblad*, the object in view has only been partially realis-ed, as a definite ratio between the price of bark and that of quinine (which will be the only means of preventing exces-sive fluctuations in the bark-quotations) has not yet been

reached. For this reason endeavours are now being made to establish new markets for cinchona-auctions, in the first place at Batavia. The Bandong factory is by no means able to work up the whole of the bark produced in Java; for this purpose at least two, probably three, other factories would be required, and although the erection of new quinine works is under consideration, a long time is certain to elapse before this project will be realised. Meanwhile, the planters, being compelled to send the bulk of their production to London and Amsterdam, are not able to obtain the most favourable prices. The average gross proceeds of the Batavia auctions in 1900 were 23·21f. per kilo., equal to an Amsterdam unit of $9\frac{7}{20}$c.; but the average unit at Amsterdam in that year was $10\frac{1}{3}$c., or 1c. higher. In 1901 the conditions so far have been more favourable, probably owing to the fact that the auctions are now held six days after those at Amsterdam. The average prices obtained at the first two auctions at Batavia were $8\frac{4}{100}$c. and $9\frac{11}{100}$c., against $7\frac{1}{2}$c and $8\frac{15}{16}$c. at Amsterdam. The fact is that the larger the quantity of quinine sold at the Batavia auctions, the more the values of quinine and bark will agree.

GENERAL ARTICLES.

INDIA AND THE RUSSIAN TEA MARKET.

At the recent meeting of the Indian Tea Association, a letter was considered from Messrs. Cresswell & Co., Tea Brokers, regarding the Russian Volunteer Fleet. Messrs. Cresswell & Co. stated that they had written to the Colombo Agents of the fleet, asking if one of their steamers could be run monthly from Calcutta to Odessa, provided a full freight was guaranteed. The Agents replied that the steamer authorities in Odessa did not care for their steamers to visit Calcutta on account of Plague. The teas could, however, be sent to Colombo for transhipment to Odessa.

A representative of the *Times of Ceylon* called at the offices of the Russian Volunteer Fleet the other day with regard to this matter. Mr. Tchokoff said he had received a later letter from the Indian Tea Association pointing out that deaths from Plague were not now numerous, and suggesting that the authorities at Odessa had perhaps acted under a misapprehension of the seriousness of the disease at Calcutta. The Association asked for the good offices of the Agents in Colombo to induce the Odessa authorities to reconsider their decision, and also asked what freight would be charged for tea sent to Odessa *viâ* Colombo. Mr. Tchokoff said that it was not of the slightest use Calcutta hoping to get any of the boats of the Fleet to call there as long as Plague continued. The regulations at Odessa were absolutely firm on the point, and if any vessel of the Fleet did call, it would not be admitted in Odessa. Another point was that the Volunteer Fleet, with its eighteen ships, was often hardly sufficient for the work it had to do, and Colombo at present would have to wait beyond the ti expected for a vessel, owing to the pressure. Of course, later when Calcutta got clear from Plague, the matter of sendin vessel from Calcutta to Odessa might be favourably considered, Calcutta were to guarantee a satisfactory cargo. With regard Indian Tea being exported from Calcutta *viâ* Colombo, he w engaged at present in answering the question of the Tea Assoc tion regarding freight charges. He thought that arrangeme might be made with the Messageries Maritimes or some ot Steamship Company for through charges. At present there w no direct trade in tea between Calcutta and Odessa, but there w a growing trade through London. The Agents of the Volunt Fleet in Colombo would do all they could to meet Calcutta in matter of freight charges.

THE TEA TRADE.

According to an old newspaper, the tea habit is much more u versal than is commonly supposed, as the following schedule prove:—

People of all classes take tea. Dead people take eterniT; people, festiviT; nice girls, puriT; free people, liberT; fashiona folks, socieT; good people, pieT; successful candidates, major editors, honesT; solemn citizens, graviT; funny roosters, levi orthodox citizens, deitT; polite people, suaviT; bashful fello modesT; kind ones, chariT; bachelors, singulariT; short peo breviT; cunning folk, rascaliT; romantic simpletons, novelT; pectable people, ChristianiT; artistic people, beauT; strong peo responsibiliT; criminals, penalT; vicious cusses, enmiT; groc varieT—but the T-pot cracked at this juncture.

Among the fragments were found: Wedded couples, felic Mormons, multipliciT; Quakers, tranquiliT; the asylums, insa mediciT, poverT, etc.; pretty girls, incomprehensibiliT; lov uniT; everybody, longeviT; the one who does not pay his subsc tion, T-total depraviT.

Blended tea is more apt to suit the average consumer tha straight tea. It takes a connoisseur of flavour to appreciate delicate aroma of the rarest tea. We have seen experts spew of their mouth tea that cost $5·00 per pound in China, sim because the flavour was new to them, and their palate ignoran what constitutes an exquisitely-flavoured tea.

The main object in making a blend is to have the tea give up qualities in the boiling water; and that the flavour shall be grat to the palate. All the better if it has a distinctive flavour, a t different from the general run of tea. This enables the consu to identify your special blend, and to so accustom the palate particular flavour that the user will become wedded to it; and t continuous demand is insured.

Hard water, such as is impregnated with lime, will not m good tea. Soft water is more apt to draw out the extractive ma in the leaf.

In order to build up a trade in blended tea, the taste of the sumer must be studied. If the popular demand is for a tea diffe from the standard desired to be established, patience will required if you are to educate patrons to the use of something Don't try to force the change. Begin by serving a cup of blen tea when they come to the store; or, if you have a lunch coun serve a fine tea properly infused, and thus pave the way to change.

An old tea merchant says the best way is to "fall in with prevailing taste of customers, and then introduce or sug improvement gradually, from time to time."

While cup quality should be the first consideration, it is bes combine good style of leaf with fine drawing quality. The ey a factor that cannot be ignored.

If you give your customers an opportunity to drink fine they will soon refuse to have anything else, no matter how m pounds of tea competitors may sell for $1·00.

Mr. A. R. Robertson says: "The tea trade is dead—wors two years. I am looking, though, for speedy improvement, feel confident a general advance will come all along the line wi three months."

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

TEA IN THE DOMINION.

Mr. Ross W. Hayter, of Toronto, writes to the *Home and Colonial Mail* :—

"Being an old Indian Planter, and having been engaged in the Indian and Ceylon tea business in Toronto (Canada) for many years back, I have taken a great deal of interest in the many proposals made to better the state of the tea market. And while watching with much interest the very energetic campaign that has been carried on by Ceylon for some years, and which has shown such great results, especially here in Canada, I have been surprised, as well as disappointed, that as much at least has not been done by India. They did have an energetic and able representative in the United States for three or four years with a small amount of money at his command with which to advertise and he effected wonders, I think, with the amount at his disposal. But what is wanted to turn the consumption of the one hundred million pounds of Japan and China tea, that is now consumed annually in the United States, into a consumption of Indian and Ceylon tea, is the expenditure in advertising, for the next three or four years, of at least forty or fifty thousand pounds sterling per annum. This, well spent in the daily Press, would force Indian teas on the attention of all tea-drinkers; and I venture to say that, in five years from now, over fifty million pounds of Indian tea per annum would be consumed in the United States.

You will ask how this money is to be raised. Well, why can it not be raised as I understand the planters of Ceylon have raised theirs for years back? The imposition of an export duty of one-sixteenth of a penny per pound on all tea exported from India would create a revenue of £45,000 per annum; that is, basing the calculation on the output of Indian tea last year, and the expenditure of such a sum would enhance the value of Indian tea twenty-fold the amount expended.

It may be said that the Planter is not in a position to stand this one-sixteenth of a penny per pound. The question just occurs to me, who would pay it? Would not the consumer pay it in the long run, instead of the grower or exporter?

In any case I consider that a real live campaign, carried on in the United States, is the only feasible plan that will bring about the position so much desired by us all.

If one wants to see a recent result of advertising, I have only to point out the progress which Ceylon green teas have made in Canada during the past eighteen months. One firm, to my knowledge, the "Salada" Tea Company, has for months back taken, on regular orders from one garden in Ceylon, over four hundred half-chests per month. Practically every wholesale house in Canada is now handling Ceylon green teas, and they are all predicting that they will entirely displace Japan teas. This has been brought about, first, by superior quality, and, secondly, by the tremendous advertising that "Ceylon green tea" has received. To the Indian Planters the moral is: "Go thou and do likewise."

THE SURFEIT OF TEA.

More than enough perhaps has already been written about the ailing condition of the tea industry and there have been many suggestions as to the treatment to be applied. It is obvious however that the advice has not always been based on a true diagnosis of the case.

The letter of our correspondent "One deeply interested" published last week, should do much to clear away any lingering misconception as to the real cause of the evil. His straightforward and uncompromising avowal that over-production is mainly responsible for the present trouble, cannot fail to carry conviction to the mind of every impartial reader. The fact is that the tea community in this country has got to exercise strict self-denial at once and for some time to come. We do not mean simply by giving a rest to parts of a garden or by finer plucking. Those are partial remedies and do not cover the whole evil. What is wanted, to speak summarily, is an absolute cessation from sowing, we mean of course no increase in the actual tea-bearing area. Ever since the last boom in tea, companies have been incontinently adding acre to acre, and a striving after quanity rather than quality of output has been the rule. And yet there is wonderment among those engaged in tea that the industry has fallen on evil days, and even now some have hardly grasped the fact that the whole trouble has arisen simply because the overplus was created before a new market was found for its disposal. Now the cry is all for opening out new markets. It is better raised late than never, and the sharp lesson of the past two or three years will not have been in vain if it teaches as a hard and fast rule that it is new-found markets which call for large extensions in tea and not *vice versâ*.

We have said that the tea industry will have to exercise considerable self-denial. There is room for it in more than one direction. We are aware that at present the Agents are hard hit in common with all whose interests lie in tea. But it is notorious that in times of fair weather Agents' commissions are often a dead weight on the working of gardens. For example, there is no obvious reason why garden stores should not be ordered direct from the garden instead of through Agents, except that the custom has always been otherwise. No reason, that is, in the case of a garden paying its way. We should prefer too to see the salaries of garden managers, when better times come, *fixed*. Let them be liberal, but let the customary commission on the yearly outturn or on the profits be abolished. At all events, the commission on the outturn, for there will then be less temptation to the manager to favour extensions or to pluck coarsely regardless of the quality of tea produced. We believe that it is commissions which are the veritable tax on tea, it is idle of course to assert that the increased duty has brought about the fall in prices. Over-production once more is the root cause, and it is a fortunate circumstance that this year natural forces have largely checked it. But we do not hesitate to add that the charges on the industry which intervene between producer and buyer will have to be sensibly lessened if a majority of gardens are to recover, otherwise it will be a case of continuing to bleed a patient who has lost too much blood already.—*Capital*.

THE APRIL COFFEE MOVEMENT IN THE U. S.

The deliveries of coffee in April were heavy, and have only been exceeded once in the United States since January, 1900; but in Europe they fell below the monthly average for this year. The month was notable for a bear movement, which carried prices from $6\frac{3}{4}$ cents to $6\frac{1}{8}$ cents for No. 7 Rio, closing at 6 5-16 cents. There was a decrease of 53,165 bags in the world's visible supply. Receipts at ports in Brazil surpass any former record. The world's crop added to present visible supply will furnish over 22,000,000 bags—possibly 23,000,000 to 24,000,000 bags, to meet annual requirements of about 15,000,000 bags. The future of the market must eventually be governed by the relation of supply to demand, rather than by minor incidents, such as a rise or fall in Exchange or speculative manipulation. The safe plan is to buy for present and nearby wants.

Messrs. Duuring & Zoon (Rotterdam), in their last circular upon the situation, estimate the 1901-1902 Brazil crop at 12,000,000 bags. They note the fall in the price of Santos coffee since April, 1900, of $52\frac{1}{2}$ per cent., against an advance of 58 per cent. in Exchange. They say:

"It is true that to some extent lower railway freights and cheaper labour, owing to higher exchange, are benefiting the fazendeiro, but not to the same proportion, and the question has to be studied up to what price coffee can be grown and shipped. Are commissarios willing to advance money? What about exchange, a further advance till July 1, and afterwards? These questions sufficiently denote how involved the position of coffee has been getting—a crisis, indeed, which is bound to lead to a solution; the sooner the better. The only remedy is low values—sufficiently so as to carry the full weight of the position on Brazilian shoulders, as the natural consequences of excessive production. Higher values mean more coffee and encouraging cultivation of coffee.

"San Salvador.—The present crop is now estimated at 165,000 bags (70 kgr.), against 230,000 bags last year, and Nicaragua at 70,000 bags (70 kgr.), against 87,000 bags last year. Negotiations between France and Venezuela are likely to lead to a satisfactory result, so that the differential duty on coffee from said republic into France may soon be abolished. Difficulties between Germany and Haiti have decided the German Government to double the duty on merchandise arriving from Haiti, thus practically preventing shipments of coffee from the latter country to German ports."

The following statement shows the April movement and general position of the article:

	Bags.	Bags.
Stocks, April 1, 1901—		
United States	1,154,094	
Europe	3,813,183—	4,967,277
Receipts during April—		
United States	659,948	
Europe	743,879—	1,403,827
Total supply, May 1		6,371,104
Less stocks, May 1, 1901—

Increase as compared with April, 1900 ...		166,482
Deliveries (United States and Europe), April ...		1,298,992
Do. do. do. March ...		1,280,733
Do. do. do. February ...		1,067,607
Do. do. do. January ...		1,328,216
Do. do. do. December ...		1,180,838
Do. do. do. November ...		1,281,638
Do. do. do. October ...		1,340,059
Do. do. do. September ...		981,198
Do. do. do. August ...		917,608
Do. do. do. July ...		1,219,058
Total for ten months, 1900-1901		11,895,947
Do. do. 1899-1900		12,916,080
Decrease as compared with 1900-1901 ...		1,020,133

The April deliveries in the United States consisted of 511,486 bags of Brazil; 106,698 bags of all other sorts.

The visible supply of the world on May 1,1901, was 7,359,112 bags, against 7,412,277 bags on April 1 (a decrease of 53,165 bags), and 6,144,418 bags on May 1, 1900.

The visible supply on August 1,1900, was 5,817,759 bags, so that in ten months it has increased 1,541,353 bags.

The total receipts at Rio and Santos for the first ten months of the trade year were 9,906,000 bags, against 8,453,000 bags for the same time the previous year, and 7,870,000 bags in 1898-99.

Trading in options on the New York Coffee Exchange in April reached a total of 646,750 bags. The lowest price for options was 5 cents for April and May; the highest, 6·20 cents for March. Spot coffee, No. 7 Rio, fluctuated between 6¾ and 6 cents.—*American Grocer.*

"NOTHING LIKE TEA"

We extract the following from the *Grocers' Journal*:—

There has been so little said or written on the subject of tea lately, that one is in some danger of overlooking the fact that tea is still, as it has always been, the chief glory of a grocer's business. Whatever the impetus secured for sugar by the new impost, the fillip given by the medical profession to the consumption of cocoa, the advantages or otherwise derivable from dealing in packet or proprietary goods, and the thousand and one articles added to a retailer's stock-in-trade with the assurance that they will command a ready sale and secure for the shopkeeper a marvellous profit—when all these have been duly weighed and taken into account, we believe the grocer will agree with us that there is absolutely nothing like tea, that alike from the retailer's and the consumer's point of view there is nothing to take its place as the leading commodity of the grocery trade. China tea has long been under a cloud, and this year we learn that even Russia is no longer a buyer except for the best quality of Keemuns. As to Australia and America, they have seemingly followed the example of Great Britain, and are confining their attention exclusively to the Indian and Ceylon growths, so that prospects for the Celestical Empire's product are by no means encouraging. Long-established customs, nevertheless, die hard, and there is still a spark left of the old-time frenzy at the advent of the new season's teas; moreover, certain connoisseurs declare that for delicacy of flavour and aroma no tea can compete with those grown in the Far East, and it may be th fickle fashion will some day decree a return to former predilecti in this line. Anyway, be it China, Indian, or Ceylon that is to chief in favour, it is hoped that the tea market will speedily sha off its lethargy and adopt a brisker tone. We are convinced th quality is the great desideratum; buyers want better teas wi which to tempt their customers, and where these are procurabl good and paying business is assured. For some time past most u pleasant rumours have reached this country of damaged, and the fore injurious, teas being craftily blended and manipulated, pri to being sent over here as sound commercial articles. Su rumours may not be authentic, on the other hand they have not be officially contradicted, and the public taste is so easily disturb that should there be a continuance of these reports the trade mu inevitably suffer. Prevention is ever better than cure; and in th matter the certainty that all imported teas were carefully sup vised at the bonded warehouses would do much to restore con dence where it has been shaken. The complaint, so often hea now-a-days—"I can't drink tea," should be made impossible, for, we have already asserted—there is nothing like tea.

CEYLON AND JAPAN TEAS IN CANADA.

The following letter, signed "P. C. Larkin, Toronto appears in the *Canadian Grocer*:—

"We read with much interest in this week's issue your arti headed 'Japan Tea Market Injured.' In it you state that Japan tea market has been 'difficult to understand,' and you go to state that, 'in spite of the material diminution in the amount imports, the market has weakened rather than stiffened.' personally, and without prejudice, cannot see that there is a reason for surprise. It is quite apparent to us that you have ov looked the strongest factor of all in bringing about the decrease the demand for Japan tea, and that is, the green teas of Ceyl Every wholesale house has, by this time, recognised the fact th there is no future for Japans, and that there is a great future Ceylon greens in Canada. Consequently, not only the wholes houses, but every bright retailer as well, are afraid to lock up w Japan teas, wishing rather to adopt a hand-to-mouth policy."

CEYLON GREEN TEA IN FRENCH CANADA.

Mr. Wm. Mackenzie writes to the *Times of Ceylon*:—

I send you some cuttings from letters from Mr. Larkin, and t of his branch offices. Perhaps you may find space for some of th You will see the work of trying to convert Montreal is a tedi and costly process. We cannot "*sweep*" the Japan teas into ocean. Our failure in that respect is what causes your conte porary to wonder. How I wish he had an opportunity of wav the magician's wand over those conservative French people! might first try his hand at inducing coolies with dysentery to t the sago and arrowroot their *dorais* give them, instead of beloved curry they have been accustomed to:—

William Mackenzie, Esq., 39, Netherhall Gardens, Lond England.

DEAR SIR,—I thought that perhaps you would be interested knowing how we are getting along with the sampling and wh results we are feeling from it, although it is a little early yet for to be able to intelligently speculate on the outcome.

The carrying out of this scheme is quite a task; nevertheless cannot but feel that it is a good investment and one that will us ultimately.

Some streets that we have already covered—such as Panet, Ples St. Hubert, Lagauchetiere, and others—we have succeeded in sell a little to nearly every storekeeper, but they will only purchas very small quantities. As an example, we sold to eleven men Plessis Street, and the total amount of the orders only amounte 90 pounds. They seem to order with fear and trembling.

Take the sampling, our advertising, salesmen's time, and delive we make nothing out of it, and I am sure in some instances it leave us a loss on the individual transaction any way; but, nev theless, we are accomplishing just what we have most desired accomplish, namely, getting the tea out, no matter how small quantity, so that when a person that we have sampled inquires it, they will be able to get it; otherwise to inquire for it in one

two stores and be disappointed would mean that our efforts went for *nil*.

It is the way with the French here; they are a slow, non-progressive people, but once they take hold and a demand is created, they will be equally slow to let go; at least I think so. Of course, everything hinges upon whether the tea is liked or not, and there is little doubt but what it will be; in fact, we are almost daily getting some evidence and encouragement in this respect.

I hope ere long to be able to write you more definitely in connection with this matter, as there will be a lot more samples distributed, and the result of the first orders sent out will have been made manifest.

I have just engaged another man to go into the French country districts and see what he can do. I am very hopeful that he will prove a success, but it is so hard to tell. However, we can only keep on trying, and if we are disappointed with one man, or in one course of action, we can only keep on changing until we get the results desired. The consumption of Japan in this Province is so great that, if we once get the upper hand of it, we shall be amply repaid for efforts put forth, but we shall have to keep on everlastingly hammering away—timidity now would be fatal.—Yours truly,

GEO. MANN.

MONTREAL, *May 7th.*

This letter will show you how laborious missionary work is, and that only *faith* in the future, as in religious missionary work, would justify its trouble and expense.

This firm is engaged in sampling as nearly as possible every house in Montreal with Ceylon green tea. Being business people, they know that there can be *no "sweeping"* out of the Japan teas. Patience is needed—and a deal of hard work.

Here are the other two extracts:—

DEAR MACKENZIE,—I have your valued favour of the 3rd instant to hand, for which many thanks.

Extremely glad to hear the good reports of the Ceylon greens all over. I can add to them that the week ending May 4th was the biggest we ever had with Ceylon greens. Our gross sales amounted to 4,592 lbs. The week before they were 3,304 lbs., and the week previous to that again 4,497 lbs. We have not heard fully about the sales last week yet.

In addition to the above figures there must also be taken into consideration the quantity of Ceylon green that we sell loose, and also that which is disposed of in our mixed tea.

If Mr. Owen predicts that a good percentage of his trade will in the not far distant future be Ceylon greens, we can predict also that we shall ultimately double our trade with them. We used to talk about some day selling 15,000 pounds a week [*i.e.*, black and greens], but while we were saying this we were apt to feel a little faint-hearted as to how long it was going to take to bring this about, just the same as we felt when we spoke about 10,000: but 15,000 does not look such an unreachable achievement now. We do not mean by this that we are going to get it with a few grasps, but we are going to get it, just the same, as sure as the sun shines; although we realize very very fully that we shall have to keep up the fight in order to break the hearts of those that are now opposing us.

Perhaps you will print this from Mr. Larkin in the *Canadian Grocer*.

The American mail this morning brought me many letters from United States and Canada, praising our green teas.

A New York firm writes:—"Don't let them ship poor cup stuff—no one here wants it at any price. If your good people don't keep us in a better position as to stock, it will be annoying and cause lots of trouble; this has been the fear all along, and has kept many from touching those greens."

Another New York firm, writing on 14th May, says:—"We have received orders from 136 retailers for the Ceylon greens, and our salesmen who at this season usually solicit orders for new crop Japans to arrive, are using their influence to induce customers to take Ceylon greens instead. Our orders are all for the Orange Pekoe grade, and we believe we can cause this tea to supersede Japans very largely in our Western States." It is only two months since they bought the first chest.

In the States the four grades are in request. This is the case also in Canada with grocers who deal in *loose teas*. For packet teas coarser grades are preferred—because cheaper; and because, in packets, the *eye* does not so much influence the purchaser. Not demand, but a regulated supply, is now the difficulty.

THE INDIAN TEA SUPPLY CO., LD.

The report of this concern is melancholy reading, says *Capital*. The wonder is that the company continues to carry on, year after year, such a pottering and unprofitable existence. After trading for thirteen years, it has managed to get rid of two-thirds of its capital, and to all appearance, the remaining third is doomed to follow, if the current style of doing business is to be carried on. During the year ended 31st March, 1901, the net loss is given as Rs.2,667, which brings up the total loss on capital to the tidy sum of Rs.66,544. The business done was not large, only about 200 maunds of tea per month. A quantity which any first class native pedlar could have sold with great ease and much profit. But to carry on their small trade the company spends Rs.860 per month on establishment and other charges, which is a tax of 10 pies on every pound of tea sold. The accounts show that the average cost of the tea, including packing and forwarding charges, was about 4 annas 7 pies per lb. and the price obtained, 5 annas 2 pies, showing an apparent profit of 7 pies per lb., which, however, was all eaten up and 3 pies more, by the establishment charges aforementioned. The actual loss to the company was one-quarter anna on every pound of tea they sold. Surely those responsible for the management of the concern can put their hand on the loose screw, which must be somewhere about, causing this continual leakage. Had this company been managed with ordinary tact, and push, and business enterprise during these past thirteen years, it could have successfully exploited every market in India for the sale of tea, and thus have saved the necessity for calling into existence the Agency now about to be started by the Indian Tea Association for the distribution of the article throughout the length and breadth of the peninsula. According to present appearances it is likely that the young and vigorous rival will give the *coup de grâce* to the lingering existence of the old concern. The Indian Tea Supply Company have had a free field and magnificent opportunities for a lengthened period, and having failed to take advantage of them, they need not be surprised if theirs should be the doom of the barren fig tree.

BRAZILIAN NOTES.

(From the *Brazilian Review*.)

Exchange.—*5th May*, 1901.—Ninety days' Bank rate on London opened on Monday, 29th ultimo, at 13 1/8d. rose to 13 15/32d. on Wednesday 1st and closed this evening at 12 7/8d.

The message is read and the flourishing condition of finances appreciated here as everywhere, and immediately after down flops the rate. To the simple minded, accustomed to search for current causes in explanation of every phenomenon, the fall is associated with the message, and that with failure or trickery. Certainly it was unfortunate that exchange should drop so promptly after the message had been read, but looked at from a purely business point of view, it was perfectly natural that after it had been energetically boomed on the strength of the impression the message was expected to create a re-action should set in as soon as operators commenced to let go. From 12 3/4d. upwards most of the selling centered on the effect of the message which, howsoever good and hopeful it may be, will add nothing to our immediate stock of bills nor even do much to reduce demand.

Besides the message deal, the bull account for the current month was believed to be particularly heavy, so that when covering for the former began the bears, assisted apparently by one of the banks, had it all their own way and rates slumped hopelessly and irresistably. The opportunity could not be better for bearing the rate, just when the supply of ready produce bills was lower than it had been for a long time and demand for private remittance by Italians and Turks at S. Paulo and other small fry that, though individually insignificant, mount up to formidable figures in the aggregate. Last year bills for over £2,000,000 were taken in this way and though, if repeated, it is likely to be on a smaller scale this year, it is certain to be reflected in rates. One of the S. Paulo banks is said to have imported £100,000 in sovereigns in anticipation of last year's performance, when sovereigns were sold at 5$000 over their market value!

During the past week *embarques*, too, were much smaller, £216,700 at Rio and Santos as against £400,000 the previous week, whilst sales were also smaller, 107,000 as against 122,000 bags.

Rubber shipments, as we said last week, are now comparatively

insignificant, and for the seven days 26th April to 3rd May, only 445 tons of the value of about £120,000 for both Pará and Manáos. At Pará stocks were reduced to only 62 tons. For some time Pará seems likely to be a source of weakness in the exchange market, especially if, as the balance sheets of 31st March seemed to indicate, that market is heavily oversold.

The tendency is evident, and we regard it as particularly fortunate that a drag should be put on in time to prevent disaster. The present fall will no doubt have the effect of frightening out a good many of the guttersnipe fraternity, that are so dangerous an element in a speculative market. It is said that liquidations have been very numerous and heavy during the last few days and may continue for a week, which, in the absence of any considerable supply of ready produce bills, may provoke a still further fall or maintain the market weak for some time, but as soon as they are over a reaction seems unavoidable, because during the coming month at latest new coffee will commence to come in in large quantities and heavy sales swell the supply of bills, which have not, to all appearances, been anticipated this year to the usual extent.

At present the market appears to be in a dangerous condition in which there is no fortelling what may occur. An energetic "bear" onslaught might send it slumping for a time, just as a new loan or piece of good fortune might send it booming. Ultimately, we do not doubt that we shall see higher rates, but just at the present the market is in a nervous condition and best left alone to right itself.

The coffee cleared during the past week is valued at £225,048 and since the 1st January at £5,500,405 as against £4,080,646 last year. For the current crop the value of shipments to 3rd May is £17,580,295 as compared with only £13,129,609 for the same period last year.

Coffee.—During the week ended May 3rd, entries fell off considerably both at Rio and Santos, being in the aggregate 44,759 bags under those of the previous week, but, in spite of all, 43,013 bags or nearly 90 % over last year's. From 4th May to the 30th June entries last year amounted to 740,740 and, should they continue to the end of the crop on the present scale, (190 % of last year's) the amount of coffee still to arrive would be over 1,400,000 bags and the aggregate for the Rio and Santos crops be raised to the enormous figure of 11,413,611 bags! Even were entries to be identical with last year's for the balance of the crop, which is unlikely for many reasons, the total would reach over 10 3/4 million bags.

The Rio market was dull throughout the week and very little doing for either Europe or the States.

Friday being a national holiday, business, was somewhat interrupted and sales, though up to the previous week's average, fell 15,000 bags under its aggregate. Quotations during the week ruled 6$300 to 6$400 per arroba a few sales being reported as low as 6$000. To-day prices improved somewhat in consequence of lower exchange 6$500 being asked but without finding buyers. Colory coffee for Europe obtained 6$800 to 6$900 for type No. 7.

We quote cost, freight and commission 30s. 6d to 31s. and for New York 6 1/4 to 6·35 cents, which is about 1/4 cent. over New York parity.

So far only samples of new washed coffees have been seen on the market, for which fancy prices are being asked by deluded dealers. The weather continues good but cold, although frost has been reported in S. Paulo. What truth there may be in it we are unable at present to say, but however in some districts the prospects of the 1901-1902 crop might be affected, the area is now too immense for any frost to be general enough to do much harm. It is likely that a good many reports will be circulated during the next month or so regarding the damage done by frost, which, however, should be put into quarantine until confirmed.

A friend from Santos writes us as follows :—

"Why the coffee of the last crop comes down is clear and has nothing to do further with the actual cost of production.

"What do you mean by saying "Is there any minimum cost at all?" A query neither I nor anybody else here can understand. I suppose freight, commission and such like outlay are the minimum, and when planters with their wives and families can gather a crop of 7,000,000 bags without the help of outside labourers, that outlay *plus* the cost of their maintenance, would be the minimum as far as I can see. But that is an absurdity.

"Why should prices go up when exchange continues to rise after having disposed of our stock?

"You say 2,800,000, of which 1,200,000 invisible stock, are still to be disposed of *plus*, say, 800,000 bags from other countries, which at a low estimate makes a total of 3,600,000 in two months.—The consumption of the world is about 1, 0,000 bags per month, so we should find ourselves with a visible supply not smaller than now but with the difference that there are 1. 00,000 bags now on the other side to gamble with and put prices up or down at their heart's content and not trouble about Brazil at all. We are, therefore, at a loss to understand how you can speak of short supplies.

Importers have twice paid dearly for accepting the theory that exchange rules coffee prices and not supply and demand, and will not fall into this trap again."

Wages on Plantations.—However it may be resisted, if exchange keeps up wages are bound to come down. The process, indeed is already commencing, some of the larger planters in Minas having given hands the choice of accepting a reduction of 20 % or stopping work altogether Whilst the colonos, or labourers before received 2$ per *alqueire* of berry they will now get only 1$600. This reduction of 400 réis per arroba of berry is equal to 800 réis per arroba of beans.

DISTRICT ASSOCIATIONS.

INDIAN TEA ASSOCIATION.

The following are extracts from an abstract of the proceedings of a meeting of the General Committee held on the 4th June :—

There were present :—Messrs. H. S. Ashton (*Chairman*), A. Tochet (*Vice-Chairman*), H. W. Boyd, W. Brown, D. A. Campbell, R. H. A. Gresson, and R. R. Toynbee.

Messrs. W. Holder and R. Magor were unavoidably absent.

RED RUST.

Mr. H. H. Mann, B.Sc, F.I.C., the Agricultural Chemist employed by the Association, attended the meeting to discuss with the Committee a proposal which had been made, that he should visit immediately a certain Tea Estate in the Nowgong District Assam. It had been represented to the Committee that the Estate in question had been badly attacked with red rust, every section of the planted area being affected. A request had also been made that Mr. Mann should be permitted to visit the garden in order to make investigations, and, if possible, to suggest a remedy.

After considering the matter with Mr. Mann, the Committee came to the conclusion that the results of such an investigation as that proposed would be to the general advantage of the industry. Red rust was admittedly one of the most serious blights of the Lower Assam Valley; and that it should be studied with a view to its prevention was very desirable. This they understood could only be satisfactorily done during the months of May and June. They accordingly sanctioned the proposed visit, which, Mr. Mann stated would not extend over a longer period than four weeks. The soil analyses, upon which he was engaged in Calcutta, were to be resumed on his return.

EXPLOITATION OF CHINESE TURKESTAN.

Considered a letter No. 168, dated Kashgar, 25th April. from Mr. Geo. Macartney, C.I.E., Special Assistant for Chinese Affairs to the Resident in Kashmir, with reference to the question of extending the sale of Indian tea in Chinese Turkestan. This question was last referred to in the proceedings of the meeting held on the 12th March last. It was there stated that the Committee had been in correspondence with Government respecting the different route from India to Kashgar. A copy of the letter from the Government of India to the Government of Bengal, which was summarised in the proceedings referred to had been forwarded to Mr. Macartney, with a request for his opinion upon the points raised in it. In his reply he stated that the Association could not do better than push the trade by the Leh-Yarkand route to Kashgar. Travellers in limited numbers were allowed to use the Gilgit-Hunza route. But scarcely any goods were brought by it although there was no prohibition on their transit. This was probably on account of the difficulties of the road along the Hunza river, and by reason of the absence of transport facilities on a portion of the route. The Indian teas usually imported into Chinese Turkestan had not found special favour. This was probably a stronger reason why the trade had not grown, than was the existence of the physical obstacles on the Leh-Yarkand route. If Indian planters wished to have a share in the trade, they should

he suggested, try to introduce teas similar in taste and shape to those sent from China. The trade was, he thought, susceptible of expansion, if the requirements of the markets were studied. The present appeared to be a favourable opportunity for action on the part of Indian growers. It was true that there was a large stock of China brick tea in the Kashgar markets. But it had arrived before the disturbances in China proper. Since then there had been a general rise in the price of Chinese goods, tea not being excepted. As Indian tea was officially prohibited in Chinese Turkestan, the advisability of establishing special agencies in Yarkand and Kashgar was questionable. Operations should rather be conducted through the Hindu and Mohammedan traders engaged in the Indo-Chinese Turkestan trade. As an experiment, a few maunds of brick tea of suitable quality might be sold at a reduced price to some of these merchants at Leh. They would probably take the tea on to Kashgar for sale. If the experiment succeeded, the traders in question would no doubt be willing to repeat it, and Indian teas would thus become known in Chinese Turkestan

Mr. Macartney also forwarded a sample of China brick tea for the information and guidance of Managers who might wish to engage in the trade. The Committee decided to forward a copy of the letter to the Kangra Valley Planters' Association, with a suggestion that the experiment proposed should be made. They considered it to be of great importance that Indian teas should be introduced into Chinese Turkestan, seeing that the consumption of tea in that country is very extensive. In the proceedings of the last meeting of the Committee, reference was made to samples of Indian and China green teas which had been received from the British Consul at Batoum. It was stated that the sample said to be of Indian growth closely resembled China green tea, and that it was to be sent to the Kangra Valley Planters' Association for an expression of opinion as to its origin. This had been done; and in a letter dated 27th May, the Honorary Secretary of the Kangra Association stated that the tea was a very badly adulterated mixture of green and black leaf, faced with gum and soapstone. From its smell it seemed to be China tea. It was possible that it had come from China to Bombay, where it had probably been re-faced. This opinion was to be conveyed to Mr. P. Stevens, the British Consul at Batoum.

THE RUSSIAN VOLUNTEER FLEET.

Considered a letter, dated 28th May, from Messrs. W. S. Cresswell & Co., regarding the Russian Volunteer Fleet. Messrs. Cresswell & Co. stated that they had written to the Colombo Agents of the Fleet, asking if one of their steamers could be run monthly from Calcutta to Odessa, provided full freight were guaranteed. The Agents had replied that the Steamer authorities in Odessa did not care for the steamers to visit Culcutta on account of the plague. Teas could, however, be sent to Colombo for transhipment to Odessa. Messrs. Cresswell & Co. suggested that the Association should take the matter up, and ask the Steamer authorities to reconsider their decision. After discussion, the Committee resolved to enquire from the Colombo Agents of the Fleet as to whether the prevalence of plague was the only reason for the steamers not calling at Calcutta. Enquiries were also to be made as to the rates of freight for tea from Colombo and from Singapore to the Black Sea Ports.

Messrs. W. S. Cresswell & Co. were to be informed accordingly.

THE COST OF WAR.

From the day when Achilles fasted three days and nights over the body of Patroclus, slain in the ten years' siege before the stout walls of Troy, have we learned of war's sorrows.

The Duke of Wellington wept like a child when he surveyed the bloody, hard-won field of Waterloo. Methuen, it is said, broke down at the ghastly sight of Magersfontein, and returned to his tent that the men might not witness his grief.

"Who dead is must be buried," says Homer, and, we might add, "who ill is must die."

So thought Private John Smith, living now at 19, South Uxbridge Street, Burton-on-Trent. The *Aurania* steamed out to the Cape on December 27th, 1899, with this soldier aboard her (that was before she steamed back with the gallant C. I. V.'s) and in telling me of his trials, on August 29th, 1900, Private Smith says that *that* part of his duty was pleasant enough.

"Shortly after Earl Roberts' famous march into Kronstadt, we were stationed between that town and Jacobsdal to guard the line of communication. Towards the end of April I was laid low with that fell disease enteric fever.

There were hundreds of men down with it. It has laid low more men than all the shot and shell that was ever fired by Boer Artillery. For several weeks I was in the fever hospital. My stomach was converted into a manufactory of torturing pains and I grew as weak and helpless as a new-born babe.

"I was for *days unconscious*, but gradually recovered sufficiently to be invalided home."

Yet the suffering of Private Smith was not over. "I went aboard the Hospital Ship *Nineveh* in June," he says, "and shortly afterwards sailed for home. During my short stay in South Africa, I lost over 20 lbs. in weight. Nothing that I took relieved the constant vomiting, or increased my strength."

"After," he says, "I had been home a few days, my brother, who is an engine-driver on the Midland Railway—not of *an armoured train*—advised me to try Mother Seigel's Syrup. I got a bottle. I found it was doing me good. The vomiting *ceased*, and I was able to enjoy all kinds of food. My appetite is now enormous."

"Altogether I have taken four bottles of Mother Seigel's Syrup, and gladly give you permission to use and publish my statement. This Syrup is a fine tonic and a great medicine for the stomach. I can especially recommend it *to soldiers returning from South Africa* in feeble health."

Wellington knew the bitter cost of war in 1815.

Methuen in 1899 and 1900.

And the hero of this narrative in 1900, too. His was a personal cost. "Green vomit." Charles Reade writes, "laid her sickly hand on him."

A BROKEN MAN.—Until the kindly offices of Seigel's Curative Syrup put him on the steppingstone of "first wealth," which is health.

MARKET REPORT.

[*Per Mail advices of 31st May* 1901.]

COFFEE.

The London Commercial Record says:—The public market after having been closed since the 22nd instant, re-opened yesterday, when supplies to a moderate extent were offered, and meeting with fair competition were chiefly disposed of. Fine and choice grades were very firm, but medium and common decline 6d to 1s per cwt. Futures have been flat under the influence of large receipts and declining exchange, and prices are easier: yesterday July delivery Santos sold at 30s 7½d, September at 31s 1½d to 31s, December 31s 7½d to 31s 6d, and March at 32s 1½d to 32s. We quote:—

London ...	Santos ...	July delivery	... 30s 9d.
New York	No. 7 Rio...	,,	... 5·40 cents.
Hamburg...	Santos ...	,,	... 30¾ pf.
Havre ...	Santos ...	,,	... 37¼ francs.

To-day's auction supplies consisted of 5,746 bags Costa Rica, 173 bags Nicaragua, 212 bags Salvador, 2,125 bags Guatemala, and 22 bags Colombiam. A good market for all colory sorts, and prices rather dearer. Common sorts quiet and unchanged to occasionally a little lower.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	Stock.		Imports.	
	1901.	1900.	1901.	1900.
Tons	23,696	19,791	27,977	21,595
	Home Consumption.		Export.	
	1901.	1900.	1901.	1900.
Tons ...	8,694	7,821	11,332	8,724

The preceding figures exhibit— Tons.

In the Imports an increase this year of ...	6,382
Home Consumption an increase of	873
Export an increase of	2,608
Stock an increase of	3,905

Auctions yesterday passed off as under:—

CEYLON.—*Plantation.*—4 casks 7 tierces 7 barrels 1 bag mostly sold, middling greenish 75s 6d, bold 90s to 92s.

EAST INDIA.—1,480 bags partly sold as follows:—*Mysore*, smalls 38s to 63s 6d, low middling to middling 41s 6d to 51s 6d, common to fair bold 57s 6d to 64s, fine to very fine bold blue 95s 6d to 112s, peaberry 47s 6d to 98s 6d; *Coorg*, smalls 36s to 39s 6d, low middling to middling 43s to 46s, bold 53s to 54s, peaberry 51s to 58s 6d; *Wynaad*, smalls 36s 6d to 37s, low middling 43s 6d, bold 49s 6d to 58s 6d, peaberry 52s 6d to 56s; *Neilgherry*, triage 35s.

JAMAICA.—55 barrels 120 bags mostly sold, smalls 33s to 36s 6d, good to fine ordinary 33s to 40s, fine fine ordinary to low middling 41s to 44s, middling to good middling 49s 6d to 56s, bold 65s to 85s 6d, peaberry 46s to 55s.

COSTA RICA.—Of 2,115 bags catalogued 1,830 bags sold, smalls 35s 6d to 41s, low middling to middling 45s to 50s, good middling 52s to 61s, bold 63s to 70s, very fine bold 86s 6d, peaberry 49s 6d to 72s.

GUATEMALA.—347 bags sold, smalls 36s 6d to 38s, middling 46s, good middling 52s to 52s 6d, peaberry 53s 6d to 55s.

VERA PAZ.—65 bags half sold, fine to very fine bold 90s to 112s 6d.

NICARAGUA.—167 bags practically all sold, smalls 34s, low middling to middling 42s to 46s, peaberry 54s to 56s.

SALVADOR.—Of 230 bags catalogued 160 bags sold, low middling greenish 42s.

VENEZUELAN.—30 bags retired unsold.

PERUVIAN.—77 bags sold, smalls 33s, middling 44s, good bold 54s, peaberry 49s.

COLOMBIAN.—50 bags bought in.

BRAZIL.—32 bags washed Santos sold, smalls 34s, medium 41s 6d, peaberry 41s 6d.

Receipts in Rio and Santos.

Rio Exchange 12⅛d, previous day 12⅜d.

HAVRE, *May* 30.—Good average Santos June opened steady at 37¼f. and closed quiet at 37f., September opened at 38f. and closed at 37¾f.. December opened at 38½f. and closed at 38¼f., March opened at 39f. and closed at 38¾f.

HAMBURG, *May* 30.—Good average Santos June opened steady at 30¾pf. and closed quiet at 30½pf., September opened at 31¼pf. and closed at 31pf., December opened at 32pf. and closed at 32pf., March opened at 32½pf. and closed at 32½pf.

NEW YORK, *May* 29.—Closing prices of No. 7 Rio were as follow:—

	May.	June.	July.	Aug.	Sept.
May 29...	—	5·35	5·40	5·45	5·55
May 28...	5·45	5·45	5·50	5·55	5·65

COCOA.

No auctions have been held this week and we do not hear of a material sales privately.

PEPPER.

In pepper the sales reported are restricted to some small lots Penang *White* on the spot at 8 3/16d per lb. Singapore *Black* f arrival is quoted at 6 5/32d March-May, and 6 3/16d per lb. May-June.

To-day inanimate, and business small.

QUININE.

A dilatory advance of ½d per oz. was announced by Germa makers on Tuesday, which brings the "official" quotations to 5d per oz., at which figure makers had done business for some tim previously. This advance is considered quite inadequate by sp culators, who think it ought to have at least been 1½d to bring t article to the parity of bark. It is understood that they are selle to consumers only. This slight movement has, in consequenc given a firmer feeling to the second-hand market; but only a sma business has been done (owing to the holidays and the slig advance), including August delivery at from 1s 4 5/8d to 1s 4 7/8d, a October at 1s 4 7/8d to 1s 5d. To-day 20,000 ozs. have been sold f August at 1s 4 7/8d, with buyers of October at 1s 5d. Howard make no change in their quotation for sulphate, but advance the salts in conjunction with other makers. Howard's price for t sulphate has not been changed, but they have advanced their figu for other sorts as follows:

	s.	d.
Arseniate	2	4
Hydrobromate	2	3½
Hydrochlorate	2	3½
Iodide	2	5
Phosphate	2	5½
Salicylate	2	3½
Ditto, Physiologically Pure	2	7
Valeriante	2	6½

VANILLOES.

At auction to-day 420 tins were catalogued, but demand w irregular, holders finding difficulty in making progress even at decline of 1s to 2s per lb.; about 175 tins sold under the hamm as follows:—Mauritius, good color and flavor, 8½×9 inches 24s 6 7½×8 22s 6d, 7×7½ 22s, 7 inches 21s, 6×6½ 19s, 6 inches 18s 6 5½×6 18s; second quality 6½×7½ inches 19s 6d, 5½×6½ 17s to 18 Bourbon, fair 5×5½ 17s, 4×4½ 16s 6d, mixed lengths 3½× 12s per lb.

INDIA-RUBBER.

Considerable sales of fine hard Pará have been made on America account at a slight reduction. Hard June-July delivery 3s 9½d 3s 9¾d, July-August 3s 10d to 3s 10¼d, closing quiet. Negrohe quiet. scrappy 2s 8d, Island 2s 2d, Cameta 2s 5½d. Sales of fi Peruvian 3s 9d, ball 2s 3½d up to 23 6½d for superior, slap 2s forwar 1s 11¾d spot.

In auction a fair part sold steadily.

Agents for LEA & PERRINS' WORCESTERSHIRE SAUCE.

CROSSE & BLACKWELL'S, LTD.

By Special Warrant Purveyors to The Queen AND Empress of India.

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 5th proximo. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Munzerabad.

June 25th, 1901.—*Weather*—Pleasant and sunny, with small showers, temperature ranging 62° to 76°. *Works*—Many estates started planting last week, but most have discontinued on account of the small rainfall. A 1st weeding and borer have been completed in a few instances. *Plant diseases*—Coffee very healthy, but borer bad. *Health*—still bad, fever very prevalent. *Interesting items*—It has been notified that Captain O. D. Rigg, 1st Batt. Royal Warwickshire, is to be Adjutant of the Coorg and Mysore Rifles. The news that Monsieur Yves Guyot, editor of the Paris Siècle, has caused by his exertions the removal of the prohibitive tariff on British Indian coffee imported into France, will gladden the heart of many a planter, and should be suitably acknowledged by our Associations.

PRODUCTS FOR COFFEE LAND.

Writing to the *Madras Times* last month, "Planter" inquired (1) if Egyptian cotton, Java tobacco, castor, (presumably the castor-oil plant) cocoa-nut, areca-nut, barley, potato, dammar, and gallnuts will grow to advantage on the hills in coffee soil; (2) what else could be grown on the same soil with the same effect, and (3) what percentage of profit is likely to accrue from each? This is a big order, and it is not without qualms of conscience that we attempt to answer the numerous questions involved. There is a happy provision of nature which prevents the spontaneous production of too many good things in one place. Were it not for this, men would become indolent and effete—conditions that are certainly not in harmony with the intensity of life and movement around us. Thinking seriously for a moment, it would occur to "Planter" that the special products he refers to

are already cultivated in situations which long experience has proved to be the most suitable. Viewing the matter from this standpoint it will be found that very few of the products mentioned are likely to be of maximum value in the coffee zone, although a few of them could, no doubt, be cultivated with some advantage. The climatal conditions of a South Indian coffee estate are, for instance, very different to the delta of the Nile, where Egyptian cotton attains perfection. Although improved by occasional irrigation in localities where there are rivers and canals, cotton is, practically a dry crop of the plains ; and, in this country at least, the bulk of cultivation is confined to extensive tracts of what is known as black, cotton, soil. To obtain climatal conditions in this country somewhat similar to the Egyptian season, it has been proposed to cultivate Egyptian cotton from October to May—that is during the dry season. But when coffee is grown the early part of the dry season is characterised by mists and fogs, while the latter part is subject to rain, an element which is ruinous to cotton.

Tobacco grown in Java possesses a high reputation, as the volcanic soil in that country is eminently adapted for the purpose. This is so much the case that the plant is grown extensively in some localities without being manured. Where the necessary inorganic substances—such as potassium carbonate—are present in a solvent condition there is nothing so good as virgin soil to produce the finest quality of leaf. Indian tobaccos are mostly grown on the plains, where they are known to appreciate heat and moisture. Organic soils such as prevail to a great extent on coffee estates, are unfavourable to tobacco cultivation. But the experiment is worth trying in warm situations where there is no drip from overhanging trees, and where the soil is known to be rich in alkaloids. But the difficulties of curing the leaf in a moist situation must be duly weighed, as also the trouble to be expected from insect pests. The castor-oil plant, especially the red-stemmed variety, often springs up spontaneously in new coffee clearings. But it would require to be grown very extensively to be of commercial value to the planter. Far inland, the cocoa-nut tree is not of much value ; especially when the elevation rises to 3,000 feet above the sea. It is on the shores of the latter, in all tropical countries, where the cocoa-nut attains its maximum value. The areca-nut tree is very productive in some of the coffee districts of Mysore, where it is extensively planted by the Mulnad ryots. It is one of the bye-products which planters would do well to foster at elevations of 2,000 to 3,000 feet. Associated with this cultivation, especially in its early stage, bananas and plantains are usually grown to afford shade. At the same time this fruit gives an early return for initial outlay and commands a ready market everywhere. Other secondary products such as pepper, coca, cocoa, and croton-oil might also be profitably grown while the nut trees were attaining maturity. As a masticatory (with lime and the betel-leaf) the demand for areca-nut is practically unlimited. Mysore nuts are valued, in Bombay, at Rs. 80—100 per candy.

Barley cannot be so profitably grown anywhere in the south as it is in the north of India. Potatoes should grow well on the hills. In fact they are grown to a large extent at most of the hill stations. The crop needs fairly level land, and should be put down in virgin soil ; if possible, cultivation should be near a railway to facilitate cheap export to the nearest market. Specimens of the black, dammar, and gallnut trees are not uncommon on coffee estates, where they are also indigenous to the forests. The same may be said of the w dammar tree, *Vateria indica*. But the produce of these t is reserved by Government, and the planter, if permitte raise new plantations, would have to wait for many years a return of outlay. What can be grown most profitably abandoned coffee land is a problem which can only be wor out by practical experience and the requirements of the mar If Mahomet will not go to the mountain, the mountain m come to Mahomet !

THE ANNAMALLAI HILLS.

An Ex-Ceylon Planter writes from the Nilgiris to a Colon paper that Cardamoms grow luxuriantly on the Annamal Coffee, as far as looks go, promises very well, but pri and the present outlook are certainly not very bright. Pla ers are going in for shady trees, grevilleas, dadaps, sau, a others, and planting cinchona along the roads and in t coffee, too. The oldest clearings in the district gave a lit crop last year, but it was mostly sacrificed by strippi There are one or two natural shady clearings, too, and so these seem quite a success. The tea clearings planted l year are coming on really well, too, and, thanks to a go monsoon last year and good rains this year during the d months, are certainly very encouraging. An experime has been made with cinchona, and, judging by a you clearing on a neighbouring estate of Succ, Ledgers plant last September, should do very well. The soil is deep a porous, with lots of good natural drainage and little or clay anywhere. Experts have pronounced favourably as the possibilities of cinchona on these hills. Another expe ment is being made with about 15 acres of rubber ; possib the land is too high for this, but along the river sid and flats it should have the best chance. Altogether the are on the Annamallais some 360 acres of tea, 100 acr of coffee, 300 acres of cardamoms, and 50 acres cinchon The latter, Ledger from Java seed, and a hybrid (Robust chiefly). All this was practically opened last year, with t exception of 50 acres cinchona and 50 acres cardamoms ar about 15 acres of Pará rubber.

The Export Tea Trade of China.

The following extracts from an article in "The Board Trade Journal," dated 23rd May, 1901, on the foreign trad of China in 1900 are reprinted as a circular by the India Tea Association (Calcutta). The article is based on th "Report of the Trade of China, and Abstract of Statistics for 1900, which was recently issued by the Chinese Imperi Maritime Customs.

The export of Black Tea was 863,374 piculs, which was 72,2 piculs less than in 1899, but, 16,241 piculs more than in 1898. Hankow the demand was brisk at the opening of the season buye for the Russian market paying good prices for the higher grade and the purchases for America and Canada being largely in exce of those of 1899. Quality, with the exception of Ningchows, w good. There were no direct shipments to London from Hanko during the year. The Foochow teas did not do well, as the marke in Europe were overstocked and the lowest prices on record we realised. In the United States it was believed that the Boxer tro bles would interfere with the export, and the closing of the Tients

oute to Russian buyers threw a large quantity of common teas on he market at low prices. Speculators therefore bought largely for merica, where the markets have been overstocked. Green tea lost 3,373 piculs as compared with the total of 1899, but gained 15,119 iculs on that of 1898. The year was a bad one for brick and tablet ea. The first consignment sent by the overland route to Kalgan as almost all lost, and exporters then shipped to Nicolaievsk *viâ* Valdivostock. Unfortunately the steamers on the Amoor were so ccupied with Government transport that the greater quantity emains stored at Valdivostock. In consequence of the change of oute, the brick and tablet tea sent to Russian Manchuria amounted o 256,019 piculs, as against 78,231 piculs during the previous year, ut only 72,656 piculs of all kinds of tea were sent *viâ* Kiakhta, as gainst 537,771 piculs in 1899. No brick tea was sent to England, s the Yenesei route has been found disappointing. Great Britain ook 135,139 piculs of all kinds of tea, or 100,882 piculs less than in 899. The United States took 255,156 piculs, as against 218,535 iculs, and 10,524 piculs, went to South Africa. The shipments *iâ* Odessa rose from 195,449 to 269,230 piculs.

The Report also gives particulars of the export of tea direct to oreign countries. The total quantity thus exported for the last our years is stated to have been as follows:—

—	1897.	1898.	1899.	1900.
	Piculs.	Piculs.	Piculs.	Piculs.
Black ...	764,915	847,133	935,578	863,374

BOARD OF TRADE RETURNS.

MAY, 1901.

The following tables show the Imports, Consumption, and Exports of the undermentioned articles for the 5 months ending May 31 in the present and 2 previous years, compiled from the Board of Trade Returns, with stock in U.K. on May 31.

Coffee.—Imports stand near the high level of 1899, and stocks are heavy notwithstanding a large increase in Home Consumption and Export. The statistical position is not strong.

NOTES.

Tea Samples in the U. S.

The U. S. Treasury Department has ruled that tin tea boxes, imported, filled with tea, and not designed for use other than the *bonâ fide* transportation to the United States, are not dutiable as unusual coverings.

Java Quinine.

According to Mail advices received in New York on May 29, the entire 3,000 kilos. offered at the Batavia auction on May 15 were taken by one London buyer at an average of 23⅞fl. The next sale was scheduled for June 19.

Indian Tea Exports.

Indian tea exports to the United Kingdom for the first half of June were 2,630,991 lbs. compared with 2,666,723 lbs. last year. The total for period between April 1st and June 15th was 4,020,923 lbs. as against 5,745,029 lbs. last year.

Coffee.

Predictions of coffee developments are not always certainties, observes the *American Grocer*. Estimates of the wise ones gave 2,500,000 bags of Rio and 6,250,000 of Santos for this season. Present appearances indicate 2,750,000 bags of Rio and 7,500,000 of Santos—a total difference of 1,250,000 bags.

The Canadian Tea Market.

Messrs. P. C. Larkin & Co., of Toronto, state that the Ceylon Commissioner has "entirely captured" the Canadian Market, so far as *Black Teas* are concerned. There is practically no China Congou Tea coming into Can this year, and there was very little last year.

Indian Tea Exports.

The Calcutta Collector of Custo annual report for last year sho that the shipments of tea were the heaviest on record, be over 182 million pounds, an increase of 8 per cent.; but average value of tea for the year disclosed by the Calcu export shipping bills is the lowest recorded since 1891-92.

Coffee.

A grocer's man away down Richmond, Va., has broken out verse thus :

"Of all the things the grocers sell,
'Tis coffee makes your profits swell."

Would that the planter of coffee could compose as joyous couplet !

Brooke, Bond & Co., Ld., London.

Messrs. Brooke, Bond & C Limited, pay a dividend of fifte per cent., together with a bonus sixpence per share; £100,000 is placed to reserve, whi includes the share premium; and £2,474, is carried forwa Whatever may be said about the cultivation of Tea it obvious that there is still money to be made out of distribution.

Yokohama Exports of Tea.

In 1899 Yokohama exported T to the value of £546,836; in 1900 the value of £556,986. The asso ment" in the latter year was as follows :—

	lbs.
Green (pan fired)	16,897,783
(basket ,,)	6,169,887
Dust	2,936,921
Sundry	292,868

The Dumont Coffee Company.

The Dumont Coffee Company, Lim ed, pays a dividend of 2½ per cent. account of Preference share intere £20,000 is placed to Reserve, and £10,263 carried forwa Ordinary shareholders have to wait a bit. The Debentu holders are paid up to date, the Preference shareholders a some two years in arrear of their dues, and the Ordina shareholders, since the first 10 per cent. paid in 1896, ha received nothing.

Combinations and Competition.

Thus the *American Grocer*: T result of "combinations" is seen a Chatham street restaurant sig It reads "Combination coffee, 2 cents a cup." Instead increased cost to consumer, note the decrease. It is not stat how much of the combination is preferred or common stoc or how extensively watered. There are grounds for belie ing that common has the call and the cup. With "Ariosa and "Lion" quoted at a dime, trade in the famous bran should surely 'gin to climb.

Ceylon Green Tea in Canada.

Messrs. P. C. Larkin & Co., Toronto, wrote last month :—*Ceyl Green Teas* are wanted here, a there is none to he had. If certain gardens have "giv up" the making of these teas because of their being "un munerative," it surely must have been because they had n made them properly, judging from the prices at which bla teas have been sold, and the prices we have paid for Ceyl

reens. We think wonderful progress has been made in anada with Ceylon Green Teas during the past year.

uinine.

The increase in the London stock, which stands at 3,558,000 oz., against ,465,000 in May, 1900, and the great discrepancy between ie landings (238,720 oz.) and the deliveries (11,712 oz.) has epressed the speculative market this week, and only a small usiness has been done at lower prices, spot value having eclined to 1s. 4d.; October has sold at 1s. 5d. down to s. 4½d. The exports of "quinine, quinine-preparations, tc.," from Germany during the three months ended March mounted to

	1901.	1900.	1899.
Kilos	49,800	64,100	65,900

The British Tea Duty.

In the House of Commons Mr. Kearley moved for an *ad valorem* tea luty not exceeding sixpence per lb. Sir Howard Vincent noved the remission of one-fourth of the duty on British teas. Both amendments were negatived. The Chancellor of the Exchequer said that under equal duties, India and Ceylon had out-driven foreign producers. When he was in the happy position of being able to reduce taxation, he would certainly reduce tea in preference to beer and spirits. When that good time comes it may happen that Sir Michael Hicks-Beach is no longer Chancellor of the Exchequer, so our readers need not attach much value to the above promise.

A proposed Otto-of-Rose Combination.

A meeting of Otto-of-Rose producers from the districts of Karlovo, Kezanlik, Brezovo, and Panagjurischte was recently held in Karlovo to consider the question of a combination of the essential oil-industry in Bulgaria. After discussion it was resolved that a Committee, consisting of eight members, be appointed to thoroughly study the question and the means of forming a combination; also to draw up a series of rules, and to issue an appeal to all producers to ascertain what support such an Association would receive. The appeal has already been issued, and the further fate of the project will depend on the answers received by the Chairman of the Committee, Mr. E. Netschew, of Karlovo.

Prize Essays on Coffee.

The *Canadian Grocer* remarks:—"Experts have been heard to say that there are a good many in the grocery trade whose knowledge of coffees is more limited than it should be. Whether it be true or not it would be a valuable contribution to the literature on the subject of coffee if those whose knowledge in regard thereto is extensive would transfer this knowledge to paper. With a view to inducing the qualified ones to do this we have decided to give $30 in cash for the best essays on the subject of the "Buying, Handling, and Selling of Coffees." The 1st prize will be $15, 2nd $10, and 3rd $5. Besides this, to each of the five essayists whose productions rank next to those winning the cash prizes will be awarded a copy of *The Canadian Grocer* for one year." The prizes are not large but they will probably cause pretty active competition.

The London Tea Market.

Weekly special telegram, dated 20th June, from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally is steady, and that the market for medium liquoring Pekoes and Broken Pekoes is weak, while that for Common Pekoes and Broken Pekoes is also steady. The price of fair liquoring Ceylon Pekoe Souchong is 5d. (same as last week) and the average price of Ceylon tea sold on garden account this week was 6⅜d. (⅛d. down) as against 6d. and 6½d. respectively in the corresponding week last year. Reuter reports that fine qualities of Ceylon tea are steady, and common to medium, dull. Pekoe Souchongs are quoted at 4¼d. and the average for the week at 6⅜d. (both an eighth of a penny down). 30,000 packages of Ceylon tea were offered for sale, and 28,000 were disposed of; while of the 10,000 packages of Indian tea offered, 9,000 found purchasers.

"Futures" in the U. S.

The *American Grocer* of 22nd May, 1901, quotes:—

GENERAL ARTICLES.

TEA AND THE CURRENCY.

It is not a little amusing, writes "X" in *Capital*, to find your correspondent, Major E. P. Marriott, writing in *Capital* of the 9th ultimo that "no one interested has fully grasped the fact that the currency legislation does act as a crushing tax on the industries of India." If producers have been for the past eight years wrapped in a kind of slumber, I can only say they have been talking very loudly in their sleep. It is a little strange if Major Marriott has not heard their mutterings—*vide* the letters of Mr. J. A. Wadia, Mr. Robert H. Elliott, Mr. Acworth's evidence before the Currency Commission, the letters which have appeared quite recently in the *Times of India* on the cotton industry and the bounty to China and Japan—to say nothing of scores of other communications, opinions, and utterances, which from time to time have come before the public. If I am not mistaken I think Mr. Forbes-Mitchell wrote a whole book to prove the iniquity of the Currency Legislation—and besides this we have Major Marriott himself. No, No. There are plenty of people grasping the fact; but unfortunately there are other facts to be grasped too. It has been alleged that planters have been somewhat apathetic regarding Sir Michael Hicks-Beach's last 2d. on tea, but this hardly seems a fair charge to bring against the tea producing community. It is extremely difficult for a body of capitalists in India effectively to organize an opposition to a budget impost of this kind. After the event they may and of course do raise their voice. The simple fact—or one of the simple facts about tea is, that as a revenue-producing commodity it has

been for years *too heavily taxed*. At the present moment every pound of tea which enters the United Kingdom pays approximately a duty of 100 per cent. *ad valorem*. Such an impost is a confession that our statesmen are not financiers. It presses hardly on the *poor* consumer at home; it almost crushes the producer abroad and when we reflect that both the produced abroad and the consumer at home are citizens of the Empire, the folly of such drastic taxation should be at once apparent. The position of the consumer and producer was very fairly put in an article entitled "Garotting the Tea Trade," which appeared in the first number of *Tea*, a new paper, just started in London. Your young contemporary observes: "It may be argued that the duty cannot be paid both by consumers and producers. They may divide the burden, but in any case its evil effects have to be borne in some measure by both. Last year the Chancellor of the Exchequer remarked in his lofty way that he did not believe the people minded paying the 2d. additional on tea. Sir Michael probably thinks that a two-penny surtax on one of the necessaries of life is no more to a day labourer than to a Cabinet Minister. But the people know that it is. So instead of paying the 2d. per lb. more as a patriotic Chancellor expected them to do, they have to content themselves with inferior tea at the same price. The result is that the producer pays the extra duty, and the consumer probably adds dyspepsia to the multifarious ills that already afflict him."

The tea-taxation problem is a very simple one, and highly discreditable to the Home Government. On the one hand you have the spectacle of private enterprize which has built up a big industry and invested £30,000,000 therein. To this army of productive workers the State says, in effect, if you can land tea in England at 8d. a pound you must give me 8d. too, a national example of appropriation of other people's energy and labour which is a fine specimen of predatory economics. But let us look at the problem a little further. The output of tea for all India, as Major Marriott tells us, has been estimated for the coming year at 180 million pounds. The duty on this at 8d. a pound would realize six million pounds. A duty of 4d. would realize three million pounds. But there are the war expenses. Quite so. At the same time I think the Chancellor of the Exchequer is paying a very dear price for that extra three millions. In the first place a solid reduction in the tea duty would, if anything, materially assist in consolidating the currency policy of India, a policy which has been largely pushed along by Home influence, and the success of which is understood to be of vital importance not only to India but to Great Britain. I do not advocate merely taking the extra 2d. off tea. I advocate a solid reduction of 4d. in the duty. This would immediately help an industry represented by a capital of £30 millions Gain No 1 From this would flow increased purchasing power for India, and a good deal of opposition to the currency policy would cease. Then, again, the consumption of tea in Great Britain is one of the very best means of weaning the people as a whole from the excessive use of alcoholic drinks. It is needless to enlarge on Great Britain's drink bill—good tea, cheap, well made and properly served is one of the greatest agents the temperance cause could possibly wish for. That a change in the popular taste is steadily spreading, no one, who compares the London of a quarter of a century ago with the London of to-day, can doubt. Big concerns like Lyons, the A. B. C. shops and scores and scores of tea houses all over the place prove very conclusively that the average Briton is ready to drink tea where his father would probably have asked for something stronger.

And among the *very poor*, tea may very truly be said to be the one chief creature comfort that to some extent makes amends for the absence of many others. Sir Michael Hicks-Beach evidently does not understand the part which tea plays in the national taste. A lowered duty would help us all along the line. I do not know why Major Marriott estimates the selling price of tea @ 8d. per lb. From some figures published the other day by the Indian Tea Association in London I extract the following:—

	1899.	1900.	1901.
Indian Pekoes	7·73d.	7·20d.	5·97d.
Ceylon Pekoes	7·38d.	7·25d.	5·21d.

I am not going to argue from this, as has been done, that the fall in price is owing to the enhanced duty. It is in my opinion owing to supply having overtaken demand, under existing conditions, and the supply has largely been stimulated by the low rate of exchange, which prevailed prior to 1893 and for a little time after.

There is a passage in Major Marriott's letter which might enlarged upon a little to show how unsuitable the gold standar for India, in her present economical condition. The writer sa "Six millions sterling should be worth about twelve crores of ru (or a little more at the present price of silver). At the pric which the Indian Government manufactures and sells rupees sum realizes 9 crores only. The planter is, therefore, mulcted crores of rupees." Major Marriott must know, as well as I that from the Government point of view the way of stating case only looks at half the question. But the point is this. S posing the tea industry in India exchanged its tea for six mill sovereigns—actual coins. It would be paid in full then. So no question of convertibility would have arisen. But—what go would those six millions sovereigns be to the planting indust They would not pay labour—and labour is the chief obligat the planter has to settle with. If the planter could pay in g his labour would adjust itself to a gold price, for by degre gold prices and not silver prices, would settle the exchanges of commodities—labour included. But the Indian markets are dom nated by silver prices. This really means that the price of labour in India has been raised by legislation since 1893. F whereas, in 1893 the man who received Rs.15 a month was or getting about 16 shillings, the same man is to-day without a nominal increase in wages getting £1 sterling; and the only w his employer can pay him that fifteen rupees is by purchasing th sum with £1 sterling worth of produce. The worst of it all is th the £1 sterling the labourer receives does him not a bit more go at present than his 16 shillings did before. When it does commen to do him more good, then labour will come down. But the go never can do him any good until gold replaces silver as currenc and until a limited tender is placed upon silver.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange.—*May 11th*, 1901.—Ninety days' Bank rate on Lond opened on Monday the 6th instant. at 13d. and closed this evenin at 12 11/16d. and 12 25/32d.

As we anticipated, the rate has been oscillating between com paratively narrow limits all the week, and seems likely to contin so long as liquidations are incomplete. It was well known th selling had been particularly heavy for this month and June, a it was only natural that there should be some check to an almo unprecedented and uninterrupted rise.

Indeed, it may be considered very fortunate that the check can in time to clear the decks and shake out weak jobbers before t real action commences.

By obliging "bulls" to liquidate a good deal of their sales t situation of the market at the end of this or the coming mon should be materially improved and, instead of a violent reaction July or August, it is now possible that the rate may be maintain or even improved, throughout the current year. Of course a goo deal depends upon sterling coffee prices; but even these do n seem so hopeless as formerly.

How considerable speculation in Exchange must have lately bee is shown by the following figures supplied to the *Camara-Syndic* by the different local banks:

Sale of Bills on London.

	£	£	£
January	2,397,551	1,714,987	2,841,0
February	1,479,034	1,932,502	3,190,3
March	1,860,301	2,322.552	2,996,2
Quarter ...	5,736,886	5,970,041	9,027,6

These figures, it must be remembered, represent the moveme of this market only, whilst the total value of coffee bills at Rio a Santos together did not reach £4,000,000 during that period.

Pará advices state that entries there during the past week we only 117 tons, including Bolivian rubber in transit. Shipments Pará and Manáos amounted to 505 tons (exclusive of 75 tons Peruvian origin) the value of which is about £130,000. Stocks Pará on the 11th May were reduced to only 44 tons. Steame are now commencing to return from the sertão with but very sma cargoes and the Rubber season may be regarded as over.

At present, and for some time to come, the position of Pará mu be a source of weakness to Exchange. With a considerable ove

sale to be liquidated and little or no rubber bills to do it with, that market seems likely to be a taker here not only for ordinary trade purposes but as cover for oversales; whilst Bahia and Pernambuco seem to be likewise oversold.

At Bahia, the tobacco crop is said to be heavy, but was mostly discounted in January and February and is not likely to affect exchange. In spite of the heavy movement during the past month, the Bank of the Republic shows an increase of only 1,000 contos in cash and also of its indebtedness to London Bankers.

During the past week shipments or embarques of coffee at Rio and Santos were to the value of £234,599, as against £154,773 the previous week, and £60,723 for the corresponding week last year, thus giving with Rubber about £380,000 in coffee and Rubber bills only. Imports may be put down roughly at about £300,000 per week and Government remittances at £75,000. So that were it not for a probable reserve of bills that have probably been held back, there would be a deficiency of ready bills just at present.

Declared sales during the past week were also larger, 143,000 as against 107,000 bags for the previous week, and seem to promise fair shipments during the current week. But until both entries and shipments of coffee increase considerably there can be no justification for anything except a speculative further advance. Summing up, the situation is reduced to this: markets generally heavily oversold and remittances likely for some time to exceed the supply of ready produce bills. This disequilibrium may, however, be redressed by new money from Europe on account of the *Melhoramentos* scheme, which, it is said, will be launched on the 15th instant the Pará loan and the City Improvements for which last an issue of £200,000 debentures has just been made for extension works here.

It is to be trusted that the balance-sheets at the close of the month will show that a good deal of the oversale for this month, at least, has been liquidated, as indeed there seems every reason to expect; and, should the same prudence be observed by the banks in June, a renewed rise may be reasonably looked for in July. Of course it may come sooner, but that must chiefly depend on the banks themselves.

Coffee.—Joint entries at Rio and Santos during the week ended 10th May showed a slight revival at each of these ports, being 15,836 over those of the foregoing week and 52,388 or nearly 120 % greater than for the corresponding week last year. Entries since the 1st January amounted on 10th inst. to 2,959,900 bags as against 1,831,271 last year and for the current crop to 10,120,813 bags as against 8,546,862.

If Entries are indeed extraordinary for the time of the year, Shipments are, fortunately, no less remarkable and more than keep pace with stocks, which on the 22nd March stood at the gigantic total of 1,458,844 bags but are already down to 942,249 and hold out a prospect of still further reduction. So that after all it is possible that the new crop may be entered on with local stocks no bigger than last year's. If so, with consumption growing as it is, in spite of the crop promising to be larger than any before, the situation does not seem so entirely hopeless, especially with syndicates on the alert for a favourable moment to start a new corner and projects of every kind on foot, of which no one can tell the outcome. There is a decided feeling not only that prices have touched bottom but that they are low enough to make a corner possible and profitable if properly managed, and under such circumstances it is impossible to tell what the course of prices may be.

For our part we are inclined to take a more hopeful view of foreign prices, but as every improvement abroad must react on exchange and send it higher still, it is difficult to see how currency prices can improve except by restricting supplies.

The powerful manner in which Coffee shipments must have influenced exchange is evident from the fact that their value from 1st January to 10th May is £5,837,653 as against £4,080,640 last year, and for the current crop £17,917,251 as against, only £13,129,602 on 10th May last year.

The Rio market during the past week was somewhat firmer, prices ruling from 6$400 to 6$800 per arroba, and closed on Saturday between 6$600 and 6$800 with 200 réis premium for colory coffees The demand for the United States was fair but confined mostly to the speculative trades.

In the local market liquidations have been also heavy and added in maintaning prices. We quote cost, freight, and commission 3/8 cents for the States and 30 to 34s for Europe.

A report is current of a great combination of 25 commission firms to form a single syndicate dispensing with Dealers or Ensaccadores altogether, as at Santos.

Nothing new has transpired about the coming crop, nor have further reports of frost been circulated. Rain has recommenced and will probably interfere somewhat with harvesting and drying and perhaps throw entries back a little later.

The Market at Santos was quite but well sustained, as stocks in first hands are not large and more than is coming in can be disposed of daily. Dealers are not such free sellers as formerly and hold out for their price. The demand for export on the other hand is not very brisk but sufficient to keep the market from falling. We quite:

Primes	4$500 to 4$700
Superior	4$200 „ 4$300
Good	4$000 „ 4$100
Regular	3$600 „ 3$800

There was a better demand for peaberry, that for superior being more general, but fine qualities were neglected. Europe is now quieter and sends few orders, even Havre which before bought so largely, being now out of it. We quote cost, freight and commission:

Superior 30s. 9d. to 31s. 6d.; Good average 30s to 30s. 6d.

A little better demand was noticeable from the States but at figures too low for execution. The quality of receipts is poor and lower grades of indifferent character art most frequent It is generally believed that new crop arrivals will not be particularly early. Reports from the interior are to the effect that the weather has turned warm but rainy.

The Report of the Agricultural Department for March states that during that month the average temperature observed at Campinas was 1° under normal, but that the minimum of 11°, 9 registered on the 26th March was the lowest known for 11 years. The prevailing winds were S. E. whereas they are usually N. E. at this time of the year. The rainfall amounted to 132·9 millimetres, or only 70 m/m, over normal, rain having fallen on 15 days or 1 more than usual. The Inspector of the Second district reports everything to be satisfactory with notable diminution of rain in most sections. In the third district the coffee trees are well loaded and a good crop is expected. From the 4th district the Inspector does not report so favourably and states that the quantity of *chocho* or parched coffee will be considerable in many sections, especially at Jaboticabal. Preparation for harvesting is already advanced on many plantations, where it is expected to commence in April. Labourers are still very scarce in this district. From the 5th district reports are also good, but the black bug has made its appearance and is doing damage on some plantations. Nevertheless the crop is expected to be good and, excepting at São Roque, earlier than last year's.

BRITISH-GROWN TEA.

WHY THE PROPOSALS TO RESTRICT PRODUCTION FELL THROUGH.

When the proposals approved by the Committees of the Indian and Ceylon Tea Associations for the restriction of the output of tea were first formulated, we ventured to question the practicability of the scheme, and later history has proved the correctness of our anticipations. The proposals, it will be remembered, fell through on account of the lack of support from the Ceylon planters, who failed to guarantee the stipulated reduction of 8,000,000 lbs. in the output of the island It is generally admitted that over-production is the chief cause of the low price of tea, and, in view of the unfortunate results shown by so many of the tea companies, the outlook is one of no little interest to the shareholders. To obtain light on this point a member of our staff called yesterday on Mr. Leake, the secretary of the Ceylon Tea Association in London.

"Yes," said that gentlemen, "the scheme fell through owing to the lack of support from Ceylon. We could only get an undertaking for a total reduction of 3,500,000 lbs., while the stipulated quantity was 8,000,000 lbs."

"But the proposals emanated, I understood," said our representative "from the Ceylon interests. How was it that the island planters declined to agree to their own scheme?"

"There are, as perhaps you are aware, a great many small companies in Ceylon, and a considerable number of the Boards of Directors seems to have regarded the question from the individual standpoint of their respective companies. There are some companies which made satisfactory profits last year, having

sold their teas at good prices, and it is easy to understand that they would object to reduce their output. They, of course, made the better qualities of tea."

"But under the scheme was there not an allowance to be made for high-class teas?"

"Yes, in the case of teas which realised 11d., per lb, but unfortunately, such prices are not realised now-a-days."

"Then I suppose, now that the scheme has been given up production will continue at the same rate as before?"

"No, I think not. Planters have now realised that it is useless to continue on the old lines, and while they declined to sign the undertaking, they will, I believe, restrict the output on their own initiative. Indeed, shipments are already falling off from Ceylon."

"Is it true that the green tea industry is proving a failure? It is stated that one Ceylon company is giving up the manufacture, and has stopped erecting further machinery which it had purchased for the purpose."

"A great deal too much has been made of the fall in green tea. Our agent in America writes most hopefully on the subject. The decline in the demand, he says, was due largely to special causes, and he advises planters to continue manufacturing green tea. There are obstacles, of course, to be encountered, the strongest being the vested interests in China and Japan of those who control the grocers, as the brewers do tied houses."

Our representative next called on an expert in the tea trade, whose interests chiefly lie in Northern India. His views of the position and outlook were that, although the Committee's proposals had failed, planters would of their own accord pick finer and thus restrict the output. The industry, he considered was subjected to many injustices. "In the first place," he said "tea was taxed to an unfair extent. For instances, last week 252 chests were sold in London at 5d. per lb., on which the duty works out at 200 per cent. No other commodity is taxed to such an extent. Then it was only a short time ago that another burden was laid on the tea industry when the Government action caused an appreciation in the rupee. All this tends to retard the increase in consumption. It is largely to the light duties that I attribute the growing demand in Australia. In most of the colonies in that group a moderate tariff is charged. In West Australia tea is admitted duty free and the same liberal policy is pursued by Canada. If tea growing is to be carried on successfully in India under present conditions more attention must be paid to details. We must have intelligent managers—managers who will study the position and adapt their policy to meet circumstances and not simply aim at producing so many more pounds of tea than in the previous year. Then, expenses must be more closely looked after The charges of agents on both sides are too high. Under the old system 2½ per cent. on the gross returns was the usual rate, but there are plenty of houses which now work very much cheaper and there is still room for further reduction under this head. Freights are also too high and the dock dues are excessive. In regard to freights Ceylon has a considerable advantage, and it must be admitted that economy is more studied by her planters. But the island industry has another element in its favour. It has the cess tax, amounting to about £20,000 a year, which is spent on pushing the tea trade. This tax was originally imposed on tea growers in Ceylon to pay for improved transport facilities, and after the indebtedness was cleared off the planters agreed to the continuance of the tax on the understanding that the amount was to be handed back to them to be utilised in pushing the tea trade. A cess tax has been advocated for India, but it would be impossible to get all the tea planters to agree to it, and consequently the Indian Tea Association is dependent on voluntary contributions."

"Then you consider that indifferent management is responsible for the poor returns by the companies?" said our representative.

"In some cases, undoubtedly," was the reply.' "How else can you account for companies apparently on even terms showing such widely different results? Take the case of the British India Tea Company and the Doloo Company. The former has a capital, including Preference shares, of £77,000. Last year its output was 1,045,770 lbs., or 127,770 lbs., above the estimate, and 90,000 lbs over the crop of the previous year The tea realised 5·43d, or 1¼d. less than in 1899. Yet the net profit was only £250, and the company so far from making any distribution on the Ordinary, was compelled to pass its Preference dividend. Now, the Doloo Company has a capital of £80,000, including the Preference shares. It made 1,029,000 lbs. of tea last year, which was an increase of 24,000 lbs. over the previous crop Its tea realised 5·72d., or 1¼d. per lb less than in 1899, but made a profit of £6,270 and paid a dividend of 7½ per cent. on Ordinary shares, after providing 7 per cent. for its Preferen interest. Yet the Doloo Company's plantations are all in the Cach district, while the British India Tea Company has about 25 per ce of its acreage in Assam, where a better quality of tea can be grow Now, if the fault is not in the management, how is it the Compa which apparently has the greater advantages is unable to do as w as the other? But there are other changes which are eminent desirable in the management at home. In their balance-she some of the companies set out the items in details, while othe lump several together in one sum, so that it is impossible for t shareholders to ascertain where extravagance, if any, has be committed. So long as a company makes good returns the shar holders are content to let matters drift, but when bad times set they are not likely to submit to being kept in the dark. They w naturally, and very properly, too, want to see how their expens compare with those of other companies."—*Financial Times.*

THE PRIVATE TEA SALE-ROOM.

The London correspondent of the *Times of Ceylon* writes that th Tea Brokers' Association sent out a circular on the 31st ultimo cal ing attention to the establishment of the Private Sale-room which the outcome of all the previous talk and committee meetings abou a Tea Exchange. The rules for the conduct of business are e tremely stringent; and all details are left in the hands of th Brokers' Association. Admission is by ticket only. The ticket are issued by the Brokers' Association, and are printed in tw colours, one for the members of the firms co-operating, and anothe for the employees who attend the sales. These tickets must b signed by the firm to whom they are issued, who will be held re ponsible for the fulfilment of the conditions laid down on them List of the names of employees must be sent to the Secretar of the Tea Brokers' Association, and any alterations must b notified at once. That Association also decides how many ticket will be allowed to any firm, and all complaints of infringements the rules must be made to them.

The rules on the tickets run as follows:—

1*st.*—Prices of all contracts made in this room are to be kep strictly private as between the parties concerned in any such co tract, and shall not be divulged by any ticket-holders other tha those strictly concerned.

2*nd.*—In the event of tea being withdrawn from the sale, th highest prices offered in the room is to be kept strictly private i like manner.

3*rd.*—It is also understood that the sellers making use of thi room are not to disclose the prices obtained for their lots except i quarters where it is deemed necessary to do so.

4*th.*—Tickets must be produced when asked for.

THE INDIGENOUS MARKETS FOR TEA.

The question of selling tea in Calcutta and its environs seems be attracting some attention but, says "J" in *Capital*, there a several points in connection with it which do not appear to hav been clearly brought out. First and foremost, we noticed in contemporary, that tea was being given at 4 annas per lb. to retailed. Had the tea been a common dust even, then the price too low. What is wanted is to get rid of a quantity of common te but the price netted to the estate should not be less than 4 ann per lb.; else, no relief will be given. There are very few estat that can turn out their teas at 4 annas per lb., and it is no u putting a price upon the tea to be disposed of unless it gives som benefit to both parties. Another thing is, that even if the native take to drinking tea they will later on be averse to paying more f it than they did at first. It would surely be a far wiser policy start at a price that can be reduced, and, we hope, that those mo interested will endeavour to start at something not less tha 8 annas per lb. for our best Pekoes, down to 5 annas for Souchon and 4 annas for dusts. Even at these figures enormous profits c be made if tea was retailed by the cup even at a pice a drink. T

native of India is like Hodge at home, he does not value a thing unless he has to pay well for it; we do not mean an exorbitant price but one that will leave a fair margin of profit to the grower, middleman, and retailer. There are numbers of ways in which teas might be distributed at very small cost, and with good results. For instance, in the North-Western Provinces if small packets were made up in lead, and labelled in Urdu and put up for sale at all the railway stations it would, we believe, pay. No doubt Wheeler finds his bookstalls pay, but it is as much due to the natives as to the Europeans, in fact more so, that this is the case. Cigars and tea often make a combination at home, so why should not books and tea be joined together with mutual advantages. Again, on board the huge fleet of inland steamers the sympathies of the serangs and butlers might be enlisted by a commission on all they sold, and if packets were got up attractively and sold on board the steamer think of the advertisement it would be. The labels should all be in Urdu or Bengali—Urdu, in the North-West Provinces. Bengali, in the lower Provinces. In the north-west the native is a great traveller, and if packets were taken by even one-third of those travelling, in a very short time tea would be found in every village in the Punjab. The writer of this so long ago as 1875 purchased China tea in small packets done up attractively (but with Chinese character on the labels) in the bazaars in Tirhoot, so why should one not be able to get Indian tea if a little 'push' is shown? For two ounces of dusty powder the price asked was 4 annas, or at the rate of two rupees per lb.; this makes the lips of our planter friends water; we do not say that anything like this is obtainable now-a-days, but if even 8 annas per lb. could be got, we imagine we can see the somewhat lugubrious face of the planter who groans over a 4 to 5 anna rate, almost relaxing into a smile, and assuming the rubicund countenance, one associates with an Assam planter. The planters' lot has not been a happy one lately, but with a little combination, which is quite as badly, if not more, wanted in Calcutta than in the districts, we see no reason why a good time shall not set in for the distressful industry. But combination is the first step to success, and unless we get this it will be a case of the survival of the fittest and grief to a good many. The miserable results that every day's newspaper almost reveals, should surely have a salutary effect and bring about what no amount of writing could do; for there is no better instructor than adversity. Change of management, which has been hitherto resorted to as a panacea for all ills, should be relegated to a back seat, and hearty co-operation solicited in its place, and the result we feel sure would be more satisfactory and beneficial to the interests of all concerned, be he proprietor, agent, manager, or assistant. In Ceylon unity was the outcome of the coffee disaster. Surely, with this in their memory Calcutta agents, proprietors and managers of estates, are not going to allow such a disaster to overtake Indian tea for want of sticking shoulder to shoulder, for depend upon it, disaster will come unless all interested are up and doing; so let no time be lost, let the Tea Association show that it can do something in the interests of the vast capital it represents, and if it succeeds in capturing the indigenous market of India, it will have deserved well of every one connected with Indian tea from the largest owner to the lowest-paid assistant in the country. To bring about this result all that is necessary is the adoption of the motto "Unity is Strength."

CEYLON GREEN TEA IN AMERICA.

The Secretary of the "Thirty Committee" in Ceylon has placed at the disposal of the Press the following copy of letter received by Mr. Edward Rosling from Mr. Wm. Mackenzie on the subject of Ceylon Green Teas.

London, *May* 24.

Dear Rosling,—I have yours of 1st May. I see it stated, and am often told it, that the prices offered for Greens in America are too low to encourage their manufacture. The average price in this market is 6½d. This week a large quantity of low green teas were sold under 5d. These teas would have brought at least 6d. in America as Greens and have earned the bounty. Mr. Bosanquet told me to-day a Broker in London estimates there is a market in London for about 2,000 chests a month. Now these would go partly to displace Chinas used here, and partly be shipped to Morocco and other countries. In a letter received from a New York Broker Firm yesterday, they say "if your good people do not keep us better in stock it will be very annoying and cause lots of trouble. This has been the fear all along and has kept lots of people out of the business." They write this in reference to the Greens. It is the supply that should be looked after and regulated. It is difficult I know, but hardly impossible, and the result would to many gardens mean salvation. I am afraid Messrs. Whittall & Co. will give it up. But I enclose a letter from Mr. Thomson which, I think, points out a road to success. It is Orange or Broken Pekoe they want in the U. S. because there it is sold in chests as loose tea. Therefore the eye has to be pleased. In Canada coarser grades, because cheaper, will do, as the tea to a great extent is sold in packets I hope by giving canisters to get many grocers to sell it as loose tea, instead of packets, because the bulk of it is sold in Canada at 25 cents and as packing in lead, labels etc., cost 2d. per lb., the grocer can give the vendor a better price for loose tea. I have now about 2,000 canisters in grocers' shops, marked Ceylon Green Tea; surely a splendid advertisement. I have applications now for 400 canisters from New York Firms; but, as I do not believe there is any stock of Orange Pekoe Greens, I must ascertain before giving them.

Wm. Mackenzie.

BOLSTERING-UP COFFEE.

The *Brazilian Review* remarks :—

Of late the papers have been full to nausea of suggestions of every kind, from State monopoly to partial destruction of plantations, intended to sustain or to raise prices and bolster up the ottering industry a little longer. Everytime things go wrong and planters begin to suffer, such suggestions are repeated, but never, fortunately, come to much because they are generally impracticable and nearly always vicious *ab origine*

Even so, such discussion is not altogether useless, because it serves to widen planters' views and ultimately to teach them to take a healthier view of things and helps them through hard times.

Of all the many expedients, the latest, that comes from S. Paulo, is, perhaps, the most insidious and dangerous, because the most plausible and insinuating. At first glance the idea of reducing supply by means of a 20 % tax payable in kind and the destruction of its product, seems an irresistible panacea that, at the cost of but slight sacrifice, would secure to planters high prices and happiness right out.

Some propose to burn the coffee out of hand, whilst others, to whom such waste is repugnant, claim that it should be held in stock on account of Government or of a Syndicate.

No doubt if 20 % of the supply were held back or lost, prices would react in a powerful manner. The scale on which coffee is being shipped, even in this the usually slack season, is sufficient proof of the manner in which consumption has been stimulated by low prices.

For some time, at least, should supplies be suddenly cut off, prices would inevitably rise. Whether they could be maintained for long, however, must depend on the manner in which consumption were affected thereby; the probability being that the planter under no circumstances would secure the whole of the advantage, but that an improvement in value would in the long run be counteracted by the sacrifice of volume. From this point of view the whole question hinges on two eventualities: would the rise of price compensate the sacrifice of 20 % taken from the lowest grades? and, secondly, if it did, would not exchange immediately rise in consequence of such an addition to the supply of coffee bills and thus counterbalance the improvement in sterling prices?

Besides, whether from a moral, social or even economical standpoint such a measure is indefensible.

The deliberate destruction, without real gain or advantage to anyone, of the product of so much labour, cannot be right and this should alone be sufficient to condemn the scheme. Socially, no Government or combination has the right to so usurp individual functions as to dictate how the product of men's labour shall be disposed of, or to so limit the right of property. If every planter is to be indifferently mulcted of 20 % of his produce without distinction of kind or quality, the chief stimulus to improvement of method and mechanism would be lost and qualities be either

reduced to a single type, or planters waste time and labour on the production of a low grade article in sufficient quantity to yield their particular percentage.

The real remedy for what is termed "over-production" is, as has been often pointed out, to perfect our methods in such a manner as to reduce the cost and improve the quantity and quality of production and thus oblige others to imitate us or drive them from the markets. Such a proposal as is now entertained would do just the contrary and prove a regular premium to laziness and incompetence. Economically, the wilful destruction of Wealth, that is the outcome of labour and capital, is repugnant and indefensible. Before coffee could be burned, it must be planted and tended for weary years, weeded and harvested and then cleaned and carried to a market, all at huge expense of human energy. When there, it must be stored and sold, and then bunr't! For what? How is this waste of *one fifth of all the enormous energies employed* in the industry and commerce of coffee to be made good, or the wanton destruction of her gifts to be made up to bountiful Nature? Mere money cannot do it! To burn wholesome food, however it may be disguised, is wanton waste and an offence and crime against Nature and Society!

But supposing such reflections to be of no avail and sordid interest to overcome all scruples, could such a scheme succeed? We believe not. Not only because, as has been already pointed out, any considerable artificial improvement of prices would certainly be reflected in consumption and provoke an ultimate reaction, but because it would be impracticable to fiscalize the working of such measure in a way to ensure its loyal execution and the reduction of supplies that is aimed at.

A new type of "Coffee" would be inevitably created consisting chiefly of husks and twigs and stones, in quantities sufficient to satisfy the tax, and instead of a diminution there would be a positive increase of "production." Nor would storage by a Central Committee or by Government be much better. Within a short time the quantity would become so enormous as to weigh like a nightmare on the markets. In a single year twenty per cent. would represent over 2,000,000 bags and, with such a stock ceaselessly overhanging and increasing irresistibly day by day, what chance could there be of anything but a transitory rise of prices?

On no grounds, even of expediency, can such a measure be sincerely defended, and if planters are to ever extricate themselves from their difficulties they must give up all such delusive Will o' the Wisps once and for all and make up their minds to conquer by hard work and determination, as so many have before them, *Virtute et Labore.*

CENTRAL GREEN TEA FACTORY IN COLOMBO.

PROPOSAL BY AN AMERICAN FIRM.

The following proposition was contained in a letter, dated the 20th May, received by a Colombo firm from its United States agents, and published by the local "Observer":—

Of late a good many so-called Ceylon Greens have been sent to this market, and have attracted some attention, but we feel convinced that there will not be a ready sale for this new description of tea unless their manufacture is somewhat altered. If the leaf can be made to closely imitate Japan Teas, both basket fired and pan-fired, we believe that there would be a great opportunity and a small fortune for those who are first in the field. To accomplish this, it would be necessary to have a firing establishment in say Colombo (and Calcutta, if the Indian Teas prove serviceable for the purpose) the same as exists in Yokohama and Kobe. The leaf would be brought down in the semi-raw state, *viz.*, once fired, and then treated and manipulated in the same manner as Japan Teas. It would also be necessary to have the teas packed in half chests matted and faced in the same way that Japan Teas are treated. We are forwarding to Japan a small quantity of Ceylon Green Tea for the purpose of ascertaining whether they can manufacture this leaf to imitate closely in appearance Japan Teas. If they can do so, the cup quality of Ceylons would certainly give them a distinct advantage over Japans. The annual export of Japan Teas is approximately 40,000,000 lbs, and if this trade can be diverted to Ceylon and India, the Associations interested in these classes of tea would certainly be greatly benefited. Our suggestion is th Company be organized for the purpose of establishing fi establishments in both Calcutta and Colombo, provided, of cou that we are able to ascertain by experiment that our suggestio imitate Japan Teas is a feasible one. In a venture of this kind should be willing to subscribe liberally, and we think that the Indian and Ceylon Associations should make some consider concessions to the pioneers. The question is as to the best most expeditious method of taking up such a venture. It se to us that it would be necessary to form a small Company of th interested, and obtain some skilled Japanese labour to initiate start the manufacture. Speaking in general terms we th that the export of such teas should be confined to one or two ho in the States and Canada.

We are sending you by to-day's mail samples of Japan Teas we suggest imitating. You will notice that one is a long bl leaf tea called "Basketfired" and the other is the regular style called "Panfired." We feel sure that the latter can be imitated v closely. Whether or not leaf is obtainable in Ceylon and In similar to the Basketfired, is another question, of which you the best judge. Please advise us as promptly as possible w suggestions you have in this matter.

RUBBER IN TRINIDAD.

The Superintendent of the Royal Botanic Gardens, Trinidad, reports:—

The St. Clair experiments in the growth of Rubber trees are a fairly extensive scale. During the past year the Castilloa plot grown well. Trees planted in July, 1898, and consequently two years and five months old, average nearly 18 feet in heig and give a girth of twelve inches. A paper was prepared for West Indian Conference held at Barbados in which the results to the present time, of Rubber cultivation in Trinidad, was gi in detail. This paper will probably be published in the W Indian Bulletin for the information of intending planters. Capt Short, of Tobago, has published results obtained in Tobago in Ceylon Tropical Agriculturist, giving considerable information.

Hevea.—Hevea brasiliensis grows rapidly at St. Clair, the tr being taller but not quite so large in girth as the Castilloa pla Our supply of seed has been ample for our requirements.

Funtumia.—This kind has made splendid growth, and has alre flowered and fruited at St Clair, which has enabled the Departm to have the trees accurately determined by the Kew authorit A goodly number of plants have been raised from home-grown s Our trees at two-and-a-half years, average 13 6 feet in height, have a stem circumference of 7·2 inches. Some of the trees w lightly tapped, and at this early age were found to produce Rub of excellent quality.

Manihot or Ceara.—We have only a single row of this kind Rubber, but they do not present a very robust appearance. single old tree of some twenty-five years has given us a small sup of seed. Rubber taken from young trees is of good qual Report describes this rubber as growing well, on hill sides ab the valleys formed in our northern range of mountains.

CACAO DISEASE.

In a Bulletin issued by the Trinidad Botanical Departm we read:—

Some time during the end of the year 1900, I received an enqu from Surinam as to whether I had noticed in Trinidad a dise attacking the branches af Cacao trees and causing growth in bunc like the European "Witches Brooms" or "Hecksenbesen." I glad to answer that I had not yet seen such an appearance am our Trinidad trees. It was reported from several independ sources that the disease was very prevalent and did a large amo of damage to the trees, seriously affecting the crop. Specim were kindly procured for me, and these on examination proved be infected with one of the Fungi known to cause abnormal gro of the branches, running into knots or "brooms" The specim

were sent on to the Director, Royal Gardens, Kew, and attached is the Report of Mr. Massee the Mycologist who examined them:—

"Exoascus Theobromae, Ritzema Bos, is the provisional name given to the Fungus parasitic on the Cacao branches, and causing witches broom thereon. The author of the species could not find the fungus in a fruiting condition, neither did the material forwarded to Kew furnish fruit. Material should be sent at the time when the tips of the twigs are only slightly swollen, and covered with a white delicate bloom. In much swollen branches the fruit of the fungus has entirely disappeared and the persistent or perennial mycelium of the fungus can only be found. Owing to the perennial mycelium a crop of spores is produced each season on the diseased branches, such spores being spread to neighbouring trees by wind, etc., extends the disease. If it were possible to remove all diseased branches, the disease would soon disappear, but as this is hardly possible, in addition to removing as many diseased shoots as possible, it is advisable to spray with dilute Bordeaux mixture from time to time, so as to prevent the inoculation of young twigs and leaves"

It would be nothing short of a serious calamity were the infection introduced into this Colony, and steps have been taken with the view of securing effective Regulations to prevent such an occurrence. Similar growths are to be observed in many trees growing in this Colony, Arabian coffee being considerably troubled, but not so as to seriously affect its growth or productiveness. This however is not the same as attacks Cacao, but is related thereto. It is probable that in the course of nature many diseases exist amoung our indigenous trees which on the occurrence of suitable conditions might attack, and destroy many cultivated plants as did the Hemelia with Ceylon coffee, and a careful watch is necessary for the first indication of disease, so that measures can be devised for its suppression before the damage becomes too extensive to be effectively dealt with. The disease of which we write is an easily recognised one and cultivators may see a preserved specimen showing its character in the Herbarium of this Department. In any case where trees appear to be suffering, the Department would be glad to receive and secure the determination of specimens which may be thought to be diseased.

BEVERAGES CALLED TEA.

Arabian Tea or Kat.—Sundried leaves of the Catha Edules, much esteemed by the Arabs for beverage purposes.

Australian Tea.—Leaves from the climbing vine Smilax Glycyphylia and formerly much used by early settlers.

Cracker or Sassafras Tea.—The fragrant bark from the root of a native American tree belonging to the laurel family. Tea from sassafras roots was and is still used by the poor whites and negroes of the South.

New Zealand Tea.—From a small shrub of the myrtle family, the leaves are picked, carefully cured and used in preparing a pleasant drink.

Labrador tea.—When full of sap, small branches of an evergreen shrub are harvested, dried and used in making a hot drink that is taken with food.

Tea.—The generally accepted definition of the word tea is any infusion or decoction of herbs, or roots, although in reality it being Chinese, means an infusion made from the dried leaves of the tea-tree. The word tea, according to authorities is derived from the Amoy dialect of the name of the plant which is Tê, and pronounced tay. The tea-plant or shrub, Thea or Camellia, Chinensis, belongs to the Camellia family, and lives under cultivation, from thirty to forty years.

Maté or Paraguay Tea.—Maté is the dried leaf from the shrub Ilex paraguensis, commonly known as the Brazilian holly. In the early spring branches of this plant are gathered, piled upon the ground, and partially dried by great fires that are built near, afterward they are spread upon frame-work a few feet above the ground, and subjected to a curing process from the heat and smoke of the fire built underneath.

During the Centennial Exposition of 1876, Maté was exhibited, and considerable effort was made to introduce its use into the United States, without favorable results. During the Commercial Congress Exposition in Philadelphia, a more successful attempt is reported, in bringing it before consumers.

COFFEE CULTURE IN QUEENSLAND—No. 8.

In his eighth paper on this subject in the *Queensland Agricultural Journal* Mr. H. P. Newport deals with Pitting, Filling-in, Planting, and Shading. He says:—

Pitting and holing for coffee should be carried out during the preliminary showers of the rainy season. Generally the weather will be favourable during January, but, even if dry, unless the hardness of the soil makes the cost prohibitive, an effort should be made to complete the work before the regular and heavy rains set in, so as not to delay the planting.

The object of pitting is primarily to allow the taproot of the delicate young plant to have a free and unobstructed start in its downward course, and secondly to give the same fair start to the lateral roots, and is not essentially, as many think (especially coffee planters of the old school), to give the seedlings richer or better soil to start in. This is, in fact, a dangerous error, as will be shown later.

The shape of the pits may be either round, that is, cylindrical, or square—cubical. The cubic pits of the same diameter give more room for the plants than the cylindrical, but there is not very much difference, and the cylindrical form, being easier, is more generally adopted.

Pits should not be either too wide or too deep, because the soil filled into such becomes hard, even harder than before from its fineness, before the plant can take advantage of it, on the one hand, and because of the expense on the other. The size of pit necessary for coffee has been found to be from 1½ to 2 feet according to the soil; 18 inches by 18 inches is as small as is allowable with benefit to the plant, and 2 feet by 2 feet as large as it will pay to make, under ordinary circumstances; 2 feet deep by 1½ feet wide is a good size of pit for coffee. The bottom need not be as wide as the top, as the lateral roots do not go lower than 1 foot from the surface but in 18-inch cube pits very little is gained by making the lower 6 inches narrower than the top foot. When finished the bottom of a pit should always be broken up with the holing bar to prevent the formation of a pan as well as to see if any large stone or root exists just below, in the latter case it should be removed. Pits that are too shallow are the cause of many failures in clearings. The young taproot should not be required to start off into unturned and more or less hard subsoil at once on being put out—a few inches of soil that has had anything that might prove an impediment to the taproot removed will admit of a stronger and healtheir root to work its way down afterwards, while if the root is put straight away at the bottom of the pit, especially in a young plant from a nursery bed and possibly after being cut back, the end of the root is very apt to turn upwards. For the effect of this and the results, see article on "Coffee Root Growths," *Queensland Agricultural Journal*, March, 1900, p. 214.

The width of the pits may be reduced, but never the depth, for it must be borne in mind that the width of the pit can be remedied at any time—the depth never. Should it be found, therefore, that, the planting season coming on, there is no time to complete the pitting of the clearing with pits of a proper size, the work may be expedited or cheapened by the digging of narrower pits. Coffee may be planted in post holes, provided only the depth is kept to, with perfect success, the width being made up to the plant again during the year when time admits. It must not be imagined that narrow pits are on this account generally advisable. On the other hand, it is far better to pit at once to the full size.

By contract, pits should not cost more than 1d. to 2d. each—that is, a labourer should be able to do so from thirty to sixty pits a day, according to size, condition of the soil, and the presence or absence of stones, roots, or gravel.

In the old days of coffee planting, and occasionally even now, plants are put out without pits by a method called "dibbling." This consists of sticking a holing bar or stake into the ground for a foot or so, and working it about until a small hole is made, into which the plant is put. Of course, the plant can have no earth round the roots when planted thus. Sometimes several holes are made in this way and broken into one, but the dibbled hole, while making a way for the taproot, hardens and cakes the soil around the lateral roots. This method is in advance of one I have seen adopted in this State, which consists of making a small hole with a hoe, only a few inches deep, into which the plant with its earth is seated, and the earth trodden hard round it. In this way the tap-

root must inevitably be bent. Another method, much used on the Continent in forestry, is to make two cuts crossing each other in the earth with a spade, as deep as possible, and then with a third insertion, somewhat to one side gently prizing up the soil or sod. The earth cracks naturally at the cuts, and the plant is inserted at the point where the two cuts intersect, and the sod gently pressed back. This eliminates the hardening or caking of the soil for the lateral roots, but does not afford the plant any assistance in the way of removing obstructions. Under given circumstances, and in specially favourable soils, pitting might be dispensed with, especially if, as in forestry, a hardy indigenous tree is to be planted; but generally in the planting out of more or less delicate exotic trees such as coffee, any method that does away with the pitting is uncertain, dangerous, and to be deprecated.

The pits once dug should be left open for a time, if possible, until after a good shower of rain, so that not only the sides and bottom of the pit, but the earth excavated may be sweetened and rendered fertile by sun, air, and weather.

Filling-in.—The filling in of the coffee pits is one of the most important works in coffee culture. It is often carelessly and badly done; yet the health and strength and often the very life, of the young tree depend on the start it gets in the field. Like shallow pitting, or bad planting, filling-in, once badly done can never be remedied. The filling of the pits should never be left till the planting time arrives, but be done in good time. Not only should showers be waited for after filling in, if possible, to allow of settling, but the filling in also should be done after a shower, when the soil is uniformly moist. The soil should be put back into the pit in much the same order that it came out. It is a mistake to fill a pit, that goes down into a sub-soil at least poorer than the surface soil with a rich surface mould or manure. This, though often done and frequently advocated, leads to a drawing downwards of the lateral roots to the plant's subsequent detriment, and the too quick growth of the taproot which is rendered more delicate rather than hardy. A quick and apparently healthy growth for a year or two is the immediate result, but eventually the check received by both taproot and lateral roots, when the growth requires them to spread beyond the "pot" that the original pit has thus become, will result in a marked fall off in the third year, a speedy drooping in dry weather, and often in a plant that dies in bearing its maiden crop. The first thing to do in filling in is to remove roughly with the hoe, yet as carefully as possible, all roots, stones the size of a walnut or upwards, and weeds or rubbish, break all lumps and lightly mix the soil taken out of the pit; then to put it in again after having seen that no stones, sticks or rubbish have fallen into the pit itself. The use of a sieve or screen ensures good filling, but is slow, expensive, and unnecessary.

The breaking in of the sides of the pit is unnecessary, and often causes a wide hollow round the tree. The scraping in of surface soil is also to be avoided, as either ashes and roots are filled into the pit, or grubs and insects collected which attack the plant as soon as it arrives. If the earth is not sufficient to fill the pit and heap it over, a shovelful or two of earth from between four pits may de taken to complete it. The pits must be carefully filled; it is of no use digging pits if they are only partially filled again. The earth should not be pressed down but heaped up over the pit and allowed to settle naturally, which it will quickly do after a shower of rain. The stake used previously in lining should then be stuck in the heap to indicate the centre of the pit, the edges of which will not be visible, and to prevent the plant from being put anywhere but in the middle of the pit. A very frequent mistake that is made is to fill, or almost fill, the pit with ashes, under the impression that ashes are a valuable manurial agent. Ashes are valuable. Wood ashes consist very largely of potash, among other valuable ingredients, which is one of the constituents, of the coffee tree, but the young plant requires it diluted, and in small quantities. In large and unmixed quantities the roots cannot make headway, get stunted or worse, and the plant will not grow. The effect of too much wood-ash at the roots of the plant is to encourage and often cause fungoid growth, moss, etc., on the stem, and a stunted and sickly appearance, while nothing can be seen wrong with the roots except that they have not made the growth that they should have made. In moist or cold soils a chemical reaction sets in, which burns the tip of the taproot, and often the lateral roots also. In clayey soils the excess of ashes is often evidence by a growth of small yellow fungus on the ground round the stem of the tree, and occasionally I have observed minute be of crude saltpetre.

Trees having yellow, striped, or variegated leaves, indicating excess of potash or insufficiency of nitrogen, often show wh wood-ash in excess has been scraped into the pit. Later on growth of rank grass or coarse weeds of a deep green colour w appear on the pit. A little—very little—wood-ash mixed in w the soil, especially with a little charcoal, will do no harm; but excess wood-ash, at this stage of the life of the coffee-plant, disastrous.

The cutting out of plants from the nursery bed and their selecti has been dealt with in the article on "The Nursery," *Queensla Agricultural Journal*, February, 1900. p. 120. An instrument call a transplanter is sometimes used for the cutting out of plants fr the nursery beds, and a short description of it here may be usef

The transplanter, for which there are, I believe, several paten in England, India, and Ceylon, is very like an ordinary spade wi the blade bent round until the edges nearly meet, forming cylinder except for a gap of about three-quarters of an inch width. There is then a sort of lid to the cylinder having a "I shaped" gap in it (where the stem of the plant goes), movable, a fastened to the spade by means of a small iron rod. This lid moved up and down the length of the cylinder, inside it, by mea of a small handle at the end of the iron rod which works in tw small staples in the spade-like handle of the transplanter. Th instrument is about 3 inches wide at the cylinder, and being p over the plant in the bed is pressed down with the foot as a spad the plant levered out with its ball of earth, and the lid, moved b the small handle, then pushes the plant out of the cylinder on the tray or barrow in which the plants are transported to the fiel This transplanter can be used for many other small plants, and very useful, saving time and trouble where large quantities ha to be dealt with.

In taking plants to the field, care must be taken first to preser intact, if possible, the ball or brick of earth, and second to sha from direct sunlight. A few leaves of banana or castor-oil over th plants will be sufficient, but a few moments of sunshine will oft wither them and give them a check which it is the planter's object avoid. The plants may then either be placed one against each hea of earth covering the pits, or be kept in the tray or barrow an taken out as required when planting. If raining at the time, may be just as well to keep the plants together and covered t prevent the breaking or washing of the ball of earth. The plant should be carefully selected as pointed out previously. Relinin after filling in, as is sometimes done to get the stakes in perfe line, is to be deprecated. If a pit is not dug in line no advantag is gained by putting the plant in one corner of it, but rather th reverse. If there is any doubt of the heap of earth being in th middle of the pit, the edges of the latter may be felt for with th stake, and the centre then determined at the time of planting.

Planting.—Planting should be done as early in the season a practicable, to get as much of nature's watering for the plant a possible. The artificial watering of even an acre is expensive, an of large areas is out of the question. Enough rain should have falle to moisten all the soil in the pits before planting is commence as well as to allow of natural sinking of the new earth. If th soil in the pits on being turned over be dry in parts, wait for mor rain. If possible, plant on a cloudy day or while drizzling, bu not when the ground is sloppy or the soil clinging and muddy.

The plants being then brought out to the field the heap of eart should be roughly levelled off and a small hole, a little deeper tha the ball or brick of earth on the plant, dug in the soft earth wit the hand, a stake, or trowel. This little pit should be sloped toward the planter, but have the side away from him perpendicular. Th plant is then taken, with the ball of earth lying in the palm of on hand and the stem of the plant on the wrist or forearm, and hel against the perpendicular side of the little excavation, while th earth is gently pressed under and on the other three sides of th ball of earth, the hand that was holding it being gently withdraw The earth is then again gently pressed in with the finger tips, an the edges of the pit pressed gently with the feet, the spare so being levelled round the plant.

Another way is, while holding the handle of a hoe close to th ground, to press the blade into the earth about the middle of th pit and pull for 6 or 7 inches towards you, proceeding subsequentl as before, but removing the hoe before returning the earth.

The plants should be put in level and upright. If they had bee

properly cut from the nursery bed there will be no fear of the taproot being bent. If the earth has fallen away care must be taken to see that the taproot is straight

If planted too deep, the lateral roots already made become useless, and new roots have to grow from the stem; if too high, the lateral roots are also lost by exposure, sooner or later, and the plant's growth is checked in either case until these roots are replaced.

The top of the pit, again, should be level with the surrounding ground, for if left higher, it will wash level in the first heavy shower and the plant's roots will be exposed, or if a hollow or depression is left, water is collected there, which either rots the roots, ringbarks the stem, or "boils" the plant in the first burst of sunshine.

The stake should then be put in alongside the plant. If on sloping ground, above it; if on level ground, on the windward side, partly as a guard against rolling stones, or twigs and leaves blown along, and partly as a guide for the supply in case of failure.

Shading.—Unless the cloudiness of the weather is very reliable, shading should be done Where bracken fern is available, this is easily collected and manipulated; if not, any green stuff with a fairly stiff stalk to it will do. Two or three pieces should be stuck in at the edge of the pit, bent over the plant, and interlaced with each other so as to stay in that position.

Except in an especially exposed situation, it is only the vertical sunshine that has to be guarded against. Before planting, a bundle or two of such green stuff for shading should be cut and kept to hand. Dry material is not so good for shading, and the putting of a handful of straw or hay on top of the plant does more harm than good. Shading is quickly done, and the work is not so expensive as might appear. It is amply repaid. The growth of plants that have come through the planting-out process, and "struck" in the field without an intermediate droop, is rapid and gratifying.

TEA AT HANKOW.

In his report for 1900 the British Consul at Hankow writes :—

For the following remarks on the staple product, tea, I am indebted to a British firm :—

The total supplies of Hankow teas during the season were 698.897, against 753,077 half chests in 1899, and the settlements 677,738, against 728,680 half chests. From Kiukiang came 210,228, against 217,674 half chests last season. Shipments to Shanghai on native account amounted to 34,686, against 30,653 half chests in 1899. The subjoined table shows that the United Kingdom and Russia took considerably less than the amount required last year, while the figures for America and Canada doubled owing to anticipated changes in taxation which were not fulfilled. A certain amount of tea goes *viâ* the Han River to Mongolia and Siberia; in 1900 the total rose from 7,300,000 to 11,860,000 lbs., and the value from 795,001 to 1,470,001 :—

Destination.	Quantity.			
	1900.	1899.	1898.	1897.
	Lbs.	Lbs.	Lbs.	Lbs.
United Kingdom ...	8.271,788	10,210,283	8,052,584	9,940,839
Russia	35,447,580	25.940,112	22,874,747	19,610,645
Tientsin and North ...	6,905,756	23,889,948	26,553,905	19,037,180
America and Canada ...	10,583,182	5 264,276	4,567,052	5,811,527

The market opened on May 7 by the settlement of all the crack chops of Kheemuns on offer up to 50 taels. The condition of the crop, on the whole, was good, and, perhaps with the one exception of Ningchows, every district was in demand right through the season, and settlements were on a far larger and quicker scale than any previous year. Ningchows were a shade inferior to last season and Kheemuns a little better; Kutoans and Wenchows were poor; Hohows quite up to the average. Hankow teas, as a whole, were of good average quality, and Ichangs proved to be choice teas. Oonfaas were fair and Seeangtams good. For the first year on record not a single settlement was made in Kiukiang; last year quite 15,000 half chests of the first crop were brought there. Second crop teas began to arrive on June 14, but only a few Ningchows and Kheemuns found buyers at Hankow, there being a much better demand in Shanghai. Hankow teas of good quality came forward to much the same amount as last year and met with a good demand for America. Third crop was very small owing to continuous dry weather, and the difficulty the teamen found in financing owing to the political troubles in the north.

The first teas were put on the London market on July 17; fine Kheemuns and Ningchows did fairly, medium grades were only moderately well taken but met with a fair export demand, common teas were in small supply. Towards the end of August the market slackened and has continued to droop in consequence of large supplies of common Indian and Ceylon teas.

There was no direct steamer for London for the first time on record; the through rate for conference steamers *viâ* Shanghai was 57s. 8d. per ton, against 52s. 6d. last year, but the "Glen" and "Ben" lines took 55s.

ECONOMIC PRODUCTS: VANILLA.

A. P. writes in *Capital* :—

To judge by occasional notes, which appear in our planting journals, this product appears to be having its full share of attention at the hands of those planters, who are on the alert for anything in the shape of a profitable auxiliary to the main crop they may be growing. In certain planting districts it is being propagated year by year with the view of raising a sufficient number of plants to form a plantation of an acre or so, in order that a regular squad of people may be told of specially to look after the plants. This is absolutely necessary, and is the right way to go about the matter, —where there are only a few plants scattered here and there about a compound, they cannot get that special attention which is necessary to forming an opinion, as to whether the raising of them on a larger scale will be a profitable undertaking Of course there is always the probability of over-production, and this ought to be steadily kept in view, and nothing but the very best quality of pods put upon the market. If we may take South Sylhet for instance, which, by the way, we are inclined to place in the very first front rank amongst planting communities, in the matter of the introducing and cultivating of valuable plants from other regions with an analogous climate and habitat, we can see no reason whatever why that district should not make a name for itself for a good quality of vanilla.

The large majority of our planting districts in Assam will grow vanilla. There are a few districts in Upper Assam, which are sometimes too cold and damp during the Winter months, and the plants get what is known as "spot." This is not what we should call a disease, but simply a "hurt" caused by water resting upon the leaf when the atmosphere is at a low temperature. The vanilla "plant" will stand a much lower temperature than any we ever get in the valley of Assam, but it will not tolerate dampness as well. Even in the South Sylhet district, where we never get such a degree of cold as is usually experienced in Upper Assam, vanilla will not succeed in a low-lying situation where there is a sufficient moisture during the dry season to cause a continual raw feeling during the day.

That it grows, flowers, sets and grows pods of as good quality as are produced in the Seychelles Islands has been already proved. The prices have been well maintained for many years past, despite the invention of vanilla (the coal tar product) which has not commended itself as anything likely to be a competitor, where the real vegetable product is to be had. There are lands more suitable for its cultivation than others, but any ordinary forest land with a good surface accumulation of vegetable mould will be found adaptable for the cultivation of vanilla. At the same time, vanilla growing being one of the most concentrated of Agri-Horticultural industries, can be grown upon the most barren of lands, in the

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

absence of other unfavourable conditions. The writer is not aware as to what size the vanilla plantations of Reunion and Mauritius run, but we may take it that a 5-acre vanilla garden would be considered a very large "auxiliary" indeed to a 500-acre tea garden. And if 5 acres of first class forest land could not be had 5 acres of scrub jungle could very easily be made almost as suitable by carrying fresh jungle soil to plant the vanilla plants in. It would cost no more than it does to make large pits and fill them with fresh soil—a necessary work when filling tea vacancies if any measure of success is to be counted upon. The Mexican system of allowing the vines to grow under trees nearly wild appears to be almost universally adopted now, and is a decided improvement on the old system of training the vine on artificial supports. According to a report on the vanilla growing in Seychelles nothing pays better than vanilla Its production costs the planter about Rs.3 per lb., and as prices vary from Rs.8 to Rs.16 per lb., a net profit of from Rs.5 to Rs.13 is the result. The average price was Rs.15 in 1898 and at the present time runs much about the same. The yield may safely be taken to be 200 lbs. an acre according to the report above alluded to. "Taking therefore an average of Rs.10 only, an acre of vanilla should produce Rs.2,000." Five acres of vanilla at this rate would not come amiss to plenty of large tea concerns, to say nothing of small ones.

It would even pay them to keep a European who thoroughly understood the plant, its growth, fertilisation (which has to be done artificially) and last, but by no means least, the curing, sizing, and packing. The object of this article is not to make planters believe that they have nothing to do but procure vanilla plants, stick them in and wait for the pods to come. We may go the length of asserting that out of every 100 planters who attempted vanilla growing 98 would very probably not succeed. It requires special knowledge all through as to the habit of the plant and its requirements. The curing alone requires considerable study, care, and experience. The plant when growing, although preferring to take its own sweet will during its adolescence, is entirely helpless when it comes to maturity. It will keep on growing certainly, but is quite incapable without human aid of reproducing its own species, consequently if this process is not understood the growers will have no produce in the shape of the fragrant vanilla pods of commerce.

Whatever may happen in the future the industry is not suffering at present from over-production to the extent of affecting the profitable nature of the industry. In 1898 the vanilla crop of the Seychelles amounted to 63,000 lbs., and was sold for Rs.9,36,000. It cannot be gainsaid that the large output of vanilla has given a fresh impetus to its cultivators, and large quantities have been planted during the last two years. Still, according to the chemist and druggist, the consumption of vanilla pods is increasing every year and likely to continue to do so for a long time.

DISTRICT ASSOCIATIONS.

INDIAN TEA ASSOCIATION (CALCUTTA).

Extracts from an Abstract of the Proceedings of a Meeting of the General Committee held this day. PRESENT :—Messrs. H. S. Ashton (*Chairman*), A. Tocher, H. W. Boyd, W. Brown, D. A. Campbell, A. C. Lawrie, and R. R. Toynbee.

A letter dated 23rd May from the Secretary, Indian Tea Association, London, was brought up for final consideration and disposal after previous circulation. With it had been forwarded a copy of a report dated 14th May by Mr. William Mackenzie, the representative in America of the Indian and Ceylon Associations, upon the work which is being carried on in that country. Mr. Mackenzie dealt in some detail with the question of the quality of the green teas suitable for the American market. He advised that proprietors in India should make green teas resembling as nearly as possible those manufactured in Ceylon. He also thought that in order to ensure the systematic working of the business, consignments should be handed over to one or more special firms, who would take quantities of about 100 half chests at a time, at intervals to be determined. Mr. Mackenzie further suggested that in order to avoid the sending to America of small lots differing more or less in quality, the teas should be bulked in Calcutta, and that arrangements should be made, through a syndicate or other agency, to receive them f shipment. This would ensure more uniformity, and would enab orders to be duplicated without difficulty.

The General Committee had noticed that there appeared to h some difference of opinion as to the suitability for America "green" teas of the Ceylon type. For while Mr. Mackenzie (a indicated above considered there was a promising market for suc teas, it was understood that opinions to the opposite effect had bee received by some firms in Calcutta. In these circumstances th Committee decided to ask the London Committee to obtain, possible, some further information on the point.

Reference was made in the proceedings of the meeting held on th 7th May, 1901, to the following resolution which had been adopte by the Central Travancore Planters' Association, *viz.* :—

"That this Association do ask the support of the Indian Tea Associa tion and the United Planters' Association of Southern India in urgin on the Government of India the immediate necessity of putting an im port duty on foreign grown teas."

In reply to the enquires which the Committee then decided t make, they had been informed that the Travancore Association wished to see the existing Indian import duty enhanced to a pro tective rate, or the Ceylon import duty on Britsh-grown teas re moved. The latter seemed to be the principal object in view; and the Travancore Planters thought it could be best attained by asking the Government of India to impose an import duty at a protective rate. say 4 annas per lb, on all tea brought into this country. The Ceylon duty was said to be prejudicial to Southern Indian teas mainly because it practically excluded them from the sales in Colombo. For though they might be sold there in bond, this restriction had an adverse influence upon prices. Again, when— during the South-West Monsoon—the West Coast ports were un availabe, Tuticorin was always open. A railway between Travancore and that place had been projected; and if Colombo were a free port, this new route would prove to be of great advantage to Southern Indian Planters.

The Committee were inclined to favour the suggestion tha action should be taken by the industry with the object of procuring the abolition of the Ceylon duty. They were willing to approach the Government of India to that end. But they were doubtfu whether the most effective mode of procedure would be to sugges the enhancement to a protective rate of the existing Indian duty They accordingly decided again to address the Central Travancore Planters' Association on the subject, stating these views, and suggesting that in the first place the abolition of the Ceylon duty should alone be pressed for.

The Committee had before them a letter dated 12th June, from Captain Webb Ware, I.S.C., of the Quetta Agency, suggesting that the period (four months) allowed for Mr Foley's mission should be extended. Captain Webb Ware pointed out that to enable Mr. Foley to carry out the duties entrusted to him it was essentia that he should remain in Birjand for six weeks or two months, and at Meshed for at least a month. He would require leisure to study the question of the tea trade on the spot; to interview the various merchants interested; and thoroughly to master the whole subject This could not be done in the time allotted for the journey.

In view of the fact that two large caravans of Indian tea would be shortly going through to Meshed, it did not appear to the Committee to be absolutely necessary that Mr. Foley's mission should be so extended. Moreover, the funds at their disposa were insufficient to admit of any extension. They also thought tha the sending through of the caravans in question would prove to b a more satisfactory method of developing the trade. Captain Webb Ware was to be informed accordingly.

Considered demi-official correspondence between the Chairman and the Hon'ble Mr. Slacke, C.S., Secretary to the Government o Bengal, Revenue and General Department, with reference t section 3 of the Assam Labour and Emigration Act VI of 1901.

The section in question empowers the Local Government to issu a Notification prohibiting recruiting either absolutely, or other wise than in accordance with the provisions of the Act. The Local Government may, at its discretion, give six months' previous notice of such an order, or it may direct that the order shall take effect at an earlier date.

The Chairman had pointed out to Mr. Slacke that in the recruiting districts it was rumoured that the Local Government propose fully to enforce the Act as from the 1st July. If so, it seeme that the issue of a Notification to take effect within a shorter perio

ıan six months was contemplated. Mr. Ashton had asked if he ɔuld be informed as to the intentions of H. H. the Lieutenant-overnor upon this point

Mr. Slacke had replied on the 10th June, to the effect that the st July had been recommended to the Government of India by ıe Government of Bengal, on the suggestion of the Hon'ble Ir. Buckingham. It was understood that the engagements made y the Planters with their agents in the recruiting districts rminated on or about that date. The views of the Government India upon the point had not however been so far received.

The intentions of the Local Government did not appear to be clear om this reply; and it was pointed out that Mr. Buckingham's ıggestion was that the Notification should be issued when the Act ecame law, *i.e.*, on 8th March. After discussion, the Committee ecided to forward copies of the letters to Mr. H. Gordon, the uperintendent of the Tea Districts Labour Supply Association at urulia. Mr. Gordon was to be desired to state what the position ould be if a Notification with immediate effect were issued; and so what notice, if any, would, in his opinion, be required. In ıe event of Mr. Gordon considering that serious inconvenience ould be caused by the issue of a Notification with immediate effect, ıe Committee would again approach the Local Government on the ıbject.

Considered a letter dated 10th June, from the Honorary Secre-ry, Dehra Dun Planters' Association, with reference to the ɔssibility of the gardens in that district joining the Indian Tea ssociation. It was asked in the letter whether, in the event of the rger concerns becoming members, they would be permitted to ɔpoint a representative on the General Committee. Also whether ıe Local Association would then be recognised as a branch of the alcutta Association.

In reply it was to be pointed out that under the Rules of the As-ciation it was not possible for the General Committee to add any rson to their number. They were elected annually by the mem-rs; and their powers and duties were defined and limited by the ules. The Dehra Dun Planters might, however, arrange to establsh their district a branch of the Association on the lines of the ssam or other Branches.

Considered a letter dated 13th May, from Mr. Chas. Duncan of innipeg, asking to be put in communication with a leading alcutta Tea Agency House. Mr. Duncan stated that he had been ndling teas for many years; and had recently opened a brokerage siness. He wished to secure the agency of a first-class firm.

A list of the members of the Association was to be sent to Mr. ıncan for his information and guidance in the matter.

MARKET REPORT.

[*Per Mail advices of 7th June* 1901.]

COFFEE.

The London Commercial Record says:—The tone of the market dull, and supplies at auction have met with less demand; prices nerally have been in favour of buyers to the extent of 1s to 2s on mmon to medium qualities, and at the close the trade shewed s disposition to operate. With continued heavy Brazilian ceipts and a further decline in Exchange the market for "futures" s been declining one, and although at the close there has been a rtial recovery prices for the week are again easier; yesterday ntos September delivery sold at 30s to 30s 3d, December at 30s , and March at 31s 3d per cwt.

ndon ...	... Santos ...	July delivery	...	30s 0d.
w York	... No. 7 Rio...	,,	...	5·20 cents.
mburg...	... Santos ..	,,	...	30 pf.
vre ...	... Santos ...	,,	...	36¾ francs.

No auctions were held to-day, this being "Oaks" day at the som Race Meeting. Brazil futures opened steady and continued changed throughout the day.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	Stock.		Imports.	
	1901.	1900.	1901.	1900.
Tons ...	23,504	19,574	28,804	22,164
	Home Consumption.		Export.	
	1901.	1900.	1901.	1900.
Tons ...	9,164	8,097	11,881	9,235

The preceding figures exhibit—

	Tons.
In the Imports an increase this year of ...	6,640
Home Consumption an increase of	1,067
Export an increase of	2,646
Stock an increase of	3,980

Auctions have passed off as under:—

Ceylon.—*Plantation.*—4 tierces 4 barrels 1 bag partly sold, smalls at 33s, bold 66s.

East India.—4,020 bags partly sold as follows:—*Mysore*, small 34s to 51s 6d, low middling to middling 40s to 48s, good middling 50s 6d to 56s, bold 68s to 82s, peaberry 48s 6d to 65s. *Coorg*, smalls 38s to 49s 6d, low middling to middling 43s to 46s, good fine middling blue 59s to 62s 6d, bold 53s to 59s 6d, peaberry 45s to 70s. *Neilgherry*, middling greenish 43s to 44s 6d, bold 51s. *Wynaad*, smalls 37s 6d, bold 54s, peaberry 55s 6d.

Jamaica.—84 barrels 8 bags sold, smalls 35s, ordinary to good ordinary greenish 30s 6d to 38s, low middling to middling brownish 40s to 50s, fair bold colory 60s.

Costa Rica.—Of 6,350 bags catalogued 3,600 bags sold, smalls 31s 6d to 42s, good ordinary 37s, fine ordinary 40s to 42s, low middling to middling 43s to 50s, good middling 55s to 56s, bold 59s to 73s, peaberry 42s to 64s.

Guatemala.—Of 785 bags offered 320 bags sold, smalls 35s to 39s 6d, low middling to middling 43s to 51s, peaberry 48s to 57s 6d.

Nicaragua.—133 bags sold, ordinary to good ordinary bright foxy green 35s to 38s.

Mexican.—614 bags mostly sold, smalls 38s, low middling 44s, good middling 52s, peaberry 40s to 52s.

Colombian.—320 bags, chiefly damaged, sold, smalls 35s, low middling 42s to 43s 6d, bold 47s to 51s, peaberry 40s to 45s.

Receipts in Rio and Santos.

Rio Exchange 11$\frac{13}{32}$d, previous day 11½d.

Havre, *June* 6.—Good average Santos June opened firm at 36¼f. and closed steady at 36½f., September opened at 37f. and closed at 37¼f., December opened at 37½f. and closed at 37¾f., March opened at 38f. and closed at 38¼f.

Hamburg, *June* 6.—Good average Santos June opened steady at 29¾pf. and closed steady at 30pf., September opened at 30¼pf. and closed at 30½pf., December opened at 31pf. and closed at 31¼pf., March opened at 31¾pf. and closed at 32pf.

New York, *June* 6.—Closing prices of No. 7 Rio were as follow:—

	June.	July.	Aug.	Sept.	Oct.
June 6...	5·16	5·20	5·30	5·35	5·40
June 5...	5·15	5·20	5·30	5·35	5·40

TEA.

Indian.—Business was resumed after Whitsuntide on the 3rd instant, only 2,500 packages were submitted at auction, against 11,900 packages on the 20th ultimo.

There was rather more demand for useful descriptions, particularly those in closing invoices, though no material alteration in quotations can be recorded. Common sorts and parcels with mixed stalky red leaf continued to bring low prices. The first invoice of New Season's was offered, *viz.*, 69 packages of the Makum Tea Company's growth, and met with spirited competition, being superior to usual early arrivals.

The May figures issued by the Tea Broker's Association are disappointing, deliveries amounting to 6,378,000 lbs, contrasted with 7,362,000 lbs. in the previous year, while the bonded stock on the 31st ultimo was 12½ million lbs. heavier than at the corresponding date in 1900.

Ceylon.—The market re-opened on the 4th instant, catalogues including 27,700 packages, compared with 24,600 packages on the Tuesday before the holidays.

A quieter tone was noticeable in the bidding for all except the more attractive lines. Ordinary Pekoe Souchongs and Pekoes seemed less sought after and tended in favour of buyers. Medium to fine leafy grades sold without much change. Broken Pekoes went irregularly and those with inferior liquor were often lower,

though the best received fair support. Broken Orange Pekoes, as a rule, fetched fully prior rates.

The average is 6½d per lb. On the 23rd ultimo, it stood at 6⅝d per lb., and 6¾d per lb. on the 14th June a year ago.

Clearances from the London warehouses in the month were 6,495,000 lbs., opposed to 7,346,000 lbs. for the same period in the preceding May. The stock on 31st ultimo was 25,744,000 lbs. and 24,794,000 lbs respectively.

JAVA.—A little over 1,000 packages of direct import passed the hammer, and met with attention, values being about maintained.

Deliveries.—The clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 31st May, 1901 ... ... 10,705,595 lbs.
Do. do. 1900 ... ... 13,748,376 „

During the fortnight the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	8,764	699	9,463
Ceylon	25,013	2,641	27,654
Java	883	139	1,022
Total ...	34,660	3,479	38,139

Also 376 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated June 7th, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1901-1902	9,639	28,089	1,022
1900-1901	—	—	—

9,639 *pkgs.* INDIAN
28,089 „ CEYLON
1,022 „ JAVA
} Total 38,750 packages were offered in public auction this week.

It will be seen by the table given at foot that the imports of all Tea into London during the season just closed were *forty million* lbs. more than was the case two years ago, in spite of a reduction of five million lbs. in the quantity received from China.

INDIAN.—The market opened on the 3rd instant, at prices about on a par with those ruling before Whitsuntide, although the tendency, especially for commonest grades, was rather in favour of buyers. Only one invoice of New Season's has, as yet, been brought to auction, *viz.*: 69 packages "Makum" which realised an average of 1/2½ per lb. 343 "last of season" invoices have been sold against 399 for corresponding period, 1900.

The official telegram gives exports to U.K. for second half of May as 727,000 lbs., against 2,000,000 same period last year, making the total from 1st April to 31st May, 1,388,000 lbs., against 3,100,000 lbs.

Week's average of New Season's Tea sold on Garden Account 1901, 69 pkgs., av. 1/2·50d. 1900,—— pkgs., av —d.

CEYLON.—The first sale after Whitsuntide was held on the 4th instant, when the quantity brought forward, although heavy, was not excessive. Buyers were not eager purchasers and the slight change in prices was in their favour, especially for common to medium Teas which sold with some irregularity.

The official wire gives shipments to U.K. during May as 9,750,000 lbs., against 10,500,000 lbs. last year, making total from 1st January, 47,750,000 lbs., against 49,500,000. The estimate for June is given as 10½d to 11 million lbs., against 12,750,000 shipped June, 1900. Average for week 6·50d.

Ceylon Tea sold on Garden Account 1st Jan. to date, 533,989 pkgs., av. 6·63d. 1900, 505,997 pkgs., av. 7·44d.

JAVA.—Only 1,022 packages were brought forward, all being of direct import; the Teas were nearly all sold in the room without material change in quotations. 13,508 packages are advertised for sale in Amsterdam on the 7th instant.

Bank Rate 3½ per cent. Exchange on London three months' sight:—Calcutta 1/4 5/32. Colombo 1/4 3/16.

COCOA.

Auctions were resumed on Tuesday, when 6,984 bags were submitted for public competition. Common West India was a trifle buyers' favour, as also was Ceylon, but otherwise there was no change. Of 1,075 bags Trinidad brought forward 600 bags sold, very fine red 76s, fair to fine 70s to 73s, being full up. Of 2,264 bags Grenada, 1,520 bags were placed at rather higher values for the better qualities, but at 6d reduction for common; fine to very fine red realised 67s to 69s, good 64s 6d to 66s, common to fair 61s 64s. 48 bags fine Demerara brought 71s. 271 bags Jams nearly all sold at 63s to 65s 6d for fine fermented, and 59s to for common to fair. 176 bags Dominica practically all sold—fai good 61s to 64s 6d. 36s bags St. Vincent brought 66s 6d to for superior, and 57s to 63s 6d for common to good. 16 bags St. Lucia, half sold at 64s to 65s. 20 bags surinam realised 72s bold greyish red. Of 443 bags Haiti, 115 bags sold at 64s for fermented, and 56s for greyish. 60 bags Puerto Cabello half s at 78s for clayed. Of 56 bags Colombian, 10 bags common sold 62s. 517 bags Guayaquil partly sold, at 62s for Esmerelda, 68s for Winter Arriba, being unchanged. Of 566 bags African o 30 bags sold at 64s, Ceylon growth still hangs fire, and out of 1,436 bags offered barely 200 bags sold at 77s to 79s for g medium and bold red, 68s per cwt. for fair, 60s 6d to 64s ordinary medium, 53s 6d for smalls and 61s for collected, be cheaper. Private sales include 350 bags African at 61s to 64s and 150 bags Guayaquil early summer Arriba 69s to 70s and win Arriba 67s to 68s per cwt.

PEPPER.

BLACK.—Has moved in buyers' favor, but sales only small. the spot Singapore sold at 6⅛d to 6 1/16d and 40 tons dene to arri April-June (s.) at 6⅛d and January-March (s.) at 6⅜d, but there sellers of June-August at 6⅓d, and September-November 6 3/16d per lb.

The shipments of Black Pepper for the month of May compa as follows:—

	1ST-HALF.			2ND-HALF.		
	1901.		1900.	1901.		19
	Tons.		Tons.	Tons.		To
U.K.—Sing. ...	50	160	160	*nil*	30	40
„ Penang ...	110		160	30		80

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 12th instant. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Coorg.

Polli Betta, *3rd July.—Weather*—Since yesterday the monsoon has once more become strong. Over two inches of rain recorded this morning. Previously we had a break extending over eight days, but there was a little rain on some days. If the monsoon does not make it up this month, the forecast for these parts will be falsified. Borer still being removed. All seasonable works are progressing favourably. *General Health*—Some imported cases of cholera have occurred. *Labour*—Sufficient.

THE TAXATION OF TEA, COFFEE, ETC.

There is probably no more vexed question of commercial and political economy than the question upon whom the burden of an import or an export tax on a particular comestible really falls: whether the produce or the consumer. Under what may be regarded as primal, if not as normal, conditions, we need no science to lead us to a plain answer, "the consumer." But this reflects a narrow view. The main principle of the exchange of commodities is that the producer should be able to earn at least a fair wage. He ought to receive the full value of the employment of his labour and his work. Yet when he comes to sell his produce the interests of the consumer have to be considered. Virtually, all trade originated in, and is based upon, a system of barter. If, then, the consumer be called upon to pay a duty upon a special product, his remaining purchasing favour is reduced *pro tanto*; and if the principle of barter be properly applied it will eventually be found that producer and consumer both pay. The nearer the equality of the payments the nearer the transaction is to an ideal standard of perfection. Complications arise, however, when the transaction is with a

foreign supplier or a foreign consumer; again, when the product taxed has to compete with similar products, untaxed, from other countries; and under various other circumstances. It needs but a moment's reflection, for instance, to satisfy us that there is a wide difference between the conditions under which Tea and Coffee have to bear taxation in Great Britain.

At the last Annual General Meeting of the Tower Tea Company—a large tea, coffee, and cocoa distributing concern in London—some interesting remarks were made by Mr. THOMAS LOUGH, M.P., the Chairman. He rightly observed that the great articles of consumption now subject to a tariff in Great Britain are so few that the public will watch with interest the effect produced even on one of them by those abrupt increases of taxation with which the nation has become familiar. Studying what has been the effect of the large increase, amounting to 50 per cent., in the taxation on tea, Mr. LOUGH remarks that this has now been in existence for over a year, so that we are in a position to judge. It is the only increase that has been made in the tax since tea became one of the leading products of the British Empire. In 1865 the tea duty was reduced to 6d., and in 1889 to 4d. per pound. The same result followed the reduction in each case. Within two years consumption increased by 15,000,000 lbs. The duty remained at 4d. till last year, when it was raised to 6d. In 1865 96 per cent. of the tea used in the United Kingdom was from China. The effect, therefore, of British tariffs on the trade was of small concern to the British as a nation; but last year 95 per cent. of the tea consumed was from estates in India and Ceylon, owned by British capitalists and worked by British subjects; therefore any vicissitudes that affect the business become of profound importance to the Empire. The experience of those engaged in tea production is unanimous that the increase of duty has produced disastrous results. British tea-growers had naturally made arrangements to meet a steadily-increasing demand, which they had every reason to expect; but the new duty has checked consumption, and the latest figures show, for the first time for many years, a decrease in the quantity of tea used in the United Kingdom per head of the inhabitants. In 1899 the Board of Trade returns show that the consumption had reached 5·98 lbs.; but last year, according to figures just issued by Messrs. W. J. and H. Thompson, it had fallen to 5·91 lbs. per head. This, says Mr. LOUGH, is the general result of an increase of taxation.

It may strike some of our readers that the connection between cause and effect here is not beyond question. The deduction made by Mr. LOUGH is supported, however, by facts regarding the consumption of Tea in the United States. In 1898 a tax of 10 cents per pound was imposed on tea in the United States, and the effect was that within two years consumption was lowered by 25,000,000 lbs., or one-third of a pound per head of the population. If we conclude from English and American statistics that the increase of duty has checked demand, we must also conclude that it has had the effect of raising the price asked from the consumer, and that the burden of the tax has thus leaned towards him in the first place, and not the producer. On the other hand, a check in the volume of demand is distinctly disadvantageous to the producer, and when, as in India, this is accompanied by currency legislation adverse to the interests of the producer, the result must be serious. Indian tea and coffee exported to Europe are virtually taxed twice over. The inflation of the rupee acts as a very heavy duty on exports from India; in Europe various direct import duties are levied. It impossible for anyone to urge that tea, coffee, and cocoa—t great rivals in the list of beverages—have to submit to equ burdens and are thus fairly placed for competition, the o with the others. Manifestly, therefore, the present system scientifically unsound. That it is unwise, is proved by t parlous condition into which the tea and coffee industri have fallen.

JAPAN TEA IN 1900.

A British Consular report states that for years past t export of Japanese tea has been declining. Tea from Ind and Ceylon has gradually been supplanting that of Japan the markets of the United States and appearances are th the latter will in the end lose its main customer. T quality of the leaf produced in Japan is judged by exper to depreciate year by year. Notwithstanding the enjoyme of a Government subsidy, due care does not seem to exercised in the cultivation of the plants and in the pickin of the leaves. The tea crop of 1900 showed a shortage a prices in consequence appreciated. Two reasons account for the inactivity of the tea market in general in the Unite States in 1900. The first was the uncertainty caused by t Presidential Election, the other the fact that it looked at o time as if the customs' duty on tea might, as the outcome strong agitation, be removed. Nothing came, however, the movement directed against the duty; and as it will n be abolished this year it must at any rate remain at present rate until 1902. Yet the Japanese Tea Guild a once more doing their utmost to bring pressure to bear favour of its removal. The troubles in China gave rise to speculative demand for Japanese tea, which brought abo a considerable advance in prices in July and August. Canada the beverage prepared from the product of Japa lost ground partly owing to its high price and partly account of the preference given to Indian and Ceylon tea Of the tea exported in 1900, about 32 per cent. found its wa to New York, 29 per cent. to Chicago, 14 per cent. to Sa Francisco, 20 per cent. to Canada, and 5 per cent. to Europ The shipments nominally to Europe are chiefly meant f Singapore and made on Chinese account. For those engage in the trade the season has not been a bad one, good profi being made in the early part of it.

As regards the trade of Yokohama in tea it is observed another report:—

Until the opening of the tea season on May 1 no tran actions in tea occurred, stocks of old leaf having bee disposed of by the end of December, 1899.

Prices for the new leaf averaged 10 per cent. over rat ruling at the same time the previous season, the mark continuing fairly firm on about this basis till June, when became apparent that the supply of first crop leaf would considerably less than the average. At about the same tim the troubles in China threatening to extend to the tea distric in that country, considerable speculation in the America markets ensued and a heavy rise took place in Japan, t market ruling fully 20 per cent. over last year's rates.

By the end of August, however, the demand in Ameri had ceased, and shipments made at this period reached a du and declining market, the position remaining unchanged unt the end of the year.

The position of the Japan tea trade in Canada is unsati

uctory in the extreme. The causes that led to the advance n the United States mentioned above met with no response n the Canadian market, buyers contenting themselves with he stocks of old leaf remaining over from the previous season, vhich proved sufficiently adequate for their requirements to bviate the necessity of drawing their supplies direct from the rimary market to the usual extent. The trade in the finer rades of Japan tea has been to a great extent supplanted in anada by the Ceylon product, and the only demand that xists for Japan leaf is for the commoner descriptions, which an be sold at low prices, and which are largely used for nixing purposes.

Referring to the quality of the crop of 1900 the remarks nade in the last report continue to hold good. Whilst a light improvement in the drawing qualities of the earlier rrivals was noticeable, Japan teas, on the whole, are yearly leteriorating in quality, and unless a vigorous effort is made n the part of the growers to improve the standard, the posi- ion the article still maintains in America will be seriously endangered.

The following is the total export from Yokohama from January 1 to December 31, 1900 :—

To	Quantity.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

Imperial Differential Duties.

The Canadian Manufacturers' Association (Toronto) have ent copies of two resolutions adopted on various occasions with reference to the subject of Imperial Differential Duties. The first of these resolutions was unanimously adopted at the nnual meeting of the Association, February, 1901, and was supported by its delegates to the fourth Congress of the Chambers of Commerce of the British Empire. The second esolution was adopted at the general meeting of the Associa- ion called in September, 1901, to pass report of delegates to he above Congress. These two resolutions will serve to how the position of the members of the Association on these mportant subjects. The Association wish to do all in their ower to promote closer trade relations within the Empire.

[RESOLUTIONS.]

February, 1900.

"Whereas it is generally recognized that an advantageous com- nercial bond is the strongest link in National Unity, and that the naintenance and strengthening of trade is the keystone of a State's successful development;

AND WHEREAS the existence of an Empire is largely dependent pon the material prosperity of its people;

THEREFORE BE IT RESOLVED, That in the opinion of this Congress he bonds of the British Empire would be materially strengthened, and the union of the various parts of Her Majesty's Dominions greatly consolidated by the adoption of a commercial policy based upon the principal of mutual benefit, whereby each component part of the Empire would receive a substantial advantage in trade as the result of its national relationship.

FURTHER RESOLVED, That in order to make the foregoing operate, the Chair shall appoint before this Congress dissolves, a representative and proportionate Committee of Home and Colonial delegates to devise a scheme of this nature and report to this or a similar Commercial Congress, and that a copy of this resolution be officially forwarded to the Home and Colonial Goverments concerned in the proposition."

IMPERIAL TRADE RELATIONS

August, 1900.

Whereas: At the present time proposals are being made looking to the possibility of drawing into closer union the various parts of Her Majesty's domains and strengthening the ties of love and friendship by the addition of advantageous commercial bonds within the Empire.

Be it resolved: That this Association places itself on record as being heartily in favour of reciprocal preferential trade between Canada and other parts of the British Empire with which arrangements can be effected to their mutual benefit, and by means of which each would receive substantial advantages in trade as the result of its national relationship.

And be it resolved: That in the opinion of this Association, the first step towards the inauguration of such a policy must be brought about by the adoption of a policy by the colonies themselves on which all can unite;

And be it further resolved: That, as the present time is a particularly opportune one for the discussion of such a policy in Australia and South Africa, the Government of the Dominion of Canada be, therefore, urged to take such steps as may be possible to have the sister colonies consider the adoption of the principle of preferential trade within the Empire.

NOTES.

Yerba mate. Efforts are now being made to cultivate yerba mate or Paraguayan tea artificially, and these have it, it is said, been attended with considerable success.

Java Cinchona. Shipments from Java from May 6 to June 9, 1901, at 811,000 Amsterdam lbs., and the total from January 1 to June 9, 1901, at 3,863,825 Amsterdam lbs.

India's Trans-Frontier Tea Campaign. Mr. Foley has arrived at Seistan. The extension of his mission has been negatived for want of funds. Two other caravans of Indian tea are shortly going to Meshed.

The Ceylon Association in London. At the Annual General Meeting of the Ceylon Association in London, Mr. Henry Bois was elected President; but no one was elected to the post of Vice-President.

The Ceylon Import Duty on Tea. The Indian Tea Association have voted in favour of action being taken to secure the abolition of the Ceylon duty on Indian Tea, prior to the enhancement of existing Indian duties.

Lipton, Limited. Lipton, Limited, intend, says a Home paper, to float a subsidiary Company in South Africa, and stores will be opened in the leading centres. Mr. Julius Weil is reported to have taken a large interest in the undertaking.

Green Teas: Manufacture resumed in Ceylon.

A Colombo contemporary announces that the high tea estates which previously went in for making green teas and which ceased to do so for some time, have commenced to manufacture the greens again.

Proposed Tea Growers' Association.

At the Annual General Meeting of the Ceylon Association in London, Mr. Sholto Skrine proposed, and Mr. James Sinclair seconded, a resolution in favour of the formation of a Growers' Association for the better representation of the interests of sellers. This was carried.

Green Teas for Canada.

A Colombo paper states that a local firm lately received a telegram from Canada asking for quotations of Ceylon green teas As there were none on offer they were unable to reply. Mail advices to hand supply confirmation that Ceylon greens are making headway in Canada, although prices realised are low.

Tea Prospects in India.

Advices from south Sylhet state that the weather in June has been variable. In the early part the heat was intense and rain wanted. Insufficiency of moisture retarded the flushes. During the past few days there have been copious showers which must do good, and the temparature has fallen considerably. If this continues it will retard growth.

Colombo Tea Sales.

At the public sale of tea at Colombo on the 26th ultimo, 15,445 packages=1,208,781 lbs. were offered, of which 11,793 packges=938,986 lbs. were sold. The *Times of Ceylon* reports that the market was firm for Pekoe and Pekoe Souchongs. Common to medium broken Pekoes were dearer; but the better class of brokens were in rather less demand and were a shade easier.

Tea in French Indo-China.

The cultivation of Tea in Annam is expanding rapidly, as will be seen from the following statistics of exports :—

1897	10,000 kilos.
1898	39,000 „
1899	137,000 „
1900	180,000 „

Coffee in Italy.

The British Consul report, that although the importation of Coffee into Italy in 1900 was smaller than during the previous year, the amount was over the average of the five preceding years. Imports from the United Kingdom have gone down nearly 80 per cent. in five years; while supplies from Central and South America have during the same period nearly trebled. The other supplying countries in 1900 were Austro-Hungary and France.

Pepper in French Indo-China.

Exports of Pepper from Indo-China for "the three-quarters of 1900" were, says the British Consul, as follows :—

To	Kilos.
France	2,297,694
French colonies	1,149
Foreign countries	399
Total ...	2,299,242

which is 544,060 kilos. in excess of 1899 exports.

The Sale of Tea in India.

The Indian Tea Association nounce promises amounting 600,000 lbs. towards the scheme for extending the sale of in India. There are further conditional promises, and million lbs. are now expected. When the distribution is full progress, the proposed tea distributing agency will formed immediately, and its operations will commence fort with. It is probable that Messrs. Andrew Yule & Co. w be entrusted with the organization and working of the ne "department" for the pushing of sales in India.

A Coffee Exchange in Rio de Janeiro.

It is proposed, says the *Hand Museum*, to establish a Coffee E change in Rio de Janeiro, wi branches and depôts in Santos, Bahia and Victoria. petition has already been made to the President of the R public. This Exchange is to be managed by seven Directo to be chosen by parties interested in the trade, except t Chairman, who is to be nominated by the Government. It also proposed to establish agencies to furnish statistics of t production and consumption of coffee, in order to establish basis for arranging the prices.

Ceylon Tea in Sweden.

According to an advertisement a Swedish paper, Ceylon tea from certain estate "is to be had from all grocers throughout t Kingdom." We venture to question the truth of this stat ment. Mr. Oscar Dickson has supplied the *Ceylon Obser* with the following statistics of Tea and Coffee imports in Sweden.

	Coffee (in kilograms)	Tea.
1895	18,067,617	168,815
1896	19,675,391	165,615
1897	25,560,331	188,871
1898	25.088,349	181,978
1899	23,519,000	

It is said that, gradually, tea is being more used, but t demand is, for the most part, for China teas of inferior qualit Coffee is still King.

Cocoa in Holland.

The total importation of cocoa Holland during 1900 reached 14,3 tons in 1899. During 1900 the arrivals of the new crop which were rather later than usual, found a ready sale advanced prices, and the demand during the year continu brisk, prices remaining firm until near the close of the yea when the heavier shipment from Trinidad, Bahia, and S Thomas in consequence of larger crops caused the quotatio in our market to give way to some extent. The receipt Java cocoa at Amsterdam in 1900 amounted to 19,200 bag showing a steady yearly increase since the year 1894, wh they amounted to 8,630 bags. The price of No. 1 Java whi opened in January, 1900, at 10d. per lb., advanced to 11¼ per lb. in September, closing in December at a slightly low quotation.

Rubber in Mexico.

A Home paper says :—There a wild and cultivated rubber trees no growing on the Isthmus sufficient to make the country ric without regard to any other product. Mexican rubber is no worth 80 cents per lb. gold. A good, healthy, rubber tree w produce from two to four lbs. of rubber annually at from eig to twelve years old. A rubber forest of 1,000 acres, co taining 250 trees per acre, would yield at least $1 per tr profit, or $250,000 annually. The Isthmus is the only natur

bber-producing country within the limits of civilization. he demand for rubber is increasing at a rapid rate, and those ho are now growing rubber forests confidently expect to see lexican rubber sell for $1 per lb before their trees are in earing. Those who have invested in rubber on the Isthmus ill be well rewarded for their patientwaiting.

e London Tea Market. The weekly special telegram of 27th ultimo from Messrs. Gow, Vilson & Stanton to Colombo reports that the market enerally is steady, and that the market for medium liquoring ekoes and Broken Pekoes is weak, while that for Common ekoes and Broken Pekoes is also steady. The price of fair quoring Ceylon Pekoe Souchong is 5d (same as last week) nd the average price of Ceylon tea sold on garden account is week was 6¼d (⅛d down) as against 5¾d and 6⅝d respecvely in the corresponding week last year. Reuter reports at common qualities of Ceylon tea are firmer. Pekoe Souongs are quoted at 4¼d (same as last week) and the average r the week at 6¼d (an eighth of a penny down). 25,000 ckages of Ceylon tea were offered for sale, and 24,000 ere disposed of; while of the 9,000 packages of Indian tea fered, the whole found purchasers.

lcutta Tea Sales. At the Calcutta sales on 28th ultimo 14,000 packages were offered d most of them were sold. Quality was rather indifferent, large proportion consisting of plain Cachars, and soft eathery liquoring kinds from Terai and Duars. There were few good invoices. As regards Assam and Darjiling the ne of the market was better. There was a strong demand r all above the commonest, and prices generally showed a rdening tendency. The feature of the sale was the particularly strong demand and keen competition for the best quoring Assams and Darjilings; and for these long prices ere recorded. For the Bombay and Asiatic markets buyers ere operating freely; and of the Pekoes, 25 per cent. were sorbed by these demands. Other outside markets were terested to a considerable extent. The sales are now to be ld weekly.

a Seed from Natal. Mr. Jas. A. McMillan writes from Ifafa, Alexandra County, Natal, to e *Ceylon Observer*:—Dear Sir,—At the request of the late r. John Fraser, of Umzimkulu, formerly well-known to you of the "Brae Group" of Gardens, Ceylon, I have taken e liberty of sending you, through Messrs. King & Sons of rban, a small box of tea seed. Mr. Fraser had a quantity the seed from me and mentioned that there would probay be an opening for seed in Ceylon, so pleased was he with e jât. All the seed on my place I have imported—some m Darjeeling, some from the Kodanaard (Nilgiris) and me from Ceylon (from a Mr. Inglis). Consequently the seed am sending you is a hybrid. I shall take it as a great vour if you would kindly ask one of your friends to try the d and let me know what you think of it Our seed is dy for shipment February-April. Thanking you in antiation.

w York Tea Trust in apan's Interests. Concerning the report that the tea merchants of New York had been proposing the organizing of a tea st since about the spring of this year and that our tea merchants had been asked to join the union, the *Japan Weekly News* of the 1st ultimo states, that it appears from a paragraph contained in the *Nichi Nichi* that the proposed plan has now become an accomplished fact. The paper says that the tea trust was lately organized in New York by the joint efforts of the American and the Japanese merchants concerned, who are backed by a capital of seven million *yen* altogether. It is further stated that the general business of the new trust will be conducted by six commissioners of high standing, three of them being supplied from Japan. With reference to the above, the same paper publishes the opinion expressed by Mr. Kahei Otani in this connection. The latter is entirely in favour of the trust.

Tea for Natives. "A Native" (of Ceylon?) writes to the *Ceylon Observer* that it is now an admitted fact that the natives have almost all taken up tea drinking, not as a luxury but as a necessity of life. "In fact some of them substitute it for the morning meal I had recently occasion to travel in the interior, when I had the pleasure of seeing people freely using tea, invariably without milk but with a bit of Kitul jaggery." He adds:—"Although we are living in the midst of big tea estates, yet we are tantalized. There is not a grain of good tea to be had here for any love of money or mercy. The boutiques here sell dirt, rubbish or sweepings at 25 cents per lb. which is not fit for human consumption. It costs R1·40 to R1·50 to get a lb. of good tea from Colombo by post and it is not all who can do this. I have often heard the proprietors and the Superintendents say, retailing tea at the store is simply encouraging thieving. Surely it is not the case; a trustworthy person can be entrusted with the work with equitable advantage to proprietor as well as to buyer."

Proposed Coffee-tax in the U. S. The *American Grocer* expresses the opinion that a tax on coffee would not result in any appreciable difference in cost to consumers. "It would give the Government an additional revenue of $15,000,000, and thus permit the removal of really burdensome taxes imposed to meet war expenditures. It would tend to improve the grade of coffee. We can see no reason why a heavy tax should be laid on tea and none on coffee, especially as the latter can stand a duty much better than tea. When the Government requires less revenue, we favour the reduction of the duty on tea, and would be glad if that could be brought about at the next session of Congress. The tax on tea, together with the inspection act, has led to a decided improvement in the quality of imports, which have steadily increased since 1897 and promise to grow until the country absorbs as much as prior to that date, when tea was duty free. If the distribution has increased, it follows that more and more is being consumed, and to that extent retailers are benefited. What the retail trade needs most is to stimulate consumers to a greater use of high-grade tea and coffee." Yet the same paper writes:—"Cheap coffee has greatly stimulated consumption.

Tea Growing in South Carolina. Another tea farm is soon to be started in South Carolina. Colonel Augustus C. Tyler, of New London, camped at Summerville during the war with a regiment of Connecticut Volunteers, of which he was Commander, and took great interest in the tea farm of Dr. Shepherd at that

place. Colonel Tyler was so impressed with the possibilities of tea culture in this region that after the close of the war he organized a syndicate of New England capitalists and brought £5,000 acres near Summerville on the Savannah Railroad, which is now being prepared for planting. This year 300 or 400 acres of tea plants will be set out, and the area will be increased annually, and as rapidly as the plants can be obtained. Dr. Shepherd, who owns the tea farm at Summerville, made a great deal of money out of his crop last year, and is likely to make still more during the present season, for he, too, has enlarged his acreage. Mr. Wilson, the Secretary of Agriculture, has always argued that there is both patriotism and money in tea culture, and is lending the aid of the government to Colonel Tyler in his enterprise According to a Dutch Consular report in the *Consulaire Verslagen en Berichten* satisfactory progress is being made in the planting of tea in several States of the Union. In South Carolina there are at the present time about 60 acres under cultivation which have produced a crop of very good quality, the tea from that particular plantation selling at one dollar per pound retail. It is intended to plant 4,000 acres with tea shrubs, estimated to produce about 300,000 pounds of tea per annum.

GENERAL ARTICLES.

THE COFFEE TRADE IN THE U. S.

Cheap coffee has greatly stimulated consumption, and, if the era of low prices continues for a few more years, love of the beverage will be so strong, and the habits of coffee-drinkers so confirmed, that prices will be abnormally high when crops fall below average annual requirements.

It is reported that Brazil will carry over one million bags of coffee of the 1900-1901 crop.

Caution is needed in accepting reports, especially from producing countries, concerning coffee crop conditions and probable developments; for, in the light of past experiences, they should be received with caution, and confirmatory news awaited before investment.

Mr Hermann Sielcken, of W. H. Crossman & Brother, in reviewing the present coffee situation to a representative of the *Journal of Commerce*, said:

"Brazil has been sending sensational stories into the consuming countries, undoubtedly with the idea of affecting the prices at the commencement of the new crop. In the last four or five years of large crops, they have exhausted all schemes which the people would believe for awhile, and all of these sensations came forward regularly between May and August, the time when the crop is commencing to be harvested.

"In 1897-98, at the beginning of the crop, we had frost stories galore, and in July and August it was stated that the trees might be totally destroyed by frost. And last year the heavy rains were supposed to have reduced the outturn of the present crop very greatly, and this, together with the advance in exchange in Brazil, made the world extremely bullish at the beginning of the crop."

Mr. Sielcken attributes the over-production to the "high prices in gold paid to Brazil from 1887 to 1896," which "stimulated the production, and the fall in the value of the paper money of Brazil gave enormous currency prices as well as gold prices, and made this stimulus for values in the eyes of the Brazilian planters still greater. Planting was pursued with a vengeance, especially in the Province of San Paulo, where plenty of virgin ground was still open, and is still open, and where the planters still possess a great deal more wisdom than those of Rio by attracting immigration to replace slave labour. These efforts led to production never dreamed of.

"While values have been established on the same broad l governing other staples—supply and demand—the coffee world been trying to make out what influences of a minor nature either caused a decline or would stop it. So far, since the c mencement of the big crops in 1896, the Brazilians have been to obtain good prices, considering the size of the crop, and the he losses have fallen almost entirely on Europe and the States.

"There is no question that the consuming markets have B completely at bay. They have enough stocks on hand to en them to wait until Brazil markets conform to the necessitie they present themselves. Facts have proven that neither spec tion, the varying of exchange, nor increased consumption can with the present production. If prices fall low enough, and haps lower than the actual cost of production, it is likel work its own salvation to the coffee market of the future.

"The spot quotation is now on the basis of 6⅝ cents for No. 7 (the market standard), and prices are among the lowest on rec As a matter of fact, the lowest record is 5 7-16 cents. This reached in September, 1899, at a time when the October op sold at 4·10 cents. The question which is receiving attentio whether the current figures should be accepted as indicating era of low prices, as a result of over-production and of the che cost of production, or whether they of themselves constitute basis for an advance, on the ground that they do not pay the of producing coffee, and that the production will on that acc naturally be curtailed."

Lewisohn Brothers accept and emphasize the latter view. T are looking for higher prices. Time will tell which—the "bu or the "bear"—has the clearer predictive eye.—*American Groc*

JAPAN TEA COMBINE IN CANADA.

There was considerable excitement in the wholesale tea trad Montreal on Tuesday says the *Canadian Grocer*, when it bec known there was a well-established movement on foot to for big combination in the Japan tea trade.

The movement, which had its origin in New York, has, as its p the formation of a company with a capital of $3,000,000, the i being to do away with the current competition in the Japan trade, which forces buyers to purchase at high prices in Japan then later sell at a loss.

It appears that the chief object of the combination is to do a with the ruinous competition which the trade has recently b undergoing, and which has placed Japan tea at a distinct disad tage with the China and other teas which are fired and pac by natives.

The exigencies of competition have forced the trade to buy fr the Japanese at high prices and to sell at low prices. This particularly the case during the month of May—the opening of new season—when it is necessary to duplicate the exceedin choice samples, which can only be secured very early in the sea The extremely active competition for these grades enables

THE ART OF SINCING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, ot have no effect, and none do good. Sugar and water, or a little glycerine, g relief when the throat is inclined to be dry; this applies to persons whose thr are affected by the weather. About a third of a teaspoonful of Condy's Flui a tumbler of water, if used as a gargle every morning, will clear the throat brace up the uvula, which, in some singers, is so long that it interrupts the p emission of the voice, and introduces a grating undertone, while it also tend make a tremolo on the upper notes."—*The Idler*, February, 1900.

apanese to fix fancy prices, and the buyers have the added nducement to take all the choice grades of the early supplies, for he reason that the Japanese will then consign any surplus of these grades to this market to be sold in competition with the regular mporters.

The active competition in securing supplies of Japan teas results rom the fact that the offerings must be accepted with virtually o delay. The teas are in perishable shape and must be immediately fired and packed by the purchaser. As the supplies of the "cream" of Japanese teas may be purchased only at the beginning f the season and as the various buyers have customers for special ines of teas which can be obtained only at that period, it will be readily seen that the Japanese have excellent facilities at hand to secure favorable first prices.

The present plan is, therefore, to incorporate a regular company, having a capital of $3,000,000 or more, which shall be subscribed on an equitable basis by the various interests of the trade, including Japanese. American, and Canadian houses. Of the capital, $1,500,000 will be 8 per cent. preferred stock, and the balance will be common stock.

GUTTA PERCHA AND RUBBER.

M. A. Godefroy Leboeuf writes under date Paris, May 25th, to the *Ceylon Observer* :—

You will receive by this mail a little sample of Gutta Percha; submit it to any expert and he will report—'Gutta Percha fine quality. And yet, I can certify that neither *Dichopsis, Palaquium, Isonandra, Payena,* nor any other plant yielding Gutta Percha has anything to do with this sample.

This little sample is perhaps the solution of an urgent problem, the certitude of the supply of this substance for the future. All the Gutta Percha yielders from the "Insulande" are localised, and the crop will be quickly exhausted Their product is slowly obtained; the trees require four years and more and give 1 or 2 lb of marketable gum. The extraction from the leaves has proved till now a failure, and has not been accepted by the manufacturer of electric cables; extraction from the bark is on trial and I cannot say anything about it yet.

But chemists have recognised the presence of gutta percha in a number of plants growing in all parts of the tropical world. All the *Mimusops* contain Gutta; and *M Balata* and *M Globosa* are reported to yield 60 to 70 per cent. of pure Gutta in the gum. *M Schimperi* of Abyssinia and very probably the species from Asia, contains a limited quantity of the product. I know that other *Sapotaceous* plants and a few *Euphorbiaceous* are in the same case. The sample I send you has been obtained from Balata, *Mimusops Balata.*

I do not know the process, but I know it is a very simple and economical one. One kilo of Balata gives 700 grammes of Gutta. As the sample is valued at 7 francs per kilo, one can obtain 700 grammes of a substance easily sold at 14 francs for 700 grammes or 20 frs. per kilo. The chemist says that, all expenses paid, the kilo comes out at 12 to 12½ francs the kilo. This sample is sold here at a much higher price, for 30 francs have been paid in every case, so you can judge of the commercial value of the substance.

But just now I write with another point in view. I write only to planters, and I say all the gutta-yielders actually known are trees, slow-growing, requiring a special soil and climate, and very few will try the culture of these trees out of the regions where nature has sown *Dichopsis Isonandra, etc.*

But amongst the numerous species containing gutta, mixed with other substances, many are easy to propagate and to grow in very varied conditions of temperature, soil, and moisture. So it will be of enormous interest to know what percentage of Gutta all these plants contain, and to see beforehand if the culture can be remunerative. Till now the process has been a secret, but I believe it will not be so far long. But never mind, if this gutta-yielder becomes the subject of great enterprise, Balata gum will jump high, so the grower will be interested in trying some other gutta-yielders. Balata (*Mimusops Balata*) is a tree more easily grown than *Isonandra* or others from the same region, and other sorts of Mimusops are largely spread over the world.

Any chemist will give you the percentage of true gutta the trees contain; do not take any notice if the chemist says it will be too expensive to isolate the gutta. My inventor says that his process allows him to make a profit from the gums containing only 10 per cent. of true gutta. But we will speak of that again some day or other.

I received a few days ago two plants in a very bad state from the centre of the Orenoque region. One of these plants has begun to show a few leaves and I was very ashamed when I identified it with the numerous varieties of *Sapium Biglandulosum.* The travellers reported:—Big tree, yielding a large quantity of the rubber exported under the name of Pará rubber.

I know that Pará rubber is not the product of *Hevea* alone, and an Englishman sent me a few years ago a sample of rubber made from *Micrandra.* But *Sapium* from the hot countries has always been reported to yield rubber of very inferior quality. Strange to say, I have had in my hands plants collected by one of my collectors, M. Guillot, from English Guiana, known by such an authority as Mr. Jenmann as a bad yielder; others from Columbia, giving the virgin Caucho known as a very fine sort: others from Ecuador, just at the limit where the *Castilloa* is met: all these sorts are exactly the same in general appearance. But the area where *Sapium* gives good rubber is immense, nearly as large as its competitors, *Hevea* or *Castilloa.*

I have not been able till now to identify that new Rubber-yielder from San Luiz Potosi, Mexico. I know that the plant is a very common one in all the dry countries of the Mexican region, but I do not know its botanical name. My correspondent told me that the plant was known under the name of *Synanthera prepennia*, but Synanthera is not the name of a botanical genus, so I believe this species has been determined as a plant of the Synanthera family, which will also be called part of the "compositæ" family. The sample I have had in hand is really a plant of this family, but I have not had any flower, so I can say nothing more. As the region where the plant grows presents many plants suitable for the dry countries of North Africa, it has great interest for us.

After many trials I have received in good order seeds of the *Mangraba* rubber (*Ilencornia speciosa*). These reached me in the forests packed in saw-dust, but I believe it will never pay to import the seeds. All insects are fond of these seeds, and I have been obliged to place the pots on supports with the feet of these supports in Lysol to avoid the incursions of ants. It is a common proceeding in your countries, but not here. The seeds begin to germinate in a few days. The plants remain very delicate in our houses, but are easily propagated by cuttings.

I trust some of your planters will be enterprising and kind enough to send me through you a few samples of the gum from *sapotaceous* plants from your fine country, and if possible latex from the same. The latter must be packed in bottles mixed with 2 per cent. of formol. I believe that will be sufficient for avoiding the coagulation of the latex, for I can do nothing with coagulated latex.

[The following are the trees of the order *Sapotaceæ*, mentioned in Trimen's "Hand-book of the Flora of Ceylon," of which the author says that "all contain a milky juice, which after evaporation of its liquid portion, affords that variety of Caoutchouc known as Guttapercha:—(1) Chrysophyllum; (2) Sideroxylon; (3) Isonandra; (4) Bassia; (5) Palaquium and (6) Mimusops—Ed. *C. O.*]

NEW MARKETS FOR INDIAN TEA.

PERSIA.

Mr. E. G. Foley writes to the *Pioneer* from Seistan :—

I read with great interest your article in your issue of the 8th instant, which arrived two days after my arrival here—the "warning" against competition in sending caravans with tea into a new market like Persia under irresponsible or rather separate and conflicting interests. On my arrival here on the 27th ultimo, I had learnt that the Dehra Dun planters were sending up to Persia about 20,000 lbs. of tea, presumably that which had been sent up by two of their community to Quetta as far back as last February, or early in March, but had remained unsold for want of purchasers, and that one of the planters from the Dun was coming up in charge of it. I remarked to our Consul here the danger of these "expeditions," working irrespective of each other which would eventually end in a suicidal policy fatal to all concerned and which would benefit no one but the Persians—who are astute enough to sit tight and await the lowest bids. The object of the Indian Tea Associa-

tion is to see as much tea as possible diverted from the Calcutta and London markets and to attain this object to co-operate and work conjointly with all other Associations or Syndicates. On my way up to Persia I visited the Dun and saw all the leading planters and some of the Directors of the two Limited Companies, and explained to them that the intentions of the Indian Tea Association were by no means hostile and as a proof offered to take up with me samples of their tea to Persia to be shown round to intending purchasers, exactly the same as the samples of Assam and some Kangra Valley green teas with which I had been furnished. I saw the Honorary Secretary of the Dehra Dun Planters' Association, who is an old friend of mine and an Assam planter originally and for whom I officiated last season when he went Home on furlough and asked him for some samples to take up with me, but was informed they were not available then. In spite of this explanation to correct the misapprehension of the intentions of the I. T. A. a most virulent and spiteful and unprovoked letter appeared in the *Mussoorie Times* of the 8th March, not only as regards myself, but as to the intentions of the I. T. A. It was absolutely without foundation and contained a deal of braggadacio, as to the Dun being able to hold its own and more against all competition, owing to the cheapness of its labour, etc. The letter was signed "Planter," evidently the writer was ashamed to add his name to it. The writer apparently is not aware of the fact that there are gardens in Sylhet and the Dooars that land their tea in Calcutta at under 3 annas per lb., that some of these gardens turn out a yield, of from 800 to 1,200 lbs. per acre! In the Dun there are only three gardens that yield over 600 lbs. per acre. All the others turn out between 300 and 400 lbs. only per acre, the total crop of the Dun being under 1½ million lbs. The tea properties in the Dun are year by year steadily falling into the hands of native proprietors, and even in the two Limited Companies, comprising about 1,800 acres, nearly one-half of the total area under tea in the Dun, the native element is very strong, a large number of shares in each being held by them. In one a native has been on the directorate for several years and no doubt in time we shall possibly see natives having all the say in both these Companies by acquiring the majority of shares —which mean votes. This seems rather a digression on my part, but it is intended to show how a very small section of a community can wreck an undertaking meant for the benefit of all by holding aloof and working selfishly and adversely, a course of action which must ultimately end in their own loss if not ruin as well. To open up a new and unknown market like Persia it behoves all those concerned to work amicably and harmoniously and to co-operate and work together in a friendly spirit and to the best advantage and to combine and so overcome all difficulties. My intention has all along been—to which end I am now working and I think successfully in a measure—*not* to interfere or compete with the traders who bring Indian teas into Persia, by bringing up rival caravans, but to utilise these men as much as possible and induce others to take up the business as well by offering them facilities for obtaining their purchases at a reasonable price in British territory, and leaving to them the larger margin of profit and *risk* in selling in Persia. To put these men's backs up will lead to a combination on their part and a European with a caravan of tea might find himself stranded so that he might ultimately have to sell at the price offered by the "combination"; as they know it is not worth his while to take the tea back to India. It is to guard against a contingency of this kind and for fixing a price, that co-operation is absolutely essential—and I hope all those who contemplate sending caravans of tea will work together in a friendly spirit and to one end.

THE NATIVE ARMY.

Mr. Foley also writes:—

I see in your paper of the 5th ultimo an article from the pen of that versatile gentleman Mr. J. B. Leslie-Rogers "The Native Army and Indian Tea" wherein he condescendingly notices my communication to the Viceroy on the same subject and patronisingly says:—"Mr. Foley beyond these slight misconceptions is to be commended for bringing the matter before the public." I am glad to see that my views have met with the approval of so great an authority as Mr. Leslie-Rogers—who also remarks, "the writer, who has I hear recently visited the Dun, appears to have received his inspiration from the many previous experiences of that District in this matter." To this I can confidently and conscientiously reply that neither during my short visit to the Dun on my way up to Persia or my two seasons in the Dun as officiating Manager of the two properties of the Dehra Dun Tea Company, Limited, for wh services I hold a testimonial from the Directors of the Company, did I learn anything new, but—perhaps it is bet left unsaid. The idea of compressed tea is very old—as far ba as 1872, I remember a Cachar planter selling out of his intere in tea, going Home and investing the proceeds in tea compre ing machinery. He dropped £2,000 over it and returned tea planting. I also saw and drank China-brick tea in the ea sixties which a friend of mine used to get from China or rat from the Portuguese settlement of Macao. We also know t Davidson of Sirocco fame invented a machine for compressing into packets—samples of which were sent to nearly all those usi his tea-drying and other machines. No the idea is by no mean new one, but the kind which I advocate for use in the Army a Navy is what was given to me as a sample by the Chairman of Indian Tea Association to whose firm samples of the same we sent out only lately, the process employed for compressing bei quite different to any hitherto tried. With regard to the objectio of the Indian Army on natives in general using it, I enclose views on this as well as other subjects as laid before the As ciation, showing how this might be got over.

THE SALE OF TEA IN INDIA.

It is with great satisfaction that all interested in the tea indust will learn that tea to the extent of nearly 600,000 lbs, has now be guaranteed, by Companies and proprietors, to the scheme for tending the sale of tea in India, which is being promoted by t Indian Tea Association. The names of the principal contributo with the quantities promised are as follows:—

Companies represented by:—

		lbs.
Messrs.	Finlay, Muir & Co.	204,912
,,	Andrew, Yule & Co.	100,000
,,	Macneill & Co.	80,000
,,	Octavius, Steel & Co.	67,000
,,	W. S. Cresswell & Co.	23,920
,,	Barry & Co....	12,200
,,	Williamson, Magor & Co.	11,080
,,	Balmer, Lawrie & Co.	8,200
Mr.	C. A. Stewart	7,200
Messrs.	Davenport & Co.	5,950
,,	McLeod & Co., (one Company)	4,000

THE COFFEE SITUATION.

The coffee market is very sensitive to the slightest influence a favourable character, but to "bearish" developments it respon very sluggishly and stubbornly. These characteristics have be noticeable for months, and they are as marked as ever, now that new Brazil crop of enormous proportions is only a few weeks dista and the visible supply of the world is more than seven million bag

During the month of April the visible supply of the world fe away 53,165 bags, a less reduction than was expected in son "bull" quarters, but it was sufficient to impart a steady tone to t market, notwithstanding that the American warehouse deliveri for the ten months of the present crop year fall behind the deliveri for the corresponding period of last year, although there was considerable gain last month over April, 1900. For the ten mont of 1901 the deliveries were 4,787,715 bags against 5,233,799 bags the ten months of 1900.

The world's visible supply on May 1st was 7,359,112 bag distributed as is shown in the table below. A few years ago suc a quantity would have forced prices to unheard of depths, for it larger than the total Rio and Santos crop in any year precedi 1891-2. It is also larger than the crop in any year between 1891 and 1896-7.

Now, we not only must expect to see a seven million visible pply on July 1st next, the beginning of the new crop year, but so one of the largest crops ever gathered. How the market ands up so well under the prospect is a mystery.

The following table shows the visible supply of coffee in the orld:—

			Bags.
Stocks in Europe			3,876,254
Rio			272,000

The Merchants' Review.

CEYLON TEAS FOR AMERICA AND CANADA.

Writing on 7th ultimo, Mr. Wm. Mackenzie sends from ondon :—

I send copy of letter just received from Mr. Estabanks of New unswick, on the subject of Ceylon Greens in Canada, and a letter om New York, which gives wise advice on the manner in which ose greens should be prepared. He remarks:—

How often during the last six years have I pointed out the fatal itish error of trying to convert a nation—instead of following e line of least resistance and giving Americans what they drink d want? For years profits were too large. No one would listen. t the last 18 months must have brought wisdom to some. And t millions of pounds of Ceylon *Blacks* have been sold lately at s than 4¾d.—aye, large quantities at less than 4½d., which, as *eens*, would have fetched 6d. to 6½d. in America; would have ened a market there; and would have received a bonus of 1d. per

Is it impossible to devise a scheme whereby, under the control the Committee, 50,000 lbs. per week should be manufactured as een tea, blended to standards in Colombo, packed similarly to pan consigned to one broker in each of the cities of New York, ooklyn, Chicago, Buffalo, Montreal, and Toronto? These teas uld be held for a fair price, and if a slight loss were incurred ring the first year, Ceylon Planters could cover it. On 2½ llions at 1d. per lb. the loss would be £10,000. At present there ed be no loss as compared with the 4¾d. gross for huge weekly es of Black teas; there would be a large gain at even 5½ in New rk. Am I exaggerating in saying that, during this year, half e Ceylon crop, say 70,000,000 lbs. will be sold one penny below r value, owing to over-production giving a few dealers here the portunity of combining not to compete at the sales? If not, e loss on that quantity of tea will be £280,000. A small propor- n of that sum would give us another market—that for greens— d enable Ceylon to take the reins in its own business, instead of owing it to drift—a helpless prey to wreckers. Combine— gulate the supply of greens; sell through agents who do not ash prices to please their friends, the dealers, in America, and gust the growers. The present *fitful* method of supply is not ing us much good, as, see the third letter from a Toronto broker, ich also shows in a lively manner, how keen the demand for our eens is in Ontario. I have also several letters from New York, nplaining bitterly of the falling off in supply. One broker had ated a good demand; had many orders for teas expected; t, owing to failure of supply, had to throw up the sponge. Another made a market for the tea of a certain estate; sold several shipments of it; wired twice for more; but did not even have the courtesy of a reply. He writes:—"Ceylon people should take advantage of the growing demand, and not look too closely at the returns for the moment. The Japan men are very sick." The returns would be better than are yielded by 4¾d. in London.

William Mackenzie, Esq., 39, Netherhall Gardens, Hampstead, London, England.

DEAR SIRS,—After a careful investigation we believe that Ceylon Greens stand a good chance of displacing Japan teas, provided that the special requirements and prejudices of this country are considered and pandered to.

It is hardly necessary to point out to you that the style of package, branding or facing, and the similarity in "style" of the tea are important factors. It may be argued that in course of time the States will become educated to buy tea on its intrinsic merits, and to disregard the appearance of the leaf itself, as well as that of the ungainly package now used in Ceylon and India. Our opinion is that much quicker progress can be made by following the line of least resistance, and making Ceylons to closely imitate Japans in colour, style and package. As you are aware the annual consumption of Japans in the States and Canada is now approximately 40,000,000 lbs. Doubtless this rapid increase in their use has been due in a large measure to the fact that it is the only tea that can be manufactured to a close *match*, i.e. *blend*, hence its extensive use under brands or trade marks. The cost of labor in Japan has risen enormously of late, and if means are found to give the American retailer *what he wants*, we are convinced that much can be done towards increasing the outlet for your teas.

A "firing" establishment should be started in Colombo for the purpose of manufacturing tea to correspond, in appearance and package with pan-fired and basket-fired Japans. The leaf itself could be sent to Colombo in a semi-raw or once-fired state, although doubtless the green tea as it is now marketed could be refired and manipulated to the necessary finish.

We note from London reports that the attempt to curtail supplies by concerted action has virtually failed, and we presume that those you represent will not be adverse to considering other ways and means of relieving the situation. * * *

NEW YORK, *May 23rd* 1901.

Wm. Mackenzie, Esq., 37, Netherhall Gardens, Hampstead, London.

DEAR SIR,—I am pleased to have your favour of the 8th instant, as it shows that even though far away you are following the Canadian business.

Now in reference to my own particular business, and green Ceylons in particular the "proof of the pudding is in the eating." So far I have sold 12,540 pounds of green Ceylons. The quantity that I have received and have *en route*, estimating one chest as two half-chests, equals 512 half-chests. I am not very much ashamed of this as a beginning.

As far as newspaper advertising is concerned, as yet I have done very little, and it is not my intention to do much. I believe other methods of advertising are more effective considering the amount of money spent. What I have got better results from so far are large samples and personal letters mailed direct to the consumers. I propose following this up for a good many months hence. Those who get red rose tea know that it is Ceylon and Indian, and later I will have something to say in the press concerning Ceylon and Indian teas.

What will interest you even more, I am sure, are the following reports concerning green Ceylons. One of my travellers sends in the following reports in a recent letter:—

"M———— is selling and sampling Ceylon greens and says his customers are asking for it a second time."

"M———— My reports in *re* Ceylon greens are favourable. I find some Ceylon greens in nearly every stove and the merchants are all in favor of handling it and I have not seen anyone who has heard unfavourable reports from their customers.

From an entirely different section of country I had similar reports from another traveller and have had numerous repeat orders.

All my travellers have special instructions to canvas Ceylon greens against Japans, and they are meeting with more success so far than I expected.

I was in Toronto and Montreal recently and in the latter place I found a very different tone concerning Ceylon greens than when I was there in March in your Company. The merchants I saw seem interested in these teas, and are now rather of the opinion that they are worthy of some attention. If the price is kept below Japans, and the Ceylon Government will continue a liberal appropriation for the advertising of these teas, I believe they will make rapid strides.

Following is an extract from a letter written Messrs. Rodewald and Heath recently:—

"In Toronto, the opinion as far as I gathered, was that if prices are kept quite a bit below Japans, the sale will materially increase and eventually a large part of the Japan business will be displaced by Ceylons. This seems also to be the opinion in Montreal at which I was rather surprised as when I was there in March last, the dealers would hardly talk about Ceylon greens at all. Now they are buying them in limited quantities and seem interested.

"The best reports of all concerning Ceylon greens are in letters just received from my travellers in Ontario, in which they say the consumers are asking the retail dealers for them the second time, and this is making the retail dealers feel that the Tea suits the people who are buying it, and as a consequence they will be much more confident when selling it. The vital points are to suit the consumer and to have the prices so that it is an inducement to both the retailer and jobber to push them. Ceylon greens seem to have both these points in their favour at present. I have very much more cconfidence in the Teas myself than when your Mr. Heath was here, and it seems to me important that your Government should continue subsidy sufficient to encourage the planters to go on producing them. *To stop now would appear to be like stopping just when there was a favourable turn.* You are at liberty to use these remarks in any way you think best."

I hope to have the pleasure of hearing from you often, and any suggestions will have careful consideration, and I hope further the funds at your disposal will allow you to make me an appropriation of $2,000·00 instead of $1,000·00, but I do not want this until you are convinced that the money is being made good use of.—I am, yours very truly,

(Signed) T. H. ESTABANKS.

SAINT JOHN, N.B., *May* 22.

A Toronto broker, writing on 27th May, says:—

There is one phase of this green tea business as hitherto worked by the Ceylon men which strikes me as rather a poor business method to be pursued by men who profess to be trying to capture the American market, and that is the fitful and intermittent way they seem to handle it. Is the Japan tea trade is to be ousted, and Ceylon greens forced into consumption in their stead, then the growers, shippers, or whoever it is whose interests are at stake, should see to it, that these teas are pushed at this end, and that no let up is given to them, now that we have got the thin end of the wedge in. The loss of a cent or two in starting the trade should not deter them from continually pushing them against Japans. There seems to be a disposition to slacken up, if not even to drop the business as soon as the returns shew the slightest loss, Japans will only be displaced by something showing a better value to the consumer, and at least as good a return to the dealer, otherwise what reason is there to undertake all the trouble of revolutionizing the trade from top to bottom.

I lately had a consignment of little over 300 packages of these teas all of which I placed in Hamilton, and had there been 600 they would all have gone, and an amusing incident happened in connection with them which I cannot help relating to you. The teas were sold "to arrive," and are not yet due. I last week happened to be going round through the trade in Hamilton with the representative of a large Philadelphia house, and after our business at Balfour's was ended their buyer said to me "By the way Mr. ————when can we expect those teas to arrive; we want them badly." I told him and we left, we went over to Lucas Steel's and just before leaving Mr. Steel, said "I say, Mr.————, when shall we get those teas that are on the way?" I told him and we left. Going up the street we met W. Duncan of Duncan Bros. with whom we spoke and among other remarks Duncan said "When can we expect to get those Ceylon Greens, Mr.————?" I told him and we went on. My friend said to me "You must have sold those men some very desirable teas they all seem very anxious about them." So I told him what they were and said that I would bet something nearly every house we went into would ask abo same lot of teas. My friend next called on Macpherson Gl and just before we left they began "Oh, I say, (Mr.————,) shall we see those teas to arrive?" My friend and I both beg smile, and Glassco said "What are you laughing at?" So we him what had previously happened, and all laughed over the inci From there we went to James Turner's and to Gillard & Co. same thing happening in both of them, also much to the an ment of us all. Now I think that this was not a bad advertise for Ceylon Greens to be given to a Yankee and certainly go show that these teas are beginning to move fairly well among jobbers, who are certainly not reaping where *they* have sown, are now coming in for a portion of the benefits resulting from Salada Company's persistent advertising.

WM. MACKENZIE.

[The jobbers, however, did not buy those greens until I them the canisters, notwithstanding the advertising.—W. McK

DISTRICT ASSOCIATIONS.

NELLIAMPATHY.

Proceedings of Meeting of Nelliampathy Planters' Ass ation, held on June 24th, 1901, at the Alexandra bunga PRESENT:—Messrs. J. B. Burnett, P. W. E. Watts, Barnes, A. R. Jones, H. de Courcy Denny, W. L. Rank A. G. Murray, J. C. Abbott, *in the chair*, and G. Welchman, *Acting Honorary Secretary*.

Proceedings of last meeting taken as read.

Read correspondence *re* blackmailing of coolies by peons of British Salt and Abkari Department. The Acting Honorary Se tary was instructed to write further on the matter.

Read correspondence *re* Police stationed in Nelliampathy resolution was passed: That the Acting Honorary Secretar instructed to write, thanking the Superintendent of Police fo suggestion that a constable in charge, acceptable to the plan should be appointed, and to propose that a pensioned sepo employed, subject to the approval of the Sircar.

Also to write and thank the Peishcar for his enquiries into conduct of the Police previously stationed in the hills.

Read correspondence *re* site for infectious diseases ward. Jones said that he would recommend the Proprietors of Pa gherry to sanction site suggested by Resident Medical Officer.

Read correspondence *re* bridges and noted with satisfaction the bridge complained of in letter of March 23rd had been pu hand. The Acting Honorary Secretary was requested to draw attention of the Chief Engineer of Cochin to the state of the proaches to the bridge on the Sircar road near the Pardagh nursery, opposite bazaar.

Read correspondence from Dewan's office sanctioning forma of Sanitary Board. Recorded with satisfaction.

Read letter from President, Sanitary Board, requesting plan to report infectious cases and to place their cooly lines under supervision of the Board. The Acting Honorary Secretary instructed to write that members of the Association would gl comply with the first request but considered the latter inadvisa

Read correspondence of U. P. A. S. I. and S. I. Railway *re* c freights. The Association regrets that the reduction of frei by rail cannot be considered by the Railway Companies.

Read circular from U. P. A. S. I. *re* acreage statistics, and n bers promised to send same at an early date.

Read correspondence *re* French tariffs.

Read letter from Honorary Secretaries, Victoria Memorial F Resolved that a sum of Rs. 50 (fifty) be subscribed from funds of the Association.

Acting Honorary Secretary was instructed to write regret that the list sent by the Honorary Secretaries of the Vict Memorial Fund had not been received and that in view of bad times the Association could not subscribe a larger amoun

The Acting Honorary Secretary was instructed to write to Planting member requesting him to draw the attention of Government to the need of a larger allotment on road to Palgh

The Acting Honorary Secretary was requested to act as dele

the ensuing Conference in Bangalore, and if unable to go to find ubstitute.

Mr. Barnes gave notice that three months from date he would ng forward a resolution to reduce the rates of coolies' pay.

Proceedings terminated with a vote of thanks to the Chair.

(Signed) J. C. ABBOTT,
Chairman
G. H. WELCHMAN,
Ag. Honorary Secretary.

A STORY OF THE CENTURY.

Here is a quotation from an old friend of mine and of yours—a ctor, one of the wisest, most kindly-hearted, and successful of the en who compose his useful profession.

"One thing," he says, "I have been telling my patients for the st forty years, that, so far at least as the science of medicine is ncerned, the human mind is merely a name for a group of brain nctions. The food in the blood acts chemically upon certain rve centres, and this is mysteriously worked up into what we call ason. In other words, the condition of the mind depends upon at of the body.

"For example," continues the doctor, "there are people who are oubled by irritability, great mental depression, sleeplessness, ental hallucination, and those symptoms expressed by the general rm '*nervousness*' (and who also fear insanity), who might either oid such sufferings or be cured in a month, if they but knew that the bottom of the whole business lie the poisonous products of perfect digestion. *Ninety per cent. of all the cases of mental and rvous ailments in persons under fifty are directly due to dyspepsia.*"

Now we will listen to Mr. George Bath.

"For many years," he says, "my life was marred and spoilt by digestion. At first only slight, the attacks became more and ore severe as the years rolled by, until at last I was a mere ysical wreck, a ready prey for every disease. My head was cked with pain, fierce darting, stabbing, rending pains, that most drove me frantic. I had no relish for food, and what morsel did swallow filled my body with wind and caused a most oppres- e sense of fulness on the chest.

"What with a distressing sense of sinking in the stomach, and constant feeling of sickness, through the foul state of my tongue, elt, as I looked, 'of all men most miserable.'

"This wretched existence—it wasn't life—I dragged on for *twenty ars* with just a short respite now and then Each year the disease ghtened its grip, sapping my strength and vitality. Doctors amined me and gave me medicine. They lightened my purse t not my ills. At times I turned quite dizzy and faint, and got nervous and depressed that I scarcely dared venture out of doors. 'My whole nervous system seemed unstrun; the slightest noise stressed me. Why, the ticking of a clock, in *another room*, was fficient to keep me awake for hours, and a knock at the door uld make me jump and tremble all over.

'Friends shook their heads as they saw me tottering about more ad than alive, and said 'Bath has not long to live, poor fellow.' at was six years ago, but I'm alive still and very much alive too. hy, I seem to be getting younger every day. Though I am now venty years of age, I am so brimful of energy and animal spirits at I feel equal to anything. It was Seigel's Syrup that wrought e change, nothing else; I owe my life to its wonderful power.

'Now, forty clocks ticking wouldn't spoil my sleep, and food ust be very indigestible indeed to upset me. I would rather lose 0 than be without Seigel's Syrup, for it has made a man of me, d added years of happiness to my life." George Bath, Trefusis lla, Windmill Road, New Brompton, Kent. April 25th, 1900.

No word of the writer's can add one jot or tittle to Mr. Bath's nk and eloquent statement, the truth of which is vouched for by ny independent witnesses, among them being Mr. John Scrace, lieving Officer, Medway Union, Chatham, and Mr. A. Durrant, ort Street, Luton Road, Chatham, to both of whom Mr. Bath is rsonally known.

Now turn back to the quotation from the old doctor, and you ll learn what Mr. Bath's disease was. No, never mind, I will set down here—it was dyspepsia. Oh, if my voice could but reach the suffering men and women in dear old England, how I would out to them the old doctor's deep saying and the story of Mr. th's illness and cure. But, as it is, we must take the chances heir seeing this report in print.

MARKET REPORT.

[*Per Mail advices of 14th June* 1901.]

COFFEE.

The London Commercial Record says:—Since our last a generally flat tone has prevailed in this market, and a considerable proportion of the supplies offered at auction was withdrawn in the absence adequate bids, and where sales were made prices show a decline of 1s per cwt. A few lots of Ceylon sold at fair prices. "Futures" have been dull and prices are rather easier. Yesterday September delivery sold at 29s 9d to 29s 10½d, December at 30s to 30s 3d, March at 30s 7½d to 30s 9d, and May at 31s 3d to 31s 1½d per cwt.

London ...	... Santos ...	July delivery	... 29s 6d.
New York	... No. 7 Rio...	,,	... 5·10 cents.
Hamburg...	... Santos ...	,,	... 29¼ pf.
Havre ...	... Santos ...	,,	... 36¼ francs.

Auctions to-day offered 961 bags East India, 3,469 bags Costa Rica, 755 bags Guatemala, 511 bags Salvador 30 bags Venezuelan, 31 bags Columbian, 217 bags Nicaragua, 80 bags Mexican, and 26 bags Bolivian. The auctions passed off flatly and the bulk of the quantity offered had to be bought in. Any disposition shown to sell would have resulted in a further decline.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	Stock.		Imports.	
	1901.	1900.	1901.	1900.
Tons ...	23,554	19,953	29,971	23,005
	Home Consumption.		**Export.**	
	1901.	1900.	1901.	1900.
Tons ...	9,703	8,301	12,459	9,493

The preceding figures exhibit—

	Tons.
In the Imports an increase this year of	6,866
Home Consumption an increase of	1,402
Export an increase of	2,966
Stock an increase of	3,601

The following are the results of this week's auctions, *viz.*:—

CEYLON.—*Plantation.*—1 cask 7 tierces 3 barrels 3 bags partly sold, middling to good bold 85s to 99s, peaberry 60.

EAST INDIA. - 4,943 bags partly sold as follows:—*Mysore*, smalls 34s 6d to 41s, low middling to middling 43s to 53s, bold 60s to 79s 6d, peaberry 46s 6d to 65s; *Coorg*, smalls 35s to 39s, low middling to good middling 42s to 53s 6d, bold 70s 6d, peaberry 52s to 55s; *Travancore*, smalls 35s to 39s 6d, bold 61s, peaberry 46s 6d to 63s; *Peermaad*, smalls 37s 6d, middling 43s, peaberry 49s; *Wynaad*, smalls 34s to 36s, low middling 39s to 39s 6d, peaberry 47s; *Naidoobarum*, smalls 39s, middling 50s, bold 66s.

JAMAICA.—Of 6 casks 272 barrels 97 bags offered 120 packages sold - small greenish 34s, ordinary to good ordinary greenish 31s 6d to 38s, middling 48s to 51s 6d, bold 61s, peaberry 45s to 46s.

COSTA RICA.—Of 9,368 bags catalogued about 3,650 bags sold—smalls 33s to 44s 6d, good ordinary brownish 36s 6d to 38s 6d, fine ordinary 41s, low middling to middling 42s to 49s 6d, good to fine middling 51s 6d to 62s, bold 58s 6d to 78s 6d, peaberry 43s to 77s 6d.

GUATEMALA.—2,698 bags offered and 1,700 bags sold—smalls 33s to 38s, good ordinary 38s 6d, fine ordinary foxy 41s to 47s, low middling 42s to 42s 6d, middling to good middling 44s to 50s, bold 60s to 66s, peaberry 45s to 52s 6d.

SALVADOR.—1,799 bags offered and 1,100 bags sold—smalls 32s to 37s 6d, low middling to middling 40s to 47s, good middling 53s 6d to 54s, bold 50s to 61s, peaberry 40s to 54s 6d.

NICARAGUA.—213 bags sold, smalls 33s, good ordinary 36s, low middling to middling 40s 6d to 45s 6d, peaberry 42s to 50s.

COLOMBIAN.—661 bags damaged bulked mostly sold, smalls 32s 6d to 34s, ordinary to good ordinary greenish 31s 6d to 39s, low middling to middling 42s to 48s, bold 53s 6d, peaberry 41s to 49s.

MEXICAN.—812 bags partly sold, smalls 32s to 37s, low middling to middling 41s 6d to 44s 6d, bold 44s 6d, peaberry 40s to 50s.

BRAZIL.—200 bags Santos, quay terms were bought in.

Receipts in Rio and Santos.

Rio Exchange 11$\frac{3}{32}$d, previous day 11$\frac{1}{2}$d.

HAVRE, *June* 13.—Good average Santos June opened quiet at 35$\frac{3}{4}$f. and closed barely steady at 36f., September opened at 36$\frac{1}{2}$f. and closed at 36$\frac{3}{4}$f., December opened at 37f. and closed at 37$\frac{1}{4}$f., March opened at 37$\frac{1}{2}$f. and closed at 37$\frac{3}{4}$f.

HAMBURG, *June* 13.—Good average Santos June opened quiet at 29$\frac{1}{4}$pf. and closed steady at 29$\frac{1}{4}$pf., September opened at 30pf. and closed at 29$\frac{3}{4}$pf., December opened at 30$\frac{1}{2}$pf. and closed at 30$\frac{1}{2}$pf., March opened at 31$\frac{1}{4}$pf. and closed at 31$\frac{1}{4}$pf.

NEW YORK, *June* 13.—Closing prices of No. 7 Rio were as follow:—

	June.	July.	Aug.	Sept.	Oct.
June 13...	5·10	5·10	5·15	5·25	5·30
June 12...	5·10	5·10	5·15	5·25	5·30

TEA.

INDIAN.—Auctions were rather heavier, comprising 13,900 packages, of which 138 packages were New Season's, compared with 9,500 packages (69 New Season's) on the 3rd instant.

There was an improved competition for almost all kinds, common grades being taken up somewhat more freely. The few new teas offered were of ordinary quality, and did not attract much attention.

Exports from this country continue to indicate a substantial increase on those of previous years, as will be seen by the figures given below, and are gradually assuming an important place in the trade of the United Kingdom.

CEYLON.—Public sales were on a larger seale, totalling 32,000 packages, spread over Tuesday and Wednesday, contrasted with 27,700 packages in the week before.

Pekoe Souchongs and Pekoes up to 5d per lb. were in better request and brought steady rates. but medium leafy sorts were not so well supported either by dealers or shippers, and sold irregularly and in many cases easier. Broken Pekoes under 7d per lb. often marked a decline but the better liquoring lines ruled generally firm, while the finest breaks elicited brisker bidding and showed an upward tendency.

Business with outside markets is expanding, partly no doubt fostered by the low prices current here.

The average is the same as on the 6th instant, *viz.*, 6$\frac{1}{2}$d per lb. On the 14th June, 1900, it was 6$\frac{3}{4}$d per lb.

JAVA.—Nearly 800 packages of direct import were submitted to the trade, and passed with spirit at fully former quotations.

Deliveries.—The clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 11th June, 1901 ... ... 3,750,554 lbs.
Do. do. 1900 ... ... 4,230,560 „

During the fortnight the following have been printed for sale by public auction:—

	Sold. Pkgs.	Withdrawn. Pkgs.	Total offered. Pkgs.
India	12,250	1,666	13,916
Ceylon	28,518	3,569	32,087
Java	639	158	797
Total ...	41,407	5,493	46,800

Also 914 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated June 14th, 1901, says:—

32,420 „ CEYLON
1,010 „ JAVA
} Total 47,992 packages were offered in public auction this week.

GREEN AND UNCOLOURED TEA.—Intelligence from America appears to indicate a passing away of the recent depression in this class of tea, which was caused mainly by the sudden increase in production of green tea from Ceylon, which led to a tempo over-supply.

There are now evidences of a readiness on the part of buye operate more freely in such kinds of Indian and Ceylon tea as prove suitable to the American taste.

If this important outlet could be captured by India and Ce it would doubtless materially relieve the congested state of black tea market.

INDIAN.—The small quantity brought forward passed wit change in prices. 366 last of the season's Invoices have been to date, campared with 400 the same time last year. The only season's tea brought to auction this week comprised 28 pack from the "Hukanpukri," 129 packages from the "Panitola" gar of the Jokai T Co., and 81 packages from the "Nurbong" Esta

Week's average of New Season's tea sold on Garden Account 138 pkgs., av. 6·62d. 1900, 751 pkgs., av. 6·61d.

CEYLON.—The heavy auction, which was divided between Tue and Wednesday, passed with good competition at steady rate all descriptions, better grades being perhaps in strongest dema

Average for week 6·44d., against 6·74 same period 1900.

Ceylon tea sold on Garden Account 1st January to date, 565 pkgs., av. 6·62d. 1900, 569,573 pkgs., av. 7·36d.

JAVA.—Amongst the Javas 751 packages were of direct imp and mostly sold in the room at fairly steady prices; a few sec hand teas were also included in the auction. Catalogues are iss for 3,772 packages to be sold during the next fortnight.

Bank Rate 3 per cent. Exchange on London three months' sigh Calcutta 1/4$\frac{5}{32}$. Colombo 1/4$\frac{3}{16}$.

COCOA.

At public sale on Tuesday, 6,214 bags were brought forward, there was not much activity, and only about 2,100 bags sold, these at generally lower rates. Of 1,431 bags Trinidad sel could only place 200 bags—middling to fine at 70s to 72s 2,214 bags Grenada about half sold—good to fine 64s to 66s, 63s to 63s 6d, common to good common 60s 6d to 62s 6d, being to 1s down. Of 214 bags Jamaica 70 bags sold—fine fermented 6d, common to good 59s to 63s 6d. 32 bags Dominica brought 6d to 63s for common to good. 122 bags St. Lucia partly sol 64s for good red down to 60s for common. 9 bags St. Vin partly sold at 65s for fine and 60s for ordinary. 10 bags Surinam realised 74s. 50 bags red unclayed Venezuelan w placed at 70s. Guayaquil slow, only 50 bags selling, out of bags catalogued, at 66s for reddish Caraquez, and 57s 6d Esmerelda. 175 bags African sold at 55s 6d to 61s for commo fair. Ceylon continues in the dull state recorded for some t past only about 350 bags selling under the hammer, out of 1 bags offered; fine bold and medium red quitted at 87s 6d to 93s dull to fair ditto 60s 6d to 75s, fair to good smalls 48s 6d to 56s blacks 41s 6d to 51s 6d, and collected 58s to 61s per cwt. Priv business embraces 200 bags Trinidad and 300 bags Grenada auction rates, 50 bags Venezuela at 67s to 70s, and about 2,000 b Guayaquil, Caraquez 66s to 67s, winter Arriba 65s to 68s, e summer ditto 69s to 72s 6d, and good red summer 74s 77s per cwt.

PEPPER.

BLACK.—The market has been very quiet this week, and o small sales are recorded, including fair Singapore on the spo 6$\frac{1}{16}$d; for arrival April-May shipment has changed hands at July-September and August-October at 6$\frac{1}{16}$d, and Septem November at 6$\frac{3}{16}$d.

At auction on Wednesday 67 bags Singapore bought in at to 6$\frac{1}{2}$d. Of 112 bags Tellicherry only a few bags of damages s at 5$\frac{5}{8}$d to 5$\frac{3}{4}$d. 20 bags good to fine Mangalore sold at 8$\frac{3}{4}$d to 9 103 bags Ceylon sold at 5$\frac{15}{16}$d for good heavy. Of 79 bags Alep only one lot greyish sold at 5$\frac{7}{8}$d per lb.

To-day dull and no sales mentioned.

There are sellers of Tellicherry to arrive at 55s c.i.f d.w. Lond with buyers at 6d per cwt. less.

For *White* the market continues very quiet, but value is uncha ed. Singapore has been sold on the spot at 9$\frac{5}{16}$d for fair, Penang at 8$\frac{3}{4}$d to 8$\frac{13}{16}$d per lb.

At public sale on the 12th instant 322 bags Singapore bought at 9¼d to 10¼d. 14 bags Ceylon partly sold, small mixed with cks, 8⅞d per lb.

GINGER.

COCHIN.—Cut descriptions sold at steady prices, but washed rough clined 1s to 2s per cwt. 41 cases 846 bags offered and 240 ckages sold—bold rather roughly cut and scraped, slightly limed s, medium and small, with a little bold 55s, medium and small to 46s 6d, tips and smalls 40s, medium and small part bold washed igh 37s 6d to 38s, rather smaller 36s to 37s per cwt.

JAMAICA was in very large supply and but poor demand. 1,598 rrels were offered of which 550 barrels sold—good bright bold s, fair to good 58s to 55s, middling to good middling 40s to 47s , common to good common 36s to 39s per cwt.

ST. LUCIA.—23 barrels fair sold at 34s 6d to 35s per cwt.

CINCHONA.

The auctions of Java cinchona-bark held at Amsterdam on ne 13, consisted of 5,356 bales and 264 cases, weighing 485,826 os., and containing 23,787 kilos. sulphate of quinine. The average percentage of quinine in the manufacturing-bark is 5·55 per cent., against 5·10 per cent. for the auction in May last, and an average of 5·26 per cent. for the ten auctions held in 1900. Of the above quantity 5,147 packages sold at an average unit of 10·45c. per half-kilo., against 10c. per half-kilo. paid at the auctions on May 11. The following were the approximate quantities of quinine purchased by the principal buyers:—English and American factories, who purchased the equivalent of 3,941 kilos.; the Brunswick factory, 4,262 kilos.; the Mannheim and Amsterdam factories, 6,323 kilos.; the Frankfort-on-Main and Stuttgart factories, 4,123 kilos.; and various buyers, 2,769 kilos. The prices paid for the manufacturing-bark ranged from 4c. to 113c. per half-kilo., and druggists' bark from 14¼c. to 63c.

QUININE.

Quinine has had a quiet week, and prices in second hand are practically unchanged. A few thousand ounces have been sold at 1s 4½d for October, and 1s 4¾d for December, while for spot there are sellers 1s 4d per oz. The general desire to await the result of the Amsterdam bark sales has curtailed business this week.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 19th instant. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Munzerabad.

July 8th.—Weather—After a long spell of light rain, the monsoon asserted itself, and gave us an average of above one inch daily throughout last week. *Wind* from the S.-W. very cold and strong. *Works*—Planting, weeding and handling. *Plant diseases*—Borer very virulent. *Interesting item*—The Deputy Commissioner in answering the Balehonnur Planters' Association that the roads were excellent throughout the district, can hardly know what a metalled road should be, or he would not write such nonsense; the road from Hassan to Arsikere is a disgrace and from Hassan to Saklaspur it is worse.

Coorg.

Polli Betta, 10*th July.—Weather*—During the past week the moonoosn was heavy, over six inches of rain having been collected. There is every promise of its continuing heavy this week also. Operations against borer are still being actively prosecuted. Supplying is progressing favourably. Labour is sufficient for present requirements, but places are not so swamped as they were this time last year. There have been no more cases of cholera beyond the imported ones.

INDIAN TEA FOR INDIANS.

One of the most interesting subjects likely to be discussed at the annual meeting of the U. P. A. S. I. this year is that of the development of consumption of Indian tea among Indians. There are various points to be considered. The Indian Tea Association (Calcutta) has a scheme in course of incubation; in all probability, it will be worked by one of the maligned middlemen; the Central Travancore Planters' Association has suggested a scheme, but this appears likely to be merged into another proposed by the Kanan Devan Planters' Association. The first thing to be settled is whether

the working up of demand in Southern India shall be undertaken by the I. T. A. or by a special organization on the South. If the former, details pass beyond the scope of Southern Indian Planters, except in so far as they may succeed in getting one representative or more appointed on any special committee that may be formed to control operations If the latter, there still remains for consideration the questions whether the South Indian organization shall or shall not work in conjunction with the I. T. A. or its agent, and whether financial aid from the I. T. A. shall or shall not be asked for. There are among the first matters to be settled. We cannot but think, that unity of policy is greatly to be desired; but equally necessary to success is independence of action. The object must be the same; the general plan of action should be as uniform as possible, but details must vary according to local conditions, and in the various districts of India, whether North or South, a certain elasticity of system must be admitted, in order that local agents may be free to avail themselves to the uttermost of their experience in regard to methods of working local business.

Assuming that it is decided that the southern portion of the Indian continent shall be worked, whether with or without financial aid from the wealthier northern tea-planters, by a southern organization, it remains to be considered whether this organization shall be distinct from the U. P. A. S. I. This Association cannot work on any lines that would mean a financial profit to itself, for it is incorporated on the lines of an Association not working for profit. It is free nevertheless to do everything in its power for the benefit, financial or otherwise, of District Associations or of planters. At the present time its organization is quite unfitted to cope with special work such as that of pushing demand for tea throughout Southern India; but either this organization can be remodelled to meet the requirements of the day or a separate organization can be established in connection with the body that represents the joint interests of all the District Planting Associations in the South. Yet again it is, of course, possible to form an organization that shall have no direct connection with the U. P. A. S. I. The advantages and disadvantages of the alternative courses will need to be very carefully weighed. The Indian Tea Association, which represents northern planters as the U. P. A. S. I., represents those of the South, is expected to leave the working of its general plan to a firm of merchants. If southern planters decide to work through the U. P. A. that body may take a similar course, or it may decide to proceed differently. It is in no way bound at present, nor is there any reason why it should bind itself, to work out all details on the lines approved by the I. T. A. or those laid down by whomsoever may eventually be appointed as its working agent in regard to the sale of Indian teas in India.

In Indian, as in English, journalism, anonymity is the rule. In the present instance, however, it seems but fair that we should lift the thin veil of anonymity, and declare that these lines are written by the Secretary of the U. P. A. S. I., and that the editorial "we" is identical with the secretarial "I." From this small digression, we return to our sheep, to state our opinion that, in some form or other, however slight, the new scheme should be associated with the U. P. A. Whether the practical working be left to an entirely separate organization that shall merely regard the U. P. A. as its direct principal, to whom reports must be sent and through whom the necessary funds must be obtained; or whether the organization of a working scheme and staff be left to U. P. A.—these are minor points. What we wish to ur that the United Association represents the joint interests District Associations, and that for this reason, also becau the difficulty of arranging for the head of a working sta receive instructions from, and make reports to, diffe District Associations, it is preferable to follow the nort precedent and work through, or in connection with, central body. It seems to us that the elaboration of a w ing scheme must be largely a work of time. Work details as one may at the outset, the apparently simplest may prove to be the most effective if so arranged as to a of expansion and elaboration as necessity arises. The ex to which the agency of the U. P. A. S. I. is to be, or can utilised, is, we venture to say, one of the first points t considered after a general plan of campaign has been deci upon.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S

Production of Coffee in India.

After noting that the figures are imperfect and defect and that, for example, the statistics of the Nilgiri district very imperfect, the Director-General of Statistics reports follows:—

Area.—At the end of 1900 there were 245,405 acres of land u coffee in India, all, with the exception of 387 acres, in South India. The production of coffee is restricted for the most part limited area in the elevated region above the South-Western co the coffee lands of Mysore, Coorg and the Madras districts of M bar and the Nilgiris, comprising 88 per cent of the whole under the plant in India. About 52 per cent. of this area i Mysore, where there were 128,087 acres in 1900, and the plan grown on 99,088 acres, being 40 per cent. of the whole, in British districts of Coorg (68,596 acres), the Nilgiris and Mala (30,492). In Madras there is no extensive cultivation excep these two districts, and in Salem and Madura. Coffee is grown, but on a very restricted scale, in Burma, Assam, Ben and Bombay.

Production.—The fall in prices since 1897 has removed stimulus which had been given for a few years to the furt expansion of the coffee-growing area, while disease has combi with adverse climatic conditions to reduce the yield. The quan produced last year was but little more than half the quan produced ten years ago. Taking 100 to represent the area and duction in 1885, the ratio of yearly increase or decrease is follows:—

	Area.	Product
1885	100	100
1886	97	90
1887	103	109
1888	104	76
1889	110	85
1890	114	63
1891	111	13
1892	110	97
1893	109	109
1894	117	101
1895	119	115
1896	121	75
1897	116	69
1898	118	68
1899	115	50
1900	103	62

Persons employed.—According to the statements there w 22,128 persons permanently, and 91, 685 temporarily, employe the coffee estates in 1900, making a total of 113,813 persons, wh is equal to one person to about 2·16 acres.

Exports and Consumption.—The following figures are the average the ten years ending 1900-01:

	lbs.
dian Coffee—	
Production	30,040,608
Exports	30,163,056
reign Coffee—	
Imports	1,529,819
Exports	737,520

It is of course not the case that exports have exceeded production ring this period; the figures merely illustrate the difficulty of taining an accurate view of an industry when those who are gaged in it think fit to withhold information which is indispens-le in the consideration of any questions affecting the industry. e figures, however, imperfect as they are, indicate that the Indian oducer of coffee has no local market on which he can depend for e consumption of any portion of his production. He is entirely pendent upon the external markets which are contained in the untries mentioned below, these being the principal countries to ich Indian coffee is exported (in lbs):

	1897-98	1898-99
ited Kingdom	12,773,376	17,392,480
ance	8,607,872	9,356,816
ylon	293,888	505,680
atic Turkey and Persia	863,856	131,264
stralia	199,024	265,440
abia	630,896	229,488
rmany	297,584	618,688
stria-Hungary	591,360	1,023,568
	1899-1900	1900-01
ited Kingdom	17,640,000	15,678,768
ance	10,847,536	8,430,016
ylon	1,224,272	1,088,528
atic Turkey and Persia	137,984	610,288
stralia	272,496	447,104
abia	85,232	274,960
rmany	292,544	126,560
stria-Hungary	298,704	123,312

As France takes on an average about a third of the whole quan-y exported, it is obvious that the Indian coffee producer has an timate interest in the outcome of the question at present under scussion of the application to Indian coffee into France of a rate duty higher than that which is imposed upon Brazilian coffee.

Prices.—Coffee is not sold, as tea is sold, before shipment for port, and therefore there is no Indian quotation of price. The erage prices in London for East Indian plantation coffee since 74 are here subjoined with their variations, taking the price of 74 as the datum=100. Prices dropped last year, as a conse-ence of the great expansion in the production of Brazilian coffee, the lowest level known:—

	Per cwt.		Variation.

* * *

Production of Tea in India.

The Director-General of Statistics reports as follows:—

AREA.

he area under tea in India at the end of 1900 extended over ,487 acres, nearly two-thirds (64·6 per cent.) being in the eys of the Brahmaputra and Surma, which contain as much as 327 acres, namely 204,985 in Assam (the Brahmaputra Valley) and 132,342 in Cachar and Sylhet (the Surma Valley). In extent of cultivation Bengal comes next, the area under tea being 134,572 acres, or 25·8 per cent. of the whole, and a little more than that in the Surma Valley. The production of tea is, therefore, to the extent of nine-tenths of the whole area, limited to the two Provinces of Assam and Bengal.

The principal localities in each Province where tea is grown are these:—

	Acres.
In Assam.	
Surma Valley:—	
Cachar	60,852
Sylhet	71,490
Brahmaputra Valley:—	
Sibsagar	78,422
Lakhimpur	67,509
Darrang	41,708
Nowgong	12,673
Kamrup	3,973
In Bengal.	
Darjiling	50,769
Jalpaiguri	76,278
Chittagong	4,146
Ranchi and Hazaribagh	3,284
In the North-Western Provinces.	
Kumaun	2,921
Dehra Dun	5,134
In the Punjab.	
Kangra	9,645
In Southern India.	
Nilgiris	2,542
Malabar	3,058
Travancore	25,202

There is a small area of 1,479 acres in Upper Burma, but in this Province the leaf which is produced is not made into tea, but is pickled to be eaten by the Burmans, and the area and production may therefore be left out of account. Tea cultivation in India has been mainly concentrated in tracts where a heavy rainfall and a humid and equable climate permit of repeated flushes and pluckings of the leaf. In the valleys of the Brahmaputra and Surma the yield averages about 468 lbs. to the acre; in Jalpaiguri (the Duars) 484 lbs; in Darjiling about 279 lbs; in the North-Western Provinces it is 309 lbs. In Travancore it is stated at 360 lbs. Elsewhere it is much lower. The area under tea has expanded from year to year without a pause during the sixteen years, 1885 to 1900. In 1885 the area was about 284,000 acres; in 1900 it had increased to 522,487 acres, the increase being in the ratio of 84 per cent.

The number of acres added to the tea-growing area each year has been:—

	Acres.		Acres.
1886	14,294	1894	4,688
1887	14,584	1895	15,190
1888	11,524	1896	17,563
1889	9,374	1897	36,838
1890	11,126	1898	31,561
1891	17,610	1899	13,978
1892	12,432	1900	6,829
1893	20,970		

It appears then that as much as about 107,000 acres have been added to the area under tea during the last five years. This area, in full bearing, will yield at least 40 million pounds of tea a year. The plantations vary greatly in size. In Assam, where the industry is mainly carried on by Europeans with ample capital, where fusions of estates have been in progress for some years in view of economy of management, and where most plantations have large unplanted areas attached to them, the area of a plantation averages as much as 1,318 acres. In Bengal the average area of a plantation is 734 acres; in the North-Western Provinces the average falls to 121 acres, while in the Punjab, where natives grow tea extensively in the Kangra Valley, there are only about four acres to each plantation. In Madras the average is about 172 acres, and in Travancore 445 acres.

PRODUCTION.

The quantity of tea produced has increased in much greater ratio than the area under cultivation, for while the area has increased by 84 per cent., the increase in production has been 176 per cent.

Representing the area and production in 1885 by 100 in each case, the ratio of increase is stated below :—

	Area.	Quantity produced.	Actual increase annually in lbs.
1885	100	100	...
1886	105	115	10,899,835
1887	110	129	9,826,270
1888	114	139	7,540,462
1889	117	149	7,250,331
1890	121	156	4,993,531
1891	127	173	11,831,496
1892	132	170	—1,873,628
1893	139	185	10,253,626
1894	141	188	2,465,144
1895	146	200	8,694,783
1896	152	219	13,018,227
1897	165	215	—2,643,846
1898	177	222	3,693,192
1899	182	254	24,322,055
1900	184	276	15,663,209

PERSONS EMPLOYED.

The number of persons employed in the tea industry in 1900 is returned at 621,287 (permanently) and 98,446 (temporarily) or altogether a little below three-quarters of a million (719,733 persons), which would work out to about 1·38 persons to the acre.

EXPORTS AND CONSUMPTION.

The tea produced in India is exported, mainly to the United Kingdom, to the extent of about 96·6 per cent. of the average production The subjoined figures give approximately the quantity of tea consumed in India, the figures representing the average of the last five years.

INDIAN TEA.

Produced	170,509,067 lbs.
Exported	164,634,913 „
Left in India	5,874,154 „

FOREIGN TEA.

Imported	5,801,241 lbs.
Re-exported	2,563,029 „
Left in India	3,238,212 „

Thus more than nine million pounds were left in India on the average, of which 5·87 millions Indian and 3·24 millions foreign, the bulk of the foreign tea being Chinese, though a substantial quantity consists of Ceylon tea. More than a million pounds are purchased annually for the British Army, and a larger quantity must be consumed by the European and Eurasian civil population, as also by natives who, in some of the larger towns, are adopting the tea drinking habit.

The principal markets for Indian tea are stated hereunder, with the quantity exported (in lbs.) to each country in the last three years :—

BY SEA :	1898-99.	1899-1900.	1900-01.
United Kingdom ...	136,245,995	154,161,492	166,171,556
Australia ...	6,305,135	8,362,797	10,438,984
United States & Canada	2,457,880	4,677,797	3,490,451
Persia	3,456,791	1,953,900	2,429,140
Russia	500,889	467,451	772,495
TRANS-FRONTIER :			
Kabul, Kashmir, and other countries on the N.-W. Frontier ...	1,040,704	2,099,328	1,942,640
Other trans-frontier countries	23,968	25,312	25,760

The production of tea in India and Ceylon has increased so much more rapidly than the consumption in the United Kingdom, which is the principal market for these teas, that there has been a heavy fall in price, and the tea industry is at the moment in a position of great embarrassment. Producers are busily engaged seeking relief from the introduction of economies and from the enlargement of markets other than that in the United Kingdom.

PRICES.

The course of prices of tea in Calcutta is illustrated in the appended figures in which the price in March, 1873, is taken as equal to 100. They represent the course of prices of fine Pekoe in January of each year as given by the Bengal Chamber of Commerce It will be observed that the price in January, 1901, fe the lowest level yet known :

1873	100	1888	84
1874	123	1889	77
1875	123	1890	63
1876	136	1891	81
1877	148	1892	71
1878	135	1893	87
1879	129	1894	52
1880	126	1895 ...	97
1881	135	1896	84
1882	126	1897	64
1883	110	1898	61
1884	116	1899	58
1885	90	1900	64
1886	90	1901	45
1887	77		

In the Statistical Department the average prices of the vari descriptions of tea sold at the public sales held in Calcutta dur the tea season have been computed for some years past. Fr these accounts the figures below are taken, being the prices annas and pies per pound of the three descriptions which form largest proportion of the tea sold and the variations in the pri the average price of 1888 being represented by 100 :

	Broken Pekoe. Price.	Pekoe. Price.	Pekoe Souch Price.
	A. P.	A. P.	A. P.
1888	10 3	8 1	6 3
1889	9 9	7 5	5 7
1890	8 10¾	7 2	5 8¼
1891	8 7½	7 0½	5 3⅓
1892	11 3⅓	8 9	6 5¼
1893	9 2⅘	7 2⅔	5 4⅘
1894	11 8	9 4⅘	7 2⅝
1895	9 0	7 3⅘	5 11
1896	8 7¾	6 9 9/10	5 5½
1897	7 5⅝	6 0¾	4 10⅔
1898	7 0	5 8	4 7
1899	6 9¾	5 8¾	5 0⅔
1900	6 0	5 0	4 1⅔

TEA–SUPPLY AND DEMAND.

At the last general meeting of the Dooars Tea Compa Limited, Mr. W. H. Verner expressed in very clear wo what we believe to be the opinion of "the man on Estate" regarding the Tea Crisis. He had first explai that the Company was making tea at a lower cost than ev Then, as regards the Tea industry generally, he remarked "But things seem to me to have gone really from bad worse. We have had against us, and we have still agai us, a largely-increasing output, due to the heavy extensi of new tea which were made during the last decennial per of the century. We have had that difficulty, and we do yet know whether that has reached its climax in 1900 or Then we have had thrown upon us, to add to our troub the increased duty, and that that increased duty cannot to check consumption I think there can be no doubt, must check consumption. However, the real difficulty fac us is that, mainly owing to these large extensions, and pa owing, also, to the very extensive use of manure in Ceyl the supply greatly exceeds the demand. It exceeds it n and the question is whether it will exceed it more this y than it did last year The future is a great conundrum in things, and I cannot answer that conundrum with certai But we have certain things for us. The cheapness of undoubtedly tends to increase consumption, though, of cou the increase which might thereby have been produced be cancelled by the reduction in consumption effected by new duty. Still, we have that effect, that cheaper pr tend strongly to increase the consumption."- Mr. Ver

s not inclined to rely upon cheaper prices alone for the ıch-needed increase of consumption. He took a pessimis- view of prospects of development of demand in foreign ırkets. He admitted that new markets are enlarging very st, yet said:—"In Russia, in Australia, and in America erything appears hopeful as regards British-grown tea, d we have before us—and all persons interested in either dian or Ceylon tea have before them—questions which ay result in the solution of our main difficulties, and that the manufacture of green tea in India and Ceylon." "He so remarked:—"In the United States there are some ,000,000 lbs. of green tea drunk yearly. We have been ccessful there and in Canada in largely substituting our ack teas for the China black teas, and the great problem fore us now, it seems to me, is this—whether we cannot pture a very large portion of the green tea market. There no reason why we should not, as far as I can see. Most cellent green teas have been sent over from Ceylon to merica, and I think that if we work it properly and can ork together we shall very likely find in this the great lution of the present difficulties; that is to say, a large nount of tea which now comes over here as black tea will, e hope, go over to America as green tea, and therefore our arkets will not be flooded."

PROPOSED TEA TRUST IN AMERICA.

Apparently the Japan Tea Trust has caused some excitement nong our American cousins interested in tea. Mr. Thomas artindale, of Thomas Martindale & Co., tea importers, hiladelphia, has sent out a circular suggesting the formation a great national Tea Trade Association. He asserts that No great branch of business in the United States to-day is a more bewildered and unprofitable condition than the ısiness of the import and sale of teas at wholesale." It is ggested that a convention be held at Buffalo in August or eptember, to decide what the best interests of the trade emand, especially as regards the tea Duty; for when an gitation for its removal arises, the Ways and Means Com- ittee of the States Government shrug their shoulders and s the circular expressively puts it) say: "Consistency, thou t a jewel." The real object appears to be to give Japan as a helping hand, so the proposed movement is not likely please Indian and Ceylon planters.

NOTES.

itish Exhibition in St. Petersburg. Originally fixed for November, 1901 the opening of this Exhibition has how been postponed until Novber, 1902.

dian Tea. The tea exported from Calcutta in the second half of June was 4,106,522. he total export up to June 30th is over four millions short, mpared with the past year.

ushing Brazilian Coffee. Dr. Brandão, President of the Planters' Association of Minas, lately ft Brazil for Europe to represent the Brazilian Coffee ercantile and Agricultural Association, whose principal aim is to advertise and advocate the use of coffee, especially in Italy.

Java Cinchona. The shipments from Java for the first half of June are declared at 500,000 Amsterdam lbs., against 300,000 Amsterdam lbs. last year. The exports from Ceylon from January 1 to May 27 have been:—

	1901.	1900.	1899.	1898.
Lbs.	320,928	220,592	391,903	317,281

The Flora of the South Lushai Hills. Vol. I, No. 13 of the Records of the Botanical Survey of India contains an account by Lieut. A. T. Gage, M.A., M.B., B.Sc., I.M.S., of a Botanical Tour in the South Lushai Hills. An alphabetical table of contents would have added to the utility of this very interesting little publication.

Tea Experiments. The Agri-Horticultural Society of India's annual report dates that the cultivation of the tea plant has this year been commenced; not, however, on the lines laid down in the paper read by Mr. H. St. J. Jackson at the meeting of the 11th July, but with a view to aid in the study of the various *jâts* of the tea plant and the insects, blights, and parasites that attack them.

The Private Sale Room in London. A special telegram, dated London, July 5th, 10-5 A.M., to the *Times of Ceylon* says:—Prices at the private sale yesterday were unchanged. It is believed that friction shown by country grocers prevented buyers from bidding. There are only small catalogues for next week. Many merchants are holding off from the sales, pending the settlement of the matter.

Indian Tea Prospects. In Kurseong, after a good flush in the first half of June, tea leaf is not now plentiful and the pickings show a shortage. In North Darjeeling there has been good rain, but the last leaf has been scarce. The bushes now should go on better. In Cachar there has been plenty of rain and conditions are favourable for growth. In Lower Assam leaf is backward. In Sylhet the leaf has been retarded by excessive rains.

A New Market for Coffee. The *Brazilian Review* remarks:—How extravagant the idea of destroying coffee merely to raise its price really is, is shown by the naive proposal of Snr. Ewbank de Camára to use it in place of earth for the embankments of the Santos Docks! That would overcome all the difficulty connected with burning 300 tons of coffee every day, and provide cheap material to the Dock Company. We have heard of using sugar to make mortar, but coffee "earthworks" take the cake!

Travancore Green Tea. Mr. H. Drummond Deane writes to the *Ceylon Observer:*—I have permission to publish the following extract from a letter addressed to Mr. H. M. Knight by Mr. W. Mackenzie:—"A Travancore Green Tea ('Stagbrook' I think) is pronounced *the best yet sent to America.* I have two letters from America about it this week, and one man has sent me a sample from these. It looks glazed. Granted an agent who would look after it and not knock it down at any price offered, such tea should do well."

The Times of Ceylon. We owe our apology to our contemporary in Colombo for having failed to acknowledge that certain news in our last issue (about Brooke, Bond & Co. and the Dumont Coffee Company) was taken from it. The oversight was due to our having failed to note that the information appeared in *special* telegrams to our contemporary. Legally, of course, we have as much right as "the man in the street" to assimilate information given us in the newspapers, but our general aim is rather to acknowledge than to hide the sources of our information.

Exports of China Tea. Messrs. Siemssen & Co. in their Market Report, dated Hongkong, June 21, give the following figures :—

	1901-02. Lbs.	1900-01. Lbs.
To England	220,865	216,825
„ The Continent	591,912	...
„ Russia	...	...
„ America	...	...
„ Australia	...	...
„ South Africa...	..	...
Total ...	812,686	216,825

Ceylon Tea. During the first six months of the year 59,100,000 lbs. of tea were exported to the United Kingdom, compared with 61,200,000 lbs. in the first half of last year and 53,800,000 for the same period in 1899. The exports to other countries for the firs *five* months of the year were 15,700,000 lbs., against 14,000,000 lbs. and 9,500,000 lbs. It will thus be seen, says the *Times of Ceylon*, that the export in 1901 has been the same as last year. Two millions of the January export, however, really belonged to December, 1900, so that there has been a slight decrease in *production*. Stocks of Ceylon tea in London have been on the increase lately.

Amsterdam Bark Market. Further particulars of the bark auctions, which were held in Amsterdam last week, have come to hand, says the *British Colonial Druggist* of 21st ultimo, and show that the bark was divided as follows :—*Succirubra*, 97,370 kilos.; *Ledgeriana*, 346,946 kilos. ; *Officinalis*, 2,498 kilos. ; *Hybrid* and other kinds, 39,015 kilos. Of the total thus formed, root bark formed 57,747 kilos. The richest parcel of bark was lot 115, consisting of 24 bales of *Ledgeriana*, which contained an equivalent of 11·20 per cent. sulphate of quinine. The shipments from Java for the first half of the month were 500,000 Amsterdam lbs., against 300,000 Amsterdam lbs. last year.

London Tea Market. Cabling to Colombo on the 4th instant Reuter reports that the market for Ceylon tea is generally quiet but steady. Pekoe Souchongs are quoted at 4¼d. (same as last week) but the average for the week is "unquotable." 33,000 packages of Ceylon tea were offered for sale, and 19,000 were disposed of; while of the 8,000 packages of Indian tea offered, 7,000 found purchasers. Messrs. Gow, Wilson & Stanton report that buyers are operating very cautiously and that the market for medium liquoring Pekoes and Broken Pekoes, as well as that for common Pekoes and Broken Pekoes, is weak. The price of fair liquoring Ceylon Pekoe Souchong is 5d. and the average price of Ceylon tea sold on garden account week was 6¼d. (both same as last week) as against 5⅞d. 6¾d. respectively in the corresponding week last year.

Indian Tea at the Glasgow Exhibition. A gentleman writes to *Capital* Glasgow, that, so far as he can Indian tea is anything but quately represented at the Exhibition there. Ceylon is, of course, well in evidence with Cingalese waiters ; Dr. Pilgrim's khitmutghar appears to be the chief representa of the Indian Empire. He sits behind packets of tea mar "Government," cannot make himself understood in Engl and looks cold. This, remarks *Capital*, "may be called object lesson in "How not to do it," and the Indian Association wish the Government to levy a tax to adver the product ! The same thing happened with the Coolgar Exhibition. In that case the Committee excused themsel on the plea of insufficient notice. It would be interestin learn what the excuse is this time. Heaven helps those w help themselves."

The Bandong Quinine-factory. The annual report of the Bando quinine-factory expresses much sat faction with the results of the Ba via quinine-auctions, and states that new contracts have be made with the planters, which ensure a full supply of ba for this year. As the whole of the Company's capital invested in the buildings, plant, and stock, it is proposed issue 6 per cent. debentures for 6,250*l*., redeemable in years, in order to provide the necessary working capital ; t whole of this issue has practically been applied for. Af allowing for depreciation there remains a net profit sufficie to pay a dividend of 4 per cent., which the directors propo The Board refers to the great assistance rendered Mr. P. van Leersum, who superintends the work on beh of the Government, and to whose advice the improvement the manufacturing proces is due.

Tea in "South California." Messrs. P. C. Larkin & Co., Toronto, urge Ceylon to "fear no foe Of tea grown in South Calfor (? South Carolina) they say :—"That the tea has been gro in this same garden for very, very many years ; that the grown has been very, very bad ; and that a very, very, *v* big price has been charged for it. It is, we understa subsidised to some extent by the United States Governme and is regularly exploited, for political effect, every two three years, after which we hear nothing more of it another two or three years, when it becomes "flourishin again, *in the newspapers*. We think that the growing of in America is very much like the artificial diamond indust It has been proved that diamonds can be made artificial but they are very much dearer than the real stone, and ve much inferior."

London Port Charges on Coffee. During a recent sitting of t Royal Commission on the Port London, Lord Revelstoke presidi Mr. George Rouse, of Messrs. R. J. Rouse & Co., said was Chairman of the coffee brokers' section of the Gene Produce-Brokers' Association, and past Chairman of t London Produce-Brokers' Association. In illustration of t high dock and warehouse charges on certain articles of produ

the port of London, he put in a table showing the rates harged at London, Hamburg, Bremen, Havre, and Antwerp n imported coffee and cotton, for the services of landing, orking, weighing, delivery, and for rent. In the case of offee the charge for delivery in London was set down at 5s. er ton land conveyance and 6s. 8d. per ton water conveyance, against 1s. 4d. at Bremen, 9¾d. at Hamburg, 8d. at Havre, nd 5d. at Antwerp. The high charges in London, the itness said, were maintained by the absence of competition etween the dock company and the wharfingers, the consequence of certain agreements between those bodies to maintain he high level of warehouse charges.

---

alcutta Tea Sales. The Calcutta Tea Sales on the 5th inst. comprised about 12,400 packges, all districts being represented, although Assams are ill in limited supply. A most satisfactory feature of the le was that for the first time this season every leaf was sold, ompetition being brisker and prices firmer all round, except r poor thin "rubbish" sorts. Buyers were particularly een on anything possessing stand-out quality, and the following satisfactory prices were realized :—Hautley Broken ekoe, Rs.1-3-6 ; Phukenbari Broken Orange Pekoe, s.1-3-6 ; Nagri Farm Orange Pekoe, Rs.1-3-6 ; Singtom roken Orange Pekoe, Rs.1-1-0 ; Nasorjan Broken Pekoe, s.15-6 ; Phukenbari Orange Pekoe, As.15-3 ; and Halmerah range Pekoe, As.15. Good Darjeelings and Assams e particularly wanted in this market, just now, and ny such offered will meet with a good reception. With a ortage in output to date of, it is estimated, something like % to 30%, as compared with last year, the market may be pected to firm up considerably for all *good* teas, but the ospect is as bad as ever for badly made coarse plucked leaf ith thin liquor, the stock of which left over from 1900 ason will take some considerable time yet to work off. ylhet and Cachar planters particularly will do well to bear is in mind, and aim at quality rather than quantity.

---

elping Brazilian Coffee. On the introduction of the bill to grant 2,000,000$ per annum for the rpose of advertising and pushing Brazilian coffees in Europe, r. Neiva Junior delivered an able speech, in which he conemned in no measured terms artificial expedients for limiting pplies and, especially, the idea of burning 20 % of the outt. It is, however, curious to observe, remarks the *Brazilian eview*, how an observer so clearminded on most points lows prejudice to blind his judgment on others. To Dr. eiva Junior the bugbear is not over-production but exports, who in combination with the big roasting houses, onopolise the markets and persistently and systematically bear" coffee. No doubt an active propaganda will be used in extending the use of coffee, but until consumption ertake production, it is idle to look for any permanent improvement in prices. Precisely the same phenomena that flict coffee interests here are to-day the object of equal licitude to the planters of tea in India and Ceylon, where ere are no exporters in our sense of the word, to monopolize e trade. That, however, has not prevented "overoduction," nor impeded prices from falling. As here, anters are on the outlook for a panacea, but so far we have t heard that Government interference in any form has been en suggested. God helps those that help themselves. But re our trust is in Government.

Indian Teas in London. The quantity in offer is small, says the *Produce Markets' Review* of 15th ultimo, and, consequently, there has been but a poor selection, the bulk of the tea catalogued for public sale having consisted of final invoices of inferior quality. For the latter the demand has been inactive, and, as Ceylon growths are brisker in cup and more useful for freshening up blends, the inquiry for the lower grades of Indian is likely to remain quiet until considerable arrivals of new season's. The finer descriptions, owing to the continued poor supply, have been readily bought, and firm to improved prices have been paid ; and, until there is a fairly good quantity of the new crop available, which will probably not be before the middle or the latter end of next month, the market is likely to be higher. A few parcels of new tea have been brought forward from the Assam and Darjeeling districts, but as the quality was not very attractive there was only moderate bidding and comparatively easy rates were realised. Exports from this market are largely increasing, those for the past month being 1,103,000 lbs. against 555,000 lbs. in the same period last year, while for the past eleven months there is an increase of 4,290,000 lbs., the total quantity being 12,462,000 lbs. as compared with 12,231,000 lbs. of China tea. Taking the total export of all growths from the 1st July, 1900, to the end of May, which reached 40,491,000 lbs , Indian and Ceylon teas contributed the large proportion of 27,125,000 lbs., which clearly indicates the growing popularity of these growths in other markets. Of the 14,562 packages offered at the public sales 13,055 were disposed of at, on the whole, steady prices.

Coffee in the U. S. and Elsewhere. The *American Grocer* reports :—The market moves within a narrow range. The demand for good roasting grades is fair, and such are firmly held and generally above quotations. Thus, good Cucuta, while selling at 8¼@8½c. in an invoice way, will bring 9c. or more if very desirable in style and color ; in fact, some very fancy sold at 11. Bogota, washed, while quoted on ordinary invoices from 9@14c., will bring, if very desirable, 16@16½c. Yellow Santos brings from 10@13c. in jobbing lots where color is extra fine. The differences between grades of Brazil as established by the Coffee Exchange are about 1@1¼c. above actual values based on recent street transactions. Padang Interior, 15½@18½c., with fancy mats at 25@28c., and very fancy better ; Mocha, 15@18c., and higher for extra lots. Sales between May 17 and 31 include 13,559 bags Maracaibo, 5,530b ags LaGuayra, 4,569 bags Savanilla, 2,254 bags Mexican, 5,056 bags Central American, and 220 bags Jamaica. The market sags for Brazil sorts; in fact, there is little to encourage buying ahead of requirements. Receipts continue heavy. The year will close on a record-breaking crop. In options there is moderate trading. Deliveries are light. Mild sorts are in fair demand. No. 7 Rio closed at 6⅛c and No. 3 Rio at 7⅜c.; No. 5 Santos at 6⅝c., and No. 4 Santos at 6⅞@7c. In Costa Rica rains have been late, and, in consequence, next season's crop is predicted small. Reports from Mexico indicate the current crop at two-thirds an average yield. Samples of new crop Rio coffee have been shown in London and indicate poor quality. It is thought that recent volcanic eruptions in Java have damaged the coffee plantations.

GENERAL ARTICLES.

THE TEA TRADE IN THE UNITED STATES.

The *American Grocer* of 5th ultimo says :—

Last Wednesday's auction disclosed a firm market for greens, especially Moyunes. Blacks were irregular, and Congous decidedly weak. From the report in the regular market column, it will be noted that India and Ceylon sold as low as 7 cents, in bond. A line of Moyune Hyson sold at 6¾@7¼ cents. At the close of the regular sale, there was a special sale of 1,692 packages Formosa Oolong, in bond, at 10½@13½ cents.

A BALLAD OF OOLONG.

Whenever the magistrate, good Li Song
Is short of his favorite tea, Oolong,
He lays his gout and his spectacles down
And hies him away into Chinatown.

Into the region of Mon Lay Won,
When the day of official life is done,
Into the land of slant eyed Lee's
He hies him away to replenish his teas.

All day long, in the places of Tax,
Of rubicund tape and sealingwax,
He toils and moils till the hour of tea,
Blessed old 5 o'clock, sets him free!

Blest liberator, better than rum,
Of the Fa and the Fee and the Fi Fo Fum
Of the Tammany Ogre who used to dwell
In the metropolitan citadel

Blest over all the heroes that be
On the sunny side of the Ceylon Sea,
Nerve him still to be Good and Strong,
Excellent magistrate, great Li Song.

—*John Paul Bocock.*

Thomas Martindale, of Philadelphia, in a letter to the *Journal of Commerce*, proposes that a National Tea Importers' and Tea Dealers, Association be organized, and that the first convention be held in Buffalo in August or September. The idea meets with favour. "There is probably," says Mr. Martindale, "no great branch of business in the United States to-day that is in a more bewildered and unprofitable condition than the business of the import and sale of teas at wholesale. I say bewildered, because the trade in this particular article of merchandise is without a policy for mutual protection; unprofitable, because, for at least two years back, it has been practically impossible to turn importations or jobbing lines over at a fair profit, no matter how favourable the purchase appeared at the time it was made. Old houses in the business confess that they have not made living expenses for two years or more, while the capital of many firms has become dangerously impaired in consequence of the heavy shrinkage in values. A number of cases of suicide of members of the trade likewise mutely testify to the lamentable condition in which the trade finds itself. Nor is it likely to improve in the near future without some radical steps are taken by the trade as a whole."

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

AFRICA AS A MARKET FOR TEA.

Interviewed recently by a correspondent of the *Ceylon Obse* Sir Harry Johnstone, Governor of Uganda, gave his ideas on tea industry, which are described by the interviewer as distin refreshing in these times.

To begin with, we read, he takes a keen interest in planting, has tried growing various products, including tobacco and tea; last with but small success. In his opinion this depression in the trade will not last, it cannot last, and when it passes over, assuredly it must, tea will be in as sound a position as e Moreover, if he had money to invest, he would have

NO HESITATION IN INVESTING IN CEYLON TEA PROPERTY.

Regarding the question of over-production, Sir Harry declares t Africa will be a great tea-drinking country—already the native tri are taking to it; and provided tea is good, cheap, and easy to Africa, now only in its infancy, will do away with the fear of ov production; and there will be no question, he believes, of glutt the market with India, Ceylon or China teas. Africa, for vari reasons, will never compete with recognised tea-producing co tries, like India, Ceylon, and China.

Talking of the "Thirty Committee," why on earth, he said, they not

EXPLOIT PORTUGAL?

There is a good field there for tea shops. Portugal, unl Spain and France, is not a coffee and chocolate drinking count It drinks tea, and drank tea long before we did ourselves, but is dearer there than it ought to be. Then Morocco is anot country where tea is drunk all day long, and the "Thirty C mittee" would do well to turn their attention to it. The other

IN SOMALILAND

he stopped at a café, and asked for some coffee; they told him t had only tea, and he was served with a delicious cup of tea. Th were great possibilities for opening up a trade in packet teas w the Arabs who of late have taken to drinking tea. If India Ceylon turned their attention to these parts of the world, ov production would cease to cause alarm. Asked about the increa duty on tea, Sir Harry said he would have taxed fifty other thi before he touched tea; he would have clapped the duty on, champagne, velvets, silks, and various foreign importations. Harry, himself a good judge of tea, is a confirmed tea-drinker, believes that tea is

DISTINCTLY BENEFICIAL, ESPECIALLY IN MALARIOUS REGIONS.

"Bad for the nerves and digestion, the Doctors say? Well, it not injured mine," said Sir Harry, "and I don't care a rap Doctors' fads Much of the illness in Uganda is caused by scarc of good cooks and good food, with too free and too frequent use alcohol."

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange.—*May 25th*, 1901.—Ninety days' Bank rate opened Monday, 20th instant, at 12 7/16d fell to 11 1/2d on Friday and clo this evening at 12 1/16d.

If any proof were wanting of the necessity of a controlling fluence in the exchange market, the extraordinary and viol oscillations of the last three weeks would be more than sufficie With the balance of trade unquestionably and irresistibly in favour and a huge sterling balance in London disposable, th would be no great difficulty in manipulating the market in a m ner that would have prevented the precipitous and prejudicial r to 13 1/2d, on the one hand, and the almost equally disastr reaction on the other. Such, were it properly understood, sho be the rôle of the Bank of the Republic, whose first duty it is use the resources that have been provided by the Nation, not mere personal profit but to ensure the maximum degree of stabil compatible with so fickle an instrument as paper-money. Unfor nately such has not been the programme of the Bank, and, inst of an element of stability, it has proved hitherto an element disturbance rather than otherwise.

If, after allowing for imports and Government requirements, surplus of £3,000,000 shown by exports in two months is not s ficient to cover all possible requirements and leave some balance o after every demand for bills is satisfied, the situation of the coun must be hopeless indeed! By severely restricting expenditure

very kind and cutting down Government requirements and nports to an almost irreducible minimum, the balance of trade as been turned unquestionably in our favour; nor with the revailing monetary stringency and heavy losses entailed on oreign investors by late frequent failures, can there be much doubt hat the equilibrium of foreign payment is so also.

Last year the rapid rise of exchange to over 14d stimulated rivate remittances to an extraordinary degree, but necessarily ft so much less to remit afterwards. This year, no doubt, uch remittances have been also considerable, but limited as ney are mostly to a single year's savings, they must necessarily e on a much less extensive scale and insufficient to greatly affect ie balance. Moreover, no such movement as was noted last year Sao Paulo, when special trains were run for Italian labourers nxious to remit their savings before rates fell and single families ere known to take £2,000 and more over the counter, is perceptie. Were business brisker the activity of the demand for lls might be attributed to the remittance of overdue accounts, ut at present the difficulty of collecting any money at all the interior is notorious, and far from paying back debts, is all traders can do to keep up current payments. If deposits e any guide, on the 30th April, in spite of the stoppage of 13 fferent native banks, deposits at the 25 branches of the foreign nks positively fell off nearly 8,000 contos, the conclusion being at not only was little are nothing available for taking purses in the native banks, but that in the foreign ones the nount was much smaller than last year. Besides, the quantity paper-money in circulation has diminished since this time last ar by over 12,000 contos and still further added to the stringency eated by almost total stoppage of discounts. So that, whatever y it be looked at, it seems indisputable that, whilst the supply of ls has notably increased, the demand must have undergone dical reduction.

It is argued that all the factors in force now were equally active t year when a similiar precipitous rise was followed by a hopeless d prolonged relapse. But even supposing that the value of other orts was the same last year as this, coffee alone has furnished arly two million sterling more in bills, whilst money is still re stringent and private remittances more restricted. The fact t the rise has taken place this year when coffee prices were ling steadily and long before selling for the new coffee crop could luence the market, whilst last year the violent upward movement not commence until June, is proof enough that factors in one e and the other were not the same. This year the rise that culnated at 13 1/2d on 5th May was the natural effect of the usually favourable balance of foreign payments and large surplus ills due to the simultaneous large coffee and rubber shipments, isted and exaggerated by speculation. Last year great part of rise to 14 1/2d was the result of the anticipation of coffee values. doubt speculation has overshot the mark this year, as it always s, and provoked a reaction, but not only is the oversale on a far aller scale this year than last, but for its liquidation the market count on the whole vast surplus that the sale of the coming re- coffee crop must inevitably afford. Last year when exchange minated at 14 1/2d, the Banks had some 124,784 contos to receive ills, most of which had to come from coffee shipments already roached upon.

his year, to reach 13 1/2d a debt of only 45,780 contos has been urred by the market, for which the whole of the new untouched is available as cover. The drop to 11 1/2d, violent and easonable as it was, is useful and healthy because it not only red away a mass of speculative business that, had it gone on mulating, must have been extremely dangerous, but allowed pers a chance to execute orders and get rid of a good deal of ee before new arrivals commence. It is possible that for a time s may oscillate about 12d but sooner or later the new crop must e itself felt and provoke a reaction that may carry rates her than ever.

uring the first week bills are said to have been scarce and to almost disappeared. If it be so it is not because shipments of er coffee or rubber have diminished, because the value of the arques was particularly large, £325,000 as against only £176,000 ng the previous week and £129,000 last year. As to rubber the ments seem to have taken a new and unexpected spurt, and to added some £160,000 to the week's supply of bills. There s, therefore, every prospect of the favourable balance of trade g maintained, even if there should be little or no surplus for the next month or so after meeting Government and private demand. Declared sales of coffee were also heavier, 146,000 as against 101,000 the previous week, and promise good shipments again this week. Summing up, it seems to us that the rapid fall must have pretty well cleared the slate, and if indeed the immediate supply of bills may not be much more than sufficient to satisfy demand, there is no logical reason for a further fall, but very good foundation to expect another and considerable rise in July. As we said before, this may be interrupted or anticipated by speculation, but, however that may be, unless we are much mistaken, rates will rise undoubtedly before the end of July or August, at the latest.

Coffee.—Entries at Rio and Santos during the week ended May 24th were 19,702 bags over those of the previous week and 69,572 or still nearly 180 % more than for the corresponding week last year. New crop washed coffees continue to arrive at Rio in small quantities and also a little *terreiro* coffee, accounting probably for the spurt in entries that are now almost up to the Santos level. Large entries, however, are not looked for before the end of June. The weather continues all that can be desired. Entries from 1 to 24th May amounted to 340,107 bags against 144,230 last year, and for the current crop to 10,316,889, as against 8,622,786. There can be now little doubt that entries for the current crop will reach, if they do not exceed, 11,000,000 bags.

Shipments, however, received a big fillip from the fall of exchange, *embarques* having reached 205,347 bags at Rio and Santos as against 110,676 the previous week and only 66,406 for the corresponding week last year; whilst declared sales amounted to 146,000 as against 101,000 the previous week and 69,000 last year.

The Rio market during the past week was somewhat firmer in consequence of lower rates of exchange, but only on Thursday was any large business done. We quote 7$300 to 7$400, or 30s 6d c. f. and comm. Demand for Europe was slack, only 100 reis premium being offered for colory coffees. The American demand was confined chiefly to the roasting houses. The few samples of *terreiro* coffees offering are said to be decidedly under crop's average, whilst washed coffees are better.

THE COURSE OF COFFEE.

The New York coffee market has for some time shown a decided inclination towards lower prices, and present quotations are among the lowest on record. The question is being eagerly debated whether current figures indicate an era of low prices as a result of over-production and of the cheaper cost of production, or whether they of themselves constitute the basis for an advance, on the ground that coffee cannot be profitably produced at existing rates, and for that reason the production will be curtailed. Messrs. Lewisohn Brothers (who are understood to represent the Rothschilds) are the leading exponents of the latter view; and, on the other hand, Messrs. W. H. Crossman & Brother believe that coffee can be produced at a profit on the present basis of value.

Mr. Hermann Sielcken, of Messrs. W. H. Crossman & Brother, and manager of the Sugar Trust's coffee interests, who is now on a visit to London, ably states the bear side of the position:—"Brazil has been sending sensational stories into the consuming countries, undoubtedly with the idea of affecting the prices at the commencement of the new crop. In the last four or five years of large crops they have exhausted all schemes which the people would believe for a while, and all of these sensations came forward regularly between May and August—the time when the crop is commencing to be harvested. In 1896-97 was the first large crop, and the world at large simply did not wish to believe that there was a large crop The stocks they had on hand at high prices from the preceding year made them think that it would be better to affiliate with the Brazilians in trying to uphold values than to commence with a bold stroke and say, 'The small crops are behind us and large ones are commencing, and a new basis of values must be found' In 1897-98 (the record crop up to the present) they started with estimates of 6,500,000 bags for their crop, which actually turned out 10,500,000 bags. Consuming countries believed it for a long time, as, strange to say, buyers felt more interested in what they had on hand than what they were to get in the future.

"The next year at the beginning of the crop we had frost stories galore, and in July and August it was stated the trees might be totally destroyed by frost; and last year the heavy rains were supposed to have reduced the outturn of the present crop very greatly,

and this, together with the advance in exchange in Brazil, made the world extremely bullish at the beginning of the crop. This movement was absolutely uniform, and, almost without exception, with all speculators in Europe and the States, and led to the heavy losses during this crop. Strange to say, during all of these years of heavy crops the consuming countries have been in favour of buying high, basing their action as to values on small and inferior ideas instead of on broad lines.

"The high prices in gold paid to Brazil from 1887 to 1896 stimulated the production, and the fall in the value of the paper money of Brazil gave enormous currency prices as well as gold prices, and made this stimulus for values in the eyes of the Brazilian planters still greater. Planting was pursued with a vengeance, especially in the Province of San Paulo, where plenty of virgin ground was still open, and is still open, and where the planters possess a great deal more wisdom than those of Rio by attracting immigration to replace slave labour. These efforts led to production never dreamed of. The outturn of the crop in San Paulo ranged from 1,100,000 bags in 1879-80 to 2,620,000 bags in 1886-87, and down to 1,112,000 bags in 1887-88. Since that time there has been a gradual and steady increase up to 5,700,000 bags in 1899-1900, with a promise of 7,750,000 bags to 8,000,000 bags for 1900-1901.

"So far since the commencement of the big crops in 1896 the Brazilians have been able to obtain good prices, considering the size of the crop, and the heavy losses have fallen almost entirely on Europe and the States. A good share of these losses has been caused by too much credulity in all sorts of statements emanating from Brazil for the purpose of obtaining a higher value for the merchandise. It comes to the childish and silly stage when they talk of burning up coffee by law. It is wasting time to dwell on this. It shows plainly what the object is. It proves that the Brazilians are face to face with a large crop on which they have made no advance sales like in former years. They still have about 1,000,000 bags of the current crop unsold, and they would like to sell the spot stocks as well as the new crops on the better basis.

"There is but one way that will permanently cure the decline in coffee, and that is for the Brazilians to be brought face to face with the fact that consumers have large enough stocks to refuse accumulating further, except at prices which are low enough to presume that they will curtail production. What such prices are the future alone will prove."

The arguments of those who expect higher prices for coffee are put forward in the following statement:—"The general position of the coffee market is somewhat anomalous. Prices in Brazil—the chief producing country of the world—are 25 per cent. lower than at the time when prices in America were fully 1c. to 1½c. lower than to-day. The expenses of labour and of running the coffee plantation, of harvesting and shipping to primary markets, are about the same to-day as they were two years ago, when the premium on gold was about 325 per cent.

"Thus the planter is brought face to face with a condition which actually leaves him less for his coffee than the actual cash outlays amount to. It is to this fact that may be ascribed the tenacity of the market and the futility of the efforts of the bears to depr prices below present values.

"Early in the Spring unheard of figures were mentioned as likely outturn of the new Brazilian crops. There are already in cations that anything like an unusually large crop is out of question, and that a fair proportion of the crops of the plantation likely to be affected by the low ebb to which prices in Brazil money have been forced.

"The world's visible supply is still very large, and it is lik that we will wind up this crop year with 1,000,000 bags more th were in sight July 1, 1900. Against this it may be stated that reserve stocks both in this country and Europe are very sm indeed, and probably more than make up in their deficiency for excess of coffee in sight.

"The mild coffee crop is generally reported to be somew smaller than last year's, which was a very moderate crop indee —*Financial News.*

CEYLON GREEN TEA IN NORTH AMERICA.

The following letter from Mr. P. C. Larkin, of Toronto, the Ceylon Tea Commissioner for America is given with hint that Mr. Larkin is obviously not an entirely disint ested advocate of the charms of Ceylon tea :—

TORONTO, *June 14th*, 1901.

DEAR MACKENZIE,—In looking over your letter again to-da notice a request of yours that perhaps I did not answer thoroug in my letter of yesterday ; and that is, you asked me to think o the future of green teas and give you my opinion. Well, as as Canada is concerned, my opinion is that Ceylon greens h taken hold, and so well that there will never be a "let-up." A this is generally acknowledged by the wholesale trade, and any w do not admit it, at least feel it. They are beyond peradvent successful. We have the thin end of the wedge in, and it m keep on entering in, no matter what takes place. If you give every bit of advertising, in every shape and form in Canada, demand for Ceylon green tea would go on increasing continua although a great deal more slowly than if they were well exploit Getting people like ourselves to take hold of them, as you did years ago, remember, has its disadvantages as well as advantag The disadvantages are that we are naturally not well liked by wholesale Grocery and Tea Trade, (although we are on the bes terms now with the retail trade) and if the wholesaler could de and turn to nought what we have been predicting so vigorou through the press of Canada, we have no doubt that in their own terest they would be glad to do so. They laughed at us and predictions years ago about Ceylon black teas, but now they h practically abandoned all other black teas excepting Ceylon India, and they know that our predictions which came true in gard to Ceylon blacks gave us a position in the trade beneficia us and injurious to them. Naturally they do not want to see same thing take place with the greens. But, on the other hand, if

l not taken hold of them you would probably have found it very ficult to get anyone to take hold of them. They would have given the same reception as you got from —— and ——. And, after what brings these people to toe the mark is the demand from consumer, which we create by our advertising, sampling, and ens of other methods; and this the wholesale trade, taking them lectively, have neither the knowledge or the means to do, nor experience either, and do well. Now then, the demand is set- g in from the public. There is no question about that. Many usands of Japan tea-drinkers are asking daily for Ceylon green . This news will be carried by the travellers to the wholesale ises, and they will take an interest in Ceylon green tea, and will, hin a few years, practically abandon Japans, as they have China ngous.

Of course, the speed with which Ceylon greens make headway l depend altogether on the amount of advertising that is done; such good work has been done in their introduction, and laying the foundation of their trade, that you need not fear for result, which will be the displacement of Japan teas in Canada. nly wish I could say the same about the United States; but if will study out the figures, small as they are, in Detroit and ffalo, and Boston, particularly the two former, you will soon clude, we feel sure, that Ceylon greens have taken a firm hold *h the people who have tasted them* there. When we were ad- tising there we opened a certain number of accounts. In many ces the advertising told, and the teas were asked for, were liked, the people *continued to use them*. If such is not the case why t we are getting constant "repeat" orders for them. As the ertising was not kept up long enough many people returned the as no demand was created: but I feel as convinced as I can be anything in this world that every Japan-tea drinker, or at least eteen out of every twenty of them, who taste Ceylon green tea, the United States, like it and continue to use it. The great ect is to get the Japan tea-drinker to *just try it* and the only to get at him is through advertising, both newspapers and mpling, etc., etc. Unfortunately we have not been able to keep up in the United States, whereas in Canada we have every er in the Dominion full of it, not once or twice a week but three es, and, in many cases, in every issue of the paper. Much as would like to do so, we cannot possibly afford to exploit the lon green at this rate in both Canada and the United States; we can still less afford to abandon the green tea campaign in ada just now We may be enabled to do so later on, to some ent, and then we would devote the money saved here to ex- ting the Ceylon green tea in the United States.—I am, etc.,

P. C. LARKIN.

THE TEA OVER-PRODUCTION QUESTION.

Mr. A. Cooke, of Chota Nagpore, writes to the *Ceylon server*:—

EAR SIR,—In the pages of "Indian Gardening and Planting" roposed a scheme for the use of the Cess: at that time (April) re had been such strong recommendations for a Cess from the ority of those who spoke at public meetings that it appeared a ainty.

ut as week followed week and nothing was done, I continued exertions to get a Cess, and acting under advice I confined my eavours to rousing the tea public to vote for the Cess. My nds said that we must first catch the Cess before we cook it. It fferent in Ceylon. You have a Cess, and are open to receive posals for the use of it, and so perhaps your planters will ive my idea without scoffing. I strongly hold the doctrine an absolute reduction of yield would be fatal, but that the es of tea at the open sales could be raised by withdrawing the *lus*; that is to say if the buyers want 1,000 pounds or maunds, ons, and 1,100 are offered, prices will be low; but if the surplus 00 *can be* withdrawn the buyers will *have* to pay the price vant.

me time ago your planters offered to reduce the yield by three ion lbs. and my advice is to *make* that three million, but with- it as required by the rates ruling at the sales. If prices are emely low it might be necessary to withdraw 20 % from each for three or four successive sales, and as prices improved the unt to be withdrawn would become less until absolute equilibrium should be established. "Equilibrium" means a price which would pay for production and *also* for selling, the producer and buyer would both get their *legitimate* profits.

I may note here that a *reserve* of tea would enable us to fill up any temporary deficiency which otherwise would force the buyer to pay a price that left him no margin of profit.

Any sensible scheme *must* protect the interests of the buyer.

To return to the promised reduction of offerings, I proposed that the tea should be made, but the cost of making it would have to be *repaid* to those who join the scheme.

The cost of making tea in India, *i.e.*, plucking, manufacture, fuel, boxes, freight to Calcutta and sale charges, comes to about Rs.12½ per maund of 80 lbs., *i.e.*, 2½ annas per pound of tea.

I advised Indian planters to put on a Cess of 2 pies per pound which would give a revenue of from 19 to 20 lakhs of rupees; the cost of 10 million lbs. of tea at 2½ annas comes to about 15⅓ lakhs, and leaves 3½ to 4½ lakhs for expenses of distribution. I recommended that percentage of tea should be drawn from the sales of each class of tea, not only the lowest, but of *all* classes. Thus according to the orders for the amount of tea to be withdrawn, each garden would reserve one out of 20 or one out of 30 or 40 chests of *each* class of tea. This reserve could be forwarded on demand to the Association for disposal, and would be paid for at 2½ annas per pound out of the Cess.

The tea thus reserved would be credited to the garden at the prices actually obtained at the sale for the unreserved tea.

The reserved tea would be sent to new markets and disposed of.

If it is *given* away, there would be no return, but supposing it to be sold at 2½ annas, clear of all expenses, that sum would be refunded to the gardens.

By this means a certain proportion would refund the cost of the Cess itself. The Cess on 1,000 pounds at 2 pies comes to Rs.10/6/0. 66 lbs. of tea at 2½ annas is also Rs.10/6/0, and 66 is about 5½ per cent. of 1,000, so that 5½ per cent. of tea reserved and sold at 2½ annas would recover the cost of the Cess at 2 pies per pound on the whole crop. There is an old saying that you get nothing for nothing and very little for a ha'penny. Apparently I want to propose that the Cess shall pay itself and thus cost nothing. But in this case we gain by *unity* and efficiency. The mere fact of union amongst tea owners with a *sufficient* capital at their backs, will, to begin with, force the buyers to pay the Cess. The *first* two pies increase in prices will pay for the Cess. That sum of money, instead of being distributed amongst the producers, will be collected for the *general* good. It will buy *average* tea which will be sent forward to create a demand. When you *give* your surplus to the dealers they reserve the best tea for their ordinary customers, and they send forward the lowest classes to create a demand.

I have thus shown that, by *pretending* to pay a Cess of two pies per pound, we shall force the buyers to pay it, and we shall be able to extend our markets with *average* tea at cost price instead of with low-class rubbish at double that price.

Our *average* tea will we placed on new markets at 2½ annas at Calcutta, say 3½ annas anywhere in the world, and the present low-class tea bought in Calcutta at 2 annas is placed on those markets at about 4 to 5 annas. Does it not follow that better tea at half price would do more to create a demand than worse tea at double the price?

To put it in a clear light, we could transfer the profit from the buyer in Calcutta or London to the pockets of the actual tea dealer in the new market; and he, having placed the new tea at a big profit, would go to Calcutta or London and get more of it.

In armed conflicts the one who can *show* overwhelming force is not compelled to *use* it; it is only necessary to send a commissioner or two to take possession of the desired territory.

In our case we can show an overwhelming force by paying a Cess of 2 pies per pound *on the first few invoices of tea*, and we compel the buyer to refund that, and to go on paying this heavy Cess, which we use in recovering that territory which the force of circumstances has made over to him. We shall recover the two annas per pound of tea which we do *not* get now, and which is *due* to us, and which the buyer and consumer have taken from us.

I have provided for the greatest difficulty, which is the *storage* of the reserved tea, by proposing that the reserves shall be kept (sealed) on the gardens till required. We can expect so much loyalty from managers that they will *honestly* reserve the tea, and not fill up the chests with bad tea or sand.

Even if all is granted there will be a minority who will refuse to reserve any tea. They will benefit by selling their *whole* crop at the improved rates. The *only* method of preventing this illicit gain would be to impose a Cess at a rate that would cover the gain in prices, and to refund the surplus funds to those who subscribed to any generally approved movement, but this of course is not practicable.

I fear that I exhibit a daring which may be considered folly in lightly mentioning sums of 20 lakhs of rupees per annum, but I have endeavoured to show that we shall *not actually have to pay it* ourselves, and these sums are small compared with the amount of gain to be obtained.

Our Indian crop, when it reaches 190 millions, at one anna per lb. represents 118¾ lakhs of rupees and an actual expenditure of 20 lakhs would be cheap for such a return. And then I have stated that we shall be able to recover *two* annas per pound, which comes to 237⅓ lakhs.

You in Ceylon spend about two to three lakhs of rupees per annum, and you do *not* get the buyers to pay it, because India has no Cess and the prices cannot be *forced* up. Let us suppose that you get a return of 200 per cent. on your expenditure, that is to say, you profit to the extent of 20 or 30 lakhs of rupees; that is real good business, but what is the use of this paltry profit divided amongst all tea owners?

It seems to me to be useless to struggle unless we, the tea makers, get the absolute command of the situation, and I reckon that 20 lakhs in India and 14 to 15 in Ceylon would effect this.

Unlike the simile used above, we send an insufficient force to capture the desired territory, and that force is cut up, and we remain vanquished; we remain the absolute slaves of the buyers. They will allow us only sufficient food to keep us alive.

By using ten times our present force we *shall* conquer and make up for lost time, and the tea world will belong to us; and China and Japan will retire into their own borders.

This scheme of mine surpasses even Mr. Mackenzie's aspirations. You could let him handle millions of pounds of *good* tea. Several years ago I ("1874") advised you to make "Green Tea," and to send big lots of tea to America to sell for what they would fetch; but Mr. Mackenzie would not dare to be years ahead of his time.

I understand that Your Associations are feeling sore with him, but in point of fact you set him to an impossible task; you wanted to get a retun of one anna per pound on your tea for an expenditure of two lakhs of rupees.

DISTRICT ASSOCIATIONS.

SHEVAROY.

Proceedings of a Meeting of the Committee of the Shevaroy Planters' Association, held in the Victoria rooms, at 1 p.m., on Monday, the 8th July, 1901. PRESENT:—Messrs. W. J. Lechler, E. Dickins, C. Rahm, C. G. Lechler, J. C. Large, R. Gompertz, *Honorary Secretary*.

1. Notice calling the meeting was taken as read.
2. Read letter from Secretary, U. P. A. S. I., stating that the Annual Meeting would be held at the Resident's Court House, Cubbon Buildings, at 11 A.M., a Council Meeting being held at the same time and place the day before—and requesting Honorary Secretaries of District Associations to send in notice of any subjects they wish discussed to enter upon the Agenda paper.

Resolved that Honorary Secretary be requested to inform the Secretary, U. P. A. S. I., that this Association wishes to propose the reduction of charges for curing coffee and to ask him to make the necessary entry on the Agenda paper.

The following letters were read and recorded:—

Circulars received from Secretary, U. P. A. S. I., during the month of June, 1901.
No. 47/01. Forwarding scheme for exploitation of tea in India.
No. 48/01. I. T. A. approves of Mr. Acworth's suggestion for exploitation of South India with good tea.
No. 49/01. Notice of meeting and subjects for Agenda paper, also receipt from Secretary, U. P. A. S. I., for Rs.150, subscriptions from Shevaroy Planters' Association.
No. 51/01. Forwarding Chairman's criticism of Mr. Acw suggestions and also a scheme put forward by the C Travancore P. A. for pushing the sale of tea.
No. 52/01. Forwarding copy of letter from Mr. Acwor I. T. A.
No. 37/ R. U. from Secretary, U. P. A. S. I., informing Malabar Chamber of Commerce reports that there is no fr ring and no rebates on West Coast.

Do. Coorg Planters' do.
Do. Kanan Devan do. do.
Do. North Mysore do. do.
Commercial circular on Burmese Rubber yielding plants.
Agricultural Department Bulletin, Sugarcane in Godavari and Ganjam districts.
Agricultural ledgers on Oxen, Mica, Sugarcane.

Signed H. WADDINGTON, *Chairman.*
(„) GEORGE ROMILLY, *Honorary Secretary.*

The next General Meeting will be held on Wednesday, h September.

MARKET REPORT.

[*Per Mail advices of 21st June* 1901.]

COFFEE.

The London Commercial Record says:—Auctions have again been merous and the supplies offered shewed a varied assortment, t only a small proportion was of attractive quality, and for this ere was fair competition a firm prices. The demand generally, wever, was slow, and in order to effect sales holders submitted to decline of 1s to 2s per cwt. in most instances. The market for utures" at one time shewed decided weakness, owing to a fall Exchange and continued heavy receipts, but subsequently rallied, d the closing prices exhibit no material change for the week. sterday September delivery of Santos sold at 29s 9d, December 30s 1½d to 30s 3d, March at 30s 6d to 30s 7½d, and May at 30s 10½d 31s 1½d per cwt.

We quote.—

ndon ...	... Santos ...	July delivery	... 29s 6d.
w York	... No. 7 Rio...	„	... 5·10 cents.
mburg...	... Santos ...	„	... 29½ pf.
vre ...	.... Santos ...	„	... 36¼ francs.

The auctions to-day were large and passed off without animation, l part was bought in. Prices shewed some irregularity, and ed in some cases in buyers' favor somewhat. Supplies consist- of 1,103 bags East India, 1,545 bags Costa Rica, 483 bags vador, 312 bags Nicaragua, 507 bags Guatemala, 470 bags New nada, 23 bags Colombian, and 541 bags Mexican.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	Stock.		Imports.	
	1901.	1900.	1901.	1900.
Tons ...	23,270	20,409	30,850	24,193
	Home Consumption.		Export.	
	1901.	1900.	1901.	1900.
Tons ...	10,118	8,596	13,116	9,931

The preceding figures exhibit—

	Tons.
In the Imports an increase this year of	6,657
Home Consumption an increase of	1,522
Export an increase of	3,185
Stock an increase of	2,861

Auctions this week have passed off as follows:—

CEYLON.—*Plantation.* 29 casks 9 tierces 7 barrels 8 bags sold, smalls 35s to 40s, common to fair medium 56s to 60s, bold and extra bold 70s to 90s, peaberry 60s to 62s.

EAST INDIA.—5,517 bags partly sold as follows:—*Mysore*, smalls 33s to 47s 6d, fine ordinary to low middling 37s to 44s 6d, middling to good middling 49s 6d to 60s, bold 64s 6d to 69s, fine hard bold 70s to 77s, very fine 80s to 105s, peaberry 40s 6d to 62s. *Naidoobatum*, smalls 37s to 39s, bold 67s 6d, peaberry 48s to 50s. *Coorg*, smalls 34s 6d to 37s 6d, low middling 39s 6d to 43s 6d, bold 55s 6d to 63s, peaberry 44s to 58s 6d. *Neilgherry*, smalls 34s to 38s. fine ordinary to low middling 38s to 43s, bold 55s 6d to 64s, peaberry 48s to 54s 6d. *Wynaad*, smalls 38s to 37, fine ordinary to low middling 37s 6d to 42s, bold 49s to 51s 6d, peaberry 45s to 49s 6d.

MOCHA.—38 half-frazils with drawn.

COSTA RICA.—4,121 bags offered and 3,150 bags sold, smalls 29s to 41s 6d, good to fine ordinary faded greenish 38s to 40s, low middling to middling 41s to 50s, good middling 50s 6d to 53s 6d, bold 54s to 69s, peaberry 41s to 65s.

GUATEMALA.—1,896 bags catalogued and 850 bags sold—smalls 35s to 37s 6d, good to fine ordinary 39s to 40s, low middling to middling 42s 6d to 47s 6d, good middling 50s to 52s, bold 53s 6d, peaberry 45s to 53s.

VERA PAZ.—100 bags sold, smalls 33s, middling 45s, good bold 70s 6d to 71s, peaberry 55s.

COBAN.—38 bags bought in.

NICARAGUA.—Of 584 bags offered 220 bags sold, smalls 30s 6d to 33s 6d, good ordinary 30s, low middling to middling 40s to 47s, fine middling blue 64s, very fine extra bold blue 88s to 102s, peaberry 46s 6d to 79s 6d.

SALVADOR.—Of 2,356 bags brought forward 1,640 bags sold, smalls 31s to 35s 6d, good ordinary 35s 6d to 37s 6d, low middling 40s to 41s 6d, middling colory 45s to 47s 6d, good middling 49s 6d to 50s, bold 55s to 71s, peaberry 37s to 62s 6d.

MEXICAN.—270 bags about half sold, smalls 36s, middling 47s 6d, good bold 64s, peaberry 45s 6d to 55s.

COLOMBIAN.—Of 769 bags offered 630 bags sold, smalls 30s to 31s 6d, ordinary to fine ordinary 31s 6d to 39s, low middling to middling 40s to 47s 6d, bold 47s to 54s, peaberry 41s 6d to 45s 6d.

Receipts in Rio and Santos.

Since July 1	1900-1. Bags.	1899-1900. Bags.	1898-99. Bags.	1897-98. Bags.
Rio ...	2,828,000	3,211,000	3,138,000	4,263,000

Total...	10,700,000	8,795,000	8,643,000	10,375,000
Crop ...	—	8,971,000	8,772,000	10,461,000

Rio Exchange 11½d, previous day 11 5/16d.

HAVRE, *June* 20.—Good average Santos June opened quiet at 35½f. and closed steady at 35¾f., September opened at 36¼f. and closed at 36½f., December opened at 36¾f. and closed at 37f., March opened at 37¼f. and closed at 37½f.

HAMBURG, *June* 20.—Good average Santos July opened quiet at 29¼pf. and closed steady at 29½pf., September opened at 29¾pf. and closed at 30¼pf., December opened at 30½pf. and closed at 31pf., March opened at 31¼pf. and closed at 31¾pf.

NEW YORK, *June* 20.—Closing prices of No. 7 Rio were as follow:—

	June.	July.	Aug.	Sept.	Oct.
June 20...	5·20	5·20	5·25	5·35	5·40
June 19...	5·05	5·05	5·15	5·20	5·30

TEA.

INDIAN.—A smaller quantity was brought forward at public sale, totalling 9,200 packages, of which 500 packages were new season's, against 13,900 packages (138 new season's) on the 10th instant and 6,300 packages (2,000 new season's) a year ago.

Inferior common was unchanged in value but the better grades met more demand at firm prices. Several invoices of the new crop were offered, quality on the whole being of useful description. The Assams and Dooars attracted most attention, particularly those with coloury liquor, but the Darjeelings were rather disappointing in cup.

Entries for export to the United Kingdom from the 1st April to 15th instant were 4,018,000 lbs. contrasted with 5,760,000 lbs. for the corresponding period of 1900.

CEYLON.—Auctions were lighter, *viz.*:—29,400 packages compared with 32,000 packages in the preceding week, and 34,500 packages twelve months since. Pekoe Souchongs and Pekoes for price elicited good bidding, but over 5½d per lb. both Pekoes ond Orange Pekoes were less wanted, and except in the case of parcels with full flavour, easier rates had usually to be accepted to effect business. Considerable irregularity was noticeable in Broken Pekoes, though the more desirable lines and Broken Orange Pekoes fetched about previous figures.

The average is 6⅜d., per lb. On the 13th instant it was 6½d per lb., and also for the same time in 1900.

JAVA.—Slightly over 1,800 packages of direct Import passed the hammer. Competition was fair and quotations did not shew material alteration.

Deliveries.—The clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 18th June,	1901	7,202,807 lbs.
Do. do.	1900	7,146,559 ,,

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	8,209	1,030	9,239
Ceylon	26,868	2,542	29,410
Java	1,646	165	1,811
Total ...	36,723	3,737	40,460

Also 893 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated June 21st, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1901-1902	33,770	90,370	4,091
1900-1901	10,548	66,954	2,331

9,569 *pkgs.* INDIAN
29,861 ,, CEYLON
2,059 ,, JAVA
} Total 41,489 packages were offered in public auction this week.

The substantial increase in the quantity of Indian and Ceylon Tea sent to foreign markets is doubtless chiefly attributable to current low quotations.

	1901.	1900.	1899.	1898.	1897.	1896.
Indian ...	8,526,139	4,875,982	4,994,148	4,631,650	7,090,639	4,385,921
Ceylon ...	12,924,205	10,685,902	7,788,345	7,641,405	6,060,271	4,833,025
Total lbs.	21,450,344	15,561,884	12,782,493	12,273,055	13,150,920	9,218,946

An advance to 21,450,344 lbs., in the first quarter of 1901, against only 15,561,884 lbs. in the corresponding period of 1900 is remarkable.

INDIAN.—The few Teas brought forward sold with a firm tone for anything with character, other kinds still realising only low prices. New season's Tea was represented by 496 packages.

The official wire gives exports to U.K. for first half of June as 2,630,000 lbs., against 2,660,000 lbs. same period last year, making the total from 1st April to 15th inst. 4,018,000 lbs., against 5,760,000 lbs. last year.

Week's average of New Season's Tea sold on Garden Account 1901, 496 pkgs., av. 8d. 1900, 2,885 pkgs., av. 6·99d.

Week's av. of New Season's Tea sold on Garden Account 1901, 3,347 pkgs., av. 6·10d. 1900, 3,636 pkgs., av. 6·92d.

CEYLON.—The supply, although again heavy, met with good attention from buyers Finest descriptions were in most demand, and sold at occasionally better rates, while medium brokens were somewhat irregular and here and there slightly easier.

Private wire from Ceylon gives exports to U. K. from 1st to 1 June as 6,000,000 lbs., against 5,200,000 lbs. same period 1900, estimates the quantity available for the month as 11,000,000 l against actual shipment of 12,750,000 lbs. in June, 1900.

Average for week 6·33d., against 6·50d. same week, 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 594,840 pk av. 6·61d. 1900, 601,377 pkgs., av. 7·31d.

JAVA.—1,669 packages of direct import and 390 packages second-hand Teas were brought forward, the auction passing v steadily with good competition.

Bank Rate 3 per cent. Exchange on London three months sight Calcutta 1/4⅛. Colombo 1/4$\frac{5}{32}$.

COCOA.

Business continues very slow with a tendency for nearly growths to further decline. At auction on Tuesday 3,556 ba were brought forward of which 1,500 bags sold. Trinidad w represented by 1,586 bags and at a reduction of 6d to 1s per cw 600 bags were placed; very fine red brought 75s, good to fine 7 to 73s. Only 61 bags Grenada were offered and they sold at 6 for fine red, 61s for common. 114 bags Dominica were quitted 60s to 64s for common to good, being about valuations. 73 ba St Lucia realised 62s to 64s 6d for fair to good, and 65s 6d w paid for 2 bags St. Vincent. 12 bags fine Tobago brought 64s 6 and 15 bags good Surinam 72s 6d. 281 bags Samana sold at 5 to 61s for fair to good. Ceylon was irregular, collected bringi some advance, whilst estate grown made a further move in buye favour; 878 bags were catalogued and 300 bags sold, good mediu red 77s 6d, dull to fair ditto 62s to 65s, smalls 47s to 57s, black 4 to 50s, and fair to good collected 59s to 62s per cwt. Private a good deal of business (about 1,000 bags) has been effected collected Ceylon at rather higher prices, but full particulars a withheld. 300 bags Grenada sold at 61s 6d to 66s, 100 ba Trinidad at auction rates, 90 bags Haiti 56s for ordinary greyis and some Guayaquil at 77s to 78s for good red summer Arriba, a 70s to 72s 6d per cwt. for winter.

PEPPER.

BLACK.—The market has been dull in tone, and value is easi On the spot sales of Singapore have been made at 6$\frac{1}{32}$d for fa and 50 tons are reported sold for arrival—at 6$\frac{3}{32}$d for June-Augu and at 6$\frac{1}{16}$d for August-October shipment. At the close holde are firmer, consequent upon the loss of the *As'uria* with upwar of 500 tons on board, and sellers have mostly withdrawn; for fa Singapore on the spot the quotation is 6$\frac{1}{16}$d.

The shipments of Black Pepper for the first half of Ju compare as follows:—

	1901.	190
U. K.—Singapore	50 } 180	*nil* } 1
,, Penang	130 }	110 }
Continent	90	
U. S.	200	
Total tons ...	470	1

At auction on Wednesday 35 bags Aleppy, 253 bags Wynaad, a 10 bags Penang were bought in.

WHITE.—is much neglected, and business has been almost at standstill. Singapore has been sold in small lots at 9$\frac{5}{16}$d for fa and Penang at 8$\frac{3}{16}$d. For arrival no business reported.

The shipments of White Pepper for the first half of Ju compare as follows:—

	1901.	190
U. K.—Singapore	70 } 240	70 }
,, Penang	170 }	*nil* }
Continent	20	
Total tons ...	260	

At public sale on the 19th instant. of 6 bags Singapore offer 2 bags good sold at 9½d. 30 bags Ceylon mostly sold—good 9 fair mixed with blacks 8¾d. black 8½d per lb.

GINGER.

COCHIN.—A further depreciation in the value of washed rou was submitted to, but cut kinds maintained previous rates. 1 cases 445 bags brought forward and 22 cases 201 bags sold—go bold cut and scraped 95s, bold with some medium ditto 90s, dit heavily limed 85s, medium with some small limed 65s limed tips 3 brown tips 36s 6d, and medium and small washed rough 35s 6d, 36s 6d, per cwt.

APAN.—210 bags bought in at 34s, to 35s per cwt.
AFRICAN.—255 bags withdrawn at 36s per cwt.
JAMAICA.—Only 138 barrels were brought forward, and they stly sold at steady prices—good bright washed 53s, low middling good middling washed 42s 6d to 46s, common dark lean to good mmon 34s to 39s per cwt.

QUININE.

Notwithstanding the good result of the Amsterdam bark-sale, e market closed last week at a reduction of ½d. per oz., October ivery selling at 1s. 3¾d., and December at 1s. 4d, the decline ng due to the fairly heavy shipments of bark from Java for the t of half June. Since then, however, the second-hand market has adied itself, though little business has been done, a few thousand nces having sold for October delivery at 1s 3⅞d, and December ls 4⅛d oz. The exports of quinine from Java in January 1901 ounted to 184 cases, of which 180 cases were shipped to New rk in four separate consignments; the remaining four cases went to Genoa. For the corresponding month of 1900 and 1899 352 cases and 71 cases respectively were exported.

At the auctions held at Betavia to-day 2,800 kilos. Ed. II. sold at an average of 22½fl. per kilo. (about equal to 9½c. Amsterdam unit). At the last auction, on May 15, an average of 23⅞fl. was paid. The next auction will be held on July 24.

CARDAMOMS.

Cardamoms were from 2d. to 3d. per lb. lower in auction to-day, fine grades being neglected. The following prices were paid:—Ceylon-Mysores: Good bold pale round, 3s. 5d.; medium to bold ditto, 2s 5d to 2s 10d.; medium ditto, 2s 1d to 2s 4d.; small and medium pale, 1s 7d to 2s.; brown and split, 1s 4d to 1s 5d. Seeds according to quality, sold at from 1s 6d to 2s. Ceylon Malabar, 1s 5d per lb. for good small. Of Mangalore, 14 packages offered, and sold, at 2s 10d to 2s 11d for bold round, 2s to 2s 4d for medium bold, and 1s 6d to 1s 11d for small and medium; splits and pickings, 1s 3d to 1s 5d.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 26th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

Munzerabad.

July 15th, 1901.—*Weather*—Last week was our heaviest so far for this monsoon, a little more than 12 inches being gauged at Saklaspur; the temperature ranges from 62° to 70°; winds cold and fairly strong. *Works*—Planting, weeding, borer and handling; the plants that were put out at the beginning of the monsoon appear very successful so far. *Plant diseases*—Coffee as healthy as can be desired. *Labour*—Abundant. *Health*—Improving. *Interesting item*—The Hemarati was in flood from Monday to Friday, when it subsided.

TEA IN PARLIAMENT.

THERE was an interesting discussion in the House of Commons last month. It was started on behalf of the British tea-planter, but that gentleman might well exclaim, "Save me from my friends" upon learning of the arguments advanced in his favour. During the Committee stage of the discussion on the Finance Bill, Mr. KEARLEY, M.P. for Devenport, moved an amendment in favour of an *ad valorem* duty on tea, on the basis of 50 per cent. with a maximum levy of 6d. per lb. *Ad valorem* duties are, as a rule, in favour with neither producers nor traders. To look at the matter from but one point of view, it is hard, if SMITH succeeds, by improved cultivation or manufacture, in raising the value of his tea 1d. per lb., that he should have to pay the Government of Great Britain ½d. out of this. To the practical imposition of *ad valorem* duties there are innumerable objections. It is one thing to have to submit to paying a fixed tax on each pound of tea; it is quite another to have to prove the value, or disprove erroneous valuations, of each shipment. Taxes of some kind are a necessity. Taxes in the form of import duties are in many ways more convenient than direct taxes on income or professions. Duties may thus be regarded as a comparatively

convenient form of a necessary evil; but then convenience disappears if complications are admitted in the shape of *ad valorem* levies, especially where values are variable and uncertain, as is the case with tea. Mr. KEARLEY made one point that the tea-planter should not everlook. He said that the duty on other articles that appeared on the breakfast table, such as coffee and cocoa, the average cost price of which in bond was about the same as that of tea, was much lower. Here there is just ground of complaint, and public sympathy should be easily won, seeing that no other breakfast commodity is so largely produced in *British* territory as tea is.

In his reply the Chancellor of the Exchequer prudently avoided this part of the attack. At other points he met Mr. KEARLEY boldly and cleverly. He stated that that gentleman had made his proposal on the assumption that the poor man had a special inclination to consume the worst class of tea. Sir MICHAEL HICKS-BEACH did not agree with that assumption. He believed that the poor man knew very well what was good tea, and that he purchased it. There was no one to ask him, "where, then, does the low-priced tea, of which such enormous quantities are consumed, find buyers?" Sir MICHAEL hinted that it was not desirable that the tax upon tea should be lowered in order to induce people to consume the worst class of tea; and he argued that the question was not one of mere percentage, but of "what was the price of tea, including the tax?" He cited statistics in support of his assertion that the increased duty on tea had not caused a decrease in imports into Great Britain, and made a strong point in reference to the difficulties connected with the collection of *ad valorem* duties. Mr. CAINE, M.P., asserted that while it is quite true that the well-to-do working classes used good tea and paid 1s. 8d. a pound, there was a large class who bought tea of the very cheapest quality in very small quantities—tea which probably did not cost the seller more than 4d. or 5d. a pound in bond. Nevertheless, Mr. KEARLEY'S suggestion was thrown out.

Sir HOWARD VINCENT then moved another amendment proposing to add that in respect of tea from British possessions one-fourth part or 25 per cent. of the tax should be remitted. In the course of his remarks he observed that if favours were accepted from Canada without any reciprocal effort being made in Great Britain, a great revulsion of Colonial feeling must follow, and act prejudicially to the mother-country. He wanted to get the thin end of the wedge in with respect to differential duties and thought that there could not be a better beginning than with tea. It was incontestable, he said, that tea was essential to the life of the people of England, but could not be produced in the United Kingdom, and any remission of taxation in favour of tea produced within the British Empire could hardly fail to be advantageous to that industry. It would lead to the development of production of tea in India and Ceylon and other parts of the Empire which were equally suitable for its cultivation, such as Australia, the Mauritius, and the East Indies. Sir MICHAEL HICKS-BEACH met this attack by saying that if Sir HOWARD VINCENT'S policy were adopted of placing Customs duties on a large number of foreign manufactured goods and turning the revenue tariff into a protectionist tariff, to be dealt with as some of the colonies which had adopted a protectionist policy were able to deal with a protectionist tariff, by giving preferential rates under certain circumstances to the mother-country, any such policy would be deeply injurious to Great Britain. Any confirmed Free Trader *must* hold this view, and it is, to it mildly, improbable that England will ever be brougl adopt Protection or "Fair Trade" except on the basi solid argument as to principles. To attempt to intro either "with a pound of tea" is absurd. We cannot but that the whole of the opposition side of the discussion adverse to the Indian tea-planters' interests. While by means accepting the statements of the Chancellor of the chequer as irrefutable, we consider that at a time like present the planter should cheerfully submit to extra taxat merely urging that it should be equitable in regard to own and rival commodities, and that the readiness he sh now to endure an unavoidable hardship should be pla to his credit and remembered at some more favoura opportunity in the future. But the planter has now m friends in England, as well as elsewhere, and some of t are not always discreet or tactful.

FRENCH IMPORT DUTIES.

Simla telegrams to the *Madras Mail* state that the follow has been issued by the Finance Department:—"By a Dec published on the 27th December, 1900, the French Gove ment continued till the 30th June, 1901, their minimum ta for Colonial produce of various countries, including Bri possessions. Intimation has been received from the Secret of State for India that the minimum tariff has been furt prolonged till the 23rd February next." Also that no spe proposals from the French Government have reached Government of India for relaxing the Indian import du in favour of France, or facilitating cooly emigration to Ma gascar, in return for continuing the present French tariff.

This is a very unsatisfactory position of affairs, for it ke the planting community in suspense. It is generally lieved that the French Government desires to seize present opportunity to secure facilities for the recruiting Indian emigrants to Madagascar. We should be glad learn that negotiations had been started for the settlement this matter, which is not one that should be left long in ab ance, more especially when the important question of Fre duties on Indian tea, coffee, pepper, etc., appears to depe at least in a measure, upon such a settlement.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S.

Importation of Teas into the United States.

What is called "the new" American Act (passed in 189 regulating the importation of tea into the United Sta is designed to check the influx of impure or unwho some tea. It enacts that a Board to consist of seven expe in tea shall be appointed to prepare and submit to Secretary of the Treasury standard samples of tea. T Secretary of the Treasury is to fix and establish unifo standards of purity, quality, and fitness for consumption all kinds of teas imported into the United States, and procure and deposit in the customs houses of the ports New York, Chicago, San Francisco, and such other ports he may determine, duplicate samples of such standards; t Secretary will procure a sufficient number of other duplic

nples of such standards to supply the importers and dealers tea at all ports desiring the same at cost. All teas or rchandise described as tea of inferior purity, quality, and ness for consumption to such standards shall be deemed hin the prohibition of the Act. The importer or consignee required to submit for examination samples of each line of ery invoice together with the sworn statement of the im-rter or consignee that such samples represent the true ality of each and every part of the invoice, and accord th the specification therein contained. In cases where collector, importer, or consignee shall protest against the ding of the examiner, the matter in dispute shall be erred for decision to a Board of three United States neral appraisers, to be designated by the Secretary of the easury, and if such Board shall, after due examination, d tea in question to be equal in purity, quality, and fitness consumption to the proper standards, a permit shall be ed by the Collector for its release and delivery to the porter; "but if," says the Act, "upon such final re-amination by such Board the tea shall be found to be erior in purity, quality, and fitness for consumption to the d standards, the importer or consignee shall give a bond, h security satisfactory to the Collector, to export said tea, merchandise described as tea, out of the limit of the ited States within a period of six months after such final examination; and if the same shall not have been exported hin the time specified, the Collector, at the expiration of t time, shall cause the same to be destroyed.

* * *

Copies of the Act have been recently circulated, officially, India. "Better late than never."

COFFEE IN DISTANT LANDS.

XXX.

French Indo-China.—In Cochin-China, according to vernment statistics, the number of coffee-plants existing the beginning of 1900 was some 162,000, which were mated to produce 27 tons of Liberian and 2½ tons of abica. In Cambodia there were some 37,000 plants at the ne period; in C. Annam about 234,000 plants; in Tonkin ut 800,000 plants. Total, 1,233,000 plants for the whole French Indo-China. This is certainly not much, but—it stimated that within five years the production will be five es as large.

Trinidad.—From the Annual Report of the Royal Botanic rdens, Trinidad, it appears that the growth of coffee at Clair is conducted under circumstances far from favour-e but has nevertheless met with considerable success. A ly large section was planted with *Coffea stenophylla*, ed from seed grown in the old establishment on trees ich were near to bearing plants of both *Coffea arabica* and *liberica*. Among these seedlings, have appeared several TINCT VARIETIES, and the first tree to fruit has produced nerries" containing beans *twice the size of the type*. cherries are dark purple when ripe, going black drying, and the bean appears to be of excellent quality, far as can be judged by sight alone, but there was a sufficient crop to make any test of its flavour, as the ries were all required for seed purposes. Other plants e also ripened fruit, but the berries vary in size. There appears to be some little evidence in favour of the view that these varieties are natural hybrids between the type and the Liberian, but the beans appear of much finer quality than those of the latter species. The greater portion of the trees on the section, are now showing their habit of growth, and a considerable variation in the size of the leaves is to be noticed throughout. *Coffea stenophylla*, is evidently a plant which will fall readily into the hands of the plant breeder, as it shows a variability of character, which opens out a possibility of the production of improved strains, which it was almost hopeless to secure from the less variable *Coffea arabica*. All the trees have done best where well shaded with the "Saman," but in places where they where open to the midday sun, the growth is fifty per cent. less. Good supplies of seed are now being harvested from our first planted trees. *Coffea stenophylla*, is evidently a plant which will be widely cultivated in the near future. Some of our trees have yielded six pounds of dry coffee per tree.

Two plants of a new kind received under the name of "Congo Coffee" have grown well, and have just set a fair crop of fruit. Their vegetable characters are somewhat similar to Liberian, but the flowers are more like the Arabian type, set in the axils of the leaves, in large rosettes, of from twenty to thirty flowers.

The strain called "Mexican Coffee" appears to be one of the most prolific croppers of the Arabican class. The trees are not large, but the produce appears to compare favourably with good Arabian brands.

The coffee introduced under the name of "Abbeokuta" has grown well, and probably is the best coffee of all to stand the sun. In habit and appearance it is somewhat similar to Liberian, but there is little to indicate it as being more than a variety of that species but still there are characters which readily distinguish it. There is considerable variety in the foliage of the different trees and the size of the beans.

The trees of "Golden drop" coffee, fruited freely during the year, and some hundreds of young plants are on hand for disposal. It appears to be a very productive kind, and its golden yellow berries give it a very distinct appearance from the ordinary Arabian of which it is a variety.

"Maragogipe" coffee continues to do well, producing beans of large size and excellent quality.

The narrow leaved or "Minerva" coffee, has again fruited freely. It probably fruits more regularly and at a younger stage than any other coffee, and is altogether a very desirable variety.

NOTES.

Cocoa in Nicaragua. The British Consul reports:—"Cocoa and sugar planting is increasing every year, and it would seem is a better paying pursuit than coffee.

Rubber in Parnahyba (Brazil). The *Nortista* calls attention to the excellent results obtained by late shipments of Maniçoba rubber at Liverpool, where very high prices were obtained, and recommends greater attention to this industry.

Amsterdam Cinchona Sales.

A catalogue shows the amount of Government bark to be offered at the Amsterdam bark auction on Thursday, July 18th, to be 78 cases and 335 packages, containing 42,033 kilogrammes.

The "Agricultural Ledger."

No. 1 of 1901 deals with *Paspalum Dilatatum:* A new Fodder Grass for India. No. 2 treats of Australian methods of Testing and Improving wheat: their applicability to India, with special reference to the prevention of rust.

Cocoa in the U. S.

American appetite for cocoa seems to be increasing, says the *American Grocer*. For eleven months of 1900, as compared with same time in 1899, the imports of crude cocoa were 6,532,802 pounds greater—nearly 20 per cent.; while coffee fell off 14 per cent.

Indian Teas.

Messrs. W. S. Cresswell & Co., of Calcutta, write in their weekly report, dated 12th instant:—Assams continue to show good sound quality, Cachars and Sylhets have improved, and in some instances, so have Dooars, although the bulk from this district still show signs of unfavourable weather. The few Darjeeling were good.

From America.

The *American Grocer* writes:—Choice selections of coffee command a large premium over standard grades. Colour and size of bean have a great influence on price, so extra fine lots of Maracaibo, Santos, Central American, Mexican, Arabian, and East India growths command a premium of 1 at 2 cents, or even 3 cents, over coffee that is at grade. Fancy coffee is in demand for blends and to mix with Java, and with people who sell coffee in the green bean.

Inflated Currency in Brazil.

Whatever ideas may be entertained as to the influence of currency upon coffee cultivation in Brazil, the shareholders of the Dumont Coffee Company are likely to hold but one opinion on the subject. It is said that the gross average price obtained by the Company for its coffee, 81,781 cwt., was equivalent to 40s. 2d. per cwt, against 29s. 4½d. the previous year, but that owing to the adverse course of the milreis the cost in London was 6s. 10d. more per cwt. than in 1899.

Venezuelan Coffee.

A report that Venezuela will suspend the export duty on coffee, amounting to about $\frac{5}{8}$c. per pound, on May 1st and will also increase import duties 12 per cent. has received considerable attention in the mild coffee trade in the United States, and there appears to be considerable speculation as to the effect this action will have upon the reciprocity treaties. Advices received from Washington say that no official confirmation has been received of a contemplated change in the tariff duties by Venezuela.

Quinine-Makers to the Italian Government.

The concession for produ quinine salts from the bark for use of the Italian Government M poly has been adjudicated to Messrs. G. Candiani & Co Milan. The Italian Press is elated at the success of national manufacturers. The competing firm is known as "German Syndicate," and this is the second occasion which these two firms have competed. The Milan fi price for production is 43f. per kilo., while the Ger firm wanted 62f.

Rubber Planting in Burmah.

The "Thirty Committee" of Planters' Association of Ceylon resolved:—"(I) That a memorial the Secretary of State for the Colonies be drawn up the subject of the experimental cultivation of Pará Rubber Burmah with a view to prevent a continuance of Governm competition with private enterprise in the matter; (II) t a copy of the memorial be forwarded to the United Plant Association, Kuala Lampor, Selangor, requesting support similar lines."

A Passing Cloud?

At the Assam Company's meet in London on the 24th ultimo, Chairman expressed regret that no profit had been m during the past year, but said he regarded the present p tion as a passing cloud. In the Company's long history sixty years there had been three occasions of trouble, each time they had come out with more vitality and pr perity than ever. Orders had been given for reducing expenditure not absolutely necessary for the proper work of the concern.

Tea in the Caucasus.

United States Consular Ag Harris reports from Eibenstock un date April 26, 1901: "The cultivation of cotton in the C casus has been attended with such success that the Russ Government has decided to introduce the culture of tea i that Province. In 1900, nine trial plantations were laid in the districts of Osurgei and Kutais. The results h been such that new plantations will be laid out in the distri of Mingrelien and Sentum. Plants and seeds have b collected for this purpose from the best tea Provinces of Chin

---

New Markets.

Apropos of the cry for new mark Messrs. W. S. Cresswell & Co., Calcutta, make the following pertinent remarks:—"We glutted" is the cry of Mincing Lane, "we are starved" the cry of Calcutta. The Indian Tea Association are wa ing funds to open out new markets, a most laudable obj but what is the good of spending money on this, unless th new markets get a chance of being regularly fed, and reasonable rates. London is glutted, give Calcutta some the surplus, make Mincing Lane feel that there are ot places in the world, other than Mincing Lane, were tea bought and—paid for.

A Tea Stall.

The *Times of Ceylon* reports tha tea stall has been put up at the Ga Face Hotel, to the left of the main staircase and opposite electric lift, by Messrs. Lee, Hedges & Co. The stall, wh is in charge of a Burgher lad, consists of a teak-wood coun running the length of the two pillars opposite the lift. G

lity tea, in attractively labelled packets and boxes, are laid on the counter in a way to catch the eye of those using lift, but the counter itself hardly adds to the artistic surndings of the entrance to the lift. Facilitating the purse by visitors of Ceylon tea of good quality is a most ellent way to advertise our staple product.

---

erican-Grown Teas.

When Robert Mitchell Floyd was in Montreal a few weeks ago, says *Canadian Grocer*, he promised to send one of his Canadian ends samples of tea grown in South Carolina. These ne to hand this week and they have rather surprised trade, who did not believe our continent capable of oducing such a fine article. The liquor they draw is od, but their appearance is decidedly against their ready e and folks say that, on account of this defect, they will ver take a prominent place in the tea market. At present y are treated as curiosities. There were two samples, one green and one of black.

---

cutta Tea Sales.

The Calcutta Tea Sale on the 12th instant was a heavy one, 18,455 ckages being catalogued, including about a half-a-dozen rks that are usually shipped to London. There was a ner feeling all round, flavoury Assams and Darjeelings ng keenly competed for. The Sungma garden had the est invoice of Darjeelings that has been seen for a long e on this market, and secured the following satisfactory zes :—Broken Orange Pekoe, Rs. 1-6-6 ; Orange Pekoe, 1-5-0 ; Pekoe, Rs. 1-1-0 ; and Pekoe Souchong, As. 11. s with quality from any district are wanted and will be d for, but poor badly made sorts, with nothing either in f or liquor to recommend them, are likely to be even more glected than at present, owing to heavy stocks of this class ried over from last season.

---

don Tea Sales.

Reuter reports in Colombo that the London market for Ceylon tea is erally firm at previous rates. Pekoe Souchongs are quoted 4¼d. (same as last week) and the average for the week is . 16,000 packages of Ceylon tea were offered for sale, 15,000 were disposed of; while of the 8,000 packages Indian tea offered, 7,000 found purchasers. The weekly cial telegram of 12th instant from Messrs. Gow, Wilson & nton to Colombo reports that buyers are operating very tiously and that the market for medium liquoring Pekoes Broken Pekoes, is steady, while that for Common Pekoes Broken Pekoes shows a fractional advance. The price air liquoring Ceylon Pekoe Souchong is 5d. (same as last k) and the average price of Ceylon tea sold on garden ount this week was 6½d. (a farthing up).

-Growing in South arolina.

Dr. Charles U. Shepard writes from Sommerville to the editor, of the *Tropicol Agriculturist* :—I note he May No. of your ever-instructive and welcome journal r apparent surprise that the article written by Mrs. Ellis the "Review of Reviews" did not allude "to the part ved by an old Ceylon planter—Mr. Henry Cottam" in local experimentation. Aside from the fact that the work that of another, it is but justice to Mr. Cottam and myself tate that his visit to Pinehurst was most agreeable, inspiriting, and advantageous to me; although the first cold Winter caused me to abandon, as unsuitable to this climate, the Ceylonese methods of cultivation of which, very naturally, Mr. Cottam was the enthusiastic exponent. And I might add that experience has demonstrated that it is better to conform to the taste of the buyer than to attempt to convert him.

The Pan American Exhibition, Buffalo.

The *Brazilian Review* remarks :—The Pan American Exhibition at Buffalo, with Canada left out and Brazil abstaining on account of hard times, is going to be a very creditable affair after all. The food exhibit will be particularly interesting and will include miniature tea and coffee plantations with allspice, cinnamon, nutmegs, ginger, kola, vanilla, and cocoa all alive and growing under the same roof. The coffee "plantation" will not, it is true, be very extensive, only 30 trees from Central America being available, but even so will be sufficient to prove to the receptie minds of Americans that coffee is really a product of the vegetable kingdom and not a mineral, as from appearances is too often concluded. We trust that a large accession of coffee drinkers will accrue in consequence and send coffee prices booming. Properly worked this exhibition ought to be a splendid opportunity for coffee "bulls."

The 'Rest' Question.

Quite a Sabbatarian twist has been given to the "rest" question for Ceylon teas. "T" writes to the *Times of Ceylon* :—There have been many suggestions made for decreasing the output of tea, all of which seem to be difficult to carry out in combination, because of the varied condition of the estates financially, difference of elevation, etc. I heard a suggestion made, the other day, which seems to be more likely to equalize risks in combined effort to arrive at the desired curtailment of produce put upon the market. It was this. "How would it do to stop Sunday plucking." He who instituted the laying aside of one day in every seven, as a day of rest, to ourselves and the fruits of the earth, said also, "In all thy ways acknowledge Him and He shall direct thy paths," and "Him who honoureth me I will honour." This would be one way of acknowledging, and honouring Him—practically—and in doing this we could look to Him, the Giver of all things, for help in our honour of need.

Seed Smuggling in B. C. Africa.

Mr. Henry Brown, an ex-Ceylon planter, was lately charged at the instance of the Postmaster-General, B. C. Africa, with illegal importation of small packets of seeds contained in newspapers. All the seeds were despatched from Matale. Mr. Brown, in his defence, stated he was unaware that Mr. Milne, of Matale, was sending him any seeds, that he was greatly astonished at finding them, and he at once burned them. He urged the fact that he had been in B. C. Africa over ten years, and could have introduced seed before the Coffee Disease Regulations came into force, but he had not done so, and was not likely to do so as he was ruined in Ceylon by the Coffee disease. Nevertheless he was fined £50. At the conclusion of the case Mr. Casson stated that he was instructed by H. M. Commissioner that this being the first case brought under the Coffee Leaf Disease Regulations there was no desire to press for a very heavy penalty. His Honour Judge Nunan in confirming the fines of £50 and £1

suggested the possibility of a reduction being made by H. M. Commissioner.

Coffee in London.

The *Produce Markets' Review* of 22nd ultimo reports:—The terminal market, after being about 9d. lower owing to cheaper offers in Santos, has recovered, and there seems at the close a much stronger feeling, while prices are about 6d. better than last week. This has been reflected in the auctions, where supplies, though abundant, have not contained much of an interesting character, and the demand has in consequence mostly been slow. Prices, however, have fallen so low that it only requires a little firmness on the part of importers to bring about an advance. The lower grades of washed coffees are as cheap if not cheaper than they were at the lowest point two years ago, although Santos is about 4s. dearer, and we hardly think that the present prices can be maintained when the pressure of recent arrivals ceases, as it must do in another months or so. Larger supplies of Colombian have come to hand, and though the quality is inferior, being mostly damaged, it has met with a ready sale for Continental account. The few lots of fine Mysore and East India have fetched full prices, but the common grades are most difficult of sale.

A Pharmacist's Tea-party.

M. Antoine, a young pharmacist's assistant, residing in the rue de Puteaux, Paris, and within easy reach of the artistic cabarets and cafés of Montmartre, met with an adventure the other night that at first seemed to him romantic. He met two bright young women during his evening stroll, and after a little conversation invited them to a cup of tea at his rooms. They were rather coy, but finally consented. During tea the conversation turned on the ailments of human nature. One of the girls, Raymonde Sandini, a pretty maid of twenty-one, complained of indigestion; her companion, Léonie Lebrun, who is some years her junior, said she was a victim to insomnia. The young pharmacist, anxious to show his skill, proceeded to get a soporific from a cupboard for the latter, and then began to seek a cure for indigestion. During the time his attention was distracted Léonie filled up his cup of tea with the soporific, which he drank during an animated conversation without noticing the addition. He awoke some hours later to find the ladies had flown, his cupboards were ransacked, and money to the amount of over 20*l.* missing.

Coffee and Tea in Queensland.

The exhibit sent down by Mr. Howard Newport from the Kamerunga State Nursery to the Townsville Show held last month is referred to in the *Townsville Daily Bulletin* as one of the leading features in the agricultural section. Among the articles included in the exhibit were samples of fibres (including those from the Sisal and Sida Retusa) with fibre plants in growth; a collection of rubbers of several varieties, many of which grow well in North Queensland; a specimen of the coffee bean which won in 1900 a gold medal at the Earl's Court Exhibition in London. There were samples exhibited showing the plants in growth, the berry, and the bean green and roasted. A sample of tea grown and prepared at the Nursery was likewise shown. The difficulties which stand in the way of growing this widely used article of commercial value in North Queensland are chiefly the expensive machinery required to manufacture it and the great labour in picking the crop. If these difficulties could be overcome, Mr. New thinks that tea could be grown largely in that part of world as the climate and soil are favourable.

Brazilian Coffee.

A S. Paulo correspondent wr to the *Brazilian Review*:—Of price received for coffee, 2$500 to 3$000 go for work expenses, including railway freight, all of which goes ou the country in addition to whatever Italian labour made of maize, beans, vegetables, etc., and that is not a little. W then remains? Only a paltry balance at the present mil prices of coffee, and a general crack must come some ti that will draw planters, commissarios and all the rest People in Rio do not seem to have the slightest notion h much commissarios' money is locked up in the interior mortgages and loans based on a coffee price much hig than the present. There is the rub! and that is why e common-sober minded commissarios advocate burning 20 cent. of the coffee crop. I am of your opinion that the sit tion is not so hopeless as it appears. Planters will not be a hurry to send down their produce at present prices, the fore consumers will have to continue to buy here and will get the chance to squeeze the life out of us, and the fall exchange which will be the result of small coffee entries, a smaller supply, will not exercise its corroding influence to full power. Consequently, prices will advance slowly as th are doing now. Have you remarked how the milreis pr of coffee has gone down just as the rate of exchange has go up, about 40 per cent.

Rubber Cultivation for Porto Rico.

Mr. O. F. Cook, of the U. Department of Agriculture, repo that in Porto Rico rubber stands th in importance of the commercial products of vegetable ori now imported into the United States, the receipts duri 1899 being valued at $32,500,000. At the present time largest amounts of rubber are obtained from the tropics Africa and South America The extent of the wild supply unknown, since large portions of these countries have yet been explored either geographically or botanically. T factor, taken in connection with the possibility that n species will be discovered which will yield rubber m profitably, the possibility of the discovery of new syntheti methods for producing rubber from turpentine or of meth for extracting a substitute from certain rapid growing shru the many failures in part or wholly that have attend attempts to build up plantations, outside of the natural rub districts, and the increased cost of using civilized help in management of tropical plantations, suggests caution in inve ing large sums of money in the rubber industry. The f that species may grow luxuriantly in a new district seems be no indication whatever that it will profitably produ rubber. Usually the opposite results follow. From 5 to years is given as the probable time required for the grow of rubber trees before they can be tapped for rubber. M Cook discusses the botanical sources of rubber and mentio experiments, generally unsatisfactory, in cultivating Pa rubber (*Hevea brasiliensis*), Ceara rubber (*Manihot glaziov* and Central American rubber (*Castillob elastica*) in regio outside of the native habitat of the species. Rubber cultu as a feature of mixed farming is thought to be the m rational method to follow in Porto Rico until the possibil of its successful production is more definitely established.

GENERAL ARTICLES.

CEYLON GREEN TEAS IN CANADA.

Messrs. P. C. Larkin & Co., of Toronto, write to the lombo papers :—

In your edition of April 25th, we notice a letter headed "Green a" and signed "Inquirer," in which he states that the returns the Chamber of Commerce show only 15,850 lbs. of Ceylon Green a to have been exported during the present year. Now either e reports of the Exports are not reliable, or else "Inquirer" has t looked closely into them. As a matter of fact in the period ted, the Exports of Ceylon *Green* Tea by Messrs. Whittall & Co. *ourselves* have been as follows :—

1901.		Per ss.		Chests.	Lbs.
January	19	Socotra	...	131	11,950
February	25	Java	...	127	11,365
March	8	Shanghai	...	201 hf.	11,512
March	23	Melacca	...	199 ,,	11,396
April	10	Bunaca	...	201 ,,	11,512
				Total ...	57,735

There was also exported by Messrs. Crosfield, Lampard & Co. to *in the same period*, as follows :—

1900.		Per ss.		Chests.	Lbs.
January	31	Agapanthus	...	154	13,916
March	11	Bucros	...	223	20,108
				Total ...	34,024

SUMMARY.

		Lbs.
ylon Green Tea Shipments by Whittall & Co.	...	57,735
Do. do.	Crosfield, Lampard & Co.	34,024
	Total ...	91,750

According to "Inquirer" there were only 15,850 lbs. of Ceylon *reen* Tea exported from Colombo from the beginning of the year to the time of his writing, whereas there were actually exported om Colombo, *to ourselves alone*, by the two firms mentioned above ,759 lbs.; so that someone is wrong in their figures.

In addition to the above we might mention that in the month of ecember last Messrs. Whittall & Co. shipped us by the ss. *mbay* 375 chests amounting to 33,420 lbs, and also by the *Canton* 212 chests amounting to 18,950 lbs.; and by the time u will have received this they will have shipped us at least fifty ousand pounds of Ceylon Green Tea in addition to the quantities entioned above. Our contract with them for shipments of Ceylon reen Tea runs out during the present month.

As to the Green Tea itself we have yet to hear an adverse re-rt. Mr. Mackenzie brought the tea forcibly to our attention in ril 1899, but no rapid progress was made with them, on account the absence of the writer in Europe for the three or four follow-g months; but in October of that year we took hold of them gorously, and we consider now that we have made very rapid ogress. Practically every wholesaler in Ontario has Ceylon Green a in stock to-day, as a result of Mr. Mackenzie's efforts; and we nk you have every reason to congratulate yourselves upon the ospects for the future of Ceylon Greens.

Possibly many growers of Ceylon Greens complain of the low ices they have secured for some of them, but there have been ny shipped here that we have seen which were no credit to ylon and they would do nothing whatever to improve the demand them; and this will often account for the very low prices they ve been bringing. On the other hand we have been receiving voices right along for the last many months paying the equivalent 8 1/2d. for them on contract. We do not say that we are prepared make another contract at such prices. We were compelled to so, at the time we made the one which expires this month, by cumstances, which were that we were not able to purchase Ceylon reens elsewhere in sufficient quantity to fill our orders.

Of course we are only one of the very many wholesale houses handling Ceylon Green tea to-day, we selling ours entirely in our "Salada" Ceylon Green Tea lead packets; and although we are by far the largest handlers of Greens, still we would think that in addition to the ninety odd thousand pounds that have been exported from Colombo to us, in the time mentioned by "Inquirer," there surely must have been fifty thousand pounds at least shipped to other dealers in Canada, besides what has been shipped to the United States.

"Inquirer" in inserting such a letter in your paper is apt to do more harm to the Planting Community than is done by their worst enemies as we presume it would lead the planters to believe that the Green Tea Industry is a frizzle, whereas it is an evergrowing trade.

THE DUMONT COFFEE COMPANY, LTD.

Directors in London:

P. R. Buchanan (*Chairman*), H. K. Rutherford, Hon'ble H. A. Lawrence, G. A. Talbot, R. Hart, S. Boulnois.

Directors In Brazil:

John Buchanan, Senhor Rodolfo Miranda.

REPORT OF THE DIRECTORS.

The Directors submit the General Balance-Sheet and Profit and Loss Account for the year ending 31st December, 1900. The gross profit for the year, exclusive of £7,097 12s. 8d. brought forward from previous year, amounted to £58,495 0s. 4d.; and the London charges were £3,339 17s. 5d.; leaving a net profit of £55,155 2s. 11d.; amount brought forward from 1899 £7,097 12s. 8d. = £62,252 15s 7d. Interest at 5½ per cent. per annum (less Income-Tax) has been paid on the Debentures, amounting to £20,981 3s. 5d.; Income-Tax on same £1,007 16s. 7d.; a payment of 2½ per cent. (less Income-Tax) was made on 19th April, 1901, on account of arrears of dividend on the Preference Shares £9,500; Income-Tax on same £500; leaving a balance of £30,263 15s. 7d.; it is proposed to place to a Reserve Account £20,000; and to carry forward a balance of £10,263 15s. 7d.

The crop, which was estimated at 75,000 cwts., amounted to 18,781 cwts. Of this quantity, 70,478 cwts. were sold in London, and the remainder in Santos and New York. The gross average price realised for the whole crop was equivalent to 40s. 2d. per cwt. landed in London, as against 29s. 4½d. per cwt. the previous year, but owing to the adverse milreis exchange the cost in London was 6s. 10d. per cwt. more than in 1899. The spot price of "good average Santos coffee" during the period of the year in which the Company's crop was sold, was 35s. 8d. per cwt., while the average price realised for the Company's pulped coffee, of which there were 22,760 cwts., was 47s. 7d., and for the Company's unpulped coffee 37s. 4d. per cwt. Owing to the increased production of coffee from Brazil during the year under review, the price of ordinary Santos coffee has now fallen to 29s. per cwt., and with the exchange at about 11½d per milreis, the margin of profit is considerably diminished, causing the position of growers to be one of anxiety at the present time. Under these circumstances, and in view of the necessity of providing working capital, the Directors, after serious consideration, do not feel justified in recommending the distribution of any further dividend, but consider it prudent to place the sum of £20,000 to Reserve Account, carrying forward £10,263 15s. 7d. With regard to the condition of the estate and of crop prospects, the manager writes, under date the 8th April :—

"*General Appearance of Property.*—This continues most satisfactory, and there is lots of wood to give another good crop in 1902. I suppose that Bourbon coffee at Agua Vermeha and Paty will give less, as it seems only to yield well every second year; but all the old coffee looks as well as ever it did, and the young fields at Guerra, Iguape, and Paty have very much improved and ought to bear well next year."

The coffee crop harvested to 31st ultimo was 38,000 cwts., as against 23,300 cwts. to same date last year, and the manager's latest estimate of the current crop is 120,000 cwts. Mr. R. Hart and Hon'ble H. A. Lawrence are the retiring Directors, and being eligible, offer themselves for re-election. The Auditors, Messrs. Jackson, Pixley, Browning, Husey & Co., also retire, and again offer themselves for re-election.

BASIC SUPERPHOSPHATE AND "HUGHES' PATENT."

Mr. John Hughes, Agricultural Analyst, writes to the *Ceylon Observer* :—

The *Overland Observer* received this week contains a criticism on the above from a planter who you state "has paid a good deal of attention to the subject of the proper manure for tea."

It would be very out of place for me to occupy your space with a view to supporting the merits of a manure introduced by myself. Basic Superphosphate must succeed on its own merits, and it will be sufficient to mention that the material has been devised upon chemical principles in order to supply Phosphate of lime in a readily available form, for application to soils naturally deficient in lime, upon which ordinary Acid Superphosphate, when used alone, cannot exert its full benefit.

The practical value of the invention has been recognised by the formation last January of a syndicate consisting of six of the largest manure firms in the United Kingdom who have taken up the patent rights and the manure is now being prepared and sold in considerable quantities. Ceylon planters, who are shrewd men of business, will properly appreciate the above facts and I now proceed to briefly reply to the points of objection raised by the planter already referred to. He states that unless Basic Superphosphate is cheaper than Basic Slag, he does not think there will be much sale for it in Ceylon. In reply I can assure him that this is no reason whatever, because the new manure is of superior solubility in regard to its composition and therefore should command a higher price per ton.

I quite agree with the planter that tea only requires Phosphoric Acid in comparatively small proportion, but it requires to get it in a form readily available as plant food, and not in the condition of a hard fused mass like slag, however finely the latter may be ground.

"Planter" rather contradicts himself in first stating that tea only requires Phosphoric Acid as an essential ingredient to a moderate extent, and then going on to state that Basic Slag which contains fully 38 to 40 per cent. of Phosphate of lime is more effective as a material for burying with prunings than even burnt and slaked lime which practially contains no Phosphate of lime *at all.*

The cost of Basic Superphosphate in England is about £2 10 per ton for the usual quality which contains 26 per cent. of Phosphate of lime soluble in a weak solution of Citric Acid (1 in 1,000 parts of water). For foreign shipment it has the great advantage over Acid Superphosphate that being Alkaline in character there is no danger of the bags being rotted during the voyage and importers will fully appreciate what immunity from damage in that respect means.

"Planter" evidently recognises the value of the invention when he concludes his letter by remarking that concentrated Superphosphate of lime could be mixed with finely-slaked coral lime, and might be found a cheaper form for restoring the balance to crops which are annuals, but he adds, for tea the problem is more complicated.

My patent consists in the conversion of Acid Superphosphate into alkaline or Basic Superphosphate by the use of lime, and I am not restricted to any particular strength or quality of the respective ingredients; so that the most concentrated Superphosphate can be treated with lime prior to shipment, and thus all the annoyance of damage, through the rotting of the bags during transit, will be avoided and the manure will arrive in a fine dry, powdery condition admirably adapted for mixing with the other ingredients necessary to form a suitable complete compound fertiliser for tea or coffee.

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Coffee "roasting."—Projects for "bolstering up coffee" more crazy day by day. The latest that met with warm sup from a meeting of planters at Limeira is the maddest of all, proposes that the 20% to be burned shall be paid for in S Bonds!

We are glad to observe that public opinion is slowly but su working round to take the right view of the monstrous prop for burning coffee. Lately the papers have been full of prot and now Dr. Vieira Souto, professor of Political Economy at Polytechnical School, has added his testimony also.

Exchange.—*1st June*, 1901.—Ninety days' Bank rate on Lon opened on Monday, 27th ultimo, at 12d. and closed this even shaky at 11 15/16d.

The market, for the moment, is entirely in the hands of spec tors and out of control of the banks. Seeing their opportunit powerful group commenced (hearings) immediately after the m age had been published, or rather a day or two before its delive and a leading bank, that up to then had been pushing rates, obliged to cover heavily in a falling market and brought about debacle that has carried rates back to 11 1/2d. Heavy liquidati have no doubt been effected, and, whatever the immediate cou of exchange may be, it cannot be questioned that the reaction is the whole wholesome and useful if not carried too far, becaus clears the course of a mass of speculative sales that were accu lating to a dangerous degree. At the same time such oscillatio however profitable to speculators, are none the less pernicious real business, and the market has the right to expect that Banco da Republica, at any rate, should discountenance them every way in its power. Unfortunately, it was not so, and to imprudent and, we may say, reckless dealing of that bank options is to be attributed most of the trouble.

The refusal of a large jobber to deliver at the last moment th the liquidation into confusion and, it is said, obliged the Ban the Republic to cover anyhow and anywhere, thus driving de rates to 11 7/8d. Indeed, under the circumstances, it is satisfact to see rates so comparatively firm! The feelng is unquestiona for a renewed rise; and rightly so, because whether bills h been withheld or the whole enormous surplus after payment of ports has been remitted, the effect on exchange must be simi In the former case bills must come out of hiding before long swell the supply and help drive rates up again, or else remittan have been on a scale so gigantic as to leave little left to remit. is certain that even during these, the two dullest months of year, the value of exports exceeds that of imports, whilst spec tive selling on account of the new crop has hardly yet commen However it may be looked at, therefore, the present fall appear a temporary set-back, likely to be more than recuperated when supply of bills will again largely exceed the demand in July August. It must be recollected, too, that not only will the sup of bills be exceptionally large but that in consequence of the he scale of remittances lately, the demand is likely to be very m smaller than usual. In fact, we seem about to enter on the co season with the promise of a record crop that will give in case £9,000,000; with rubber prices steadily improving abr money scarcer and tighter than ever, and a trade and gen demand for bills smaller than it has perhaps ever been before.

What the immediate course of exchange will be must dep greatly, if not wholly, on the caprice of speculation, and, as th are said to yet be very heavy options outstanding for this mo it is possible that after a partial reaction the manœuvres that w so successful this month may be repeated and exchange be knoc down once more. At the same time the chances of success do seem so favourable as in May for several reasons. In the place, the renewal of specie payments for the service of the for debt is almost certain to be utilized by the other side; and, m over, there is every prospect of coffee shippers taking advantag low rates to draw for payment of the coming crop. Altogether think the market has seen the worst of the reaction, and that the will be steady, if it do not improve, during the current month perhaps, even July, but must go irresistibly upwards about Aug

During the past week the value of coffee shipments (embarq was considerably under that of the previous week being £28 as against £325,000, but still much larger than last year va

2,000. Declared sales were also smaller 105,000 as against ,000 the previous week, so that comparatively smaller shipments y be looked for next week also.

Rubber shipments were also much smaller, aggregating about ,000 for both Pará and Manáos. Stocks, however, have in-ased to 254 tons. The nut season is also at an end, but cocoa ooking well and likely to give at least 135 tons.

Coffee.—Stocks are now reduced to only 770,346 bags and there ms a good prospect of commencing the new season, after all, h a crop no larger than last year's.

Declared sales to 31 May were as follows:

	1901.	1900.
From 1 July	8,128,000	7,692,000
„ 1 January	3,442,000	2,288,000
„ 1 May	529,000	304,000

During the past week the market at Rio was dull with very little siness doing and that chiefly for account of roasters. We quote 300 to 6$900 for No. 7 New York type and perhaps 7$000 for good ory tppes, and c. f. & com. 28/6 to 29s; the market closed steady. At Santos, too, the market ruled quiet and weaker owing to gher exchange and larger entries, which affected consuming rkets. Higher milreis prices induced planters to send more of ir old holdings down and caused the reaction We quote 4$500 4$800 for superior, primes 200 to 500 réis above, goods 300 réis ow, regular 600 réis below. No special demand is noticeable, but e qualities are no more in such request as last week, whilst quiries for regular and low-regular for Europe were better. aberry is neglected again and orders from Europe are scarce. e quote:

29/- to 30/- for good,
30/- to 31/- for superior.

The States buy erratically and the two big roasting concerns are ctically the only buyers at reserved prices; we hear of a block average n. 6 sold at 6 5/16 c. and average n. 5 at 6 1/2 c.

Receipts consist with exception of a few hundred bags, exclusively old crop coffees; the little new crop having been all picked too ly and contains 50% or more of unripe beans. Of the old crop fees a good part are lower grades, but mostly of good quality l suitable for roasters. Fine and finest qualities are getting rce.

The picking of the next crop will be pretty general by the middle next month.

Reduction of Cost and Production.—At a meeting of planters in important district of Banharão, (S. Paulo) the following sensible olutions were adopted: (1) to reduce the rates paid to labourers care and treatment of coffee trees to 70$ (at 12d. exchange ut £ 3·7d.) per thousand; (2) to reduce labourers' wages to 00s. (1s. 8d.) *per diem* with keep and to 2$ (2s.) without; (3) to ect the proposal to burn 20 % of the coffee; (4) to suspend for r years plantation of new trees; (5) to store low grade coffees l only sell at 5$ per arroba.

An Agricultural Congress is being held at Juiz de Fóra and all over the country great excitement in planting circles is noted. Plants and projects for aiding planters are innumerable and will doubtless culminate this year in action of some kind. The state of many of the planters is absolutely desperate and so far as they are concerned it would matter little if 50 % of their coffee were burned instead of 20 % as proposed so long as they could save the rest. At present many of them run the risk of losing it all unless price should improve, of which there seems but little likelihood. We have heard of some planters who in despair have chucked the whole business and are refusing to even pick their coffee. When people get desperate they become dangerous and capable of adopting any hairbrained scheme that seems to offer relief. So if the burning scheme or something similar were to go through, it would be scarcely surprising. What is really extraordinary is that there has been no organized movement to curtail production voluntarily by refraining from picking 20 or 30% of the coffee. In that way the waste of labour entailed in burning at the ports and all the cost of transport and handling would be avoided, whilst the trees would benefit. We do not say it would be a good plan, but it would be certainly less pernicious and wasteful than burning.

COCOA FOR B. C. A. (THEOBROMA CACAO).

The following is from the *Central African Times* of 1st ultimo:—

The subject of Cocoa cultivation in British Central Africa has been under consideration by me for some time, and since writing the preceding article (No. 2) on the economic product, I have visited Mlanje to see in what condition the Cocoa tree was. At the time of my visit (March) four and a half months of the wet season had passed, and the tree had been able to make vigorous growth during that time. It is evident, however, that, as surmised by me in my previous article, the dry season is too trying for it. The points of last year's growths were withered, evidently the result of drought.

Eucalyptus trees growing close by exert beneficial influences, but screen it from the morning sun, and a grass wind-break has been erected to protect it from the S.-E. winds. It is otherwise exposed to the strong midday and afternoon sun, at which time during the dry season the absence of moisture in the atmosphere is greatest.

As this tree has been at Mlanje for over eight years, and not yet fruited, it may be considered a failure but as before stated, the conditions under which it has been grown were not conducive to success. The fact that this tree has existed during that period proves that it will grow; and if suitable conditions, shade, etc., are brought about, this product may with safety be taken up by the planting community.

11-0-98 –t.f o.]

It has to be considered, however, how to introduce seed satisfactorily, and how to make the conditions better for the successful cultivation of Cocoa. The introduction of Cocoa seeds to B. C. A. in quantity has hitherto been attended with failure.

The crucial point has been fermentation and consequent germination, and when the seed has been left in the pod and sealed up in tins or loosely packed in cases, this has been the cause of failure.

H. M. Commissioner and Consul General has approved of a requisition by this Department for a consignment of 2,000 seeds to be sent out from England under special conditions regarding packing and shipment. These conditions may be improved upon by the Kew authorities, but are as follows: the seed is to be placed in Wardian cases, the bottom of the case to be covered with 3 inches of leaf mould or cocoanut fibre, over which will be placed some damp sphagnum (moss), amongst this the seed will be closely packed together. It is estimated that a Wardian case having inside measurement of 3½ feet long by 2 feet wide will hold 2,000 seeds.

It is anticipated that in this manner the seed will germinate and grow a little before Chinde is reached, and on arrival there every effort will be made to have them brought up the river as expeditiously as possible. I have made these remarks on the importation of seed for the benefit of those who meditate immediately entering on Cocoa cultivation. The cubical measurement of such cases is approximately 15 feet, so that beyond the cost of the seed itself importers may estimate what the cost is likely to be.

From the Meteorological Statistics in this office, I am of opinion that the most suitable Districts for Cocoa are, first, South and South-East Mlanje, second, the Southern and Eastern slopes of Zomba, and third, the lower levels from Chiradzulo along the Cholo hills facing East and North-East to the Inchila plain. These from their temperatures and situations, should be found suitable for this product, and where soil is good and deep, success may be fully expected.

Estates at Mlanje have heavily timbered land and good soil, and by judicious thinning of the forest so as to leave a fair shade, good and successful Cocoa gardens might be opened up.

The South and Eastern slopes of Zomba at an elevation of 2,000 feet, will, it is believed grow good Cocoa, but this District does not possess the natural conditions such as rainfall and forest land that Mlanje does; some 100 acre plots might however be obtained at 2,000 feet elevation with fair forest land. The temperature is satisfactory, and with Bananas between the lines of Cocoa a sufficient shade would be afforded the young plants for some years until Conifers have had time to come on and take their place.

Similarly, this would have to be followed out at Chiradzulo, and on the lower slopes of the Cholo hills. I do not mean to convey, however, that Cocoa should be planted on steep slopes, rather should it be on level patches, where protection from wind can be much better provided against. I cannot recommend Blantyre, Namadzi or the higher elevations of the Cholo hills for Cocoa culture, as from the results of three years mean temperatures at Blantyre, it is found that June has a mean minimum temperature of 49°. This indicates that Blantyre is too cold for Cocoa to do well, as it is evident that at times the temperature may go as low as 43°.

The figures require some explanation and it is desirable that this should be given here, since it applies not only to Blantyre but other similar localities. The statistics referred to were furnished by Mr. Beaton, Acting Manager of the African Lakes Corporation. For the years under consideraton, namely 1898-99-00, the instruments were exposed at the garden house near the Mudi stream.

As Mr. Ferguson observes, these temperatures cannot be accepted as a criterion of the whole of the Blantyre district, but in this discussion are all the more valuable, as they are applicable to similar localities in Blantyre, Cholo, and Namadzi. The air is naturally damp and still, and in such places it is not advisable to risk growing a product which is purely a native of the tropics.

It is unnecessary for me to state that Coffee has suffered from frost in the Namadzi district, and that it would be unwise to attempt to grow Cocoa on a large scale involving considerable expenditure in that District.

To go further a field, Fort Johnston district is worthy of consideration for Cocoa cultivation, and that when the experimental consignment of seed arrives, an effort will be made to establish some plants there as well as at other places throughout the Protectorate.

I have briefly stated that Bananas may be grown as a pr nary shade to the young Cocoa plants, and that Conifers shoul mately take their place. As a shade for young Cocoa, Ba will be found to be excellent so long as they are kept within b and not allowed to produce too dense a shade or absorb too moisture from the ground, and therefore instead of being h to the young Cocoa, take all the nourishment, giving weak gling Cocoa plants as the result. If three or four stems of Ba are allowed to grow, these will be found sufficient. My reas suggesting Conifers being grown as shade is that they evaporation more than do deciduos trees, which invariably most of their foliage during the dry season, at the time most de that they should retain it. Conifers on the other hand r their density, and maintain the necessary humidity at a when it is essential to Cocoa growing.

At low elevations Cocoa is planted at twelve to fourteen but at altitudes of 1,800 to 2,800 feet above sea-level ten to tw feet will be found sufficiently wide apart, while this admits of of Bananas and also whatever variety Conifers are grown.

Cup ressus Decurrens and C. Macrocarpa show by their ro and quick growth that they would furnish all that is necessa maintain moisture in the surrounding atmosphere. They have this recommendation that they would not harbour in that might be injurious to Cocoa.

MANUFACTURING QUININE IN BANDOENG

Mr. F. L. Seely, Secretary and Treasurer of the Paris Med Company, has written an account of a visit to Java, during w he inspected the Bandoeng quinine factory. Mr. Seely was gr surprised at the forward state of civilisation in Java. On tr ling to a plantation 23 miles distant from the railway and miles from the nearest neighbour, he was met by the plan conveyance, a "fine upholstered carriage, manufactured in Chic and the planter's home was a "picture of comfort and beauty, b furnished with the finest tapestry furniture, the table well l with cut-glass, the planter himself a college graduate, etc." A 25,000 acres of Java is under cinchona.

Bandoeng is a town of about 1,000 Dutch and 60,000 nat about eight hours' ride from Batavia. From this place Mr. S made expeditions to the plantations by pony-carts and on p back, or in mountain chairs. He saw the cinchona growing i its stages. The seed is planted in nurseries (not glass-cove and have to be covered with leaf-shelters to keep off the ray the sun. Both ledger-seed and succirubra-seed are planted, the ledger is grafted on the succirubra for the reason that ledger does not grow well in the soil, while the red-bark prospers. The little succirubra-tree is allowed to grow abo feet high and the ledger not quite so high. The tender shoo the ledger are cut up into pieces about 6 inches long, each ha two buds, and after being trimmed to a wedge-shape, are inse in a little slip made in the side of the succirubra. This is cov up with wax and bound with a piece of banana-leaf, whereu after a short time, the wound heals and the little ledger-shoot co out in leaf; then the tall top of the little succirubra-tree is cu and the tree is transplanted. It is allowed to grow until it years old, when it is sawed off at the roots, divested of its b and a new tree planted near by. Native women then beat bark off the tree, which is then partly dried in the sun before b put into the ovens. Pharmaceutical bark is usually dried enti in the sun. After drying, the bark is rough-ground and pa in bags of 100 kilos. each; 90 per cent. of the Java bark is expo and the remaining 10 per cent. is manufactured into quinin Bandoeng; this 10 per cent. means 1,000,000 oz. of quinine year, and will soon be raised to 20 per cent., as they are now doub the capacity of the factory. As a prelude to these experie Mr. Seely tells in a brief and sketchy manner the history of introduction of cinchona into Java. Hasskarl's labours were quite so fruitless as is made to appear. On the other hand, number of trees resulting from the seeds obtained from Mr. Le was as many as 40,000 (Mr. Seely says something over 20,000 1874. A good many of these, says Mr. Seely, are still left stand but they are now simply used for their seed. After descri

w the Ledger shoots are grafted on to the succirubra stem, and plaining that the bark is harvested by sawing down the young ee and beating off the bark, Mr. Seely deals with the quinine ctory.

Mr. Seely visited the factory, and his photographs include some ken in it. Dr. A. R. Von Linge is the manager and head chemist the factory. Mr. Seely saw them producing about 4,000 oz. of inine a day, which he could not distinguish when placed among e best-known European brands When the bark reaches the ctory every parcel is assayed, and natives mix the different lots average them. Tons of bark are ground up every day. It is hausted by the petroleum method. The crystallisation is done a process invented by Dr. Von Linge, which enables them to gulate the conditions of the drying-room. The crystallising-ilding is the most perfect specimen of absolute cleanliness r. Seely has ever seen. "Immense rows of big porcelain pans," ites Mr. Seely "hundreds in number," are to be seen. In these ystallisation goes on. The liquor is afterwards "dumped into cen-fugal extractors, which throw the water out and leave the quinine ystals nearly dry." The last crystallising solution is returned pipes to the factory, acid is added to it, and it becomes the first shing solution for another batch. One of the most delicate erations is to regulate conditions so that the quinine contains e right amount of water. The temperature and moisture of the are controlled for this purpose in the Bandoeng factory. The ystallising building is used only for purifying and crystallising e quinine. It is exceptionally clean. The floors are covered with rcelain-finished tiles, which are kept as clean as dishes, the allest dripping of solution being scarcely deposited before it is ped up by a native. The machinery and apparatus are kept in fect order, and even the porcelain-lined crystallising pans are shed with soap and water. Every time the solutions are changed, th is stretched over each row of pans to keep out the dust and nt. After being dried, and packed in tins, the quinine is sent Batavia, where it is sold at public auction.

Before the quinine goes to Batavia it is analysed by a Govern-nt official, and at Batavia is sold by auction. The factory has interest in the sales, as it does no commercial business except h the planter. A sum of $2 per kilo is paid for manufacturing-ts by the planter. The auctions in Batavia are carried on by house of Messrs. Tiedeman & Van Kerchem.

THE JAPAN TEA TRUST.

The report that emanated from New York about a week ago to effect that a trust was forming to control the Japan tea market this continent caused quite a ripple of excitement, both in ntreal and Toronto, but, generally speaking, the matter seems e treated lightly and as if there were nothing in the story.

On the whole, probably it would be a good thing if such a trust re formed, for, in spite of the quality of Japan teas, it has been ught, even by their fondest admirers, that the bidding that es place for these teas each year at Kobe and Yokohama has entimes led prices beyond a profitable trading point if not ond the legitimate value of the teas. The Japan tea market sents the unusual spectacle for a tea market of being cleaned up he close of each season. Production has not gone beyond con-mption. Consequently, there is a spirited competition between ers to obtain the available supplies. Oftentimes this competi-n is unhealthy.

f a trust were formed to do the buying (and why should a trust be economical for buying as well as for selling purposes?) teas uld be bought at a more legitimate value, compatible with the pply and demand. Prices would not then be regulated by a rited competition or speculation.

Even for such an excellent article as Japan tea the price can be run high to induce consumption. Recognition must be given to other s that sell at lower figures, and perchance the Japanese would well to lower their prices to a competition point in order to hold r trade rather than allow it to drift away on account of the raordinary high values set on their article. As yet they have lost any of their hold on this market, but the most ardent ad-ers of Japan tea in Canada to-day would welcome a buying trust, uch an organisation might lead to lower priced teas. Whether organisation could do the buying for the whole country is an n and much disputed question.—*Canadian Grocer.*

SOUTHERN INDIA TEA ESTATES.

The sixth annual ordinary general meeting of the Southern India Tea Estates Company, Limited, was held at the offices of the Company, 16, Philpot Lane, London, E. C., on June 27th, Mr. W. Forbes Laurie presiding.

The Secretary (Mr. Alexander J. Rouse) having read the notice convening the meeting, together with the report of the auditors, the Chairman said: Gentlemen,—With your permission I think we may consider the report as read. Well, it is no use, I am afraid, trying to hide the fact, for it is apparent to all that the tea industry is undergoing a crisis, and the Southern India Tea Estates Company has not passed through the difficulty unscathed. In the last few years tea growing has had much against it, which commenced with the fixing of the rupee at 1s. 4d. Unfortunately, when the rupee stood at a little more than 1s. 2d. the difference between that and 1s 4d. showed such a profit of itself that tea cultivation was extended in some directions most recklessly and widely, and this land now coming into bearing has produced an over-supply. Yet, after all, the over-supply is something less than 5 per cent. of the total production—a fact, which really seems to point to other influences working, besides that of the constantly-condemned over-production. On the top of this the duty was increased to what it is now, thereby doubling the price of tea to the consumer, and for the first time for many years there have been no signs of increased consumption in Great Britain—a country which is the largest consumer of tea in the world. Thus, all things considered, it is hardly possible for the industry to be highly prosperous under these conditions. There is also another factor thought lightly of by many: industries of all kinds are coming under combinations, presumably to insure a living wage to the workers. Warehousemen, brokers, shipowners, and even buyers have associations for this purpose, so whatever our sufferings may be, they do not participate in them. I highly commend any one who provides that in whatever he undertakes shall return a living wage to his employees, but I fail to see as these methods extend, how we can satisfactorily fight the war of existence without adopting similar weapons. The question that arises amongst most shareholders will be, Why are we in such a position as to be unable to pay a dividend? Last year we paid 6 per cent. and wisely passed £1,000 to reserve, much, I believe, against the wishes of several persons in the room at the last meeting. Well. the price of tea has fallen, and I hold a circular here which shows that Travancore teas have fallen 1·45d. on an average of all teas for the year. Our teas, however, have only fallen 1·17d., showing that we are still better than the average of the district, and that this fall is general. The fall undoubtedly has been large throughout India and Ceylon. The chief cause, however, is that the tea our places naturally produce has not been in demand so much as usual. There has also been a loss on coast advances, which has come most inopportunely, but, as regards this, I am sure that our losses have been very small from this cause compared to other companies similarly situated. I may add, as it does not appear in our sheet, that the cost of our tea has been just a fraction under 24 cents f.o.b., which is considered cheap production. As an instance of the great effect this fall in price had on our finances, I may tell you that had this year's crop sold at the same price as we obtained in 1899-1900, *viz.*, 5·92d. instead of 4·75d., we should have had no less than £1,837 more. With so small an over-supply as under 5 per cent, I consider that this condition of affairs cannot last long. By finer plucking, which is now being tried, there must in a short time be some improvement, and I may say that recent sales have shown an improvement. The Chairman, in conclusion, proposed the adoption of the report and accounts.

There was no reason other than he had already stated for the fall in price of their tea, which brought higher results than other companies owning estates in the Travancore district. Of course, as in other commodities there was an ebb and flow in the prices of certain classes of teas, and at present the Company's produce was not in fashion, notwithstanding that a better quality was being marketed, owing to the finer plucking. He was interested in another estate, and there had been a fall of 2d. per lb. quite lately, as the class of tea was beginning to suffer. Capital expenditure would now practically cease, and current expenditure bear everything. In the estimates for the coming year the crop of 413,500 lbs. was estimated to cost 24·64 cents, including capital

expenditure, and as the manager was very careful with his figures, it was quite probable the cost would not really exceed 24 cents. The condition of the estates he believed to be excellent; whatever economies had been effected had not been at the cost of the estates; they had not suffered in any way. Last year a trading account was rendered with the directors' report and balance-sheet, but it was not usual to do this. He saw no reason, however, why the cost of production should not be given in future. He did not agree that the quality of the tea from Glenmary had fallen off. As to coast advances, the bad advances were chiefly due to the year under review. There was no material sum to the debit of that account at the last meeting

Mr. J. F. Whyte seconded the motion for the adoption of the report and accounts, which was carried unanimously.

The Chairman proposed the re-election of Mr. A. Valentine Holland as a director of the Company.

Mr. W. W. Lord seconded the proposition, which was agreed to.

The re-election of Mr. J. D. Stewart Bogle as auditor was moved by Mr. B. F. White, seconded by Mr. H. H. Austen, and carried.

Mr. J. F. Whyte proposed that a hearty vote of thanks be given to the Chairman for his conduct in the chair.

Mr. Lord seconded the vote, which was carried.

The Chairman, in thanking shareholders for the vote, said he believed there was a brighter outlook than was generally assumed Doubtless prices would readjust themselves in time. The only danger he saw was that probably a cycle of good trading would occur in which great success would be achieved, and that might be made the excuse for more capital being put into tea extension.

The proceedings then terminated.

THE TEA CAMPAIGN IN AMERICA.

Mr. P. C. Larkin wrote on the 12th ultimo from Toronto to the *Home and Colonial Mail* :—

I have been reading with a great deal of interest the many suggestions, made by the friends of the Tea Trade, to bring that industry into a better condition than it has been of late

I read with special interest the letter signed "Ross W. Hayter," and agree with everything Mr. Hayter says. In the first place I believe that the only cure all India and Ceylon can find is in the conversion of the hundred million pounds of Japan and China tea, used in the United States annually, to the consumption of the products of India and Ceylon. That this is feasible is beyond question, and is best evidenced by the progress that has been made in the United States during the past six or seven years, for I consider that wonderful progress has been made for the amount of money that has been expended. Surely the newspaper writers, who occasionally give expression to their unsatisfied expectations, can know little of business, and less of this continent, when they expect such wonderful results (as they apparently do) from the small efforts, in the shape of expenditure, that have been put forth by these two tea-growing countries. No sum less than Mr. Hayter mentioned, *viz*, forty or fifty thousand pounds sterling per year, and continued for at least five years, can have the effect of converting this continent to the use of India and Ceylon tea. And to put this into the hands of an inexperienced man, and allow him to purchase his experience on arrival here, would be a great waste. The money should be given to a man with a wide experience.

To give you an idea of what amounts are expended by single firms, who exploit much more insignificant articles than tea, we might quote what is a well-known fact among advertisers; and it is, that the Royal Baking Powder Company spends in the United States and Canada five hundred thousand dollars, or one hundred thousand pounds sterling, annually in exploiting "Royal Baking Powder"; and they have done it consistently for years, and have found it most profitable.

In our small way, in Canada, we spend, and have for many years past, an average of twenty-five thousand dollars per year on newspaper advertising alone. In addition to this we expend large sums on sampling, show-cards, street-car advertisements, demonstrations, etc., etc. Now, if we, in our small way, find this profitable (and the best evidence of the fact that we have found it so is that we are at it to-day, after nine years) how very much more profitable could the planters of India find it if they took the matter up in a whole-souled manner.

Mr. Hayter suggests the collecting of one-sixteenth of a penny per pound on all exports from India, which would amount, roughly speaking, to about forty thousand pounds sterling per annum. This sum would be excellent, and, if continued for five years, would have a wonderful effect. But I venture to say that if, instead of one-sixteenth, one-eighth of a penny was collected, the much desired state of affairs would be brought around much more quickly; for not only would the London market be relieved of an enormous quantity of tea in a few years, but I believe that the advertising would greatly increase the consumption of tea per head per annum in the United States. The vast majority of teas sold in the United States to-day are poor teas, and to an amateur it seems the easiest thing in the world to convert the consumers of this poor stuff to become consumers of good teas; but Mr. Amateur has only to try it to be convinced that it is by no means an easy thing. Getting at the people of the United States is a most expensive process, and it has to be kept up for a number of years before the desired object can be achieved.

In conclusion, I can only say that I agree thoroughly with Mr. Hayter that India has had wonderful results for the amount expended. This continent consumes now close upon twenty million pounds of India and Ceylon black and green tea per annum, as a result of a few years' work and only a moderate amount of money expended. If it is desired to increase this five-fold, increase the amount five-fold. There is no "royal road" to it. There is only the every-day road travelled by many who, when advertising was first suggested to them, said they could not afford it; but they soon found that they could still less afford to do without it, and that advertising made them rich, always providing they had a good article to offer the public.

I might mention that in Canada the Ceylon green tea is meeting with the most wonderful success, and in a very few years it will have driven out ten million pounds of Japan tea entirely. Now I have seen some of the most beautiful green teas, the product of Travancore; and therefore the India planters can supply both black and green tea to the United States.

The deplorable condition of the India tea market I think calls for fresh, vigorous efforts to be made to exploit the great market of the United States.

The India planters must go whole-souledly into this matter, or else the results will be as they have been before; that is, "small expenditure, and only comparatively good returns."

If you were to ask a man who has successfully exploited any article in the markets of the world, what he would do if he owned the entire tea product of India, I feel sure his answer would be—"I would exploit the United States market by advertising."

PEPPER.

The *London Commercial Record* says :—

There were a good many people who awaited the telegraphic advice of shipments of Pepper from the Straits during the first half of June with exceptional anxiety, as in their opinion the extent of these shipments would determine the future of the Pepper, especially the Black Pepper market. It was believed that a further decline in the supplies would have a most stimulating effect on prices, whereas on the other hand an increase would intensify the depressed state of the market. The figures showed a small supply to London and the Continent, but a large one to America, and consequently at one moment people were hopeful that these figures would act beneficially on our steadily declining prices. But in this they were sadly disappointed, for although small shipments to the United Kingdom and a scanty supply to the Continental port sound well, and insignificant stocks in Europe are a formidable argument in favour of a rise, yet the large quantities thrown into America had a most depressing effect, for they told an unpleasant tale. They unmistakably confirmed that America is drawing her requirements from the Straits direct to the detriment of London dealers who used to supply her. It means the loss of another and a very important buyer, and no wonder, therefore, if these large shipments of black Singapore begin to cause serious anxiety among our dealers. This is one of the reasons why, in spite of an excellent statistical position, prices continue to follow a steady decline.

Another, and also a very formidable factor in the present position of black Singapore, is the keen competition of black Tellicherry Pepper. We took an opportunity two or three years ago of drawing the attention of our readers to the renewed interest evinced in the East Indian description, and ventured to assert that shortly it would become an article of speculation in opposition to black Singapore, and might ultimately even take the place of the latter. We know that our remarks at the time created general dissent, but time has proved how correct our prognostication has been. The shipment of black Tellicherry is no longer practically confined to Havre, but the Italians have purchased largely, and, above all, London speculators have bought to a considerable extent; even Liverpool has taken a bigger quantity than ever, and yet the time is not very distant when operators there would not listen to any proposals of East Indian Pepper. They were too conservative, but *tempora mutantur*, they have taken a few hundred tons during the present season, and in all probability will take even more next year. Liverpool operators, like all others, have been forced to recognise: firstly, the quickly diminishing supplies from the Straits and the increasing consumption of black Tellicherry; secondly, the superior and uniform quality of the latter; and thirdly, the low price of the Indian sort, which has been particularly apparent this season. The difference in price would be even more pronounced if the demand for home consumption of Tellicherry were less important, but as a rule the shipments to Indian ports exceed those to European destinations. We hope to furnish our readers shortly with some interesting figures and facts concerning the home consumption and position in India of black Tellicherry, which in the present state of affairs might be of interest to our readers.

SHADE IN COFFEE CULTURE.

One of the vexed questions of tropical agriculture is that of shading coffee trees. By some persons the practice is condemned, while others claim that it is necessary for the healthy growth and productiveness of the tree.

The U.S. Department of Agriculture has in press and will soon issue Bulletin No. 25, Division of Botany, entitled "Shade in Coffee Culture," which combines the results of personal observation and of a careful study of the literature relating to this much controverted question by Mr. O. F. Cook.

The conclusion reached is that there is no basis in reason or observed fact for the belief that shade is a general necessity for coffee, even when growing at low elevations. On the contrary it is extremely probable that the beneficial effects resulting from shade are quite apart from the shadow cast upon the coffee tree.

As a means of protecting the coffee tree from drought, erosion and winds, shading is beneficial and the planting of shade trees for these purposes is determined by local conditions of climate and soil.

The planting of shade trees in regions not affected by injurious climatic extremes is justified from the cultural standpoint only by the increased fertility imparted to the soil by means of the nitrogen-fixing bacteria of the root tubercles of leguminous species.

A list of coffee shade trees is given in the bulletin, which is also illustrated.—*American Gardening.*

THE MAY COFFEE MOVEMENT IN THE U. S.

The May deliveries of coffee in Europe and the United States, while lighter than during April, are to June 1, above the monthly average for the trade year. The *American Grocer* says:—The speculative movement in May was light, the total sales on the Coffee Exchange being only 264,000 bags, against 646,750 bags in April. The market throughout the month was very steady, and on spot coffee fluctuated within ¼ cent. per pound.

It will be noted from the statement below that the world's visible supply is 1,374,562 bags greater than August 1, 1900, but it has decreased 681,821 bags since December 1, 1900, when it was at the highest point on record. Another item of importance is that receipts in Rio and Santos are ahead of any former record.

The following statement shows the May movement and general position of the article:

Stocks, May 1, 1901—	Bags.	Bags.
United States	1,195,858	
Europe	3,876,254—	5,072,112
Receipts during May—		
United States	651,518	
Europe	757,813—	1,409,331
Total supply, June 1 ...		6,481,443
Less stocks, June 1, 1901—		
United States	1,334,266	
Europe	3,966,055—	5,300,321
Deliveries, May—		
United States	513,110	
Europe	668,012 —	1,181,122
Deliveries, May, 1900 –		
United States	364,459	
Europe	641,605—	1,006,064
Decrease as compared with May, 1900 ...		175,058

The May deliveries in the United States consisted of 396,327 bags of Brazil; 116,783 bags of all other sorts.

The visible supply of the world on June 1, 1901, was 7,192,321 bags, against 7,359,112 bags on May 1 (a decrease of 166,791 bags), and 6,055,816 bags on June 1, 1900.

The visible supply on August 1, 1900, was 5,817,759 bags, so that in eleven months it has increased 1,374,562 bags.

The total receipts at Rio and Santos for the first eleven months of the trade year 10,361,000 bags against 8,631,000 bags for the same time the previous year; and 8,229,000 bags in 1898-99.

Trading in options on the New York Coffee Exchange in May reached a total of 264,000 bags. The lowest price for options was 5·20 cents for June; the highest, 6·20 cents for April. Spot coffee, No. 7 Rio, fluctuated between 6⅜ and 6¼ cents; Padang Interior, 18@20 cents; fair to good Cucuta, 7¼@8½ cents.

DISTRICT ASSOCIATIONS.

INDIAN TEA ASSOCIATION (CALCUTTA).

Extracts from Abstract of Proceedings of a Meeting of the General Committee held on the 2nd July, 1901. PRESENT:—Messrs. H. S. Ashton (*Chairman*), A. Tocher (*Vice-Chairman*), H. W. Boyd, W. Brown, D. A. Campbell, A. C. Lawrie, R. Magor, and R. R. Toynbee.

Letters dated 7th and 14th June, from the Secretary, Indian Tea Association, London, came up for final consideration and disposal after previous circulation.

The chief subject dealt with in these letters had reference to the extension of the sale of Indian tea in Russia. It was stated that the American and Foreign Market Fund Committee had had under consideration the best means of increasing the consumption of Indian tea in that country; and had endeavoured to obtain information respecting the quality of the tea required, prices, methods of packing, etc. It appeared that the prices paid in London for tea for Russia ranged from 3½d. to 1s. per lb. or more

for parcels with really good flavour. So far the demand had been entirely confined to leaf teas; the buyers altogether avoiding broken teas and dusty parcels. The packing preferred was the ordinary wooden chest with lead lining; although, if the tea were suitable, a patent chest would go through. As a rule shippers in London sold on commission, as credit for twelve months was often given in Russia, and cash was then sometimes difficult to obtain.

Mr Tye also stated that the British Exhibition, which it had been proposed to hold in St. Petersburg from November to February next, had been postponed.

The General Committee had asked for the foregoing particulars with a view to an attempt being made to introduce Indian tea into Russia by the overland route from India. It had been suggested that such an attempt should be made, on account of the preference which it was understood existed in Russia for "overland" teas. (See *Proceedings of General Committee Meeting held on 16th April*, 1901.) From information which had been received from Mr. Foley and from other sources, it seemed to the Committee that it would be quite feasible to send tea overland to Russia *viâ* the Nushki-Seistan route to Meshed, from there to Askabad, and thence (by the Trans-Caspian Railway) to Moscow, St. Petersburg and elsewhere. And for their guidance in the matter they decided to ask the the London Committee to endeavour to obtain particulars respecting the China teas sent to Russia overland, the manner in which they are packed, their prices, descriptions, etc.

A telegram dated 25th June had been received from the Secretary, Indian Tea Association, London, stating that it had been decided to raise a new levy for the American and Foreign Market Fund during the current year.

Considered a letter No. 464 P. D. of 21st June, from the Officiating Chief Secretary to the Government of Bengal, Political Department, with reference to the question of the introduction of Indian tea into Tibet. It was suggested in the letter that possibly Miss Annie Tayler—a lady missionary who has a tea shop at Yatung—might be able to assist the Association in this connection. It was added that the general question of improving the arrangements for facilitating trade between India and Tibet was still under the consideration of the Government of India.

The Committee, after discussion, decided to invite the opinion of Mr. J. M. Korb of Kalimpong (who had previously endeavoured to assist them) upon this proposal. In the event of his thinking it might be adopted with advantage, Miss Tayler was to be asked if she could dispose of any Indian tea in the manner suggested. The brick tea in the possession of Mr. Korb might, the Committee thought, be sent to her if she were willing to assist.

In the proceedings of the meeting held on the 4th June, it was stated that the Committee proposed to address the Colombo Agents of the Russian Volunteer Fleet with reference to a proposal that the ships of the fleet should call at Calcutta.

This had been done, and the Committee now had before them a letter dated 17th June, from Messrs. Stcherbatchoff, Tchokoff & Co., the Agents in question. In this letter it was stated that so long as the plague prevailed at Calcutta it would be practically out of the question for the steamers of the fleet to touch here. Moreover, it was feared that there would not be sufficient cargo to warrant their calling. At the same time it was believed that Indian teas would, before long, find a ready market in Russia; and that being so, the question of the steamers of the fleet touching Calcutta was merely one for the future. The rate of freight from Colombo to Odessa and other Black Sea ports was 30s. per ton of 900 lbs. nett. The only drawback to shipping teas to the Black Sea with transhipment at Colombo was that a through Bill of Lading could not be obtained.

The Committee had also asked for information as to the rates of of freight for the carriage of tea from Singapore to the Black Sea ports. But as this was not given in the reply, they decided to ask the Singapore Agents of the Russian Volunteer Fleet for it. Enquiries were also to be made locally as to the rates from Calcutta to Singapore.

Considered a letter, dated 1st July, from Mr. O. B. Griffiths, stating that as he was proceeding to England, he would not be able to continue to advise the Committee with reference to green teas. He suggested that Mr. L. C. Baines should be asked to take his place. The Committee agreed with this suggestion, and decided to thank Mr. Griffiths for the assistance he had given them.

The Committee had before them samples of the Ceylon tea ordinarily imported into Bombay. These samples had been obtained by Messrs. Finlay, Muir & Co. at the instance of the Committee, in connection with the proposal that the Indian import duty on tea should be enhanced to a protective rate. The contention advanced by the Central Travancore Planters' Association (by whom the proposal was made) was to the effect that the Ceylon tea sent to Bombay were of a "rubbishy" character; and that consequently a protective duty was necessary to check their importation.

After examining the samples, the Committee came to the conclusion that they were not of sufficiently low quality to justify this contention. They accordingly decided to send the samples to the Central Travancore Planters' Association, together with this expression of opinion.

The Committee discussed a draft report prepared by the Sub-Committee appointed to consider the question of extending the sale of tea in India.

The report was to the effect that about 600,000 lbs. of tea had been promised (a certain quantity of it conditionally) to the scheme for the establishment of a tea distributing agency which had been set forth in the Sub-Committee's previous report dated 26th March 1901. The Sub-Committee considered that this quantity was sufficient to warrant a start being made. They had received an offer from Messrs. Andrew Yule & Co. to organise and to work the agency in consideration of the actual expenses which would be incurred; that is to say, without remuneration. The Sub-Committee strongly recommended that this offer should be accepted for they thought it would be an advantage for the agency to be connected with a firm of reputation, and with such wide-spread interests as Messrs. Andrew Yule & Co. possessed. Messrs. Andrew Yule & Co. proposed that the management of the business should be placed in the hands of Mr. A. E. Henson (one of their principal assistants), who would devote practically his whole time to it. A Committee to supervise the work would also be appointed.

The General Committee approved generally of the proposal that the Agency should be started, and be worked by Messrs. Andrew Yule & Co. But as the quantity of tea promised was considerably less than was originally anticipated, it was, they thought, a question for consideration whether the full grant (Rs.40,000) which the Association had decided to make would be required. In order to settle this point they decided to ask the Sub-Committee for a detailed estimate of what the probable annual expenditure would be. An enquiry was also to be made as to whether the proposal was that the Agency should be worked as a department of Messrs. Andrew Yule & Co.'s business, or whether it would be formed into a limited liability company with Messrs. Andrew Yule & Co. as Managers.

NATURE AT HER BEST.

We love Nature! Our regard for her, with her sweet and varying moods, is undying, and our love such that it is beyond the art of man to quench. The promise of Spring is one great message of Hope. The fragrant breath of Summer whispers "Paradise"; the mellow touch of Autumn's hand ripens recollection; and crisp biting Winter brings merry, ringing laughter, and rosy cheeks.

But of all, Summer is most dear.

It was in Summer that Tennyson found Rose, the gardener's daughter, "standing in a porch of roses." "Who had not heard of Rose, the gardener's daughter?" asks the poet.

Why did he not also find a gardener's wife, of rosy cheeks, whose buxom figure might tread with us down the ages as a picture of what a gardener's wife might be—not a woman "languid and weary," whose plaintive cry is that "every little duty is a trouble and takes all the joy out of life"

Such women there are, even "gardener's wives," like, let us say, Mrs. Martha Herriott, whose very words we have written above. Who continues thus: "Morning, noon, and night, my head was racked with pain; often for days together I scarcely got a moment's freedom from it. Sometimes, when the attacks were very severe, my left eyeball became quite shrunken and small, and my head would swell right across the top. The pain I suffered then was intense; I cannot properly describe it, but shall never forget it so long as I live. I consulted the doctor and tried all kinds of

medicine recommended by my friends, but, until I commenced taking Mother Seigel's Syrup, got no real benefit from anything."

A happy illustration is given us now of Nature quickly changing from decay to health, "for" continues Mrs. Herriott, whose address is, 24, John Street, London Road, Sheffield, "after taking it a short time, I feld much better, and the improvement continued until I was *free* from pain. Mother Seigel's Syrup completely cured me.

When I am tired and worn out, after a hard day's work, nothing so soon revives me as Seigel's Syrup. It seems to strengthen every part of the body, and is, indeed, a splendid tonic."

That was in the Summer of 1900. And *now* Nature is herself again! Life is gladness indeed.

We love Nature as she is portrayed in the fields and flowers, but we ourselves, who are part of Nature, must be in perfect health to be in harmony with the countless beauties around us.

The keynote of contentment is good digestion, and Seigel's Syrup awakens into life, by its nutritive and medicinal properties, those dormant digestive organs of the dyspeptic.

He or she can then say, "Nature is at her best."

MARKET REPORT.

[*Per Mail advices of 28th June* 1901.]

COFFEE.

The London Commercial Record says:—Supplies to a fair extent have been offered, and as a whole the trade have shewn more willingness to buy, and the greater portion of the quantity at auction was disposed of. East India met a fair demand for all desirable qualities at previous rates, but inferior kinds continue dull of sale. Costa Rica and Central American kinds were in better request at firm prices to a slight advance, whilst superior qualities sold at extreme rates. Washed Santos held above buyer's ideas. The market for "futures" has been very variable, prices improving early in the week on crop news, subsequently becoming easier, and closing prices do not shew any material change for the week. We quote—

London ...	... Santos ...	July delivery	...	29s 6d.
New York	... No. 7 Rio...	„	...	5·35 cents.
Hamburg...	... Santos ...	„	...	29½ pf.
Havre ...	... Santos ...	„	...	36½ francs.

Auction supplies to-day comprised 883 bags East India, 11 casks 2 tierces 4 barrels 3 bags East India cured in Ceylon, 98 barrels 5 bags Jamaica, 330 bags Guatemala, 426 bags Colombian, 225 bags Mexican, 580 bags Costa Rica, 1,227 bags Salvador, 227 bags Nicaragua, 837 bags Vera Paz, 468 bags New Grenada, 47 bags Ecuador, and 35 bags Coban. The auctions went off with quiet demand and without alteration in prices.

The Dutch Trading Company announce their next public sale for Tuesday, 2nd proximo, at Amsterdam, when 18,520 bags will be offered. Good ordinary Java is valued at 31½ cents.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	Stock.		Imports.

The preceding figures exhibit— Tons

In the Imports an increase this year of	...	6,563
Home Consumption an increase of	...	1,660
Export an increase of ...	...	3,452
Stock an increase of	...	2,480

Auctions this week have gone off as follows:—

EAST INDIA.—1,438 bags 55 cases partly sold as follows:—*Mysore*, smalls 33s to 38s, low middling to middling 39s to 48s, bold 52s to 63s, peaberry 43s to 54s. *Coorg*, smalls 31s *Neilgherry*, smalls 36s to 39s, fine ordinary 38s, low middling to 35s, fine ordinary 38s, bold 50s to 58s 6d, peaberry 48s to 55s, to middling 41s 6d to 44s 6d, bold 50s 6d to 65s, peaberry 43s 6d to 53s 6d. *Wynaad*, smalls 34s, low middling 38s, peaberry 46s 6d. *Travancore*, smalls 37s 6d to 38s.

JAMAICA.—83 barrels about half sold, good ordinary greenish 33s to 34s, low middling 46s, peaberry 45s.

COSTA RICA.—Of 4,728 bags catalogued about 2,600 bags sold, smalls 29s 6d to 40s 6d, ordinary to fine ordinary 34s to 40s, low middling to middling 41s 6d to 49s 6d, good middling 51s to 54s, bold 55s to 66s, peaberry 42s to 60s.

GUATEMALA.—2,849 bags offered and 1,800 bags sold, smalls 28s 6d to 35s 6d, good ordinary to low middling 38s to 42s, middling 44s to 47s 6d, bold 49s to 54s 6d, peaberry 40s to 48s 6d.

VERA PAZ.—649 bags mostly sold, small 32s 6d to 44s 6d, low middling to middling 40s to 47s 6d, good to fine middling 57s to 73s, bold 80s to 99s, very fine bold 114s, peaberry 45s to 85s.

NICARAGUA.—Of 754 bags catalogued 570 bags sold, smalls 26s, good to fine ordinary 36s 6d to 38s, low middling 40s, middling 50s, fine middling 64s, bold 96s to 102s, peaberry foxy 37s 6d to 38s 6d, good to very fine 64s to 87s 6d.

SALVADOR.—Of 5,418 bags offered 4,300 bags sold, smalls 30s to 38s, fine ordinary 37s to 39s 6d, low middling to middling 40s to 45s 6d, bold 47s to 54s 6d, peaberry 40s to 55s 6d.

COLOMBIAN.—7,380 bags mostly sold, smalls 27s to 35s, low middling to middling 39s 6d to 46s, bold 47s to 52s, peaberry 38s to 46s.

HONDURAS.—157 bags sold, smalls 26s 6d, low middling to middling 40s 6d to 41s peaberry 46s 6d.

MEXICAN.—Of 1,009 bags offered 540 bags sold, smalls 33s 6d, good to fine ordinary 35s to 38s, middling 42s 6d to 44s, good middling 48s, bold 52s to 52s 6d, peaberry 38s to 47s.

BRAZIL.—Of 1,117 bags washed Santos 170 bags sold, bold 34s 6d to 40s, peaberry 41s.

Rio Exchange 11 7/32d, previous day 11⅛d.

HAVRE, *June* 27.—Good average Santos June opened quiet at 36f. and closed steady at 35¾f., September opened at 36¾f. and closed at 36½f., December opened at 37¼f. and closed at 37f., March opened at 37¾f. and closed at 37½f.

HAMBURG, *June* 27.—Good average Santos July opened steady at 29pf. and closed steady at 28¾pf., September opened at 30pf. and closed at 29½pf., December opened at 30½pf. and closed at 30¼pf., March opened at 31½pf. and closed at 31pf.

NEW YORK, *June* 26.—Closing prices of No. 7 Rio were as follow:—

	June.	July.	Aug.	Sept.	Oct.
June 26...	5·15	5·15	5·25	5·35	5·40
June 25...	—	5·15	5·20	5·30	5·35

TEA.

INDIAN.—Auctions were about on a par, *viz.*, 9,400 packages, of which 790 packages were new season's compared with 9,200 packages (500 new season's) in the previous week, and 4,800 packages (1,500 new season's) in 1900.

The above-mentioned small supply of this year's manufacture met with a favourable reception, quality generally being considered above that of first invoices usually. No material alteration occurred in quotations for the old crop, but there was a little more life in the bidding, except for parcels with red and mixed leaf. A fair portion of the offerings was from South India, comprising 2,800 packages, some of which shewed improvement in cup contrasted with prior arrivals from the same Estate.

Printed on importer's account during the month:—

1901.	1900.	1899.
42,000 pkgs. (1,500 New Season's)	13,400 pkgs. (4,100 New Season's) (Including Whitsuntide)	47,700 pkgs. (12,700 New Season's)

making the amount passed through the Mincing Lane Sale Room from 1st July last 1,660,000 packages *versus* 1,618,000 packages, and 1,532,000 packages in 1899-1900 and 1898-1899 respectively.

CEYLON.—The quantity submitted was lighter, being 24,300 packages, while on the Tuesday before 29,400 packages were brought forward, and 26,600 packages a year ago.

Common leafy kinds ruled firm, but broken and dusts were in limited demand and often easier. Medium to fine went off quietly, Pekoes from 5½d to 6½d per lb. affording very good value to buyers. Broken Orange Pekoes with full brisk flavour commanded a spirited competition and occasionally fetched higher prices.

Partly owing to the reduced number of choice lots the average is 6¼d lb. opposed to 6⅜d on the 20th instant, and 6⅝d per lb. twelve months since.

Catalogues already issued include 23,700 packages for Tuesday, 2nd proximo, and also 9,400 packages for Tuesday, 4th proximo. The latter are to be disposed or privately, so that the selling prices should not be divulged.

Total sold in June :—

1901.	1900.	1899.
113,400 pkgs.	92.900 pkgs.	105,600 pkgs.
(Avge. 6⅜d per lb.)	(Avge. 6⅝d per lb.)	(Avge. ⅝d per lb.)

JAVA.—Public sales included 1,700 packages of direct import, which were taken by the trade without much change in rates. A consignment of 216 packages from Perbawattee realised 8d per lb.

The following were declared :—

1901.	1900.	1899.
5,300 pkgs.	3,200 pkgs.	4,600 pkgs.
(Avge. ¾d per lb.)	(Avge. 6d per lb.)	(Avge. 7⅜d per lb.)

Deliveries.—The clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.* :—

From 1st to 25th June, 1901 ... ... 10,272,487 lbs.
Do. do. 1900 ... ... 10,325,561 „

During the week the following have been printed for sale by public auction :—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	7,635	1,769	9,404
Ceylon	22,627	1,656	24,283
Java	1,387	326	1,713
Total ...	31,649	3,751	35,400

Also 343 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated June 28th, 1901, says :—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1901-1902	43,370	115,146	5,804
1900-1901	15,646	94,410	3,186

9,600 *pkgs.* INDIAN
24,776 „ CEYLON
1,713 „ JAVA
} Total 36,089 packages were offered in public auction this week.

The United States took considerably more Indian and Ceylon Tea in the first three months of 1901 than during the corresponding period last year, viz. :—

1901.	1900.	1899.	1898.	1897.	1896.	1895.
Lbs. 5,112,871	4,043,062	2,935,885	3,155,099	4,460,943	2,344,938	1,466,215

As the main increase was received from London there is no doubt that low prices have been the cause, and the expansion has therefore been in Black Tea.

To capture the North American market for Green, Unfermented and Oolong Teas his more important than ever. There seems no reason why this should not be done now that absolute necessity demands it, and it has been proved that suitable Tea can be made.

INDIAN.—The small auction passed with good competition and a tendency towards improved prices. 790 packages new season's Tea were included in the auction and made very fair prices; musters of the new crop seem to show fair average quality.

Week's average of New Season's Tea sold on Garden Account 1901, 3,573 pkgs., av. 6·21d. 1900, 2,831 pkgs., av. 7·06d.

New Season's Tea sold on Garden Account 1st June to date 1901, 6,920 pkgs., av. 6·17d. 1900. 6,467 pkgs., av. 6·99d.

CEYLON.—The auction was rather smaller than last week, comprising 24,776 packages against 29,861 last week. Competition was fairly well distributed, but no change can be recorded in quotations, except for medium Teas about 6d., which were occasionally somewhat neglected. For next week 22,904 packages are printed for public sale, and 9,372 for sale in a private auction room.

Average for week 6·30d., against 6 59d. same week, 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 619,234 pkgs., av. 6·60d. 1900, 627,895 pkgs., av. 7·28d.

JAVA.—All the teas offered were of direct import and on garden account. Nearly everything was sold in the room at prices about equal to those ruling last week.

Bank Rate 3 per cent. Exchange on London three months sight :—Calcutta 1/4 3/32. Colombo 1/4⅛.

COCOA.

No auctions have been held this week and the private transactions are of little moment. Prices of all growths are steady.

PEPPER.

BLACK.—The market is quiet, but former prices have been maintained in the business done. About 150 tons Singapore have been sold, including fair Singapore on the spot at 6 1/16d, near at hand shipments at 6⅛d, and April-June and August-October at 6⅛d to 6 3/16d.

At auction on Wednesday 250 bags Wynaad bought in at 6 1/16d to 6⅛d, also 170 bags Aleppy at 6d. 52 bags Ceylon sold at 6d per lb. for fair heavy.

WHITE—Is quiet and business unimportant. For arrival no sales reported.

At public sale on the 26th instant 35 bags Singapore retired at 10¼d and 34 bags Penang at 8¾d. 31 bags Ceylon sold, fine bold at 10d to 11d, brownish 8¾d to 9d per lb.

GINGER.

Slow of sale but steady in value. 25 cases 407 bags offered and 75 bags sold, medium and small dullish washed rough, part lean 36s to 36s 6d, cuttings 33s per cwt.

AFRICAN.—38 bags bought in at 35s per cwt.

JAMAICA.—154 barrels sold at full rates, low middling 40s, common to common 35s to 37s, fresh water damaged 21s to 24s per cwt.

CINCHONA.

At the monthly auctions held on Tuesday, 2,985 bales were presented for competition, contrasted with 4,072 bales brought to the hammer a month previously. Demand was fairly good, and the bulk of the offerings sold at full rates to 5 per cent advance, the unit average being fully 2d, against 1 15/16d obtained at the May auctions. The following are the details of the sales :—

Of *South American*, 1,050 packages were brought forward and all but 100 packages sold—Bolivian cultivated Calisaya quill 4⅛d to 1s 0¼d (damaged 6⅞d to 9d), ditto flat 9d. Red, quill (damaged) 4½d to 5d. Cuprea 2⅜d to 3¼d per lb.

281 bales *Ceylon Cinchona* mostly sold—Red, chips and shavings 2⅞d to 6d; Ledgeriana chips 9⅜d, branch 5¾d per lb.

1,175 packages *East India Cinchona* were catalogued and about 900 packages sold—Officinalis, chips and shavings 6¼d to 1s 0¼d, (common to fair ditto 2⅞d to 5⅞d), renewed ditto 4½d to 1s 0⅛d, branch 2⅞d to 5⅛d, and root 6¾d to 9¾d per lb.; Succirubra, chips and shavings 3d to 6⅞d, root 3½d to 6¼d; Ledgeriana, chips and shavings 6½d to 9⅜d, root 6⅜d; Hybrid, chips 3¼d to 4⅞d per lb.

399 bales, etc. *Java Cinchona*, about half sold—Succirubra, chips 5¾d to 6¾d; Ledgeriana and Hybrid, chips 10¾d to 1s 3¾d, root 11¾d per lb.

80 bales *African Cinchona* sold—Succirubra quill 6¼d to 7d, broken quill and chips 5¼d per lb.

SULPHATE OF QUININE has passed though a slow and inanimate week, the only business done being 5,000 ozs. for December delivery at 1s 4⅛d. The spot quotation is 1s 3½d, August 1s 3½d, and October 1s 3⅞d per oz.

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 2nd proximo. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Coorg.

Polli Betta, *23rd July.*—*Weather*—Nearly 40 inches to end of last week, 2 or 3 inches under last year, but above average. A nice "break," much appreciated, now on. Coffee looking in prime condition. Splendid promise for 1902. Borer has been very severe in parts. Works well advanced. Supplying nearly completed. Good progress on Paddy fields. *Labour*—Sufficient. Coolies are beginning to come in from Mysore.

THE PROSPECTS OF COFFEE.

We regret that it is not possible for us to write in a very hopeful strain about the future prospects of Coffee. There are but too many indications adverse to the chances of a rise in prices. Brazil continues to produce extensively, and consumption in the United States has fallen off. Whether this latter effect can be traced to the influence of the Tea Campaign we cannot say, but it is an important factor in estimating prospects. There is, some probability of "bull" speculation in Brazil, and if an upward movement can be engineered mild coffees will doubtless benefit to some extent. But unless there is a quite unexpected failure of crops any rise can only be temporary and of brief duration. It is freely asserted that prices in Brazil cannot fall much lower, which means that they are already near starvation-to-planters' point. This is a tale that has been told before, however, and fall after fall has followed, production increasing the while instead of answering to the expectations of "bull" operators. As regards Brazil it is stated to be certain that in many older districts the trees are too exhausted to be able to stand two such crops successively; but whether the new trees coming into bearing in others will make up for such loss, is not easy to determine, although the probabilities would seem to indi-

cate the contrary. It is equally certain that prices cannot fall much lower without stimulating speculation purchases. These, however, are not what is required. The chief need is a good, steady, increasing demand, and an approach to a fair adjustment of the balance between production and consumption. Without this the effects of speculation can only be spasmodic and fleeting.

It must be remembered that there is comparatively little speculation in Coffee in the English market. The chief movements are initiated in the United States, and local operations in Rio and Santos are usually controlled from New York. In the commercial capital of the State operators are rarely left to conduct their operations unopposed. Of late Coffee interests there have been divided into two powerful camps, the "bulls" under the lead of the Lewisohn syndicate, the "bears" under the banner of Messrs. CROSSMAN BROS. The former have been trying to make capital recently out of the fact that remarks passed by Messrs. CROSSMAN during the last few months are not in accordance with what they stated at an earlier date. These criticisms are not really of very much importance, for every man is entitled to change his opinion, and most wise men naturally do as circumstances develop and falsify their predictions or disappoint their anticipations. Messrs. CROSSMAN have aroused antagonism by remarks as to the alleged bearish influence exercised on coffee prices by rising Brazilian exchange. At the first glance it would certainly seem as if a rise in Brazilian exchange should tend to make prices rise, but the other view has taken, on some such grounds, as the following:—High milreis prices have stimulated production and this has become too heavy for consumption. Messrs. CROSSMAN expressed the opinion two or three years ago that with an apparent certainty that exchange would continue to rule high, there was no reason why planters should not increase production by extending their plantations to the utmost degree. Subsequent events have shown that this was an enormous idea, and the firm now expresses a very different opinion.

There can be no doubt that the immediate effect of a rise in the milreis is now favourable to the Brazilian producer, but if gold prices rise proportionately this is soon set right. Apart from speculative movements, gold prices are unquestionably mainly influenced by the relations between supply and demand. It follows therefore, that a standing upward movement in prices, a movement to a permanently higher level, must be brought about by an increase in cost of production, a reduction in quantity produced, or an expansion of demand. For this last coffee-planters have not hitherto worked very energetically. Therein, perhaps, has been their chief blunder. Competition has become keener. It has been said that old trees in Brazil cannot stand the strain of more than, say, a couple of successive heavy crops; that, after this, they need a rest and take it. Hence new ground has been worked in Brazil. In Mexico and other countries fresh and rigorous rivalry has been started. Thus there has been an increase of production. Either this must be checked; perhaps, even a reverse movement must be brought about, or demand must be largely developed. Failing either of these, there can be no lasting rise in the level of prices. These appear to us to be the chief points that coffee-planters all over the world must bear in mind. By adapting their plans to meet the difficulties arising from an increase of production simultaneously with a decrease of consumption they may yet find a way out of the critical position in which they find themselves at the present time.

THE OUTPUT OF TEA.

The attitude of the Empire of India and Ceylon Tea Company exemplifies the position taken up by many of the tea-planters who are loudest in urging a restriction of output. Increased crops are rejoiced over because they have prevented the heavy fall in prices from making the year's accounts disastrous. When challenged about extensions, the Directors reply, in effect: "We do not extend, we merely plant out 5 per cent. or 10 per cent. more land year by year to counterbalance the effects of disease, etc." Over-production is cited as the cause of the fall in prices, yet what applies generally is not taken to apply to this particular case. As it is much the same with companies generally, the merry game goes on and each advocates reduction of output and helps to swell over-production. The arguments of the man who would restrict supplies are always sound, but, somehow or other, their application to "this" company is questioned by almost every Chairman when he addresses the shareholders. Then, too, a very hopeful view is mostly taken by Chairmen with respect to the opening up of new markets, which would provide profitable employment for any increase of output. Mr. Geo. Selon made a suggestive remark the other day as to the prospects of combination for the purpose of developing new markets. He said that when he found that the Tea Industry had been absolutely unable to combine for the purpose of limiting the output, he could not see any prospect of a combination for any other purpose. However, the movement for pushing the sale of tea in India appears to have found much more general favour than that for the "resting" of tea bushes, and it is to be hoped that good results will be achieved.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

The General Committee of the Indian Tea Association (Calcutta) have issued their Monthly Return, dated 17th July, 1901, of Sailings and Daily Customs Entries of Tea from Culcutta, and also a Return of Exports of Ceylon Tea for four years up to 1st July, 1901.

NOTES.

Tea in the U. S. The *American Grocer*, of 19th ultimo, reports :—At the last tea auction a weak and irregular market was disclosed.

Cocoa in Peru. The cocoa grown in Peru is of superior quality. It is produced in various parts of the country, but only in small quantity, and nearly the whole of it is exported to Bolivia.

Colombo Tea Sales. At the public sale of tea at Colombo on the 17th instant 16,038 packages = 1,250,465 lbs. were offered, of which 13,119 packages = 1,010,957 lbs. were sold.

Java Cinchona. The exports from Java during June amounted to 1,036,000 Amsterdam lbs., against 866,000 Amsterdam lbs. last year, and 1,126,000 in 1899. From January to June the total shipments have been 5,148,000 Amsterdam lbs., against 4,100,000 Amsterdam lbs. last year, and 5,094,000 in 1899.

The Dutch Coffee Auctions. At the Dutch Trading Companys' sale, held on the 2nd July, 18,520 bags Java were sold, good ordinary bringing 32 cents, against 31½ cents at the previous sale. In "Futures" there has been very little doing, and quotations are a shade easier—Santos for July 29s, September 29s 3d, and December 29s 9d per cwt.

Tea in the Persian Gulf. There was a very slight increase of import in tea during 1900. China tea was largely imported and has paid well. According to a consular report, it is chiefly used by persons who are addicted to the use of opium. The import of Calcutta tea has fallen, and dealers in this were hardly able to realise invoice prices. Java tea is going out of favour, and has caused losses to the dealers.

* It is understood that the bulk of this tea consists of transhipments for the United States and Canada.

Coffee in Perak. The Perak Administration Report for the year 1900 states that the prospects of coffee have shown but little signs of improvement during the year. On the estates that have been maintained in good order the crops have been good, but the present price of coffee, it is feared, prevents its being cultivated with success except in connection with other products such as rubber or cocoanuts.

Pepper in Perak. Pará rubber is now extensively planted on many estates in Perak. Where well tended it grows well and the young trees are strong and healthy. In many places, however, white ants, which attack the roots of the trees, are a dangerous enemy, and one against which the planter will have to guard. On no estate have the trees arrived at sufficient maturity to enable them to be tapped.

Cacao in Ceylon. The Cacao Committee of the Planters' Association of Ceylon has resolved that District Associations be asked to arrange that steps be taken to obtain the co-operation of cacao growers in experiments and observations for the information and guidance of the Cacao Committee ; (II) that it be requested that answers to the questions be forwarded to the Secretary as soon as possible.

Indian Tea Exports. The teas shipped from Calcutta to the United Kingdom from April 1st to June 30th, have totalled 7,473,809 lbs., compared with 10,086,358 lbs. in 1900, and 15,058,358 lbs. in 1899. The falling-off is expected to materially assist to remove the glut of the home market. Increased quantities have been shipped to ports in the Mediterranean and to the Persian Gulf in the same period, *viz.*, 628,711 lbs.

Sale of Tea in India. The Indian Tea Association has accepted Messrs. Andrew Yule & Company's offer giving them Rs. 40,000 and trusting them absolutely with the working of the agency. Messrs. Yule are to have the exploitation of Indian Markets without any remuneration for personal services and at the end of three years, having accomplished the work on behalf of the Association and opened up large markets for tea throughout the Empire, the business of the agency will become their own.

Boycotting Tea in Public Sale. A special telegram, dated 16th instant, to the *Times of Ceylon* says :—Notwithstanding the organised boycott of the public sales to-day by a large section of the trade, buyers were numerous and prices firm. Resolved :—"The following Sub-Committe has been appointed by the "Thirty Committee" to consider the draft scheme for the Ceylon Green Teas Producers' Association :—Hon. Mr. W. H. Figg, Hon. Mr. J. N. Campbell, Mr. Bois, and Mr. Rosling."

Coffee in the U. S. Bickford's San Francisco circular of June 7 reports stock of Central

American in first hands at 92,974 bags, against 67,705 bags at same date in 1900. Strictly good Guatemala, 10¼c., against 12c. last year; good Costa Rica, 10½c.; good unwashed Salvador, 7¾c. Bickford says: "Dealers here have been timid investors for some time past. Their stocks are light, and they are moderate, though constant buyers. In this lies the one favorable showing, for coffee keeps moving, though not rapidly enough to suit those having it to sell."

Rambong in Perak. A small sample of Gutta Rambong *(Ficus elastica)* from Perak was reported on in England as "good clean Java character," and sold at the rate of 3s. 10d. per pound. A tree in the Kuala Kangsar garden yielded 25 pounds at a single tapping: this tree is 19 years old, and about 90 feet high, measured round the aerial roots at 3 feet from the ground, it has a girth of 88 feet. Mr. Derry's report on the preparation of the rubber for the market is most interesting, and a copy of it will be supplied to the Managers of the Plantations in the State.

Calcutta Tea Sales. The tea sale on the 19th instant was the heaviest held in Calcutta this season, 19,387 packages being catalogued, including, as was the case last week, several marks that are usually sold in London. There was a good demand, and previous rates were well maintained, lower grade, teas, showing any improvement in quality, being rather firmer. The Lingia Garden of Darjeeling had a fine invoice, which was keenly competed for, and realized the following satisfactory prices:—Broken Pekoe, Re.1-6-0; Orange Pekoe, Re.1-4-0; Pekoe, As.15-6; and Pekoe Souchong, As.11-3.

Sale of Tea in Ceylon. Mr. F. J. Wright, who has already secured an agent for Negombo, calls for any number of agents to open depôts in different parts of the Island, for the sale of pure Ceylon tea grown on Lavant estate, Yatiyantota. The step Mr. Wright has taken is, says the *Times of Ceylon*, along the lines of the proposal which has closely engaged the attention of the Indian Tea Association, considering that the over-production problem is bound to continue to trouble the minds of many. A Ceylon planter, Mr. Wright's new departure is bound to have their good wishes. Doubtless a lot is to be done in supplying our "middle classes" and any reduction of export is welcome to all. The tea will be sold in packets varying from 2 oz. to 1 lb. put up in the estate factory.

Para Rubber in Perak. The result of a sale in the London market of a parcel of Pará rubber *(Hevea braziliensis)* from Perak was received early last year. 327 pounds of the best quality rubber fetched 3s. 10d. per pound, and 23 pounds of scrap, *i.e.*, the fragments of rubber picked off the stems of the trees after tapping, were sold at the rate of 2s. 6d. per pound. 82 trees, of an average age of 14 years, were tapped to give this result; the yield is thus a little over four pounds to the tree, but the Superintendent, Mr. Derry, reports that exceptionally heavy rains frequently interrupted the work and threatened, in conjunction with the tapping, to damage the seed crop, and that therefore the tapping was stopped in many cases long before the supply of latex was exhausted. From the 11 best trees over 97 pounds of dry rubber were obtained, one tree yielding 12 pounds and 1½ ounces.

London Tea Market. A weekly special telegram, date 18th instant, from Messrs. Gow Wilson & Stanton to the Colombo papers reports that com petition is general and well distributed, and that the marke for medium liquoring Pekoes and Broken Pekoes shows fractional advance while tea for price is dearer. The price of fair liquoring Ceylon Pekoe Souchong is 5¼d. (a farthing up) and the average price of Ceylon tea sold on garden account this week was 6¼d. (a farthing down)—as against 6¼d. and 7½d. respectively in the corresponding week last year. Reuter reports that the market for Ceylon tea i generally firm. Pekoe Souchongs are quoted at 4½d. (a farthing up) and the average for the week is 6½d. (same as last week). 32,000 packages of Ceylon tea were offered for sale, and 23,000 were disposed of; while of the 8,000 packages of Indian tea offered, 6,000 found purchasers.

Artificial Manuring. The fifth year's observations upon the effectiveness of nitrate of potash, as compared with like amounts of nitrogen and potash in form of muriate of potash and nitrate of soda are reported on by Messrs. H. J. Wheeler and J. A. Tillinghast of the Rhode Island Experiment Station. The experiments of previous years on this subject were continued during 1899. The results obtained are briefly summarized:—"The data for the 5 years since this experiment was begun show as yet no striking differences between the results with nitrate of potash and those secured with like quantities of nitrogen and potash as nitrate of soda and muriate of potash. It is evident, therefore, that with the amounts of nitrogen and potash employed neither the chlorin nor the soda has as yet proved of positive advantage either as a direct or indirect manure. Incidentally, the experiment has shown the inferiority of gypsum (land plaster) as a source of lime for a sour soil, as compared with air-slaked lime."

Tea Commissions. Writing a month ago, says *Capital*, we ventured to express the opinion that it would be well to pay the managers of Tea gardens liberal fixed salaries, and, if possible, to abolish altogether commissions on profits or outturn. Such a radical change cannot, of course, be looked for until the Tea industry regains its old stability. We are glad, however, to find that so competent an authority as Mr. G. W. Christison agrees with us that commissions can be very injurious to the working of a garden. In his report to the Directors of the Darjeeling Consolidated Tea Company, written after a careful and critical inspection of the Company's gardens, he remarks as follows:—"By existing agreements the payment of commissions to managers is, in my opinion, framed upon a system most prejudicial to the best interests of the Company, 10 per cent., 7½ per cent., 5 per cent., having been paid in proportion to the amount of profit, without any stipulation whatever as to justice being done to the tea bushes or the condition of the gardens." Directors of Tea gardens generally will do well to lay this out-spoken opinion to heart, and to consider if the interests of tea will not be best served by the gradual abolition of such commissions, as the opportunity occurs.

Cinchona. It seems curious, observes the *British North Borneo Herald*, that no attempts have been so far made on a commercial scale to cultivate the cinchona tree for the sake of its quinine—yielding bark, in Borneo. Java supplies about 80 per cent. of the

world's supply of this drug. Of course for its successful cultivation cinchona requires a mean shade temperature of 62° *Fah.* which means a hilly district but that should be no obstacle in the way of the enterprise in this country. The principle of cinchona cultivation is the grafting of the delicate species (the valuable one) on to a robust but commercially valueless one. The yield of bark is obtained after a four years' growth being about lbs. 100 per acre increasing until the eighth year to lbs. 600 per acre when new trees must be called into requisition. The best bark, that of the *Succirubra*, when dried and prepared in a special form for pharmacists fetches in Amsterdam auctions as much as 2 shillings a pound. Suppose an estate in its eighth year and of say 2,000 acres has a good crop, it brings in £60,000 profit, meantime of course other trees are coming into bearing on new and adjoining land and so the rotation is kept up. Perhaps there are objections to its cultivation in this country but capital, no doubt, would overcome them.

The Tea Reserve Scheme. An Upper Dikoya planter does not think Mr. Cooke's scheme at all practicable. He points out that tea, being a perishable article, can only be kept a certain time, and meanwhile it is deteriorating; while at the same time the owner is losing money on interest. The buyers have on hand several months' supply; there is a large stock in London which must be sold, and they would therefore carry on till these reserves of tea had to come into the market. The public at home are now accustomed to 1s. 4d. tea, and if the prices of Ceylon and Indian were by combination forced up to any great extent, the dealers would import China tea again. People in England insist on a certain quality in everything they drink except tea, and they do not seem to care what blend of tea they have. It is all very well for Mr. Cooke to say that the reserve tea would be sent to new markets and disposed of; but where are these new markets and, if they exist, why do not merchants send teas to them now? It seems to me hopeless to expect any great increase in prices; but if the taste for tea is cultivated in India, a vast quantity of poor stuff may be disposed of and the London market thus relieved; and if Ceylon can dispose of 10 million lbs. of green tea in America, prices will rise to a point which will at all events pay Ceylon owners.

Tea in London. Advices, dated 5th instant, say:—Of Indian tea the auctions offered only a moderate supply; all useful liquoring teas were well competed for and realised fully previous rates.—Ceylon tea at Tuesday's auctions showed some irregularity, many buyers not being prepared to operate on that day, and consequently a very large proportion of lots was withdrawn; as the sales progressed, however, more disposition to purchase was shown, and most invoices found buyers at fairly steady rates, considering the circumstances. Subsequently a considerable private business was effected at very substantial advances on the bids made in sale, and no marked change in values can be quoted. Export orders were somewhat scarce. The sales on Thursday, "admission by ticket only," passed off with a better feeling and more general competition, but established no general advance in values. "The shipments to U. K. in June (Messrs Wilson, Smithett & Co. say) are telegraphed as 11,500,000 lbs. against 12,750,000 in June last, and 14,000,000 in June, 1899—the estimate for the current month being 10 to 10½ millions, against actual shipments last year of 11,750,000 lbs. The shipments in the first six months of the year have been 59,250,000 lbs., against 62,250,000 in the first six months of last year. From February 1st, the earliest date which can be taken after the general determination of producers to limit the output, to June 30th, the shipments show a falling off of 5,000,000 lbs. or an average of 1,000,000 lbs. a month. The imports in June were 900,000 lbs. below last year's, but the deliveries show a slight falling off, the stock being increased during the month to 27,266,269 lbs., against almost the same figure last year."

LETTERS TO THE EDITOR.

RUBBER.

Dear Sir,—Can any of your readers favour me with information on the following points:—

1. Which kind of rubber, Castilloa Elastica, Pará or Ceara, is best suited for an elevation of from 3,000 to 4,000 feet?
2. Have any Castilloa trees yet been tapped in S. India? If so, with what result.
3. Where can seed of the above three varieties be obtained?

A. B.

GENERAL ARTICLES.

COFFEE CULTURE IN QUEENSLAND.

Mr. Howard Newport, Instructor in Coffee Culture, writes in the *Queensland Agricultural Journal* on clearing, stumping, distance apart of trees, and lining-clearing.

He says:—Having got the nurseries in full swing and the land and locality for the coffee selected, the felling and clearing must be attended to. The method of clearing for coffee in no way differs from the same work for any other staple, and so need not be detailed here. I may add, however, that, should any logs remain unburnt, the planting of coffee may still be proceeded with, though the logs should, if possible, be rolled so as to lie across the slope and between the lines. If done by contract, this work will cost from 30s. to £4 or £5, according to the timber and undergrowth. From want of experience or carelessness it may, however, be made an exceedingly expensive work. The time of year in which to fell is also much the same in all cases. In coffee, the object is to have the land cleared in time to allow of pitting in January, or earlier if showers are obtained, and admit of planting as soon as the wet season definitely sets in—usually about February. If the nurseries are planted up by June, there should be time between then and February to get the clearing ready to receive the plants.

Stumping.

I have already touched upon this matter in the *Queensland Agricultural Journal* for March, 1900, p. 213—"Grubbing." I am frequently asked whether it is necessary to stump land for coffee. It is not absolutely necessary, but is undoubtedly a good thing, if it can be afforded, not only to remove all stumps, but to plough over the land two or three times before planting.

The advantages and disadvantages of the two systems are as follow:—Of stumping the advantages are—possibility of cheap weeding by means of horse-scuffling for three years or so; better worked soil less possibility of grubs, borers or beetles in the coffee; no damage to the plants from decaying roots; and cheaper pitting. The disadvantages are—the cost, which will run from £3 to £7 or £8, or even more, per acre, according to the number of stumps and nature of the timber; and a loss of nitrogen and humus from the excessive burning involved.

The advantages of not stumping are—cheaper and quicker opening, and retention of a greater percentage of nitrogenous matter and humus. The presence of stumps sometimes makes no difference to the growth of the coffee at all. The disadvantages are—inevitable hand-hoeing from the commencement (just when heaviest); possiblity of grubs, beetles, etc., in the clearing; possible, though

slight, disadvantage to the trees from the presence of roots of the timber trees; and, as a rule, more expensive pitting.

Unless the land is ploughed or dug over, however, all the roots will not be removed by stumping, though they are killed. In heavily timbered country, the cost becomes prohibitive, and the removal of stumps and roots or the digging or ploughing of the land is not essential to the success of coffee. Stumping and ploughing are seldom resorted to in any country in coffee clearings, but, being generally feasible in Queensland, may be taken advantage of where possible.

DISTANCE APART.

Before lining and pitting can be proceeded with, the distance apart that the trees should be, must be decided upon. It is a much debated question, and no hard-and-fast rules can be laid down in the matter. The question of wide or close planting hinges on many contingencies, and must be decided by each grower on his clearing.

The points to be considered are—room for the tree to grow to a good size on the one hand, and economy of space to prevent the useless cultivation of ground on the other, and, besides this, the exposure to wind and cold, and quality of soil of the field, and speedy covering of the ground. It is an old idea that trees on poor soil need to be planted further apart than on rich soil. It has been found by experience that poor soil will not grow any larger trees when planted wide than when close, and ridges and weak patches are therefore planted closer than rich fields, to cover the ground, conserve the moisture, and save weeding. The quality of the soil must be taken into consideration in deciding the question, for it is obvious that what would be close planting in a rich pocket would be wide on a poor patch. As a general rule, therefore, the richer the soil and more protected the spot, the wider the planting may be made with success. Again, not only does too wide planting allow of undue weed growth, and cost more to keep clean, but excessive evaporation takes place in dry weather, and the ground becomes hard. It is a great advantage to have the ground covered as soon as possible. Too close planting, on the other hand, is almost as bad, as it draws up the trees at the expense of lower primaries, but it is better to err on the side of close planting, for it is obviously easier and cheaper to prune back or even cut out trees than to subsequently have to plant between the rows or to weed and cultivate for an indefinite period.

A coffee tree will attain a spread of 6 to 7 feet in from three to five years, but will often take ten years to cover 10 to 12 feet, and on poor soil perhaps never do it. I am, therefore, of opinion that 8 feet x 8 feet is, as a general rule, the widest distance at which C. arabica may be planted in North Queensland, and 6 feet x 6 feet the least distance apart, with success. In exposed, cold, or windy situations coffee trees should be planted at the lesser distances, irrespective of soils, not only to prevent wind getting under or between them and damaging them, but because, other conditions being equal, where it is windy or cold the growth is less. It is better therefore, to line off according to the requirements of each patch or field, at the sacrifice of appearance, than to retain uniformity at the expense of the trees. The following table gives the number of trees to the acre, on the square, at the distances mentioned:—

6 feet x 6 feet=1,210	7 feet x 7 feet=881
6½ ,, x 6½ ,, =1,031	7½ ,, x 7½ ,, =730

8 feet x 8 feet=680.

LINING.

On land that has been ploughed, the lining can be very simply done by counting the furrows, or, if harrowed, by running the plough over it again at the required distances and crossing it. The pits are then made where the furrows intersect each other, and a great deal of the cost and work of pitting can in this way be saved. If the land has not been worked, a supply of stages of scrub wood about 2 feet long and 1½ to 2 inches in diameter will be required. Since it is better not to have split timber for these stakes, or to remove the bark, they will be easily and cheaply obtained. Besides these, a chain or line is necessary—any rope well stretched, or even fencing wire, will do. Ratling is serviceable and lasting, and rope is generally more easily handled than a chain or wire. On this the distances required are marked; a piece of rag or cloth is easily seen and easily attached. In rope it is better to insert than tie on, and so prevent shifting.

There are four methods of lining more or less used in coffee-planting (1) the Square; (2) the Diagonal; (3) the Hexagonal or the Triangular; (4) Quincunx. Surveying instruments, such as a theodolite, are extremely useful; and if a grower can obtain and use one, he will not only have exact lining, but will, need no i structions. Lining is not so important a matter as to need su elaborate apparatus, however; and I therefore propose to expla only the rough and ready methods of laying the guiding lines. all cases, a base line must be marked off, and an effort should made to get this and subsequent leading or guide lines also, if po sible, on level ground.

In Square planting, which is the method commonly adopted, th difficulty usually is to get the guide line at a correct right ang with the base line. If not right to start with, subsequent troub is inevitable.

A right angle may be obtained by tying the line at the fir mark to the first peg of the base line, the tenth mark on the li (nine spaces) to the fourth peg of the base (three spaces), a holding the fifth mark on the line to stretch the slack line out both directions. A peg that spot will then be at right angles the first peg of the base line; this must be carefully done, howeve The method experience has taught to be the surest is to guess square of equal sides and prove or correct it till the diagona measure the same. The feet and inches do not matter, but, if th length from one corner to the diagonally opposite one is not equ to that between the other two corner pegs, the figure cannot right-angled. Once the square is obtained, one side may be lengt ended to form a guide line, on which, with the base, a larger squa is formed. The sides should then be pegged off, when the subs quent filling in will be comparatively easy. In ordinary squa planting the exact distances, such as 6 feet x 6 feet, 7 feet x 7 fe or 8 feet x 8 feet, are usually taken.

In diagonal planting, the object is to have the trees in eve other row opposite the spaces in the base line. This gives th trees individually a little more room, or, rather, leaves less grou unused. but a few trees less will be obtained to the acre. Th lining for this method of planting may be done in the same way the square, and the alternate rows guessed at, but to be correct tw guide lines from the base line are advisable. The second gui line is made by taking the diagonal from two squares as p sketch. A mark on the lining rope is then made to fall on th second guide line wherever it crosses it. The second guide li need not have the distances marked on it, and should be allowed lie until the square is filled in. For this, the equal distances a usually taken as in the square planting.

There is also another method of diagonal lining sometimes use called the "False" diagonal, in which the odd distances, such 6½ feet, or 7½ feet x 8 feet, are taken; the base line always havi the greater distances. This is, however, irregular and somewh difficult, and has few advantages.

The third system is the easiest and best method of lining. It used less often than the square method only because it is imagine to be more difficult to lay out, whereas, in reality, the more or le difficult right angle being eliminated, it is easier. It gets its nam "Hexagonal" from the space alloted to each tree, this figure allo ing of no waste; and "Triangular" from the method of layi the guide lines from the base. Two lines or ropes are require marked as before mentioned, and of equal length. The base li then having been laid and pegged with one of them for its fu lergth, the end of one line is fastened to the first peg of the ba and the end of the other to the last peg, and the two lines a drawn out, forming a triangle. The sides are then pegged accor ing to the marks on the ropes and the triangle filled in, when th pegs will be found to be perfectly regular, having all the adva tages of the diagonal principle, and yet making every tree equ distant from its neighbour on any side.

Any side of the triangle may then be taken to form the base another, and triangles of any size may be made to suit the conto of the field, but must always be equilateral. For this method th equal distances are used, of course, and from 5 to 6 per cent. mo trees will go to the acre than on the square.

The Quincunx.—This is a somewhat irregular method, and only used when a field is designedly planted wide, and the fift tree, planted between every four (as the name implies), is intende to be eventually cut out, or a field is found to be too wide plante In either case it is easier to guess or measure from tree to tr than to line off at first for it. Should it be desired to line off in th first instance for quincunxing, it is best to complete the lining o the square first and make a separate process of putting in the fift pegs. Diagonal lines should be drawn between the four pegs each corner of the filled-in square and the lines stretched fro

these. The same lines may be used, as the distances will be exactly the same as the previous lining on the square will have been.

Finally, a word or two about lining in general. Always endeavour to get the base line not only on level ground, but across the slope. This is more important than making it parallel with the fence or road. In lining at odd distances, such as 6 feet x 7 feet or 7½ feet x 8 feet, the base line should always have the greater distances, so that, when planted up, the coffee will present the wider spaces to the direction of most of the works—*i.e.*, up and down hill.

A well-lined place looks well, but it does not pay to waste time in getting it too exact. A little deviation from the straight is not noticeable when the coffee is old, and the object of lining is to ensure your making the most of the ground and for easier subsequent working, rather than for appearance.

Should a rise or depression of any moment exist in a clearing, exact lining will be impossible, for either the distances must increase or the lines be crooked. In such cases, sacrifice appearance rather than your distances. On large areas, lining off with marked ropes is quick and cheap, but on small gardens it is sometimes done with two sticks of the required length tied together at one end. The end of one stick is placed at a peg in the base line and the end of the other to a peg in the guide line; the spot where the sticks are connected then indicates the place for the next peg, and so on. This is also useful for odd corners.

THE JAPAN TEA MARKET.

The *Canadian Grocer* remarks :—

Japan teas are in a somewhat unique position at present, they being strong in price, while those of other countries are weak.

The chief factor in this in the buying on United States account. Prices are now nearly 2c. per lb. above the opening of the market. So far the market has been following much the same course as it did last year.

According to latest mail advices the shipments to America from the opening of the market to May 18 were 1,370,381 lbs. against 873,658 lbs the same period last year. Of this amount the quantity credited to Canada is 182,192 lbs. against 47,711 lbs. for the same period last year.

The settlements at Yokohama up to May 23 were 59,500 piculs against 49,000 piculs a year ago. For all Japan the settlements were 14,000 piculs more than for the same date last year.

It does not appear likely that much lower prices will be experienced in Japan teas. The cost of producing tea there is increasing largely owing to the increasing cost of labour. It is alleged that, even at the higher prices which have been ruling during the last year, tea-growing is among the least profitable of the agricultural pursuits in Japan.

If the present high price of Japan tea is maintained, benefit will certainly accrue to Ceylon greens, although at present the growers of the latter description are anything but satisfied with the prices they have been receiving.

PLANTING PROGRESS IN THE SURMA VALLEY.

"A. P." writes in *Capital* :—

A Contemporary recently placed this district in the very first rank for the introducing and growing of plants from other regions possessing an Indian climate. Whether it be first in this respect will be a matter of opinion, but it must be admitted that it has taken the lead in growing experimentally other products than those which have hitherto been looked upon as firmly established staples. The mistake is to keep on working as if everything in nature was at an absolute standstill. We are always forgetting that there is nothing in creation absolutely perfect. When tea became a firmly established Assam product it always ought to have been borne in mind that sooner or later it as well as conditions would change to such an extent as to continually require hybridising and raising new species to take the place of the old. First his experiments ought to have been continually carried on with a few other plants in order to be ready with one to take the place of tea when from some cause or other it ceased to be unprofitable investment. If this had been done it may be safely asserted that the bad times, which the industry has, from time to time, gone through would never have been experienced. In some districts of South Sylhet—notably in the Burshijura range of hills—land has been taken up lately at a rate which reminds us of the days when tea was 'booming.' This range is by no means noted for its good quality soil, and no one would ever think of planting tea on it now-a-days. Sisal, however, will grow luxuriantly upon land which will not pay under tea, and the land is going to be utilised for that purpose. But as this range has some spots of low lying bheel lands, there are no use for growing sisal, and it is proposed to settle coolies upon such spots and allow them to cultivate *dhan*. Other products are being grown, such as Black Pepper and Vanilla, and as it has been amply proved that these succeed in the district, there can be no reason why they should not prove as profitable as they undoubtedly do elsewhere. It is difficult to imagine why Black Pepper is not largely grown in Assam, as it used to be formerly, though the little which is grown now cannot be compared with the old for pungency and flavour, chiefly because all our Black Peppercorns are imported from Bengal and are of an inferior quality. The Chief Commissioner from time to time has shown that he takes an interest in the growing of those so called auxiliaries, and has given practical encouragement to those who go in for them earnestly. South Sylhet has had during the last five years the incalculable advantage of possessing a settlement officer, who takes a thorough interest in all things appertaining to the agricultural industry. This officer has been employed since 1896 in the survey and demarcation of the *Elam* and other temporarily settled estates including grants. He has, therefore, had ample opportunity of coming in contact with a large number of the European and native planting community. That he has enjoyed the complete confidence of both must be a source of pleasure and satisfaction to him upon his leaving the district on the completion of his duties. The planting community of the district of South Sylhet is to be congratulated upon having had an officer who has taken such thorough pains in mastering all details during a distinct crisis in the tea industry.

If memory fails not it was the late Dr. Berry White who so continually deprecated the absolute empiricism of the Indian tea planter. Although we can cordially agree with him to a certain extent, it will be a poor look out for the agricultural industry of any district when it becomes denuded of the empirical planter. In saying this, we do mean to detract from the great importance which should be attached to a *a priori* knowledge of the science of agricultural practice. But there is no proprietor or his representative, who would hesitate a moment in his choice between what is known as a practical planter and an expert in agricultural science. It is not possible for a man to have too much practical experience, and it is better to have a large amount of this, even if it is at the expense of theoretical knowledge, than to sacrifice practice at the shrine of science. A great deal has been lately written upon this subject, and for the most part writers are apt to pass ever the fact that good practice in agriculture is the *ne plus ultra* of scientific agricultural perfection. So much is this the case that the splendid results obtained by good practice cannot be always thoroughly explained scientifically for the very simple reason that agricultural scientific knowledge, even at the present day, is far behind the practice.

It is to be feared that the day is still far distant when India will be possessed of planters who have been grounded in the science as well as the practice of agriculture before they enter upon their duties under tropical conditions.

And even if this ever comes to pass there will still be a difficulty to surmount. The planter who comes into this country does so for one, and only one object, and that is to make as much money as he can in a certain number of years and then clear out. In the present states of his education it is hardly to be wondered that a planter takes this view of his sojourn in India. When a youth is intended for any of the profession, or for a commercial career, his education is generally conducted in such a way as to help him afterwards. But the number of youths who are educated with a view to spending their lives as colonial agriculturists must be exceedingly small. When we take into consideration the vast amount of British Colonial possession which require agricultural exploitation it appears incredible that a recent assertion in a home agricultural journal can be correct, that there are not over 2 per cent. of Indian tea planters who have had the slightest grounding in the rudiments of agriculture, either scientific or practical, before they went to India! It has been further asserted that even those who have had such a grounding entirely cast it from them and do not carry on the study under tropical conditions.

This is a fact which is much to be deprecated. If we had a race of planters, who could bring science to aid them in their every day practice and carry on the study of tropical agricultural science hand in hand with their daily experience. they might possibly do something towards furthering the interests of the inhabitants of the country of their temporary adoption. Nepotism no doubt is, to a large extent, responsible for the unsatisfactory state of things as they exist at present, and nepotism is unavoidable in the case of tea concerns. But as this is impossible in the case of Government employés it is perfectly astonishing, when we are continually having evidence, that they are equally as ignorant of their agricultural duties as the employés of private concerns. As Dr. Bonavia remarks, the Government has been trying for twenty years to introduce the date palms into India, and has not succeeded yet. We may very pertinently ask how any one could expect any other result when the experiments have been left in the hands of canal engineers. We are apt to sneer at the Bengalee ryots and his ways, but he knows as much about the judicious breeding of his cattle as the canal engineers can possibly be expected to know regarding the peculiarities of the sexual system of the vegetable kingdom. The day may come, "as come it will for a that," when our European agriculturalists' in India will know something more about their vocation than they learn from their next door neighbour. When that day comes we may confidently expect that Indian famines, as they are understood at present, will almost be things of the past instead of standing disgrace to a civilised Government. If the district of South Sylhet is at all ahead of others in its agricultural enterprise, it is very largely due to the fact that it has had an officer who, besides his land settlement duties, has devoted a considerable amount of time and thought to both European and native agricultural industries, and other districts ought to point to it as an object lesson.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Burning Coffee.—Little by little good sense reasserts itself and the project of destroying 20% of the crop is condemned. At a meeting of the National Agricultural Society now a motion of Dr. Wenceslau Bello to the effect that such a proceeding was "arbitrary and contrary to economic principles as well as inefficient", was unanimously approved.

The Cultivation of Cereals.—One of the lessons that the coffee crisis has effectively taught is the folly of keeping all our eggs in one basket and of depending too exclusively on a single product. Reports of the inspectors of agriculture in São Paulo are uniform in describing the development of cultivation of corn (milho), rice, cane, and beans in that go-ahead State, and within a few years, if such efforts are persisted in, the country may be entirely emancipated from dependence for its subsistence on imports, and produce all it wants for itself. There is plenty of room in Brazil not only to produce most if not all required for mere subsistence, but to supply others as well. A glance at the following list of the (approximate) values of leading commodities imported in February and March, taken from the statistics of the Commercial Bureau, show how important a rôle cereals and other alimentary products, that we could perfectly well raise ourselves, play in the determination of the balance of our foreign payments. Out of a total value of Rs.68,000,000$, Rs.35,500,000$ is accounted for by the following eleven commodities:—

Xarque (jerked beef)	7,200,000$
Wheat-flor	5,800,000$
Wine	5,500,000$
Coal	5,300,000$
Cotton textiles	4,000,000$
Wheat	2,000,000$
Cod fish	2,036,000$
Rice	1,800,000$
Jute yarn	1,100,000$
Cotton yarn	1,000,000$
Beans	600,000$

There is no reason at all why we should not raise all the xarque, rice and beans we require, or even a good deal of the wine and wheat which constitute so formidable an item of foreign expenditure. Anyhow, it is good to see that a real start has been made and that corn (milho), at least, is now being produced in the country instead of being almost exclusively imported as formerly.

Crops.—Rain has fallen abundantly in the Cachoeira and Sant'-Anna districts, where the crops are extremely promising.

Coffee.—Trouble is reported in some districts between planters and "colonists" that originated in difficulties about money matters and threatened at one time to develop into serious rioting, had the disturbance not been stopped by the Police in time.

An outrageous proposal.—The Municipality of Sao Carlos proposes to create a tax of 20,000$ per annum in the form of a license on all houses engaged in the purchase of coffee in that district. On what possible grounds such a tax could be imposed is difficult to understand, except it be jealousy of the invasion of their peculiar hunting grounds on the part of *Commissarios* who are naturally powerful in the interior. Anyhow, it is unconstitutional and certain to be vetoed by the Executive.

Entries at Rio and Santos during the week ended 7th June were, in consequence partly of the holiday at Santos, 23,102 bags under those of the preceding week, but 71,772, or 212%, greater than the corresponding week's last year.

Should entries continue to the end of the month on a similar scale the total for the current crop will amount to 11,614,430 bags as compared with only 9,242,898 for the last crop 1899-1900.

Embarques or shipments were also slightly smaller, 162,472 as against 188,046 for the previous week and 73,031 for the corresponding week last year; but declared sales were larger again aggregating 112,000 as against 105,000 the previous week and 88,000 last year.

Properly speaking there was no coffee but only an exchange market during the past week as Europe put its prices up or down as exchange altered. Currency prices ruled about 7$000 for n. 7, New York type, the lowest quotation for c. f. & c. Hamburg having been 28s. with exchange at under 11½d. which was raised to 29s. on the 8th when rates improved to 11¾d. Very little real business was done, and most of it for European account, American buyers being almost entirely out of the market at present.

New coffees are increasing and reported to represent 10 to 20% of total arrivals. The quality is however decidedly poor even for the season, being between Nos. 7 and 8, whilst last year this time it averaged 5 to 6.

At Santos the market was steady with a regular business doing every day. The drop in exchange facilitated business, although it was impossible for dealers to enforce a rise in currency prices equivalent to the depreciation of the rate; export prices, therefore, receded somewhat.

We quote 4$600 to 4$800 for superior, price differences for the other grades remain the same as last week. There was no special demand but better qualities were preferred. Peaberry continues neglected and new crop washed coffees, although partly of color, show more withered black beans than usual. This seems to confirm late constant reports regarding the inferiority of the next crop, as washed coffees are generally fairly free from such imperfections.

Europe wants to buy good average at 28s. to 29s., superior at 29s. to 30s 6d., and at the latter mentioned price business could be effected with exchange at about 11½d. We have not heard of any business of importance having been done with the States.

The quality of receipts of new crop coffee is still very poor, only now and then a better sample being offered, but only very little new crop goods is coming forward so far. The weather continues favourable for harvesting.

Exchange.—*8th June*, 1901.—Ninety days' Bank rate on London opened on Monday 3rd inst. at 11 13/16, fell to 11 1/4 on Wednesday and closed this evening steady at 11 13/16d.

If, as is generally believed, a large amount of the "bull" account has been already liquidated, speculative selling during the early days of last month must have been on a gigantic scale.

Since 30th April exclusive of the Bahia banks there has been an increase of 18,094 contos in liability to Home Offices and Agents and increase of 3,874 contos in deposits, as against that of only 9,608 contos in cash, a great deal of which, however, probably represents margins for exchange speculation. Still the fact is prominent that the increase of liability at both the Foreign Banks and Banco da Republica is about double that of cash, from which it may be concluded that very little real liquidation has yet been done, and that if it has, it was by the Banks themselves providing the bills. The markets therefore, are now owing to the Banks some £2,800,000 against only £2,000,000 last month, which must be paid by delivery chiefly of coffee bills and the position is very similar to that of 31st. May last year, when the markets owed the Foreign Banks about £2,200,000. This of itself is not a very

formidable amount and with the balance of payments so decidedly in our favour, as they shortly will be again, should be easily paid off, so long as it is not allowed to accumulate by the reckless over-selling that has lately been indulged in. No doubt, just at present it is advisable to help the market a little to prevent any further heavy decline, but if the Banks are well advised, they will stick to their present policy of only selling for liquidation with themselves and set their faces resolutely against a repetition of last year's madness. If the rate can be maintained between 12 and 13d. during this month and perhaps next, the surplus of exports may then be relied upon to afford cover not only to liquidate the outstanding obligations of the market, but to send those rates up again. It is, however, advantageous for everyone that the process, if inevitable, should be as gradual as possible.

During the past week, shipments (embarques) of coffee at the two ports were somewhat smaller again, giving £243,700 as against £282,000 in the previous week and £151,000 last year, whilst rubber furnished only £ 100,000.

Altogether, coffee and rubber gave under £350,000 and were it not that importers had taken advantage of high rates to anticipate remittances, the supply of bills at the present moment would be certainly insufficient to meet demand. As it is, there is little or no market money to be found at these rates, whilst coffee shippers are said to be at length commencing to sell futures. It is, therefore, possible, that the market may be tided over the slack period until bills are plentiful again, but at the best the situation is delicate and liable to panic.

CONSUMPTION OF COFFEE.

(From the New York *Journal of Commerce.*)

Prices may decline very largely with a moderate effect upon consumption, as the coffee statistics prepared by the Bureau of Statistics show. The figures showing per capita consumption appear to have been obtained by dividing the importation by the estimated population, which does well enough over a series of years, but it indicates marked fluctuations of consumption from year to year, which probably do not exist, the fluctuations being in the importation. But it is probably safe to infer from them that the use of coffee is increasing.

How little the price has to do with the increase, however, is shown by the fact that in 1894, when wages had been cut and many persons were out of employment, and economy was generally practiced, particularly in the consumption of spirits and cigars, the average price of coffee was 16·4 cents, and the consumption per capita was 8·3 pounds, and this figure would be scarcely changed if we averaged 1894 and 1893 But in 1900, with wages up and employment general, and unprecedented prosperity, the price of coffee had gone down to 6·5 cents and the consumption had gone up to only 9·81 pounds. These figures warrant the inference that the country used coffee freely at a time when the price was relatively high and the ability to pay it was reduced. If it was drinking all the coffee it desired in 1894, it had little disposition to increase its consumption, because the price had fallen much more than one-half and economy was no longer needed.

There is a distinct flavor of a high tariff propaganda in the observation of the Bureau of Statistics, which no longer confines itself to figures, but obliges the country with arguments based thereon, that "the people of the United States are sending out of the country more than a million dollars a week in payment for coffee consumed in this country, all of which could be readily produced in Porto Rico, Hawaii and the Phillippine Islands, which have already shown their ability to produce coffee of a high grade, commanding high prices in the markets of the world." How often have we been informed how much money the country was parting with for arrowroot and cayenne pepper and Easter lilies, and other things which could be produced at home by making the price high enough. We have been told over and over again how much the country could save by paying double present prices for things which it now imports. Has the Bureau of Statistics only just discovered that the islands we have acquired produce coffee of a high grade? The commercial world has known it for a long time. It is the high grade—and high price—of the coffee of Porto Rico that makes it so little known in this country. Of the coffee imported in the past nine months, 82 per cent. came from Brazil, whence the cheapest coffee is imported. This Brazilian coffee was so large a part of the whole that the average price of all coffee imported was 6·5 cents. Does the Bureau of Statistics imagine that Porto Rico desires to sell coffee to us at that figure? If not, how are we going to divert the money we pay for coffee from a foreign country to a dependency? Perhaps the Bureau of Statistics will recommend a duty of fifteen or twenty cents a pound on coffee in order to "save" the money now shipped abroad to pay for Brazilian coffee. We expect it, in common with other agencies of the same sort, to explain to the country how many million dollars it would save annually by paying three times what it now pays for coffee.

TEA SALES—NEW STYLE.

The *London Commercial Record* remarks :—

In these days of keen competition and small profits men's minds are often sorely tried to devise some effective means of protection or distinct advantage, and manifold and extraordinary are the experiments to which some people have recourse. History is rich in anecdotes and interesting stories and episodes resulting from the cunning which some one or another displayed in his endeavour to steal a march on his opponent or competitor, but in these enlightened times one has to get up very early in the morning to gain a distinct and lasting victory over one's neighbour, all too soon the best laid plans are divulged and effectually counteracted. This has just been experienced by a gang of youthful operators in the Tea trade to whom apparently the exchanging of and dealing in foreign stamps has been too slow and laborious a calling' and who preferred quicker means to secure the much coveted pocket-money. It appears that these young operators had set to work in the most systematic and businesslike manner.

Agents for LEA & PERRINS' WORCESTERSHIRE SAUCE.

CROSSE & BLACKWELL'S, LTD.

By Special Warrant Purveyors to The Queen AND Empress of India.

CELEBRATED OILMAN'S STORES.

[w. 11-0-98 -t.f.o.]

They attended with praiseworthy regularity every public Tea sale, and took down with great pain and accuracy the name of each buyer, and the price he paid for each lot, and forwarded this information and in some cases the entire priced catalogues to his clients in town and country. These clients, are of course dealers and consumers, who are in the habit of drawing their supplies from London dealers, and who through their acquired knowledge of the price paid in auction by their London seller, were able to beat him down to a nominal profit, or in other ways influenced his dealings. For these secret services the young informers received a few shillings weekly until the Tea Association rightly determined to put a stop to this nuisance by endeavouring to exclude this particular class of offenders from the sales. Hence the astonishing announcement that admission to the public Tea auctions can now be only gained by tickets, which are to be obtained by application in writing to the Secretary of Tea Brokers' Association. It is to be hoped that this step will have the desired result, although it is very open to doubt whether the offending class will be absolutely excluded. There is no other trade we know of where such mischief is done by an irresponsible body of boys, and the Tea brokers and dealers are to be congratulated upon the energetic step they have taken in the protection of their business. A more vexing and detrimental proceeding against a fairly competing body of men is difficult to conceive, and no measure should be too severe to protect their interest. The attendance of serious buyers will not be diminished by the enforced rule of admission by tickets, but whether the undesirable element will be effectually exterminated remains to be seen.

A TALK ABOUT TEAS.

The *Montreal Star*, of June 18, remarks :—

Teas, their increased consumption and their remarkable displacement as regards markets, formed the subject of an interesting interview to-day at the Windsor given by Mr. P. C. Larkin, of the 'Salada' Tea Co., a former Montrealer.

"People are drinking more tea than they used to," said Mr. Larkin. "For instance, the consumption of tea has increased in Great Britain from four pounds per head a few years ago to six pounds per head to-day. It would seem to be a highly healthful beverage, for the Anglo-Saxon is the largest tea consumer, and, as a race, he seems to retain his health and vigor fairly well. Australia, Great Britain, and Canada are the great tea-consuming countries and the inhabitants have always been noted for their excellent general health.

"The prominent feature of the trade? Well, one of them is certainly the way China has dropped into the background. For instance, about 12 years ago China shipped into England on an average 160,000,000 lbs. of tea annually. Last year the shipments dropped to 17,000,000 lbs. Now, Japan ships tea to nowhere in the world except the United States and Canada, and, therefore, it is a matter of life and death for her to hang on to her trade in those countries. What is Japan's position to-day? Why, the imports of Japans last year into Canada amounted to only 9,000,000 lbs., while the smallest previous imports for a year amounted to between 11,000,000 and 12,000,000 lbs. This shows gradual displacement.

"The object of the Tea Trust being formed is undoubtedly to endeavour to head off the rapid progress that has been made by Ceylon green tea in pushing out the consumption of Japans. Practically all the Japan tea trade is in the hands of Americans, the Canadians not having firing plants in Japan. Ceylon green teas were introduced into America by the 'Salada' Tea Company two years ago, and have made the most wonderful progress on all hands, and promise, indeed, to displace Japans just as Ceylon black tea has displaced China black.

"All green tea in the dry leaf should be a dark olive or brown color. There is another thing in their favor, however, that counts for something with the Canadian public, and that is that Ceylons are produced by our fellow-colonists, and not by the Oriental. Every pound that comes out of the country has the sanction of the Ceylon Government as to its purity.

"We are able to accurately judge of the effect of Ceylon greens on the American public inasmuch as we have branches in Boston, Detroit, Pittsburg, and Buffalo, as well as do business in the other large American cities through wholesale grocers. Our operations in Canada radiate to every village and hamlet from Sydney, C.B., to Vancouver, B C."

AN OVER-SUPPLY OF TEA.

The *Canadian Grocer* reports the condition of the tea market i Canada is still in an unsatisfactory condition as far as Indian an Ceylon descriptions are concerned. The cause of this is the larg quantity of low-grade teas which have been shipped here on consign ment from Calcutta and Colombo during the last couple of years.

In some of the cities there are low-grade teas which have bee held for two years. At present the demand is light indeed for low grade teas, and the sales that are being made are, as a rule, at a loss A loss of 1c. per lb. is quite common, while we hear of a transactio a few days ago at a price which meant a loss of 4c. per lb. There i one lot of teas held in Toronto on which the holder would lose, if h could find a customer to-day, at least 35 to 50 per cent.

This state of affairs is likely in time to remedy itself; in fact already consignments are falling off. According to the figure published by the Colombo Chambers of Commerce, the exports o Ceylon tea to America from January 1 to May 13 had fallen of nearl one-half compared with the same period last year, the quantitie being 1,093,072 lbs. and 2,053,598 lbs., respectively. The exports t all countries, however, are nearly the same as last year, bein 52,083,925 and 52,140,317 lbs., respectively. These figures do no include green teas, of which 19,290 lbs. were exported, 12,010 lb being for America and 7,280 lbs. for India. The exports of India and Ceylon tea from Great Britain to Canada, have, however, rathe increased during the 10 months of the fiscal year ending April 3 as will be gathered from the following table :

	1900 (10 months). Lbs.	1901 (10 months Lbs.
India	1,358,601	1,508,971
Ceylon	1,511,181	1,498,174
Total ...	2,869,782	3,007,145

Although there is such an abundance of low-grade teas, flavor teas are, on the other hand, scarce and wanted, and have been fo some time.

COFFEE LABOUR IN B. C. A.

A correspondent of the *Morning Post* writes :—

THE COFFEE DISTRICTS.

The coffee districts lie almost entirely round Blantyre, within radius of twenty-five miles, and on the slopes of the Mlanje rang It is said, and I believe with truth, that if all the natives in thes districts could be induced to do a month's work in the year ther would be enough labour and to spare for all the coffee estates The real difficulty is to induce these people to do their four weeks work, for they are constitutionally averse from doing anything Beyond a payment of 3s. a year they have, under the presen system of government, no obligations to anyone, and the sum jus named is easily raised by the sale of a few fowls or a pig. Indeed the disposal of a pig will suffice, at present rates, to pay the taxe of a small village. To remedy matters an increased hut tax ha been suggested; but whatever money the Government exacts fro the native is obtained by the native from the settlers. It woul seem, therefore, that to double the impost would be merely t double the price of necessities already sufficiently high. Th remedy which I would suggest as most fitting to meet the cas would be for the Government to decline to issue a tax receipt to an man who cannot show when he brings his money to the Boma— the Collector's office where taxes are paid—that he has done a least one month's work. Against this remedy it may be argue that it is simply a reversion to the condition of slavery, to do awa with which a Protectorate was theoretically established. But ar the people for whom some thousands of pounds have been expende to do nothing in return? Are the settlers, who have invested thei capital, to lose it all because some people entertain mistaken idea of the real native, and consider that the most heinous of crimes i to make a man do something for himself, or make some return fo benefits received? The tramp who cuts firewood or breaks stones i a workhouse, in return for a night's lodging, is as much a victim o slavery as the Blantyre Ysos would be in doing a month's work year on a coffee estate. But on the subject of the tramp the voic of Exeter Hall is strangely silent, perhaps because the authoritie there know him better than they do the African.

WORD OF WARNING.

That a remedy such as I have suggested could be introduced in British Central Africa without any difficulty or trouble is, I think, certain. Some few would, perhaps, object at first, but if they were dealt with promptly—as are contumelious tramps—any trouble they might cause would end in their own undoing. Should, after fair trial, such a system still leave some planters with an insufficiency of labour I should advise the direct importation into the Blantyre district of whole families, villages even, of Chipeta and the so-called Angoni. These people would be settled on various estates and would have to work for pay three days a week, the other days being given them to tend their gardens and so forth. By this means planters not only ensure a constant supply of labour, but the women and children would form a reserve force which any man worth his salt in dealing with natives would be able te call on for help in the times of his greatest need. The satisfactory working of this scheme depends entirely on the individual white man concerned in each case, but, since I cannot remember, at the present moment, any planter who is not by his own showing thoroughly liked and trusted by every native with whom he comes in contact, its success would be assured from the outset. In conclusion, under this head I would offer a word of warning to planters in British Central Africa. Never in any circumstance let them have a larger acreage under cultivation than they have a permanent labour force, of one man per acre at least, to work the domain. Fifty acres properly cleaned and properly cultivated will give better returns than five hundred acres half scrub and undergrowth, with here and there a coffee bush struggling for existence.

INDUSTRY IMPERILLED.

But there is in British Central Africa a want of unanimity among the settlers which prevents them making any effort in common. Nature and the natives almost appear to have combined to place difficulties in the way of these who are on the spot for the purpose of earning their livelihood Nature has provided a splendid waterway from the Chinde mouth of the Zambesi to the north end of Lake Nyasa, except for some forty miles which it has taken care to render impassable. The natives are there in any numbers, but they have elected to live some two or three hundred miles from the places where their services are most needed. As time goes on they seem less and less inclined to come to work where they are wanted, not only causing great delay in the transport of goods but seriously imperilling the existence of the coffee industry. It must be borne in mind that, owing to the precautionary measures taken to ensure the prevention of coffee disease in British Central Africa, the coffee has become so inbred that it is now entirely lacking in stamina. It is, accordingly, peculiarly susceptible to the attacks of many enemies, and unless it receives constant care and attention it yields no returns whatever. The incessant attention thus rendered necessary demands a continuous supply of labour, which is not now to be obtained.

DISTRICT ASSOCIATIONS.

CENTRAL TRAVANCORE.

The half-yearly General Meeting of the above was held at "Fair field Bungalow" on 13th instant. PRESENT :—Hon'ble Mr. G. L. Acworth (*Chairman*), Messrs. Buxton Laurie, H. D. Deane, Hon'ble V. R. B. Wilbraham, F. Bissett, F. M. Parker, D. McArthur, H. M Knight, E. Latter, and W. H. G. Leahy (*Honorary Secretary*). *Visitor* Mr. W. Graham.

Honorary Secretary having read notice calling the meeting, the minutes of last meeting were taken as read.

Vote of Sympathy.—Before proceeding with the business of the day, the following resolution was unanimously carried: "That this Association wishes to convey to His Highness the Maharajah its deep sense of sympathy with him in the losses he has recently sustained."

The Chairman then addressed the meeting as follows:—

GENTLEMEN,—I have now a much pleasanter duty to perform in welcoming back to our ranks Messrs. Parker and Wilbraham. We all deplore equally with them the causes that have brought them back to this country, indeed we are sufferers equally with them, but it is all ill wind that blows nobody any good, and I am heartily glad to see them amongst us again. In the present critical state of our affairs we want the benefit of the counsel and good sense of all earnest men, and for these we shall not look in vain to Mr. Parker, the father of this Association, whilst Mr. Wilbraham has always been a loyal supporter thereof. It must also be a gratification to this Association to see that our old friend and late British Resident, the Hon'ble Mr. Thomson, has been confirmed in his appointment as one of the Council of H. E. the Governor. I feel sure you will wish to forward to him a formal notification of our satisfaction and hearty congratulation.

Gentlemen, I am not going to weary you with a long speech, but, as you know, there has been no improvement in the position of the Tea Industry since we last met together and, so far as I can see, it is impossible there can be any improvement, until we have found new markets for our wares. I would therefore most earnestly commend to your attention the scheme formulated by the Kanan Devan Association for popularising good cheap teas with the natives of S. India Your Committee willingly withdraw their own scheme in favor of this one, which they consider not merely more feasible, but more businesslike and embracing a wider area. You have seen that Messrs. A. Yule & Co. have offered to relieve the Indian Tea Association and undertake the work of exploiting the North. No doubt their offer will be accepted, but we do not yet know whether they will come so far South as this, and your Committee thinks that we ought to be prepared for all eventualities and have our plan cut and dried, so that, if Messrs. Yule & Co. confine their operations to the North, we may at once set to work in the South. I trust that all Associations will hold these views. But, gentlemen, what we want above and beyond everything is the compulsory cess. If only we could get that and, having got it, utilise it well and wisely, I feel convinced we should once more soon see daylight. As you know the South has gone solid for the cess, and I hope now it will not be long before we learn the result of the plebiscite in the North. I have heard it hinted, that, even should the Northern vote prove satisfactory, it is most unlikely that the powers that be will consent to the imposition of the cess. This I, for one, cannot believe. When we consider the magnitude of the Tea Industry, the vast capital invested therein, how beneficial it is, the amount of labour it employs, the money it circulates in the country, how it populates the waste places of the land, turning the wilderness into fruitful and revenue-producing fields, I cannot but think a favorable ear will be turned to us. And, gentlemen, we must recollect this. The ruin or partial ruin of the Tea Industry does not merely mean the ruin of a number of proprietors and superintendents, who can look about them and find a livelihood elsewhere. It means the ruin, or at any rate the crippling of the resources of a number of retired officers, of many widows and orphans, of those with small means, who, attracted by high dividends in the past, have placed their all or nearly their all in the Tea Industry. The partial ruin of this industry would be a national, not an individual calamity, and for this reason also I believe we shall receive consideration. Finally, we have a precedent in the pecuniary assistance given by the Government to the Indigo Industry, and as we do not ask Government for a single pie, but only appeal to it for aid to help ourselves, I think that also will be in our favour and that we shall meet with a ready assent.

Roads.—Proposed by Mr. H. D. Deane and seconded by Mr. H. M. Knight: "That the Head Officer, P. W. D., Trivandrum, be requested to either visit the district himself before the end of July, or to depute an European engineer to do so, with the object of making himself acquainted with the present system of road upkeep in wet weather; and that a copy of this resolution be sent to the British Resident and to the Dewan, asking them to support it, and pointing out that no European engineer has visited the district for three years." Carried *nem. contra.*

Post Office.—Proposed by Mr. Deane and seconded by Mr. Latter: "That the P. M. G., Madras, be asked to employ an assistant at the Peermaad P. O. capable of working the telegraph in event of need." Carried *nem. contra.*

Cart hires.—Proposed by Mr. Latter and seconded by Mr. McArthur: "That Superintendents of Estates send in to Honorary Secretary rates of cart hire now being paid up and down, and that all estate carts have a plate with Estate's name. This to be circulated and sent to Cottayam agents." Carried *nem. contra.*

Bangalore Delegates.—Hon'ble Mr. G. L. Acworth and Mr. E. Latter were unanimously elected to represent this Association

at the Bangalore Conference, and Rs.150 was voted to Mr. Latter for travelling expenses.

Sale of Tea in India.—Proposed by Mr. Parker and seconded by Hon'ble V. R. Wilbraham: "That this Association approves of the Kanan Devan scheme, and that a minumum cess of Re.1 per cultivated acre be levied, larger subscriptions being optional." Carried *nem. contra.*

Mr. Parker added this Association's delegates should impress upon the U. P. A. S. I. that the minority against the scheme should sacrifice their wishes to the majority, and join in.

Ceylon Import Duty.—Proposed by Mr Deane and seconded by Mr. Knight: "That this Association approves of the proposed support of the Indian Tea Association in the matter of pressing on Government the hardships to South Indian planters in being debarred from using the Colombo market, by the Ceylon import duty of 4 annas per lb., and at the same time would urge the necessity of Inspectors being appointed either in Ceylon or in India, to prevent the export of rubbishy teas to India. That as a proof of the export of such rubbish, we would refer the I. T. A. to the sales, from 13th May to 7th June in Colombo, when 3 ,000 lbs. of "tea" were sold at a fraction over one anna per lb." Carried *nem. contra.*

Forwarding Agent at Cumbum, and Medical Attendance on Writers, etc.—Messrs. Knight and Buxton Laurie withdrew their resolutions, and it was decided by the meeting to leave the preliminaries to be arranged for by the Honorary Secretary who will report at the next General Meeting.

Member of Committee.—Mr. F. M. Parker was unanimously elected a permanent member of the Committee.

With a hearty vote of thanks to the chair, the meeting terminated.

Papers laid on Table.—

Indian Gardening and Planting.
Indian Tea Association Circulars.
Travancore Government Gazette.
Planting Opinion.
Proceedings of Wynaad Association.
Do. Nelliampathy do.
Do. Kanan Devan do.
Do. S. Mysore do.
Do. Shevaroy do.
Do. Nilgiri do.
Do. Coorg do.

W. H. G. LEAHY,
Honorary Secretary.

KANAN DEVAN.

Minutes of Quarterly General Meeting held in the Munaar Reading Room, 20th July, 1901. PRESENT:—Baron Von Rosenberg (*Chairman*), Messrs. P. R. Buchanan, T. W. Schmid, H. S. Holder, F. J. Graham, W. M. Taylor, R. W. Cole, H. R. Quartley, Chas. Brander, R. Harely, K. E. Nicoll, W. Pottie, R. F. Thorp, M. C. Koechlin, H. L. Pinches, W. O. Milne, G. Stuart, J. S. Patterson (*Honorary Secretary*).

1. Proceedings of last meeting were taken as read.

2. **Delegate for Bangalore.**—The following proposal, proposed by Mr. P. R. Buchanan and seconded by Mr. T. W. Schmid, was carried unanimously: "That Baron Von Rosenberg do attend the Annual Meeting of the U. P. A. S. I. as Delegate and that a sum of Rs.200 (Two hundred) be granted for expenses.

3. **Occupation of Bodi Mettu Rest-House by Travancore Government Officials.**—Read letter from Honorary Secretary, of 4th June, to Sub-Division Officer, Kottayam, and to Rest-House Butler, Mettu, informing him that officials on Circuit could make use of the Rest-House meantime. After a lengthy discussion on the inadequate accommodation and discomfort of the Rest-House the following proposal made by Mr. R. W. Cole and seconded by Mr. W. O. Milne was unanimously carried: "That the D. P. W. do be written to and asked to take over the Rest-House and to improve the accommodation."

4. **Bodi Ghat Road.**—A bill from Suriauallee Estate was produced showing a sum of Rs.1,001-4-7 as spent on upkeep of the road. As the Grant is only Rs.750 it was proposed by Mr. Buchanan and seconded by Mr. Schmid that Mr. Knight be written to and asked how the excess was spent and on what authority he overspent the Grant. It was pointed out by the Chairman that although far more money was said to be spent on the road now than in former years, it had never been in worse order, and asked the Secretary to try and get a contractor to keep the road in proper repair and see that the money spent was not wasted.

5. **Munaar Mettu Road.**—Read extract from report of Sub-Division Overseer, D. P. W., granting only Rs.45 in payment for 2½ miles of the three miles repaired from 9th to 6th mile posts although the whole mileage had been carefully repaired and cost the Association some Rs.80. Extract from Dewan's letter, of 31st May, to Chief Engineer, Travancore, was read stating that although only Rs.291-6-0 out of the Grant Rs.378 was paid for the last half of 1075 (Malabar year), the full amount of the Grant should be paid for the year 1076 if work was done, and suggesting that a proper specification should be furnished to the Association. As this has never been done and the proper payment of the Grant is evidently again being evaded, it was proposed by Mr. Buchanan and seconded by Mr. Holder and carried unanimously: "That the Travancore Government be written to and informed that as no specification is furnished and the Grant is not being fully paid although it is largely overspent, this Association regrets that it cannot carry on the work without a more definite and more satisfactory arrangement being come to." Baron Von Rosenberg was asked to bring up this matter at the Bangalore Meeting if he thought it advisable.

6. **Bridge over the Kundale River.**—This work being practically completed Mr. Quartley handed in a memo. of cost showing that a sum of Rs.1,550 had been expended on the work. The Grant from the Travancore Government towards the bridge being only Rs.1,000 the Association has to defray the difference. Rs.1,550 being the estimate it has not been exceeded. The Chairman moved a vote of thanks to Mr. Quartley for the trouble he had taken in supervising and getting the work put through, which was seconded by Mr. Graham and carried.

7. **Exploitation of Tea In India.**—Read letter from Messrs. Finlay Muir & Co., Calcutta, to Mr. Buchanan on Messrs. Yule & Co.'s proposals, also letter from Mr. Ackworth to the Chairman saying that "The Peermaad Association ought to go in for the Kanan Devan Association sale of Tea in India scheme" (as drafted by Mr. P. R. Buchanan) "if Yule & Co. do not come so far South."

Read telegram just to hand stating that Yule & Co. wish their scheme to include South India, in reply to a telegram sent by Mr. P. R. Buchanan to Finlay Muir & Co., Calcutta, asking "Will Yule & Company's scheme include South India." After some discussion it was proposed by Mr. Buchanan and seconded by Mr. Pinches: "That provided the South Indian Tea Association are satisfied that Messrs. Andrew Yule & Co. will work South India concurrently with northern and other parts of India, this Association approves Messrs. Yule & Co.'s proposal." The Delegate would bring this up at the Bangalore Meeting.

8. **Harbour on West Coast and Export Duty on Coffee.**—It was decided to leave these questions for the Delegate to deal with at Bangalore.

9. **Medical Grant.**—Read a letter from Dr. Kerr pointing out that the Sothapara Dispensary had regularly sent in the necessary returns to the Travancore Durbar physician but that the Grant had not yet been received.

Proposed by Mr. Nicoll, seconded by Mr. Harley: "That the Honorary Secretary do write to the Dewan for payment of the Grant promised in his letter of 21st September, 1900, to the Association."

10. **Association Cess and Financial Statement.**—A statement of Income and Expenditure was handed round and it was agreed that the cess of 12 pies per acre be collected at once for the current year.

11. **Volunteer Movement.**—Read Mr. Milne's resignation on the Committee as he was leaving the District and his good wishes for the prosperity of the Corps. Mr. Stuart was elected to fill his place on the Committee. In the course of discussion the Chairman pointed out that little progress was being made with the formation of the Corps and it was commented on that red tape should be so bad still in India after the lessons of the war. Mr. Patterson said that nothing could be done until someone was sent up to enrol the members of the Corps.

J. S. PATTERSON,
Honorary Secretary,

MARKET REPORT.

[*Per Mail advices of 5th July* 1901.]

COFFEE.

The London Commercial Record says:—The market opened with a flat tone, and it was difficult to effect sales at previous rates, but latterly there was some improvement in the demand and all desirable qualities sold at steady rates, and the closing quotations show on material change for the week. A small shipment of Ceylon realised very full prices. The market for "futures" has been quiet, and the slight changes which have occurred have been in favor of buyers; yesterday business was done in July delivery at 29s, december at 29s 9d, and March at 30s.

London ...	Santos ...	Sept. delivery	... 29s 6d.
New York ...	No. 7 Rio...	„	... 5·20 cents.
Hamburg...	Santos ...	„	... 29½ pf.
Havre ...	Santos ...	„	... 36 francs.

Auctions to-day comprised:—5 barrels 17 bags Jamaica, 726 bags Costa Rica, 589 bags Vera Paz, 1,602 bags Salvador, 747 bags Guatemala, 1,032 bags New Granada, 841 bags Colombian, 279 bags Nicaragua, 169 bags Coban, 62 bags Honduras, and 95 bags Mexican. Good qualities sold at full prices, with a brisk demand, but common grades were dull and lower.

At the Dutch Trading Company's public sale, held in Amsterdam, on Tuesday, 18,470 bags 50 cases were offered; good ordinary Java realised 32c against 31½c valuation, and 31c last sales held in Rotterdam. The following are some of the particulars:—

Lying in Amsterdam.

No.	Bags.	Valued at Cents.	Result Cents.
1	1,172	31	33¼ @ 34
2	302	32	34¼ „ —
3	700	31½	34 „ 34½
11	1,282	32	33½ „ 33¾
13	864	36	37 „ 37½
17	329	29	29¼ „ —

Imports, Deliveries and Stock of Coffee in London are as follows:—

	Stock.		Imports.	
	1901.	1900.	1901.	1900.
Tons ...	22,859	20,294	33,312	25,435
	Home Consumption.		Export.	
	1901.	1900.	1901.	1900.
Tons ...	10,897	9,161	14,301	10,722

The preceding figures exhibit— Tons.

In the Imports an increase this year of ...	7,877
Home Consumption an increase of	1,736
Export an increase of	3,579
Stock an increase of	2,565

Auctions this week have passed off as under:—

CEYLON.—*Plantation.*—6 casks 2 tierces 12 barrels 2 bags sold, smalls 40s to 53s, good middling blue 106s to 110s, good bold 112s to 118s, peaberry 110s to 127s.

EAST INDIA.—1,938 bags partly sold as follows:—*Mysore*, smalls 35s to 43s 6d, low middling to middling 41s to 53s, bold 60s to 67s, peaberry 45s to 57s; *Coorg*, smalls 35s to 39s 6d, middling 45s to 45s 6d, bold 55s to 58s 6d, peaberry 33s to 57s 6d; *Neilgherry*, smalls 35s to 38s. low middling 39s to 41s, good middling 48s to 51s, peaberry 46s to 57s; *Nelliampathy*, smalls 35s 6d to 37s, low middling to middling 39s 6d to 43s, bold 58s, peaberry 45s; *Peermaad*, smalls 36s 6d, low middling 39s 6d, peaberry 43s 6d; *Wynaad*, low middling 40s, bold 50s, peaberry 50s 6d to 52s 6d; *Naidoobatum*, peaberry 49s.

JAVA.—*Liberian.*—136 bags brought in.

NYASSALAND.—55 bags sold—smalls 33s 6d, good ordinary 34s to 37s, peaberry 35s 6d to 37s.

JAMAICA.—208 barrels 11 bags partly sold—smalls 34s to 38s, ordinary to fine ordinary greenish 30s to 39s, low middling to middling greenish 40s to 44s 6d, good middling blue 60s, bold 70s to 80s, peaberry 33s to 40s.

COSTA RICA.—Of 4,981 bags offered 3,220 bags sold, smalls 30s to 40s, ordinary to good ordinary 34s to 39s, low middling to middling 40s to 48s 6d, good to fine middling 51s to 60s 6d, bold 59s to 64s 6d, good to fine blue bold 65s to 81s 6d, peaberry 41s to 70s.

GUATEMALA.—5,118 bags catalogued and 2,300 bags sold, smalls 30s to 38s 6d, good to fine ordinary 36s to 39s, low middling to middling 40s to 48s 6d, good middling 51s, peaberry 39s to 59s.

COBAN.—71 bags sold—smalls 39s 6d, bold 60s 6d.

NICARAGUA.—1,465 bags offered and 1,280 bags sold—smalls 29s to 37s 6d, good to fine ordinary 35s to 39s 6d, middling to good middling 43s 6d to 55s, fine middling 60s, bold 51s, good to fine bold 73s to 96s, peaberry 38s to 91s.

SALVADOR.—1,340 bags half sold—smalls 31s to 32s, good ordinary 36s, fine ordinary 38s 6d to 39s low middling to middling 40s to 44s, bold 51s to 55s, peaberry 40s to 56s 6d.

MEXICAN.—Of 791 bags offered 480 bags sold—smalls 32s to 35s 6d, fine ordinary to low middling 38s to 43s 6d, middling 46s 6d, bold 52s 6d. peaberry 45s to 46s.

Rio Exchange 11$\frac{17}{32}$d, previous day 11$\frac{9}{16}$d.

HAVRE, *July* 4.—Good average Santos July opened quiet at 35¼f. and closed steady at 35½f., September opened at 35¾f. and closed at 36f., December opened at 36¼f. and closed at 36¾f., March opened at 37f. and closed at 37¼f., May opened at 37¼pf. and closed at 37½pf.

HAMBURG, *July* 4.—Good average Santos July opened quiet at 28¾pf. and closed steady at 29pf., September opened at 29¼pf. and closed at 29½pf., December opened at 30¼pf. and closed at 30¼pf., March opened at 30¾pf., and closed at 31pf., May opened at 31¼pf., and closed at 31¼pf.

NEW YORK, *July* 3.—Closing prices of No. 7 Rio were as follow:—

	July.	Aug.	Sept.	Oct.	Nov.
July 3...	5·10	5·15	5·20	5·25	5·30
July 2...	5·05	5·10	5·20	5·25	5·30

TEA.

INDIAN.—The amount brought forward was smaller, *viz.*, 7,000 packages, of which 2,000 packages were new season's against 9,400 packages (790 new season's) in the week before and 6,100 packages (4,400 new season's), for the corresponding period 12 months since.

There was again brisk bidding for invoices of this year's growth, particularly for parcels with full flavoured liquor, although quotations were somewhat irregular. Shipments of old crop did not shew much change demand running chiefly on medium to fine sorts.

Deliveries are now assuming a normal character, those for the past month being 7,495,000 lbs. compared with 7,002,000 lbs. in June 1890. The bonded stock appears heavy, but with lighter shipments to this country from April to 30th ultimo, namely, 8,118,000 lbs. versus 12,610,000 lbs. for the same time a year ago, statistical position should ere long improve.

CEYLON.—Sales comprised 23,000 packages on Tuesday and 9,000 packages on Thursday, together aggregating 32,000 packages, contrasted with 24,300 packages on the 25th ultimo, and 20,500 packages in 1900.

The market opened quietly, some indisposition to purchase being evinced as buyers were inclined to wait the result of Thursday's offerings, and many lots were withdrawn. Towards the close of the auction, however, orders came in more freely, and there was better competition, and for the portion disposed of former rates were in the majority of instances about maintained.

Yesterday, when admission to the room was by ticket only, there was a stronger enquiry, prices being on the basis of last week.

London clearances during June were 7,276,000 lbs. *versus* 7,633,000 lbs. in 1900, while the bonded stock is similar to what it was then.

JAVA.—Rather over 1,300 packages of direct import passed the hammer, steadily as a rule, Broken Pekoes being occasionally a little dearer.

CHINA.—The *Himalaya* has arrived from Shanghai and Foochow with the first of the new pickings. About 800 packages from the north have found purchasers at from 6d to 1s 5½d per lb., and a few Paklings have been sold at from 6¼d to 7d per lb. Black Leads are considered fairly good, but Paklings so far are below the average quality.

Deliveries.—The clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 30th June, 1901	...	12,299,587 lbs.
Do. do. 1900	...	13,092,700 ,,

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated July 5th, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1901-1902	50,949	148,721	7,139
1900-1901	22,179	115,592	3,956

7,579 *pkgs.* INDIAN
33,575 ,, CEYLON
1,335 ,, JAVA
} Total 42,489 packages were offered in public auction this week.

The prospect for Tea growers is slightly improved by the smaller quantity shipped from India since the first of April, and from Ceylon since the first of January, the aggregate showing a reduction of about 7½ million pounds.

This, when taken in connection with the steady increase in the use of Indian and Ceylon Tea in outside markets is a hopeful feature, but by no means sufficient to relieve the over-pressure occasioned by the recent heavy increase in production.

The surplus must be largely worked off before any substantial relief is afforded.

INDIAN.—Monday's small sale passed with fair spirit especially for better liquoring kinds of new season's Tea. 382 "last of the season" invoices have been sold against 400 during the corresponding period of 1900. The official telegram gives exports to U.K. for the second half of June as 4,100,000 lbs. against 6,850,000 lbs. in the same period 1900, and from 1st April to 30th June as 8,118,000 lbs. against 12,610,000 lbs. in 1900.

Week's average of New Season's Tea sold on Garden Account 1901, 3,127 pkgs., av. 7·64d. 1900, 4,588 pkgs., av. 6·75d.

New Season's Tea sold on Garden Account 1st June to date 1901, 10,047 pkgs., av. 6·64d. 1900, 11,055 pkgs., av. 6·89d.

CEYLON.—Tuesday's Ceylon sale comprised 22,904 packages, while 9,839 were printed for the auction in the private room on Thursday. The former sale was neglected by many dealers, the bulk being in consequence withdrawn; a great deal of the taken out tea was, however, sold privately afterwards. Thursday's sale passed with good spirit at prices fully up to rates current last week.

The official telegram gives the quantity exported to U.K. for June as 11,500,000 lbs., against 12,750,000 lbs. last year, and estimates that for the month as 10 to 10½ millions, against 11,750,000 lbs. shipped in July last year; making the total from 1st January to date as 59,250,000 lbs., against 62,250,000 lbs. in 1900.

Average for week 6·24d., against 6·63d. same week, 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 651,054 pkgs av. 6·58d. 1900, 647,779 pkgs., av. 7·26d.

JAVA.—With good competition the teas were mostly sold in th room at fairly steady rates.

Bank Rate 3 per cent. Exchange on London three months sight: Calcutta 1/4 3/32. Colombo 1/4⅛.

COCOA.

Large supplies were brought to the hammer on Tuesday, th total reaching 10,950 bags, the great bulk West Indian Grenad growth was the only kind for which there was any substanti demand and prices all round declined 6d to 1s per cwt. Of 2,66 bags Trinidad offered, 410 bags sold at 70s to 74s 6d for good t very fine, being 6d to 1s lower. Of the heavy quantity of 4,74 bags Grenada catalogued, fully 4,000 bags were placed at a depreci tion of 6d to 1s—very fine 67s 6d to 68s, good to fine red 63s to 6 and common to fair 60s to 62s 6d. 60 bags Dominica partly sol at 58s 6d to 62s for common to good, and 138 pags St. Luc realised 63s to 63s 6d for fine, and 58s 6d to 62s for common t good, both of these being in buyers' favor. 11 bags good to fi St. Vincent brought 61s to 64s 6d. Of 389 bags Jamaica only 6 bags sold, at 57s to 60s for common to good common, and 62s t 64s 6d for good to fine. 39 bags Surinam partly sold at 72s fo good. 5 bags Maracibo brought 75s 6d. Only 20 bags greyish re Caraquez Guayaquil were catalogued; they sold at 70s. Of 21 bags African, only one lot sold at 61s 6d for fair. Ceylon wa represented by 1,374 bags, but there was practically no demand and only 90 bags sold at 85s for fine bold, 62s to 66s for ordinar to fair dull medium, 56s 6d for smalls, and 45s per cwt. fo black. The following were bought in:—14 bags Demerara, 47 bags Venezuelan, 80 bags Colombian, 646 bags Haitian, and 1 bags Java. Privately little or no business done.

PEPPER.

BLACK.—The sales reported since our last have been of sma importance, iucluding fair Singapore on the spot at 6 1/32d to 6 1/16 and shipments near at hand at 6 1/16d.

At public sale on the 3rd instant 110 bags Tellicherry and 17 bags Aleppy were brought forward, but they retired unsold at 6d t 6⅛d per lb.

The shipments of Black Pepper for the month of June compar as follows:—

	1ST-HALF.		2ND-HALF.	
	1901.	1900.	1901.	1900
	Tons.	Tons.	Tons.	Tons
U.K.—Sing. ...	50 } 180	*nil* } 110	70 } 110	*nil* } *n*
,, Penang ...	130 }	110 }	40 }	*nil* }
Continent ...	90	*nil*	270	28
United States ...	200	*nil*	390	*n*
Total ...	470	110	770	28

In *White* no business reported for arrival. On the spot sales o fair Singapore have been made at 9¼d, and fair Penang at 8¾d.

At auction on Wednesday only 148 bags Singapore were offered they were bought in at 9¼d per lb.

To-day dull. Black Singapore, July-September shipment 6⅛d and September-November 6 3/16d.

25 tons Tellicherry sold at Hamburg at 55s 6d c.i.f. delivered weights, July-September, and 10 tons ditto to Rotterdam at 55s 6d c.i.f. delivered weights, July-September.

White much neglected and sales unimportant.

GINGER.

COCHIN.—A further declension in the value of washed rough wa submitted to, but cut kinds are still well held. Of 5 cases 257 bag presented for competition, 100 bags good bold and medium plum washed rough sold at 35s, one lot 35s 6d; bold limed cut was hel for 95s, Calicut Sorts for 40s, and cuttings for 35s per cwt.

26 bags from Corinto sold—bold rough brown coated hard, poo flavor, 30s 6d to 31s 6d, small ditto 27s, shrivelled picking 22s per cwt.

JAMAICA.—240 barrels offered and about 190 barrels sold i buyers' favor—fair bright washed 48s, low middling to middlin 38s 6d to 42s, and common to good common 35s to 38s per cwt.

ST. LUCIA.—28 bags small dark sold at 32s per cwt.

CINCHONA.

Last week says the *B. & C. Druggist* we gave particulars of the amount of Government bark to be offered at the next Amsterdam bark auctions. The principal catalogue of private bark has now been issued, and we find that the amount of this to be offered is 4,141 packages containing 369,508 kilogrammes. The exports of Java bark for June were 1,036,000 Amsterdam lbs., against 866,000 Amsterdam lbs. last year, and 1,126,000 Amsterdam lbs. in 1899. The total for the six months is 5,148,000 Amsterdam lbs., against 4,100,000 Amsterdam lbs. last year, and 5,094,000 Amsterdam lbs. in 1899.

QUININE.

There is practically no business to report this week, and prices are nominal. The spot price for German sulphate is now 1s 3d per oz.

The stock of quinine in the London warehouses on June 30 was estimated at 3,686,544 oz., against 3,448,976 oz. for the corresponding period of June, 1900, or an increase of 237,568 oz The deliveries last month amounted to 27,584 oz., and the landings to 156,096 oz.

CARDAMOMS.

CARDAMOMS met with a slow sale at from 2d to 3d easier rates for fine and medium grades, but lower qualities were full up. The following prices were paid:—Ceylon-Mysores, fine pale bold to extra bold round, 4s; medium and bold ditto, 3s 2d; medium pale round, 2s 3d to 2s 6d; small and medium pale, 2s 2d to 2s 3d; peas, 1s 5d; bold splits, 1s 9d; medium ditto, 1s 7d; and small, 1s 4d to 1s 5d; small long, 1s 8d; medium brown and specky, 1s 7d; splits and pickings, 1s 4d to 1s 5d per lb.; seed, 1s 11d to 2s.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 9th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

Munzerabad. *July 28th.*—*Weather*—Rain averaging 70 cents daily; cold and rather strong winds; temperature 62° to 70°. *Works*—Planting, weeding, borer and handling. *Plant diseases*—Supplies looking very well, the year has been very favourable for them so far. *Labour*—Abundant. *Health*—Good. *Interesting item*—The views of the non-weeders find little support up here.

Coorg. POLLI BETTA, *30th July*—*Weather*—Heavy rain set in again on Friday last, but it was lighter the next day and still lighter on Sunday and yesterday. Exceedingly good planting weather, and probably there will be a heavy burst later on. *Works*—Planting out of supplies not quite completed. There has been a dearth of plants this season. Borer is still being removed and burnt; and places are being cleared up and some handled. Coffee is looking well and is carrying a lot of leaf and wood. *Labour*—Sufficient. *Health*—Fair. Cholera fortunately failed to establish itself.

THE PERADENIYA GARDENS.

WITH the new century we have a new journal, "Annals of the Royal Botanic Gardens, Peradeniya." The opening number begins appropriately with a paper on "The Royal Botanic Gardens of Ceylon and their History," by Mr. J. C. WILLIS, Director of the Peradeniya Gardens. Visitors to these lovely grounds are numerous, and perhaps the highest praise we can give to the Director and his staff is to say that whether a scientist or an artist or a mere lover of flowers visits the place all are equally enthusiastic as to its charms. The practical, the aesthetic and the scientific are combined. The Peradeniya Gardens are an attraction to the general public. To the botanist they offer attractions that are rare indeed; and while the grass flourishes and the gay flowers

bloom the work of scientific investigation is vigorously conducted so that the utility of the gardens is by no means subordinated to their beauty. The annals of gardens such as these will be interesting and instructive. Peradeniya might almost be said to exemplify the increasing interest that has been taken in Botany during the nineteenth century. As Mr. Willis remarks:—"The economic history of Ceylon during the last few years is chiefly that of tea, which is by far the chief industry of the Colony, though it deserves special remark that tea is not, in proportion to other exports, nearly so great a staple as coffee was. It forms about 52 per cent. of the value of the exports, cocoanuts, cacao, and other products forming no small proportion of the total. Mindful of the fate of coffee, the Department makes every effort to encourage the development of the minor industries, to introduce or discover new ones, and to aid the planters in combating the first appearances of disease among their crops. At present there seems every prospect of india-rubber and camphor becoming valuable new minor industries in Ceylon, through the efforts of the Department, which in the case of rubber date from 1876."

It is stated that there is scarcely any branch of modern botanical or agricultural science which is entirely unrepresented in the present organization of the Botanic Gardens Department. Mr. Willis traces its history, its growth, and shows how products fall out of notice after being thoroughly investigated while new products were taken up. In 1883, for instance, coffee was failing fast, and Dr. Trimen devoted much energy and enthusiasm to the introduction and spread of new industries, especially cinchona, tea, cacao, india-rubber, Siberian coffee, etc. It is curious to note by the way, that Mr. Willis refers to cinchona as "now becoming the staple of the Colony." With the growth of the Tea industry the scientific work at the gardens has also grown; and the threatened falling away of tea from the heights of its prosperity has had an even more stimulating influence on scientific research than had the earlier successes of the plant. In 1899 Mr. E. E. Green was appointed as Entomologist, in 1900 Mr. J. B. Carruthers as Mycologist, and in the latter year also Mr. M. K. Bamber was appointed Agricutural Chemist to the Department. Laboratory accomodation has been extended also, and Mr. Willis has a very high opinion of the Royal Botanic Gardens of Ceylon as a centre for botanical study and research. Zoologists, Entomologists, Geologists and other "ogists" all are welcome at Peradeniya as are botanists, and it will interest many to know that of the eleven working places in the principal laboratory at Peradeniya, about five are used by the staff of the Department, leaving six available for workers from abroad. Intending visitors are invited to communicate with the Director some months in advance when possible, mentioning the line of work they wish to take up, and whether they wish any arrangements made before their arrival, such as the planting of particular plants or seeds, etc.

The annals of Peradeniya are, in some degree, the annals of the planting industry in Ceylon. Study the former and you learn about the latter. Thus it is observed that in the report for 1871 appears the first mention of the Coffee leaf disease *Hemeleia vastatrix;* in the report for 1873 the spread of tea cultivation is noticed, and the cultivation of cacao and cardamoms is pressed upon public attention that Peradeniya says to-day the Ceylon planting Community will say to-morrow, and cacao and cardamoms are now important industries in the island. Mr. Willis rightly observes, however, that in the early years of the past century, when botany consisted only of the study of the external characters of plants, their classification, and the investigation and cataloguing of the floras of the different regions of the world, the Royal Botanic Gardens of Ceylon were occupied principally with the collection and description of the wild plants of the island. Towards the middle of the century began the rise of Economic Botany, and the then Director did splendid service in the introduction and acclimatization of numerous useful and valuable plants from other parts of the world, whilst not neglecting the study of the still very incompletely known vegetation of Ceylon itself. Later still, and with the rise of vegetable Pathology, the fact began to be recognized, partly no doubt as the result of the collapse of the great Coffee industry by the attack of the leaf disease, that science can afford service of as much value in aiding established industries to combat disease as in introducing new industries, and this has gradually led to the appointment of two officers upon the staff of the gardens whose primary duty is the investigation of the insect and fungi of the island, especially those likely to be injurious and the discovery, if possible, of means of combating the attacks.

BOARD OF TRADE RETURNS.

June 1901.

The following tables show the Imports, Consumption, and Exports of the undermentioned articles for the six months ending June 30 in the present and two previous years, compiled from the Board of Trade Returns, with stock in U. K. on June 30 :—

Coffee.—Heavy transactions were recorded, but the statistical position continues unsatisfactory.

—		1899.	1900.	1901.
Import ...	cwts.	752,313	586,361	726,284
Home Consumption	,,	137,845	151,766	180,093
Export	,,	277,192	255,040	332,917
Stock	,,	615,000	465,000	530,000

Cocoa (Raw).—Imports show an increase far in advance of the improved demand.

—		1899.	1900.	1901.
Imported ...	lbs.	29,062,330	29,317,152	30,938,439
Home Consumption	,,	18,982,037	20,887,690	24,255,031
Export	,,	5,682,768	5,775,829	5,787,192
Stock	,,	19,924,000	14,630,000	17,687,000

Cocoa (Prepared).—Home Consumption bulks large, and in the face of a big expansion of imports stock is reduced.

—		1899.	1900.	1901.
Imported ...	lbs.	2,699,834	3,556,278	4,257,012
Home Consumption	,,	2,915,103	3,156,383	4,003,109
Export	,,	420,493	513,366	467,514
Stock	,,	608,000	155,000	118,000

Tea.—A further growth of imports. Export trade shows up well, but stocks are exceedingly heavy.

—	1899.	1900.	1901.
Import ... lbs.	91,667,092	107,689,173	111,985,643
Home Consumption ,,	120,890,528	136,362,276	137,220,418
Export... ... ,,	13,919,782	21,730,267	22,233,487
Stock ... ... ,,	54,985,000	61,811,000	73,687,000

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

Annual Meeting, 1902.

The Annual Meeting opened at the Resident's Court at Bangalore on Wednesday, the 31st ultimo with Mr. H. P. Hodgson in the Chair. On the previous day a meeting of the Council was held, when the Secretary's Report and Accounts for the year were adopted, and the Agenda paper for the Annual Meeting decided upon. The meeting closed yesterday at about 1 P.M.

As it would be impossible to give a complete report of proceedings in this issue, only the list of delegates, the Agenda paper, and the Secretary's report appear, a fuller report being reserved for next week.

DELEGATES.

Central Travancore...	Hon'ble Mr. G. L. Acworth. / Mr. E. Latter.
Coorg	„ C. E. Murray-Aynsley. / „ A. Lambert.
Kanan Devan ..	Baron J. von Rosenberg.
Nelliampathis ...	Mr J. C. Abbott.
Nilgiris	„ H. P. Hodgson. / „ J. Liebenrood.
North Mysore ...	„ O. Scot Skirving. / „ F. J. Parton.
South Mysore ...	„ J. G. H. Crawford. / „ A. M. Elder.
Shevaroys ...	„ R. Gompertz.
Travancore Cardamom Hills ...	„ E. Latter.
Wynaad	„ D. Mackenzie.

AGENDA.

1. Suspension of Rule 2.
2. Annual Report and Statement of Accounts.
3. Chairman's Address.
4. Legislation—
   (*a*) Labour Law.
   (*b*) New Coffee-stealing Prevention Act.
5. Duties—
   (*a*) British Duties on Tea, Coffee, etc.
   (*b*) Ceylon Import Duty on Tea.
   (*c*) Indian Import Duty on Tea
   (*d*) Enhanced Duties on Pepper, etc., imported into France.
   (*e*) Proposed Tea Cess.
   (*f*) Proposed Coffee Cess.
   (*g*) Differential Duties.
   (*h*) Export Duty on Coffee in Travancore.
6. Coffee—
   (*a*) Markets (including sale in India).
   (*b*) Paris Shop.
   (*c*) Adulteration.
   (*d*) Reduction of curing charges.
   (*e*) Cultivation.
   (*f*) Land-tax.
7. Tea—
   (*a*) Markets (including sale in India).
   (*b*) Green Tea.
8. Agricultural Matters—
   (*a*) Products.
   (*b*) Fertilisers.
   (*c*) Ladybirds and Scale Pests.
9. Crop Estimates.
10. Railway and Steamer Freights.
11. Roads and Communications.
12. Proposed Harbour on the West Coast.
13. Improvement of Madras Harbour.
14. Excessive Commission on Money Orders in India.
15. Weights and Measures in India.
16. St. Petersburg Exhibition, 1902.
17. Finance.
18. Election of Office-bearers for 1901-02.

SECRETARY'S REPORT FOR 1900-1901.

No change has occurred in the membership of the Association during the year. Mr. Brooke Mockett has succeeded Mr. Frank Mangles as one of its joint representatives in London, Mr. John C. Sanderson continuing to represent the Association as hitherto. The Hon'ble Mr. G L. Acworth retains his seat as "Planting Member" of the Legislative Council of Fort St. George.

The chief event of the year, one that overshadowed the whole Empire, was the *Death of Queen Victoria*. Planters shared the universal sorrow at the demise of Victoria the Good, and the Chairman voiced the feelings of the whole community in a telegram to the Viceroy, which read as follows:—

"This Association desires to convey, through Your Excellency, its heartfelt sorrow for irreparable loss sustained by the death of our beloved Queen, and respectfully to express deepest sympathy with the Royal Family in its bereavement."

As time passes the aims of the Association become more comprehensive, and the scope of its operations widens. It has to deal with old subjects as well as new, the former predominating, as it is usually found impossible to bring any important matter to the point where "Finis" can be written, except after long deliberation and discussion, and steadfast effort. No better evidence of this could be given than is to be found in the progress made in regard to the subject of local.

Labour Laws.—The year under review has witnessed marked progress, but the new law is still on the legislative anvil. During the year Government has submitted the amended Bill for an expression of opinion, and your Chairman has responded with a memorandum of points in regard to which he feels that the Association will consider the amended draft unsatisfactory. The subject is entered on the Agenda paper of the 1901 Meeting for further discussion.

Another very important matter discussed at last Meeting was the question of *Foreign Markets for Tea*, which is connected with the still wider question—How to stimulate the demand for this product. A definite decision as to a plan of action can certainly be arrived at, but work in accordance with any such plan should be regarded as unending, for while Tea continues to be cultivated and manufactured planters will obviously benefit by efforts to extend sales and command improved prices. Increased interest has been shown in this subject since the last Annual Meeting was held. This Association has not attempted to act independently of the Indian Tea Association, but has endeavoured to stimulate discussion in the hope that benefit may result. On the other hand, the Indian Tea Association has operated independently of the U. P. A. S. I., but it has expressed its readiness to consider representations from the planting community in Southern India, and has manifested no desire to exclude planters in the South from taking an active share in the carrying out of its schemes.

The development of Foreign Markets for Tea and the expansion of *Sales of Indian Teas in India*, cannot but be regarded as cognate subjects. The Indian Tea Association has hitherto maintained a separate fund in regard to the work of advertising, canvassing and distributing samples in America and other Foreign Markets, but it has lately given increased attention to the potentialities of the Indian Market, and has decided to intrust the working out of a scheme for the extension of sales of Tea in India to Messrs. Andrew Yule & Co., a well-known Calcutta Firm. This Firm is, of course, free to operate in Southern India as well as in other parts of the continent; but it should be mentioned that a suggestion has also been put forward with a view to the elaboration of a local

scheme for the development of demand for Tea in the South. It appears probable that the District Associations concerned will consent to the exploitation of Southern India being left to Messrs. Andrew Yule & Co., provided that this firm intends to work in the South with the same energy as in other parts of India. The whole subject, in its widest form, is entered upon the Agenda paper of the present Meeting. It is one of vital interest, and connected with it, in the relation of "means" to "ways," is a suggestion that has been made that Tea planters in India should move for the imposition of a Tea Cess, similar to the Ceylon Cess, for the purpose of raising funds to defray the cost of pushing Indian Teas in Indian and other markets. This also is a point that will come up for discussion at the ensuing meeting.

It may be well to mention here that while the above subjects have received the attention of Tea planters throughout India, Coffee planters in the South have had under consideration the question of ways and means for the development of demand for the commodity that is their staple produce. In many respects the conditions affecting Indian Tea and Indian Coffee differ greatly, yet to Members of this Association the subjects of *Markets for Coffee* and a *Proposed Coffee Cess*, for the purpose of raising funds for the conduct of a campaign in behalf of increased consumption of the fragrant berry, are quite as important as the corresponding questions in respect to Tea.

In both instances a double line of preparation is desirable: the one to relate to consumption in India; the other to have for its object the capture of Foreign Markets, and the conversion of consumers therein into devotees, not merely of Tea and Coffee, but of *Indian* Tea and *Indian* Coffee.

The prevention or regulation of the *Adulteration of Coffee* has been frequently urged by this Association as one means of stimulating consumption of the pure infusion. At the 1900 Meeting a resolution was passed that a number of gentlemen in England be asked to form themselves into a Committee, to act and to communicate with the London Chamber of Commerce, and to take such other steps as they might deem advisable, for getting the subject of Adulteration of Coffee again brought before the Chancellor of the Exchequer and to the notice of the House of Commons. The gentlemen specially named were:—Sir H. Seymour King, and Messrs. J. C. Sanderson, Brooke Mockett, J. Lullin, P. Macfadyen, J. Clifford, and M. A. Ord-Mackenzie, "with power to add to their number." The thanks of the Association are due to these gentlemen, every one of whom complied with its request, and to Mr. J. Innes Rogers (of Messrs. J. Travers & Son, Ld.,) who kindly joined them. They arrived at the conclusion that it was desirable that Indian planters should make representations in regard to this matter to the Indian Chambers of Commerce and Local and Central Governments in India, and by them, or through them, to the India Office, the Board of Trade and the Chamber of Commerce of the United Kingdom. The Madras Chamber of Commerce, it may be remarked, has expressed entire approval of the agitation against Adulteration of Coffee, and its readiness to join this Association in any endeavours it may make to prevent it. The Malabar Chamber of Commerce has expressed itself to the same effect.

Connected, though less directly, with the subject of the development of demand for Indian planting products is that of Imperial Fiscal Federation, with a view to the levy of *Imperial Differential Duties* in favour of British, as distinct from Foreign, products.

A resolution was passed last year "That, considering the critical condition of the Tea and Coffee Industries this Association do communicate with the Indian Tea Association, the Ceylon Planters' Association, the Indian Chambers of Commerce, and with the leading firms of Merchants and Brokers interested in Tea and Coffee, etc., in this country and in England and the Colonies, with a view to ascertaining whether a movement in favour of a commercial combination of Great Britain and Her Colonies and India against the world which would, by a system of Differential Duties, afford some protection to British grown products and manufactures would receive support, and that a Committee of this Association be appointed to carry the above into effect." A special circular was prepared, and was despatched to numerous Chambers of Commerce, etc., in various parts of the Empire.

It would be difficult to summarise in brief space the very heavy correspondence that was received in reply. It may be broadly stated, however, that, though some few of the bodies addressed took an adverse view of the suggestion thrown out, generally speaking, the replies were favourable and encouraging.

The French Import Tariff.—Uncertainty has prevailed during the greater part of the year as to the action to be taken by the French Government in regard to the import Tariff in that country on Tea, Coffee, Pepper, etc. The latest news is to the effect that settlement of this matter has been postponed to early next year. The settlement affects the future of Indian Tea and Coffee in the French Market, which is one to which planters should certainly not give decreased attention

Paris Exhibition.—In Circular No. 48, dated 25th July, 1901, the Indian Tea Association submits its statement of accounts in connection with the Paris Exhibition, showing that no further claim on this account will be made against the Association.

A gold medal was awarded to the Association for its exhibit of Coffee.

Dr. Geo. Watt.—It was resolved last year to request the loan of this gentleman's services from the Government of India, so as to permit him to work in Southern India for six months and investigate plant diseases and insect pests in the planting districts. No reply has been received.

Roads and Communications.—The Governments of Madras and Mysore were addressed during the year regarding the repair of the Bhund Ghaut Road to Mangalore.

Postal Irregularities.—In accordance with a resolution passed last year the postal authorities were addressed on this subject.

Proposed Harbour on the West Coast.—The Association has addressed the Madras Government with respect to the need of a good harbour on the West Coast, and has also been in correspondence with the West Coast Chamber of Commerce at Calicut, the Malabar Chamber of Commerce at Tellicherry, and the Madras and Bombay Chambers.

The Madras Chamber of Commerce is occupied with the question of the improvement of the Madras Harbour, but the Chambers that represent the mercantile community on the Malabar Coast are in full accord as to the need for a harbour. Government desires that a special port be named as the one at which such a harbour should be constructed. When this is done, it will no doubt arrange for the necessary survey and the drawing up of plans and estimates.

Freights.—The Madras Chamber of Commerce requested the support of the Association in an effort to bring about a reduction of the high rates of freight now charged by the B. I. S. N. Co. and the Clan Line; and the subject of a reduction of *Rail Freights on Coffee* was also mooted during the year *Accounts* duly audited, are laid on the table, together with a Balance Sheet showing the financial position of the Association as on the 24th instant.

The Reserve Fund stands at Rs.7,039-12-0, of which Rs.7,000 is invested (fixed deposit bearing 5% interest per annum), the rest standing in current account with the Association's bankers. Of *The Paris Exhibition Fund*, Rs.986-6-2 has been invested in the purchase of 3½% Government Paper of the face value of Rs.1,000; the remainder, *viz.*, Rs.8,072-5-7, lies with bankers, in current account.

The Ladybird Fund stands unaltered at Rs.1,276-3-4, *The Transvaal War Cheroot Fund*—at Rs.20.

The General Fund shows cash in hand Rs.201-6-10, as against an opening balance of Rs.611-15-10. There are, however, sundry subscriptions still unpaid.

The actual financial position of the Association has improved, the Balance Sheet showing a surplus of Assets over Liabilities to the extent of Rs.19,292-11-11, as against Rs.16,604-10-11 on 31st July, 1900.

It should be specially noted that the accounts submitted relate to a broken period—31st July, 1900 to 24th July, 1901—not to a complete year. As far as possible, expenditure for the whole year has been provided for, and *per contra* the subscriptions paid and still unpaid relate to the year.

In conclusion, I have to express my sincere thanks to the Chairman, Planting Member of Council, and the Honorary Secretaries of the various District Associations for their unfailing courtesy during the year.

THE SALE OF TEA IN INDIA.

A Colombo paper makes some unfair and ungenerous remarks regarding the attitude of Travancore in respect to the pushing of sales of Tea in India. It says:—"Travancore will suffer an unkind blow when it is told it is not to exploit its own Tea market in Southern India. But, as *Capital* said in a recent issue, it is easy enough to say, 'We could have done that' after Messrs. Yule's enterprise has been rewarded. And it will be disastrous if Travancore continues unruly, forms a competitive limited Company and attempts to run an opposition agency for exploiting the South Indian market—unless Messrs. Yule are found in time to be neglecting this altogether." Now, in the first place, Travancore is not under the orders of the Indian Tea Association, which cannot inflict any "unkind blow" upon it. The truth is, however, that Travancore Association framed their scheme before knowing that Messrs. Andrew Yule & Co., of Calcutta, were to work on behalf of the I. T. A. As soon as they were informed of this they manifested a very creditable desire to let their own scheme drop. They merely ask for an assurance that South India shall be exploited as vigorously as other parts. This will doubtless be arranged. Particulars of the scheme proposed by Messrs. Yule are given in our "Proceedings" columns.

"PRIVATE" TEA SALES.

The new movement for the establishment of private tea auctions in London has not been favourably received by the trade. On the front page of the catalogue of the first such auction it was notified:—"Admission to this sale by ticket only. Application in writing to be made to the Secretary of the Tea Brokers' Association" Among the notices of motion in the programme of the recent Grocers' Federation Conference at Brighton, was the following, handed in on behalf of the Metropolitan Grocers', Provision Dealers', and Oilmen's Association, and headed: "'Corners' in Tea":—"That in the opinion of this Conference the proposals which have recently been made to hold private auctions for tea sales, and also to establish a private Tea Exchange are undesirable, and appear to be an attempt to bring about 'corners' in tea." The *Grocers' Gazette* remarks:—"The main object of the promoters of this scheme for private auctions is that they may realise higher prices. If this is to be accomplished at the expense of the retailer, as seems likely, we strongly protest against it. Let it be remembered that the retailers, after all, represent the buying power of the trade, and that the remedy lies largely with them; and we trust they will assert themselves by absolutely declining to consider any samples except those which have been dealt with in a fair, open, and public market."

Writing on the 5th ultimo, the London correspondent of the *Times of Ceylon* remarked:—

As I stated in my cable of 31st ultimo, a good many of those connected with the promoters of private sale made no secret of their intention of absenting themselves from last Tuesday's auction, so that what happened caused no great surprise. For the first portion of the sale there was practically no bidding for the teas, no bidding, that is, at anything like the previous week's level of prices. Most of the teas were taken out, but here and there a broker knocked down a tea at considerably below its value. News of this got about. Teas were being given away, and this is a condition of things which appeals very strongly to the mind of the buyer. So, after lunch they started bidding, and the latter part of the sale went much as usual. There is a tendency now in some quarters

TO EXPLAIN AWAY THE BOYCOTT,

to say they did not want any tea, were reserving themselves for Thursday, and so on. But this will not hold water for one moment. All the afternoon there was a procession of buyers to the brokers' offices offering a farthing, a halfpenny, a penny, above the prices bid in the morning. They did therefore want the teas, and the boycott was deliberately thought out. It was a partial failure, but the cloven hoof was shown distinctly enough.

AT THE OPENING PRIVATE SALE

there was a crowded attendance. The door was only half open, and two stalwart chuckers out cried "Tickets, please" Many of the chief buyers who were absent on Tuesday, were there, and spirited bidding was anticipated It did not come, however, and prices were just about on a par with Tuesday afternoon's or the sale of the preceding week. The buyers wanted to support the sale, but each man waited for the other to pay over the market price, and there was the feeling that the teas would be difficult to deal with in the country, where a strong prejudice is arising against them. About

THE ATTITUDE OF THE MERCHANTS

in this matter little need be said. No one now expects them to show any grit or cohesion in any trade matter, and they only lived up to their reputation. A hurriedly convened meeting of members of the Ceylon Association was held on Wednesday. There was an hour or two's talk, and there the matter ended But that the buyers should have been so weak-kneed, I confess, surprises me.

THE STORY OF LITTLE RED RIDING HOOD

appears in one form or another in the folk-lore of many nations, and we, most of us, yield the unconscious homage to the Wolf which human nature pays to the successful trickster.

But if the Wolf had failed to pass itself off as Grandmamma, or had come into untimely contact with Riding Hood's father and his crossbow, we should think him a very poor creature. And this is very much the position of the promoters of this precious private sale. First by a premature and unsuccessful boycott on Tuesday, and second by failing to support the sale on Thursday, and thus taking away the bait which they had been dangling before the eyes of credulous merchants, they have made a mess of the whole thing and it is quite possible that before long it may fizzle out. Meantime

THE MARKET IS GREATLY DISORGANISED,

and a good deal of unpleasantness has arisen A man I know who buys a lot of tea has been refused admittance to the private sales, no reason being assigned. He is naturally very indignant, and says he means to see the matter through if it costs him £100. The representative of the London *Times*, too, has been refused a ticket, and the conductors of "the leading journal" are very angry about it. The system of ticket sales was considered by the grocers met in Congress this week, and the Committee is looking carefully into the matter preparatory to taking further action.

FOR NEXT WEEK

the auctions are pretty equally divided between Tuesday and Thursday. Some merchants are supporting the first day, some the second, and a good many are straddling the fence and like Mr. Micawber "waiting for something to turn up."

NOTES.

Vanilla in Trinidad. The experiment with vanilla in Trinidad is reported to have made good progress.

Ceylon Land and Produce Co., Ld. A special telegram to the *Times of Ceylon* states that this Company pays an interim dividend at the rate of 7½ per cent. per annum.

Amsterdam Bark Market. A supplementary catalogue was issued for the Amsterdam auctions of July 18th. This increased the offerings by 425 packages, comprising 40,523 kilos. of cinchona bark.

Otto of Rose. The *Chemist and Druggist* reports :—Samples of the new Bulgarian crop are advised. The quality is better than that of last year, but the quantity, as already reported, is rather less. The official prices are not yet fixed, but an advance of 1s. to 2s. per oz. would not be a surprise.

Pepper in Trinidad. The plants have grown well but are not sufficiently advanced to produce seeds. The old plants have produced seed yearly. A demand has arisen for this, among European seedsmen for raising plants for the supply of some of the African Colonies. The crop has all been disposed of as growing seeds.

Vanilla. The prospects of a good crop in Seychelles have been realised, and the export of vanilla from the islands this year, says a correspondent of the *Chemist and Druggist*, will probably be at least 50 per cent. greater than in any previous year. There is a large amount of short vanilla, but the quality compares favourably with that of other seasons.

Ceylon Tea and the Adelaide Royal Visit. An Adelaide firm, Messrs. Drummond Brothers, instead of spending money on decorations, handed 500 tickets over to the Citizens' Welcome Committee for free distribution among the charities in and around Adelaide, and each ticket-holder on presenting the same at their establishment received one packet of Ceylon tea. A good "Ad!"

The London Tea Market. Reuter reported on 25th ultimo the market for Ceylon tea is generally firm. Pekoe Souchongs are quoted at 4½d and the average for the week is 6½d (both same as last week). 32,000 packages of Ceylon tea were offered for sale, and 24,000 were disposed of; while of the 12,000 packages of Indian tea offered, 10,000 found purchasers, at an average 7$\frac{7}{8}$d per lb.

Ceylon and Indian Tea Duties. The Indian Tea Association, discussing the Central Travancore Planters' Association's proposal, has decided that a reduction of duty on tea entering Ceylon to 5 per cent. *ad valorem* is insufficient, and has recommended that no duty be levied in Ceylon on Indian teas; likewise in India on Ceylon teas; the duty to be retained against non-British teas.

Guttapercha in French Indo-China. The Government in French Indo-China is patronising the cultivation of the guttapercha tree, and planting is now being tried in various parts, chiefly in Laos, also in Annam and Tonkin. Exports for 1900 amounted to 339,000 kilos. against 52,813 kilos. in 1899. A picul of good quality is worth about 130 dol. (£13).

Ceylon Tea in Egypt. Under the heading of "The Cup that Cheers" the *Egyptian Gazette* has the following :—"Not very many years ago almost all the tea consumed in England, and, in fact, the whole world, came from China. Now-a-days, all this is changed, and the best teas come from Ceylon, whose rich virgin soil, in conjunction with years of patient study and scientific cultivation, has yielded teas whose quality is unrivalled to-day."

Amoy Tea. The British Consul at Amoy says in his report for 1900 :—No Amoy tea was offered for sale for the foreign market during t year under review, and for the first time this commodity, which most of the foreign merchants of this port were i terested, disappears from the figures of export abroad. 20 years a trade of over 7,000,000 lbs. has completely di out. The small amount of 1,400,000 lbs. was sent to nati ports, probably solely for native consumption.

Colombo Tea Sales. It has been decided not to hold tea sale in the August Race wee and therefore the sale of the 14th August is cancelled. T following sale will take place on the 21st August an ho earlier than the usual time. The *Times of Ceylon*, dated 25 ultimo, reports :—Market firm for all sorts. Common te dearer. At the tea sales a box containing 5 lbs. of golden ti from Orion estate, was put up for sale by Messrs. W. Some ville & Co. The highest bid was Rs.3·50 per lb., but was n accepted as the price required was Rs.5.

Rubber Preparation. A Trinidad note remarks :— pursuing experiments with the vie of ascertaining the most economical method of coagulati rubber fluids, some of these were allowed to stand forgott in a large receptacle where they had been creamed Wh again handled the whole mass was putrid, but the rubber w still on the surface and easily coagulated or "coalesced" being handled, and the quality produced is stronger a therefore of a higher quality, than rubber prepared in oth ways. The specimen was shown to a noted American man facturer of rubber goods who readily recognised its quali from among numerous other specimens. There were howev evident signs of loss of weight in rubber material by t decomposition set up by the fermentation of the proteids.

"Common, but not Rubbishy, Teas." Mr. H. M. Knight explains th the samples of teas sent by t Indian Tea Association to the Centr Travancore Planters' Association are not samples of the te that complaints have been made against of being shipp from Ceylon to Bombay. He deprecates most strong trying to get a prohibitive tax imposed upon Ceylon te in India, as he has always hoped that the tax imposed Ceylon would be abolished as far as India is concerned. T teas Travancore has protested against coming into India a those that sell at or under 7 cents per lb. in Colombo, whi are nearly all brought for the Bombay market, and of whi no less than 32,000 lbs. have been sold during the last mont He remarks :—"That teas of the value mentioned should exported at all from Ceylon is quite as harmful to the intere of that country as the importation into India is to the latter

Testing Coffee. A correspondent of the Isis *Record* writing to the *R. R. Herald*, says : Several samples of coffee have been received and tested duri the last few weeks from Mauritius, Norfolk Island, Queen land, and other places, and strange but true, the Claren coffee divides honors with Norfolk Island, with Queensla next. Coffee beans parchment dried are worth 6d. a pou dressed 8d., roasted 10d., and tinned up to 1s. 2d. per lb. large lots. If retailed, one-third more in each form. It known to the writer that one firm is selling Mauritius coff as Clarence River grown. Planters will go in for the cr when they see how cheaply and simply it can be turned in money. Each grower should roast and tin his own crop,

the extra appliances would not involve an expenditure of more than £7. A man can wheel £15 worth on a barrow.

Calcutta Tea Sales. For the auction on 26th ult. 20,700 packages were offered at to-day's sale making, a total out of the market of 100,600 packages against 111,700 packages to same date (27th July) last year. There was a good selection from all districts, last week's quality being well maintained. Bidding was not quite so good as last week, and prices were very irregular, being inclined to weaken towards the close. Fine and finest kinds sold well, but mediums were easier. Assam Pekoe Souchongs sold well at former rates. Common grades remain much as last week, here and there, showing a point or two better price for better quality. Buyers for Bombay and the Gulfs were fairly large operators, but prices for suitable kinds were mostly downwards; other outside markets took a fair quantity. Quality of advance musters from Cachar and Sylhet continues good and above average. From the Dooars great improvement is noticeable, and Assams, although still above the average, are not so fine, as they have been, and Darjeelings have fallen away somewhat.

Coffee in London. The *Produce Markets' Review* of 6th ultimo says :—The Brazil crop, which closed on 30th ultimo, has proved, as was anticipated some two months since, to be the largest on record, and now that we are entering upon one the estimates for which are still larger, it is somewhat surprising that values remain so steady. During the week the terminal market has only slightly fluctuated, closing within 3d. of last week's quotations. Considering the extreme heat of the weather, which is, of course, detrimental to Coffee drinking, and the fact that on the Continent the holiday season is checking business, there has been a fairly good demand at the auctions, and, with the exception of the lowest grades, full prices have been paid. Colombian is at last coming to hand more freely, but is mostly damaged and very mixed in quality. Those parcels which were shipped in husk to be cleaned here, though lacking in colour, have maintained their flavour, and at the prices they are fetching are very useful Coffees. There has again been more demand for fine Costa Rica, and values are decidedly dearer, with a good inquiry at the advance.

Indian Teas in London. As is usual at this season of the year, says the *Produce Markets' Review* of 6th ultimo, the public sales are very small and uninteresting. Last Monday's auction comprised only about 7,580 packages, the majority of which were sold at previous rates. The scarcity of good liquoring Teas from 6d. to 9d. has somewhat hardened quotations, especially as there is an increasing demand for these grades. New season's Darjeelings were offered, the prices realised being well up to valuations. The first arrivals of this growth, however, are generally deficient in flavour and strength, and do not meet the requirements of the general trade. A few invoices of new season's Assams were also printed, and prices were rather irregular. The following are the figures for June compared with the same period last season :—Imports, 1,165,759 lbs. and 2,038,200 lbs. ; the deliveries show a slight improvement, being 7,494,691 lbs. as compared with 7,002,107 lbs., while the stock stands at 32,560,643 lbs. as against 22,079,688 lbs. Judging from the catalogues already issued, the sales next week are expected to be very limited. From Calcutta advices we learn that a sale took place yesterday, when about 12,000 packages were offered.

Formosa Tea. Amoy continues to be the port for ocean shipment for the tea trade of Formosa, in spite of the efforts of the Japanese to deflect the channel of this trade from the course it has run since its birth. They have imposed a differential tax on this tea when exported to Amoy for transhipment and when exported to a Japanese port. A consular report states that the British merchants of Amoy, whose principal business is the export of the Formosan leaf, bitterly resent this differential duty as being contrary to treaty rights, and as being aimed at depriving them of a trade which has been built up entirely by their own labour and enterprise. Out of a total of 395,159 half-chests (about 17,000,000 lbs.) shipped to the United States and Europe 358,704 half-chests (about 15,500,000 lbs.) passed through Amoy, the balance 36,455 half-chests (about 1,500,000 lbs.), presumably all for the United States, going *viâ* Japan. The great bulk of the Formosan leaf is taken by the United States, the remainder some 13,200 half-chests, being exported to the United Kingdom. The war in North China had no direct effect on this market, except that it must have imbued some operators with a speculative feeling, otherwise the smart rise which took place in July, 1900, cannot be accounted for.

Ceylon Coffee. An old planter, who lately paid a flying visit to Ouvah, says that winding in and out, and before reaching and after passing Haputale station, there is still a little coffee. He writes to the *Ceylon Observer* :—I was quite cheered to see some really fine trees, and loaded with green berries ; but like on our side of the country King Coffee is doomed—tea is coming to the front everywhere. Let me tell those wise—save the mark ! —people in London, who make long speeches and are doing more to try and reduce the output, which is unnatural, than they are trying to get new markets—let me tell them that there are a good many thousands of acres of tea not yet in bearing in this little Island of Ceylon. To return to coffee, Ouvah will see the last of it ! When an old planter sees long suckers allowed to shoot up from the old trunk, and the branches very "whippy" and many dry sticks, he knows its days are numbered ! Do you remember old "Billy Rudd" Well, he was asked to visit and report on an estate in the Hantane district—he went but it was a long time before he sent in his report ; the fact is he never intended sending one—he had nothing to report ; but urged to do so, it came, and was as follows :—"Report on ——— Estate, Hantane : all veeds, vips, and valking sticks."

LETTERS TO THE EDITOR.

BUG ON COFFEE.

Dear Sir,—I enclose a cutting of a letter which appeared in the *Madras Mail* written by a friend and neighbour of mine, but although it appeared a month or more ago, has not met with a single response. Two Estates of mine are affected in the same way, and since the enclosed letter appeared I have been watching this bug with great care and have found that it is attacking the stalk of the green coffee berry and the berry itself, the former with disastrous results, as the half size berry turns a curious brown or yellow colour and will probably drop off, at least it does on

being bent. It is impossible to say to what extent the crop will be affected. We have had a very light June and the bug was very active, then came a mesh and it appeared to diminish or to spin its web, now there is a break and it seems to be on the move again, but in lesser numbers and I can only hope that the next mesh will finish it. I have been in this part of Mysore for 22 years and beyond seeing it on isolated fig trees about two or three years ago, we have been entirely free from scab insects. Some years ago I saw it or what I presume to be the same bug on an Estate at Kil Kotagiri, but was assured by a well-known planter that it did the coffee no harm. I am told it is still prevalent on the same Estate and does no harm. I am certain, however, that the black stuff (which I believe is fungus caused by the bug's excreta) does harm, at all events to young coffee, as it becomes so hidebound that practically all growth is stopped. The same bug attack guavas badly, but they seem to get rid of the black stuff by shedding their bark. I have omitted to say that such has been the virulence of this bug that it has attacked a great many indigenous jungle trees, parasites, and weeds, especially Spanish needle. This looks as if having finished one lot of leaves off all the figs, it had to eat anything it could find, and we can only hope it won't acquire an excessive liking for coffee. I have written this somewhat lengthy letter in the hope that some kind person will write, and I hope re-assure us with regard to this bug, scab insect, applies or whatever its correct term is. At one time one heard a great deal of scab pest on the Pulneys; can you say what has happened to that bug in that District. The Hawaiian coffee, according to *Chambers's Journal*, seems to have been quite cured by the Ladybird imported from Australia. In conclusion, I may remark that so far the bug is confined to where the shade is mostly or entirely fig, and in hot situations. There are still some fig trees free from it.

SANTAVERI, 28*th July*. "ENQUIRER."

INQUIRIES.

DEAR SIR,—Will you kindly inform me where I can procure the "Agricultural Ledger" and price. Under the heading "Coffee in Distant Lands" in a recent issue of your journal, you mention several kinds of coffee grown at Trinidad Botanic Gardens. Can you inform me if seed is procurable there and to whom communications should be addressed?

PERCY G. TIPPING.

Note.—The *Agricultural Ledger* can be obtained from the Superintendent of Government Printing (India), at Calcutta; price—2 annas per copy. The application for Trinidad Coffee Seeds should be made to the Superintendent of the Royal Botanic Gardens, Trinidad. Whether he can execute orders or not, we cannot say.

ED.—*P. O.*

GENERAL ARTICLES.

PLANTING IN JOHORE.

The following information respecting the State of Johore has recently been received from the corresponding Agent of the Imperial Institute, the Hon'ble Dato James Meldrum, F. R. G. S.:—

The cultivation of gambier is beginning to languish, owing to the distance planter require to go from the water before they can find virgin forest and fresh land for new plantations. This industry is entirely in the hands of Chinese. The destruction of valuable forest trees is to be regretted thousands of acres have been cut down by gambier planters, who, when the soil is exhausted, seek for "fresh fields and pastures new." Some have gone to Raja Brooke's te tory Sarawak, some have gone to British North Borneo.

The cultivation of tea has practically ceased owing to want cheap labour otherwise the frequent rains and heat are favoura for leaf crops.

A new steam saw-mill has been erected by Chinese assisted Johore officials. The Johore Steam Saw-mills, erected in 1866, in full work; supplies are now brought from greater distanc Ballow, sometimes called Johore teak, has become scarce; t wood was admitted by Lloyd's for "all parts in ships of the high grade"; it is harder and heavier than *Tectona grandis*, and nea double the strength.

No planting of guttapercha trees has been attempted; the s ply cannot be kept up much longer. As regards forest trees, th are no private individuals in Johore to undertake such planti indeed it is only Government who can perform this import duty.—*London and China Express.*

CINCHONA PLANTATIONS IN BURMAH.

It would be interesting to learn what has become of the cincho plantations spoken of in 1880 as existing in the Toungoo distr by Major Spearman in his Gazetteer. In December, 1868, a sm plantation was commenced on Ploo-ma-do hill, south-east of To goo, at an elevation of 2,100 feet. One hundred and eighty pla of the "Succirubra," or red bark variety, were planted, of wh 128 were living twelve years afterwards. Two plants of the sa species planted on Bogale hill at an altitude of 2,800 feet, but rather an exposed situation, had attained a height of nine and feet in thirteen years. A plantation was formed in 1871-2 at Tha daung, eighteen miles east of Toungoo, at an elevation of 3,700 fe The red bark variety is the only one of the different species tri which has succeeded at all. Plants of this species, though vigoro enough, have a bushy and gnarled appearance, and were cover with seed though only about ten to fifteen feet high. The ot variety, planted over two-thirds of the whole area of 100 acr failed. The plants grow well for two or three years but then beg to sicken and die. Plants were gratuitously distributed to heads Christian Missions. We have not noticed in any Forest Depa ment report any account of these cinchona plantations, the old of which were planted from thirty to thirty-five years ago. would be interesting to learn what has become of them.—*Rango Gazette.*

THE UNITED STATES TO RAISE THEIR OWN COFFEE.

The United States is a wonderful country and Americans wonderful peoples worthy of their origin; but, says the *Brazili Review*, there are some things that cannot be done, not even electricity, and one of them is to grow coffee on the sea. We not know to a nicety what the area of the American "possession suitable for coffee growing may be, but are willing to risk a gu that, even with Cuba thrown in, it would not reach a quarter what is already under cultivation here. There is, of cou the resource . . . . of building plantations out on trestles i the sea, but short of that, however anxious Americans may be raise everything they consume within their own borders. it impossible just at present. Besides, why be in a hurry? Is it written that in the fullness of time, when American markets surfeited with their own products and the power of the Trusts waning, Americans will enter on the fullness of the vast inherita reserved by Monroe and annex South America in a lump with Bra and her Coffee plantations, all ready made, without any complica engineering at all? Meanwhile why alienate the sympathies possible possession by so cruelly usurping functions so alien? Brazil grow her coffee and sell it to the beneficent protector South Americans—at a price—and be thankful it is no lower.

No doubt the programme of raising everything you consume attractive enough to some minds, but unless it can be complet by consuming all you raise, it has its weak points. It is all v well to assert that, come what may, decrepit Europe must take States' produce at any price; but if Europe is to go on buying wi out selling, she must soon have nothing left to buy with and be b

krupt, when we suppose the U. States would supply everything gratis out of pure philanthropy. All the same, Brazil has a few advantages in the coffee line that defy competition and will enable her, in the expressive American vernacular, to lick not only the States, but the whole creation. Every time more revenue is required, or a commercial treaty with this country is involved, pressure is brought to bear and Brazil warned of the awful consequences that obduracy may entail. Its undisguised official origin is sufficient this time to show that, like its predecessors, the present is but another attempt to bluff reluctant Brazil into reciprocity. We can see no use or advantage in so tying our hands. No commercial treaty would prevent Americans from cultivating coffee in their "colonies", if it pays; and, if it don't, we require no treaty to give currency to our products in the States; because, if as they are so fond of saying, Europe cannot do without their cereals, the States cannot do without coffee, and in that particular line we boss the show!

BRAZILIAN NOTES.

(From the *Brazilian Review*.)

Exchange, *June 15th*, 1901.—Bank Rate on London opened on Monday, 10th instant, at 11 3/4d. fell to 11 1/4d. on 13th instant and closed this evening at 11 1/2d.

The figures . . . . show the value of Exports to have fallen from over £4,000,000 during the month March to £2,874,127 in April, and though even at that figure the value of Exports must considerably exceed that of Imports, unless the demand for bills for private and Government remittances, that not only absorbed the enormous trade surplus accumulating since the beginning of the year but devoured nearly £3,000,000 drawn by the Banks as well, unless that have been satisfied, however favorable the balance of trade may be, that of payments must be against us still.

Against facts argument is useless, and the fact is that, favourable or unfavourable as the balance of trade may be, the disappearance of the surplus points to the existence of an invisible demand ready to become active at any moment that rates are sufficiently favourable. Otherwise it would be impossible to explain the manner in which bills to the extent of so many millions have been mopped up. It is, however, certain that the merchandise has been shipped and drawn for and that bills have been sold in the different markets. But it is equally certain that they are enormously in excess of current requirements of the Import trade and Government put together, as that the surplus *must have* been absorbed by private demand or must still exist. That there can be any very considerable amount of bills held-back is, however, not probable, because shipping houses in general do not hold sufficient capital in the country to permit it. Where then has the balance of over four millions represented by the balance of trade and overdraft of the Banks since January gone to, but to satisfy private remittances and to *pay debts!*

Nothing could better illustrate the doctrine that currency depreciation is *debt* than this apparently inexplicable phenomenon..... As the balance of Exports turns in our favour the surplus is applied to the liquidation of debt and the currency rises in value. If this process be supplemented by the reduction of the volume of the currency it is naturally still more stimulated; but so long as depreciation exists, debt exists; and, until by means of a surplus of exportable commodities we are able to wipe it out, there will always be an invisible and unrecognisable demand ready to press on the markets.

No doubt every upward spurt of exchange liquidates a portion of this indebtedness and leaves the situation so much the better. Consequently, so long as issues of paper money are not increased and the balance of recognisable foreign payments for Imports and Government account be kept steadily in our favour, although every spurt may be followed by a reaction, something will be always gained and the value of the currency surely, if slowly, be raised. How much debt has been thus paid of lately it is impossible to state, but it is certain that it must be very considerable, amounting to several millions sterling and that, as it has not to be repaid, the market must be so much the gainer. At the same time as debt has been paid off on one side, other, if smaller, obligations have been accumulated on the other through the Banks, which have drawn liberally on their home resources in anticipation of the coffee crop. At the present moment it is probable that the value of Exports is very slightly in excess of that of Imports and Government requirements, and, consequently, taking into consideration the invisible demand, that the balance of payments is against the country for the moment Were the Banks in a position to continue to draw, the transitory deficiency of bills might be got over, but as it is with nearly £3,000,000 to receive, it is likely that the Banks have as much speculative paper as they care to carry.

The prospects for the moment are consequently not encouraging, and unless there be a pretty general carry-over of "bull" accounts at the end of the month, it seems quite possible there may be another slump. At the same time it can only be transitory, because the new coffee crop is virtually untouched and as soon as the markets' oversale of £3,000,000 is satisfied, as it will be in a month or two, a new rise appears inevitable. Last year with a smaller crop it took about seven months to liquidate an oversale of about £6.000,000; at the same rate the present oversale counting from 31st May should be paid off in three months and leave things ready about the end of August for a new and decided rise.

Thus slowly, though, surely, the rate rises, but until par be finally reached and depreciation disappear altogether, oscillations are inevitable because, so long as debt exist, the invisible or dormant demand for bills may become active at any moment and exceed the instantaneous supply. There are only two means of attaining stability:—by paying debts gradually, as we are doing, with surplus exports and raising our money to par; are by reducing our par and utilising our surplus products, first to pay off debt and then to keep it from re-accumulating and exchanges steady. Of course, in the latter case this would not prevent rates from oscillating until foreign indebtedness were finally liquidated, although such oscillations would be artificially limited by the maximum; but whether by one method or the other, it is certain that until the debt our markets owe abroad, represented by the depreciation of the currency, is finally settled, there can be no real or lasting stability.

During the week ended June 14th coffee shipments (*embarques*) here and at Santos increased a little and gave bills to the value of £291,000 as against only £243,000 the previous week and only £157,000 last year. Rubber shipments, however, are shrinking rapidly and gave only £49,500 last week for both Pará and Manáos, whilst stocks are about 300 tons. Tobacco and sugar shipments may be also considered as almost finished for the season as also the Nut crop of Amazonas, which helped to considerably swell the total in the months of March and April. The supply of bills, at present, must therefore be particularly circumscribed and practically limited to relatively insignificant shipments of coffee, cocoa, and general produce. It is of course possible that Santos shippers may assist the market by selling largely ahead, but in the present undecided state of the coffee markets it seems not very probable. The prospects for the current month seem therefore to make for a dull and sagging, if not falling, exchange market, with a revival as soon as coffee is shipped again in large quantities. A reflection, however occurs to us at this point, as to whether in view of the uninterrupted and heavy nature of shippments and the glutted appearance of the foreign markets, the coffee can be shipped as rapidly as it arrives without a heavy fall of foreign prices, and if not, how exchange might be affected thereby. Of course if the coffee cannot be got rapidly rid of there will be no new boom of exchange, all the bills being then required for liquidation of the market's actual oversale, but only, perhaps, a steady improvement, that, however, would greatly depend on the course of foreign prices. Still, whatever may happen, we look for much better rates in the course of the year.

Coffee.—Entries at Rio and Santos during the week ended June 14th, were 23,676 bags larger than for the previous week and 72,971 or 159 % more than for the corresponding week last year. Up to 14th instant entries for the current crop amounted to 10,681,085 as against 8,742,844 for last crop; and in all probability will reach the record figure of 11,000,000 bags.

Shipments, however, are still more active, being 31,855 bags greater than the previous week and more than double those of the corresponding week last year. Consequently, in spite of the extraordinary entries for the time of the year, stocks are falling and now stand at 624,349 bags for Rio and Santos jointly as against 733,131 a week ago and 392,189 on 15th June last year.

Declared sales were also larger, 131,000 bags as against only 112,000 for the previous week and 61,000 last year.

Entries of new coffee continue to increase and at Rio now represent about 30% of the total, the quality, however, being decidedly poorer than usual even at this period of the crop. The weather continues all that can be desired and the trees look strong and promise well for the 1902-1903 crop.

Large entries are expected in or after the second week in July.

The Government of São Paulo has asked the Minister of Foreign affairs to instruct the Brazilian Consul in London to make enquiries as to the manner that Temperance societies would be willing to co-operate with that Government in popularizing and encouraging the use of coffee.

Stocks.—The following widely different figures are current, all of them supposed to represent the actual stock of coffee in this market.

	May 31, 1901	July 1, 1900
Centro dos Cafésistas ...	... 252·202	152·170
Jornal do Commercio ...	... 248·114	152 112
Several Leading Brokers ...	... 207·703	107·671
The Brazilian Review ...	... 135 529	132·291

Allowing, even, for the respective initial differences on 1st July, there is a difference between our own estimate and that of the Centro dos Cafésistas of 96,794 bags; of 92,764 with the estimate of the *Jornal do Commercio;* and of 96,744 with that of Mr. F. L. P. Nunes and other Brokers. The last instance is particulary noticeable; because beginning on 1st July with a stock 24,620 bags larger than ours, Mr. Nunes' figures for stocks on 31st May were positively 72,174 bags larger! The difference is so considerable as to make it worth while to determine which of the four is the most accurate; and with this object we beg to submit to the trade the method employed by ourselves and adopted by the Commercial Statistics Bureau, which we believe to be as accurate as is possible in such matters.

We divide stocks into three categories; deposit in the city; at Nictheroy; and afloat in the Harbour. These are obtained in the usual way by adding the respective entries to each original stock and deducting the respective shipments.

Entries are obtained by daily returns furnished by the Central and Melhoramentos railways; at the Trapiche Vapor, Ferry and Caes Pharoux for the Leopoldina and other Barra Dentro entries; and by the Customs for coastwise or the sea-borne entries. The total of all these gives the entries for each day, from which the coffee re-shipped to deposits in Nictheroy is then deducted when the balance gives the precise amount of coffee entering this market for sale.

PERUVIAN COCA, COCAINE, CINCHONA, ETC.

The vaule of the coca leaves exported from Peru in 1899 was £17,359, against £22,437 in 1898; of cocaine, £67,507, against £65,197; of cochineal, £499, against £709; of borax, £61,102, against £57,422; of matico, £147, against £389; of cinchona bark, £7,830, against £3,046; and of rhatany, £755, against £604. No weights are given for Peruvian exports, as a whole, but they appear in relation to various centres. Thus, Salaverry exported 335 tons of coca leaves in 1900, and 214 tons in 1899, and 284 kilos. of cocaine in the former year as well, this being the beginning of the alkaloid trade at this port. Most of the leaves were sent elsewhere in Peru, probably to be re-exported. Germany received direct 16,019 kilos. of coca and 110 kilos. of cocaine, whilst the United Kingdom received direct only 60 kilos. of the latter. Mollendo sent to Liverpool in 1900, 3,099,555 kilos. of borax, and 48,575 kilos. of bark; to London, 93,051 kilos. of bark, and 670 kilos. of coca leaves; to Hamburg, 2,133,718 kilos. of borax, 32,962 kilos. of bark, 7,962 kilos. of rhatany, 212,922 kilos. of coca leaves, 261 kilos. of cocaine, and 598 kilos. of matico; to New York 138,569 kilos. of coca leaves, and 137 kilos. of cocaine. The total export of bark was 183,549 kilos.; of borax, 6,036,076 kilos.; of rhatany, 11,564 kilos.; of coca leaves, 352,161 kilos; of cocaine, 398 kilos.; and of matico, 598 kilos. There was no sarsaparilla exported from Mollendo in 1900, but 35 kilos. were exported the previous year. From Cuzco 617,150 lbs. of coca leaves were exported, the average price being 16s per drum of 25 lbs. in Cuzco. The shipments have gone principally to Hamburg, *viâ* Mollendo, but some hundreds of pounds went to New York. About 11,993,900 lbs. of borate of lime, worth about £51 10s. per ton have also been exported from the Arequipa district.

TRADE WITH PERSIA.

The following communications from Mr. E. G. Foley, wh is travelling on the Persian frontier in behalf of the India Tea Association, are published:—

H. B. M. CONSULATE,

Dated, SEISTAN, *6th June*, 190

To the Secretary, Indian Tea Association, Calcutta.

Since my letter of the 29th ultimo, and wire of that date announ ing my arrival here, I am glad to report satisfactory progress. Th result of my free tea to the Persian sight-seers at the Gymkhana the British Consul's escort of half a troop of the 7th Bomba Lancers, held on that afternoon, resulted on my being besieged b buyers of tea at their own price of 7 and 6 krans per pound Orange Pekoe and Pekoe equal to Rs.2 and Rs.1-13-6 per poun About 40 or 50 men of all classes were eager to buy the Orang Pekoe and Pekoe at the above prices, but I had to refuse and te them I had only samples and no tea for sale. There were peop from the town of Nasturabad and adjacent villages only. Th Governor also wanted to buy a small chest, but I would not let hi have it. The Persians like the Russians, prefer land-borne sea-borne tea, and the fact was strongly impressed upon me b several of the Persian merchants, including the Agents here the two largest Persian firms at Meshed. They say that sea-born tea is affected by the "Shabnam" or "Zhalah," which literall means dew, but really air or moisture; hence all teas from Banda Abbas were not in great favour, and caravan tea will always b preferred and command a higher price. Besides, the samples se on to Herat and Kandahar, I have sent samples to Kirman (whic is served through Bandar Abbas) to two European gentleme resident there I learnt of these gentlemen from a German Nava Captain, who has been travelling through Persia for the past nin months and arrived here to get to Quetta six weeks ago. As h was going to Gwadar on the coast to get to Karachi, and woul pass near Kirman, he very kindly undertook to see them delivere The samples have labels with prices at Quetta. But I have writte to these gentlemen to show the samples to the leading merchan at Kirman; and to say that the prices would be 7, 6, 5, and 4 kra for Orange Pekoe, Pekoe, Pekoe Souchong, and Dust at Seistan and that particulars could be obtained from our Consul her The German Naval Officer was very much taken with th compressed tea, and declared he was certain that it would b served out to the German Navy, as tea was part of their rations coffee in the morning and tea *at night*, and that samples shoul be sent to the Naval Department, Berlin.

The Russian duty of three roubles per pood (38 lbs.) is, I find, onl on tea brought from the Russian side, carried by Russian railway or Caspian boats; whereas tea and all goods from India crossin the Russian frontier have to pay duty equivalent to their valu except indigo. The latter pays a duty of about one-third less tha its value, as it cannot be got in sufficient quantities in Turkesta This information is from a merchant here, who has given u trading in English or Indian goods, and is now dealing entirely i Russian-made articles, chiefly cloths. This wan trades in indig as the only Indian article. He was one of those who impressed o me the preference of the Persian to land-borne tea over sea-born The man has travelled to Samarkand, Bokhara, Khokand, an Tashkend several times.

I have left 35 lbs. of Orange Pekoe with a firm of Shikarpu

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, othe have no effect, and none do good. Sugar and water, or a little glycerine, giv relief when the throat is inclined to be dry; this applies to persons whose throa are affected by the weather. About a third of a teaspoonful of Condy's Fluid a tumbler of water, if used as a gargle every morning, will clear the throat an brace up the uvula, which, in some singers, is so long that it interrupts the pu emission of the voice, and introduces a grating undertone, while it also tends make a tremolo on the upper notes."—*The Idler*, February, 1900.

merchants at Seistan, to be sold by them, so that they will be able to satisfy themselves as to what prices are procurable here. One of the men of this firm has traded in tea in Bokhara, Samarkand, and other places in Turkestan; also in Ladakh, Baflistan, Leh, and Cashmere, and its neighbouring districts.

The little experience that I have already had in a sparsely-populated district like Seistan has shown me that the taste for tea is universal among all classes of Persians, and that they prefer to get the very best of everything and pay for it. With these prospects before us, I would strongly recommend the Association to test the whole of the Persian markets by sending tea into Persia from four different quarters to four different centres: (1) from Quetta to Meshed *viâ* Seistan and Birjand; (2) from Resht on the Caspian to Teheran; (3) from Bandar Abbas to Kirman; (4) from Bushire to Ispahan *viâ* Shiraz. The second and third can be reached by caravan from Quetta also. The sea route, no doubt, would be cheaper, but the land-borne tea would fetch a higher price and pay better. The caravans would touch at all the principal towns and villages on these roads and would dispose of the tea as they go along. Kirman from October to March could be reached from Robat—our last station in Baluchistan and on the Persian (Seistan) frontier—in ten days. The caravan for Teheran would go *viâ* Meshed, but that for Ispahan would have to be sent by sea to Bushire, and then by caravan to Ispahan. The cost of carriage overland by Pathan camels is Rs.6 per maund for every 500 miles; Rs.6 from Quetta to Seistan; Rs.12 to Meshed, and Rs.9 to Birjand, half-way between Seistan and Meshed. The class of tea required is Orange Pekoe and Pekoe, which could be re-packed in Calcutta in bales, each bale holding from 2½ to 3 maunds net. The inner wrapping of the bales to be of sheeting white and blue—and turkey red or blue—Saloo; the raw hide outside that, and finally gunny. All this packing material would sell separately and well; and the profits on this alone would almost cover the cost of carriage. I have seen how these bales are made up and could easily pack in the same way. All extra weight is saved, and no loss from breakage of boxes. These bales are as tight as drums, and can stand any amount of knocking about, and are water-proof besides. There is seldom much rain or wet weather in these parts, except in December and January. The caravans would have to leave Quetta by the end of September or early in October, before the Winter sets in, as camels cannot stand much cold, besides fodder or camels' food dies down then and gets scant. My suggestion is that four lots of 500 maunds of tea each should be despatched as suggested, three by land and one by sea, with a European in charge of each. I could find the men, retired Government officers nearly all of them and all Persian speakers, and two of whom I know have been in Persia several times, men quite strong and fit for rough work and travelling, and reliable in every sense of the word. The cost of carriage by rail for tea by this route is now Rs.2-8 per maund, to which has to be added Rs.6 for every 500 miles of carriage per maund, *plus* establishment. The salary I would propose for experienced men speaking Persian is Rs.400 per mensem, *plus* travelling expenses; the tea if purchased would cost on the average about 7 to 9 annas at the outside if purchased in the open market. If contributed, there would be only the cost of carriage and establishment against an average selling price of nearly, if it not quite, Rs.2 per pound. Of course, these prices will not last if there is a general scramble to throw tea into Persia. But if the Association kept the business in their own hands for a season or two, *i.e.*, all the gardens in Assam, Sylhet, Cachar, Dooars and Darjeeling, etc., and worked the business as one syndicate, they would command the market, as the producer would then be dealing directly with the consumer without the intermediary of a middleman who has hitherto reaped the benefit. Two thousand maunds of Orange Pekoe and Pekoe is not so very large an order for gardens to contribute. It could all be blended and packed in bales as recommended by me in Calcutta. I would suggest 100 maunds of indigo accompanying each one of these four expeditions. Pathan camels can carry as much as two chests or eight maunds; an ordinary camel not more than five, though really they don't carry much more than four maunds.

Samples of tea were sent to Russian Consuls and Russian doctor and the Cossack guard at the Russian Consulate here. It is my intention to send a half-chest from Meshed to the Shah of Persia at Teheran, through our Consul-General and Ambassador at the Court of Teheran.

E. G. FOLEY,

H. B. M. CONSULATE,

Dated, SEISTAN, 15*th June*, 1901,

I am sending samples of Russian cotton and woollen cloths, and wool procurable here and at Birjand - prices with quantity, weight, and names are added on slips pinned on. The nappy cotton cloth called Makut Chikun sells at Rs.2-8 to Rs.3 per yard in British territory, particularly in the Punjab, where it is smuggled in by Pathan traders, Russian goods not being allowed to enter British territory. Negotiations are now pending between the two Governments regarding the admitting of Russian goods into British territory. There is a 5 per cent. export duty on all goods leaving Persia as well as on all imports. The export duty is fixed on prices current in the market. Ghee is the chief export from these parts. I am also enclosing samples of "Kundet" or vegetable wax and some of its seed under separate cover together with the samples. Price of this wax at Birjand is 7 krans and 2 Shahis (18 Shahis equal to 1 kran equal 4½ annas) for 1 man of 6½ lbs. avoirdupois. It is sent largely to Karachi. Particulars regarding shrubs, etc., on which it is found will be sent from Birjand, from where it is sent. I have just met the Russian Consul and Italian Customs' Officer, and learnt satisfactorily that the duty on tea from Persia (Indian and other into the Russian frontier or railway station of Askaoad) is three roubles per pood, equal to about 2d or 2 annas per pound, duty on all other goods, except indigo being on an equivalent to their value. The Russian Consul told me, on my asking him how the Cossacks liked the tea I gave them, that they would never drink Russian tea again if they could get Assam. Indian tea could be introduced into Russian Turkestan and the Turkoman country by rail to Merv, Samarkand, Bokhara, and Tashkend, and also into Russia proper, but for the last it would have to be sent across the Caspian till the Orenburg-Tashkend Railway was opened.

E. G. FOLEY.

COST OF PRODUCTION OF COFFEE.

The following correspondence has appeared in the New York *Journal of Commerce*, in which the cost of production in Mexico and Brazil is compared:

"According to the owners' statements the cost of producing Santos coffee on the Fazendas Schmidt and Dumont, which probably have more coffee trees than any other plantations in the world, is four cents per pound bagged, ready for shipment on the plantation; five cents per pound in Santos; six cents per pound in warehouse in New York. At this price nobody makes any money except the brokers, railway companies, and steamship lines. These figures are based on the average product of the plantation, which would probably be somewhere between numbers five and six, New York exchange standards.

"Of course, the smaller plantations cannot produce at the same price as the larger ones and the question of the survival of the coffee planter is getting to be largely a matter of transportation. Undoubtedly many coffee planters will be forced out of business from mere inability to pay their labourers for the picking of the coffee and the care of the plantation. Probably the first decrease in production will come from this reason. The planter who shipping facilities are close to a railroad can perhaps make expenses at the above figures, but the one who must cart his product five or twenty-five miles to a railroad station must go to the wall. Of course, this applies with greater force to those planters in Mexico, Venezuela, and Columbia, who must put a couple of bags of coffee on a "burro" and take anywhere from one day to five days' journey before they can reach a shipping point. All of them are at present losing money largely and it is only a question of time when they must stop.

"On the other hand those large plantations along the line of the Tehuantepec railroad in Mexico have a rate of freight of 50 cents per hundred pounds from the plantation to New York, as against 250 cents for the planter in São Paulo. These Tehuantepec plantations claim that they can put washed Oaxaca coffee in New York at a cost of five and one-half cents per pound. Now suppose the Brazilian planter receives nothing at all for his coffee on the plantation. It still costs him two and one-half cents per pound in New York in actual transportation expenses. It is probable that no one

will dispute the statement that washed Oaxaca will always bring at least three cents per pound more than the average Brazil coffee. Consequently, while the Brazilian was getting two and a-half cents per pound for his coffee which would only pay the transportation expenses, the Tehuantepec planter would obtain five and one-half cents for his coffee at which price he could live, but not pay any dividends on his stock. There is no place in the world that can compete with him in coffee production, largely on account of his superior transportation facilities, and the superior quality of his product. Moreover, he can also raise rubber, pineapples, sugar, oranges, lemons, and other products which pay a profit to reduce the cost of coffee production. A rubber tree shades his coffee tree and it costs him five cents per pound to produce the rubber after the tree is matured. The rubber sells for 65 cents. A handsome profit surely.

"Fortunately for the Brazilian the area suitable for coffee planting in this region is limited or the Brazilian would have harder competition than he ever had before. There is no doubt but that were there area enough in Mexico along the line of this railway, all other coffee planters would be driven out of business, and no one in the world could compete with such plantations as the "Doa Rios" and "Ubero", run by American capital on American business principles, with a stable government and a railway depôt on the plantation itself. Moreover they have two outlets, one by way of Coatzacoalcos to New York and Europe, and the other *viâ* Salina Cruz to San Francisco and the Pacific Coast. This road is now being four-tracked so that it will be able to handle all the freight which is presented to it with facility, even to the extent of competing with a Panama canal, because the saving in ocean travel is several days in favor of the more northern route.

"The practical question of decrease in coffee is: "How long is the purse of the planter? and "How long will he fight against what appear to be hopeless odds?" and "How can he pay his labourers for picking his product?"

Note—ED., *B. R.*—The cost of production of coffee as of everything else is a relative and not a positive quantity, and is a function of general local prices. The price of any commodity is entirely distinct from its cost of production, and is determined by the ratio of supply to demand. But if price decline in such a manner as to fall under the cost of production, it is clear that either the cost must be reduced or production fall off. If, on the contrary, as is the case with Brazilian coffee, production instead of decreasing increase, the only logical conclusion that can be arrived at is that, however low prices may have fallen they have not yet reached the limit at which production becomes impossible.

Because the cost of production may have ruled 4, 5 or 6 cents per lb. at one time, it does not follow that it will always do so, or, even, that it does so now. As exchange rises the cost of production declines, and the fact that Brazilian coffee has been sold as low as 5 cents in New York without stopping but rather stimulating production shows that the premises on which the whole argument of this correspondent is founded are unreliable. We do not pretend that at 5 or 5 1/2 cents planting can be very profitable. Indeed, if it leaves any profit at present it must be a very bare margin. But it does not, therefore, follow that it must be always so, or that, by reduction of cost the margin may not be considerably widened in a manner that would be, probably, impracticable elsewhere.

In the first place a re-adjustment of charges to the altered circumstances created by the rise of exchange is ultimately inevitable. Not only must the currency rates of wages be reduced, but railways and intermediaries of all kinds will be forced to reduce their charges also. Half a loaf is better than no bread; and if, as is stated, coffee at current prices is so unprofitable to the planter as to leave him only losses, the time cannot, evidently, be far off when they must be reduced or he must give up planting altogether and there will be nothing for the railway to carry! Long before that could happen, if, as the correspondent of the *Journal of Commerce* states, railway freights really represent a charge of 21/2 cents per lb. or 110 % on the prime cost of the coffee, there must be a tremendous margin for reduction in that item alone.

The interest of the railways are identified with those of the planter to the extent that they depend exclusively on coffee for their traffic, and would work at the bare cost of maintenance rather than shut up altogether. The very causes that are at present prejudicing the planter, *viz*, the rise of exchange and "over-producion" are a source of profit to the railways and make it easier for them ultimately to reduce their charges.

As regards the cost of delivery from the plantation in Mexico New York, we have no means of verifying the statement that rules only 50 cents per hundred lbs., but it seems extremely and probably, if correct, applies only to a limited area and d not include the cost of handling at all. Anyhow, the cost of livery from São Paulo plantations which is put down at 250 ce per 100 lbs. is grossly exaggerated. The maximum freight charg in the Paulista railway, for example, is only 1$500 per *arroba* of kilos., equivalent, at even the relatively high exchange of 12d., only 112 cents per 100 lbs., whilst, at 35 cents a bag, ocean frei amounts to 26 cents, thus bringing up the total to 138 in lieu 250 cents per 100 lbs. We do not include duties and other charg as they have evidently not been included in the calculation of comparative cost of delivery estimated for Mexico.

The railways engaged here in this traffic nearly all earn ha some dividends of 12 to 14 % and could, in São Paulo at least, p bably reduce rates to half without losing money. On the ot hand, coffee has been constantly carried to New York at 10 ce per bag without loss and could be again if necessary. So th altogether, a reduction of carrying charges from 112 to 60 or cents per 100 lbs. is by no means an impossibility. The method estimating the cost of production followed by the correspondent the *Journal of Commerce* is, however, misleading and arbitra Brazilian coffee is now selling in New York at little over 6 cen or ½ cent under what he estimates to be the cost of delivery, a has before been sold at 5 cents, the price he estimated as the c of delivery at Santos. In spite of such low prices, however, cof does not cease to be produced nor to be shipped, which certai would be the case had the price really fallen under the cost of livery. At 5 or 6 cents per lb., coffee may not leave much profit planters, but, before Brazilian coffees could be driven from markets, there are wide margins yet to be reduced not only in prime cost of production but of freight and handling. Sho extensive cultivation prove too costly, it must be made intens and labour replace planters as proprietors, as was the case w cotton in the Southern States. But, come what may, coffee w never cease to be profitably produced, because Brazil possesses almost unlimited area and climate suitable for growing coffee su as no other country enjoys.

POSITION OF COFFEE.

[From the *Bulletin des Halles.*]

The new season will commence in a couple of days, and everyc is agreed that the crop on the trees is the largest ever known. will be recollected that in their last monthly circular, Mess Duuring & Sons estimated that the yield might reach 11½ to millions of bags, that is to say, it may exceed that which is abo to be finished by 600,000 to 1,000,000 bags. This time last ye we were discussing estimates of 2½ millions for Rio and 6 millio for Santos, or 8½ million bags in all, as being the probable ma mum, but we shall have an actual crop of about 2,900,000 bags Rio and 8,000,000 bags for Santos, a total of 10,900,000 bags.

This enormous difference of 2,400,000 bags, between the estimat at the opening of the season and the reality, is, of course, exe cising an influence on prices. Mainly, however, because of the r in the exchange, the depreciation which has followed in the r value has been greater in coffee on the speculative markets. Th on June 23, 1900, good average was quoted at Santos at 7,300 re and, notwithstanding a certain recovery from the lowest point, is only quoted at present at 4,500 reis, or 2,800 reis less. Th month's deliveries, which were quoted at 46·25 fr. on June 23, a at present worth 35·25 fr., or 11 fr. less.

In fact, the positions are as opposite as they possibly could be the opening of the two seasons. Last year with such moders estimates coming after a crop of 9,000,000 bags (the result of whi was shown in a reduction of 429,000 bags in the visible supplie people were generally, of course, in favour of a rise, but this feeli was considerably modified further on by events. In the end, no withstanding the strong opposition of the large interest committ to a rise, a marked depreciation has taken place, and instead of t rise whch was expected, actual prices are 11 fr. lower than year ago.

This year it is exactly the opposite. The season will termina with visible stocks about 1,000,000 bags heavier than last year, a

there are expectations of a colossal crop. With certain exceptions people are, therefore, more in favour of a fresh depreciation in prices, notwithstandiug their present low level, than of any improvement. Such appearing to be the prospects it is difficult to say whether they will be realised. Taking into account the disappointment of the past season, it is hard to be positive, and it is because of this uncertainty that some, notwithstanding all the above, see a prospect of a rise and even of a considerable one. They argue that, although the new crop may really be as large as is expected, the reis prices are so miserable that the planters will be compelled to abandon a considerable portion of their crop or not to export it, which according to them is the same thing. If this took place the receipts would compare unfavourably with those of last year, and we should then be led to see that, if in the preceding season we were misled by the enormous excesses of the crops as compared with the estimates, we may have exactly the contrary experience during the season about to commence. If to this is added, as is hoped, favourable news on the prospects of 1902-3, it will be seen that there is a good deal may take place. We do not do more than once again sum up the ideas of those who, notwithstanding the situation and the present estimates, have confidence in and ultimate rise in prices. They are not numerous, but it is they who for a long time have been the active parties in the markets, and therefore a certain importance must be attached to their opinion. On the other hand, the majority thinks that with a visible stock equivalent to about six months' consumption, and in face of the colossal crop we are about to go through, it is difficult to see how prices can be prevented from falling as low as, if not lower than, in September, 1899.

THE COFFEE TRADE.

The following plea of American coffee is taken from the *Merchants' Review:*

We're little beans from far Brazil,
From Cucuta or Guayaquil;
Some from Mexico have come,
And others call Laguayra home.

Some people think that Aden sends
Vast store of bales to make rich blends;
That's where they're fooled—and badly, too;
Our Mocha kith and kin are few.

The Java kinds enjoy great fame,
But surely there is room for blame
When ten times more of Java's sold
Than ever left the island's mould.

The Western continent supplies
A coffee which with Java vies;
In mighty cargoes, north we come,
Our total cost a goodly sum.

But who our place of birth can tell,
When grocers o'er their counters sell
Little but Java and Mocha mild?
The thought of this near drives us wild.

Now to the trade we make our plea:
Pray treat us fairly and you'll see
The glories of the Eastern bean
Grow dim, outshone by ours, we ween.

Give to the Rio its proper name,
Let Santos sorts enjoy the fame
Which now the Eastern coffees steal.
Do this and we shall grateful feel.

If Brazilian planters were more careful in the cultivation and preparation of the bean and did not hurry the product to market, they would greatly improve the average quality of the crop. Brazil can grow some of the finest coffee in the world; but, unfortunately, the proportion of high-grade is small. There is a richness in some East India coffee that is hard to match, and there are marks that are very poor. It must also be kept in mind that individual tastes differ so that a coffee which one pronounces fit for the gods to drink is not agreeable to another. Buyers must select coffee on its merit and for the flavor which best meets the requirements of their trade, and not on any general rule.—*American Grocer.*

DISTRICT ASSOCIATIONS.

WYNAAD.

Proceedings of a Meeting held at the Meppadi Club, July 24th, 1901. PRESENT:—Messrs. Abbott, Malcolm, S. H. Powell, junior, C. Lance, Nicolls, D. Mackenzie, Waddington, Carver, West, Trollope, Taylor, Day. *Visitors*—Messrs. Beley, Armstrong, Gillatt, and Morres. Mr. Winterbotham *in the chair.*

The notice calling the Meeting to specially consider the proposed Labour Bill was read.

1. Read letter from Mr. Hocken.
2. Read the letter of the Secretary to the Government of India, to the Chief Secretary, Government of Madras, dated January 5th, 1901, with Mr. Hodgson's reply thereto.

Resolved: that this Association cordially endorses Mr. Hodgson's letter and representations.

But Mr. D. Mackenzie, delegate to the U. P. A. S. I. Meeting, was particularly asked to point out—

(1) That the suggestion proposed by the last three lines of para. 3 of the Government of India's letter, taken with the last four lines of para. 5, debars the Planter from any redress except through the Civil Courts, as against his local labour, to which the proposed Act is inapplicable; at any rate to the circumstances in Wynaad where a great deal of work is done by local coolies not living on the estates.

(2) That it is absolutely necessary that advances made subsequent to the execution of the contract should be considered as advances under the contract.

(3) That on no account shall the Maistry be considered an Agent for whose actions outside the Labour District the Planter shall be responsible.

(4) That it shall be made clear that the contract with the cooly is not necessarily a monthly one. And Mr. Mackenzie was requested to ascertain whether under the Bill, as at present drafted, the Planter can proceed against the cooly.

(5) That before the Bill is finally drafted legal advice should be taken to see that the interests of the employer of labour are in no way threatened.

3. Read Agenda paper of U. P. A. S. I. Meeting.
4. A vote of thanks to the chair concluded the proceedings.

(Signed) H. B. WINTERBOTHAM,
Chairman.
(,,) C. E. ABBOTT,
Acting Honorary Secretary.

INDIAN TEA ASSOCIATION.

A meeting of the General Committee was held on the 16th July, at which were present:—Messrs. H. S. Ashton (*Chairman*); A. Tocher (*Vice-Chairman*); H. W. Boyd, W. Brown, D. A. Campbell, A. C. Lawrie, and R. R. Toynbee. Messrs. R. H. A. Greson and R. Magor were unavoidably absent.

In the Proceedings of the meeting held on the 18th June, it was stated that the General Committee were prepared to ask the Government of India to move in this direction. But it was added that they were not at present disposed to go further and to suggest that—failing the abolition of the Ceylon duty—the existing Indian tax should be enhanced to a protective rate These views had been communicated to the Central Travancore Planters' Association, by whom the question was raised.

The Honorary Secretary to that Association now stated in reply that his Committee supported the proposal to move, in the first instance, for the abolition of the Ceylon duty. But he also said that there would be no objection to an *ad valorem* duty of 5 per cent. being levied in Ceylon, as in India

The General Committee had understood from the previous correspondence that the principal objection to the Ceylon duty was that it necessitated the sale of Indian tea in Colombo in bond. This

restriction was said to have an adverse influence upon prices. They also believed that in the case of teas sent from India to Russia, it was found to be more advantageous to tranship at Singapore rather than at Colombo, mainly owing to the fact of the latter not being a free port. It seemed to them that if such were the case, neither of these two objections would be removed unless the duty were entirely abolished. They could not therefore, on the statements before them, agree with the Central Travancore Planters' Association in thinking that the reduction of the duty to 5 per cent. *ad valorem* would be sufficient. To meet the case they considered that no duty should be levied in Ceylon upon Indian teas, and no duty in India upon Ceylon teas. But they thought the existing duty in each country should be retained in the case of non-British teas.

The Central Travancore Planters' Association were to be addressed in accordance with the foregoing. After receiving their reply, the Committee proposed to consider the question further, and thereafter to approach the Government of India, in such manner as might be thought desirable.

Considered a memo., dated 13th July, from the Sub-Committee appointed to formulate proposals for the sale of tea in India.

At their last meeting the General Committee had had before them a Report by the Sub-Committee, in which it was suggested that Messrs. Andrew Yule & Co.'s offer to organise and to work the proposed Tea Distributing Agency should be accepted.

Before finally accepting this recommendation the General Committee had asked for some further particulars. These were supplied in the memo. now submitted, which was as follows:—

"I am directed to state that the Sub-Committee have discussed with Mr. David Yule, of Messrs. Andrew Yule & Company, the different points raised in the General Committee's memo., dated 3rd July.

2. "Mr. Yule is of opinion that it would be very difficult, if not impossible, to frame reliable estimates of the expenditure which will be incurred. The Sub-Committee agree with this opinion. But they think the particulars which they now submit will be sufficient to enable the General Committee to come to a conclusion as regards Messrs. Andrew Yule & Company's proposal.

3. "Mr. Yule is further of opinion that the proposed Agency should be worked as a department of Messrs. Andrew Yule & Company's business. He is not in favour of the formation of a limited company. Such a company would not—he pointed out—have a good commercial status, for its capital would consist of only the sum of Rs.40,000 and the tea contributed. Moreover, he holds that it would not be possible for Messrs. Andrew Yule & Company as Managing Agents or Secretaries of a limited company to advertise and to push the business in such a way as would be likely to make it successful. His idea is a business having the form of a National Agency under the auspices of the Indian Tea Association, and of which H. E. the Viceroy should be asked to be patron and the Princes and Chiefs of India, the members of Council, and other leaders of society vice-patrons. This idea is, Mr. Yule considers, incompatible with that of a limited company. The Sub-Committee agree with him upon this point, and they recommend that the Agency be established as a department of Messrs. Andrew Yule & Company's business.

4. "Messrs Andrew Yule & Company are prepared to guarantee to work the Agency for a period of three years on the following terms:—

(*a*) They will require to receive their actual out-of-pocket outlay for staff (including a proportion of Mr. Henson's salary), rent, blending, packing, printing, advertising, distribution of tea, travelling expenses, etc.

(*b*) They will provide such further finance as may be required after the sum of Rs.40,000 (which is to be provided from the American and Foreign Market Fund of the Association) is exhausted.

(*c*) They will keep a proper account of receipts and disbursements, which will be audited by chartered accountants.

(*d*) They will convene meetings of the Advisary Committee at intervals at their office; and they will issue such progress reports and accounts as that Committee may consider necessary for the information of subscribers.

(*e*) If during the three years' period there is a deficit, Messrs. Andrew Yule & Company will meet it. But at the end of the period, should there be a surplus, it will be divided *pro rata* among the contributors of the tea, the value of whose consignments will be credited to them at a valuation at time of record in the books of the Agency. Should the surplus be larger than the amount required to repay to the contributors the value in full of the contributions, the balance will be devoted to repaying the sum Rs.40,000 to the Association.

(*f*) Messrs. Andrew Yule & Company will be the owners of t business on the termination of the three years' period. Any pla such as office furniture, machines for packing tea, etc., that m have been debited to the working expenses during that period w be taken over by them at a fair valuation.

5. "The Sub-Committee recommend that these terms be acce ed by the General Committee; and that Messrs. Andrew Yule Company be asked to take steps to establish the Agency as quick as may be possible."

After consideration the General Committee decided to accept th recommendation, and to ask Messrs. Andrew Yule & Compa to take immediate steps to establish the Agency.

It was agreed that the Advisary Committee referred to in t memo., should be constituted as follows:—

1. A representative of Messrs. Finlay, Muir & Company; a representative of Messrs. Macneil & Company; 3, a represent tive of Messrs. Octavius Steel & Company; 4, a representati of Messrs. W. S. Cresswell & Company; 5, a representative Messrs. J. Thomas & Company; 6, a representative of Mess Moran & Company; 7, Mr. D. King; 8, the Chairman; 9, t Vice-Chairman of the Indian Tea Association *ex-officio*.

The Advisary Committee would have power to fill up vacanc among their number giving preference to representatives of the firms who were subscribers of tea.

A letter, dated 3rd July, from the Hon. Mr. Granville L. Acwor Chairman of the Central Travancore Planters' Association, wi reference to the development of the Southern Indian markets, w also discussed. Mr. Acworth stated that a scheme to expl Southern India had been formulated by the Kanan Devan Plante Association. It was to the effect that a limited company with capital of Rs.50,000 should be established, estates taking up shar in proportion to their acreage. If this plan were carried out thought the Indian Tea Association's Agency should not operate Southern India. It was decided to inform Mr. Acworth th arrangements had been made to put the working of the Tea Distrib ing Agency into the hands of Messrs. Andrew Yule & Co.; a that the Committee could not restrict the area within which th firm should work.

THAT "LITTLE DISH."

How we do like a little dish of something nice, served up hot!

Charles Lamb would have sold his shirt for a tender suckling p done to a turn. Doctor Johnson used to say that a dish of tea w the most fragrant of life's beverages. "Why, what am I a-thinki of, I shall forget my own name next," said Toby Veck, "It's tri —the best tripe ever stewed." And his daughter Meg smiling gave him the basket, in which reposed a hot steaming dish of favourite meat.

"My wife prepared nice, dainty little dishes to tempt my appetit said Mr. Henry White, of that beautiful Devon town, Torqu "but somehow I seemed to have lost all inclination for food, a after sitting at the table trying to swallow a little, I used to s to her:—

"It's no use. I can't eat it. You may as well take it awa This sort of thing soon told a tale, for one can't go without fo for long without losing strength. Seeing my condition, a frie strongly advised me to try Seigel's Syrup. He said it had cur him, and might do me good.

"My appetite no longer needed coaxing. I could eat well-ni everything that was put before me. Each dose seemed to give life and vigour. To-day, no matter what ails me, Seigel's Syr puts me right."

That "little dish," in fact, is once again the favourite.

"Some three months ago my wife got thoroughly run dow For over a fortnight she could keep nothing on her stomach." Henry White, when certifying to the truth of this on Septemb 13th, 1900, at his house, 10, Pediford Terrace, Torquay, Devon, d not say what was the matter with his wife.

We know why the "little dish" failed to digest, and we qu the words of the famous physician to prove it: "In the nerv and irritative form of dyspepsia, this is a very prevailing sympto As is also a sensation of sinking, as if the stomach required fo

due to the fact that the food has left the stomach in a half-digested condition."

Who could enjoy a "little dish," when the food could be but half-digested? "She was troubled a good deal with wind, and seemed to be losing her strength. I fetched a bottle of Mother Seigel's Syrup from Holloway's Drug Stores, and she commenced taking it. In a short time she was quite well again." H'm, some men would now sell their shirt for a bottle of this remedy.

This essay, then, upon "little dishes" proves that while man and woman can in no wise *always* relish that favourite dish, yet a cure is ready to hand. One that has served men and women alike for more than the past thirty years.

MARKET REPORT.

[*Per Mail advices of* 12*th July* 1901.]

COFFEE.

The London Commercial Record says:—A generally quiet tone has prevailed in this market, and it has been difficult to effect sales unless at some slight concess on in prices, except for desirable qualities, which have met with a steady demand and late rates. East India did not show much change in value; good foxy green Salvador at 32s to 33s per cwt. and exhibited a greater decline than any other growth or grade. The continuance of heavy receipts in the Brazils have had an adverse influence on the market for "futures," and prices are lower; yesterday September sold at 28s 3d to 28s 4½d, December at 28s 9d, March at 29s 6d to 29s 3d, and May at 29s 9d per cwt.

London ...	... Santos ...	Sept. delivery	... 28s 3d.
New York	... No. 7 Rio...	,,	...: 5·05 cents.
Hamburg...	... Santos ..	,,	... 28¼ pf.
Havre ...	... Santos ...	,,	... 35 francs.

The sales to-day went off with very slow demand, but without alteration in values. Foxy good qualities are 1s 6d per cwt, lower on the week. To-day's auctions offered 7 barrels Ceylon, 938 bags East India, 12 barrels Jamaica, 27 bags Vera Paz, 1,336 bags Salvador. 1,140 bags New Granada. 353 bags Costa Rica, 1,897 bags Guatemala, 50 bags Colombian, and 289 bags Nicaragua.

Imports, Deliveries and Stock of Coffee in London are as follows:—

July	10...	4·95	5·00	5·05	5·10	5·15

TEA.

Indian.—Public auctions comprised 7,500 packages, of which 2,800 were New Season's, compared with 7,000 packages (2,000 New Season's) previously and 8,300 packages (6,200 New Season's) at this time last year.

There was good competition for nearly all descriptions with a stronger demand for low Pekoe Souchongs and Pekoes, quotations for them being occasionally fractionally higher.

A useful selection from South India was included in the catalogues, amounting to nearly 1,900 packages. Some of the invoices again indicated improvement as against prior arrivals of the same marks, and consequently fetched higher figures.

Exports from here to other countries for the past twelve months are very satisfactory, being 13,219,000 lbs. opposed to 8,599.000 lbs. in 1899-1900.

Ceylon.—A much smaller quantity was brought forward—*viz.*, 7,500 backages on Tuesday, and 8,000 packages on Thursday—in all 15,500 packages, contrasted with 32,000 packages in the week before, and 27,100 packages for the corresponding period of 1900.

Partly due to the reduced offerings, a better tone prevailed, though the bidding was somewhat irregular, and many lots were withdrawn. Leafy sorts for prices showed a hardening tendency, while others on the whole went at former rates, suitable Pekoes and Orange Pekoes being taken more freely for outside quarters. The best breaks of Broken Pekoe and Broken Orange Pekoe attracted attention, and in some instances marked an upward tendency.

The average is 6½d per lb. On the 12th July, 1900, it was 6⅞d per lb.

Shipments hence to the Continent, &c., from 1st July, 1900, to 30th ultimo, were 16,227,000 lbs, and in the foregoing year 13,329,000 lbs.

Java.—Rather over 1,700 packages of direct import passed the hammer without material change. For 211 packages from Golpara, consisting principally of upper lines, 9¼d per lb. was realised.

Deliveries.—The clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.* :—

From 1st to 9th July,	1901	4,816,546 lbs.
Do. do.	1900	4,544,149 „

During the week the following have been printed for sale by public auction :—

8,413 *pkgs.* INDIAN
16,189 „ CEYLON
1,752 „ JAVA
} Total 26,354 packages were offered in public auction this week.

It is satisfactory to note from the following figures that the Australian Colonies continue to take increasing quantities of Indian and Ceylon Tea. During the Season year closing 30th April, nearly 30 million lbs. of Indian and Ceylon Tea were shipped from India and Ceylon to Australasia, as against about 12 million lbs. six years ago. The figures are taken from the Circular of Messrs. Alfred Harvey & Co. of Melbourne.

EXPORTS OF INDIAN, CEYLON AND CHINA TEA DIRECT TO AUSTRALASIA FOR YEAR, 1ST MAY TO END OF APRIL.

Total lbs. ...	24,191,332	28,389,132	22,391,672

INDIAN.—Auctions were again light and included only 2,801 packages of New Season's Tea The scarcity of useful liquoring medium Tea from 6d. to 10d. per lb. is producing a better market for such grades, and prices are showing a hardening tendency.

Week's average of New Season's Tea sold on Garden Account 1901, 4,660 pkgs., av. 6·79d. 1900, 4,662 pkgs., av 6·68d.

New Season's Tea sold on Garden Account 1st June to date 1901, 14,707 pkgs., av. 6·69d. 1900, 15,717 pkgs., av. 6·83d.

CEYLON.—Supplies were smaller than for some time past. The sales were divided in about equal proportions between the Public Auction held on Tuesday, and the Trade Auction on Thursday. At the former sale many Teas had again to be withdrawn, though a fair market was found for them afterwards by private treaty. At the auction to which the Trade were only admitted, the Teas were well supported, and prices in many cases showed a slight improvement.

Average for week 6·45d, against 6·83d. same week, 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 666,799 pkgs., av. 6·58d. 1900, 672,648 pkgs., av. 7·25d.

JAVAS.—These Teas were well competed for, and met with a rea sale at steady rates. An invoice from the "Goalpara" Esta commanded good prices.

Bank Rate 3 per cent. Exchange on London three months' sight : Calcutta 1/4 1/16. Colombo 1/4 3/32.

COCOA.

A very quiet tone prevailed at the auctions on Tuesday, bare 600 bags selling under the hammer out of 4,145 bags catalogue In the business done little or no alteration was noticeable in price Of 542 bags Jamaica offered, 150 bags sold—fine fermented 65s 65s 6d, common to fair 57s to 60s 6d. 28 bags St. Vincent most sold at 59s to 63s for ordinary to fine, and 68s 9d for superio 1 bag Dominica quitted at 60s. Of 1,681 bags Guayaquil, 210 ba sold—reddish Caraquez 70s, dark greyish 68s. Of 311 ba Colombian, about 100 bags sold at 62s to 64s for sea-damage bulked. 94 bags good to fine Costa Rica realised 63s to 65s. T following were are bought in :—501 bags Trinidad, 177 ba Grenada, 3 bags St Lucia, 300 bags Samana, 25 bags Brazil, bags Para 100 bags Venezuelan, 198 bags African, and 109 ba Ceylon. Private transactions include 50 bags good red Trinid at 70s to 71s, 350 bags fair common Grenada at 61s per cwt, a 600 bags Guayaquil Arriba at a price not reported.

PEPPER.

BLACK.—The market is dull in tone, and for arrival the only sa reported is a little lot of 10 tons Singapore June August shipme at 6 1/16d. On the spot 300 bags have been sold privately at 6 3/32d 6 1/16d for greyish to fair quality.

At public sale on the 10th instant 152 bags Singapore we bought in at 6 1/8d. 10 bags Penang sold at 6 1/4d for good bold hea and 5 7/8d for rather light greyish. 10 bags Malabar withdrawn.

WHITE.—The market remains quiet, and the values have tend in buyers' favor. Small sales of fair Singapore have been made the spot at 9 1/4d, and of Penang at 8 3/4d. For arrival nothing repor ed done in Singapore or Penang; of Siam, 30 tons Septembe November shipment have changed hands at 9d per lb.

At auction on Wednesday of 113 bags Singapore only 12 ba sold—good fair bold 9 7/8d. 120 bags Penang bought in at 8 3/4d per

GINGER.

COCHIN.—Very difficult to quit, and the 91 cases 208 ba catalogued all retired unsold, at 50s for good bold bright Calic washed, 38s for medium and small washed rough, and 34s per cw for cuttings. Privately sales made to a small extent at 37s per cw for fair medium and small washed rough.

JAMAICA.—Was not represented under the hammer.

CINCHONA.

The Amsterdam correspondent of the *Chemist and Drugg* writes that 425 bales (40,523 kilos.) Java bark have been added the auction to be held there on July 18, so that the total amount be offered on that date is now 4,715 bales, 259 cases (450,752 kilo Java cinchona-bark, besides 5 cases (312 kilos.) quinine. These cases contain 79·01 per cent., 79·44 per cent., 79·61 per cent., 10 per cent., 8·37 per cent. sulphate of quinine, and are therefore n entirely pure.

The Board of Trade returns show the following statistics :—

Imports.

1900	June	7,107 cwt.	at	14,868*l.*
1901	„	3,836 „	„	7,728*l.*
1900	1st half	30,978 „	„	66,110*l.*
1901	„	22,597 „	„	57,257*l.*

Exports.

1900	June	3,947 cwt.	at	11,064*l.*
1901	„	3,494 „	„	10,650*l.*
1900	1st half	25,043 „	„	61,559*l.*
1901	„	12,968 „	„	34,874*l.*

In their July circular Messrs. Woodhouse remark that in spite the temporary depression in the quinine market the present stati tical position, taken as a whole, cannot be considered unfavourabl On the one hand, the exports of bark from Java for first six mont show an increase of about 1,100,000 Amst. lbs. compared with la year, and 130,000 lbs. compared with 1899, but this is probab more than balanced by decrease in exports from British India. will be noticed that during the last three years the exports fro Java during last six months of the year have been nearly the same a total, though they have differed very much month by month. The

have averaged slightly over 1,000,000 lbs. per month. The stocks of bark in London (which are now 11,107 packages, against 16,598 packages in 1900) were reduced by 7,600 packages last year between July 1 and October 31. A similar reduction this year would not leave London with much stock. The stock of quinine is now slightly the largest of recent years, but as importation since January 1 are 200,000 oz. less, and deliveries 100,000 oz. more, it is evident that it must compare more favourably with last year now than it did on December 31. After all, it only represents about three months of the world's consumption, and in the absence of stocks of bark it forms the only reserve to meet any extra demand that might arise. Consumption shows a marked increase this year, especially in the United States, British India, and Italy.

QUININE.

A quiet tone still prevails in this market, and the business transacted since our last report has been done at 1s 3d der oz. It is easier now, and there are sellers at 1s 2¾d.

INDIA-RUBBER.

The market this week has been quiet and prices show a downward tendency, closing with sellers of hard spot at 3s 8¾d, and forward at 3s 9d. Soft cure fine offers forward at 3s 7½d. Hard entrefine has been sold at 3s 7¼d. Peruvian.—There have been sales of ball August delivery fair quality at 2s 5d, and slab at 1s 11¼d same delivery.

In auction to day only a small part sold at barely steady prices.

Para 29 packages, Peruvian 77 packages, and Mollendo 12 cases retired.

Orinoco.—3 packages offered and one sold, negrohead at 2s 4¼d per lb.

Central American, etc.—139 packages offered and 82 sold, good scrap 2s 5½d, fair ditto slightly mixed 2s 3d, clean pale scrap very slightly heated 2s 4d, tarry and porous slab 1s 8¾d, to 1s 9d, weak scrap part mixed 1s 8d to 1s 10d, pressed strips heated 1s 3¾d, dirty slab and sheet 1s to 1s 3¼d.

Mangabeira 32 packages, and Madagascar 10 packages retired.

Mozambique. 241 bags offered and 15 sold, red ball slightly heated part softish and mixed 2s 6d to 2s 9d, brown niggers 2s, sandy Lamu ball 1s 9d per lb.

Nyassa. 20 bags sold, reddish ball slightly mixed to fair 2s 8¾d to 2s 9½d, brown ball 1s 1¼d, ditto heated 1s 9d.

Assam 88 packages and Penang 48 cases retired.

New Guinea.—5 bags offered and 1 sold, dark coated ball 2s 1d per lb.

(Average for all India 6·16d., July 12th.)

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 16th instant. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Munzerabad.

August 6th.—Weather—very variable, one day very heavy and the next very light, rains. Wind moderate but cold. *Works*—Handling, weeding and re-supplying. *Labour*—Abundant. *Health*—Good.

Coorg.

Polli Betta, *7th August.—Weather*—We have had a short spell of wet and very gloomy weather after a nice break which put a "polish" on the coffee. The borer campaign still continues but will soon be over. No signs of rust as yet. Supplying is very nearly completed. Other seasonable works continue to make satisfactory progress. There is a report that plague has invaded Yegadeven Koté in Mysore Province.

THE ANNUAL MEETING OF THE U. P. A. S. I.

Custom demands from us a series of remarks on the Annual Meeting of the U. P. A. S. I., but there is very little to be said that is not of the character of the "I concur" of a once well-known member of the Madras Legislative Council. The interest of the meeting may be said to have centred in discussions as to methods of pushing sales of tea and coffee throughout the world. As regards Coffee there is just a shadow of bathos hanging over the suggestion that links India and Paris as the two markets to receive special attention. Yet it is certainly wiser to pick out a couple of markets in this way, than to try to throw Indian coffee broadcast about the world on the chance that someone may pick it up, take a fancy to it, and follow the excellent example of Oliver Twist. Again, it is perhaps well that two such widely different markets as India and Paris should be canvassed at the same time. Although in both instances special agencies are intended to be employed, so that planters will

not have the direct management of affairs, they cannot fail to see a good deal of the wires worked in each case, and those who set themselves to study and compare methods will doubtless acquire useful information. India is a coffee-producing country, it is largely a coffee-consuming country also, and coffee planters should never rest until the official statistics of imports show that not a pound of foreign coffee enters the country from year to year. No country can produce finer coffee, so that all people who want "the best" can be supplied with Indian; no country should be able to produce at so much less cost as to be able to compete with India in the sale of her lower descriptions in her own markets.

Before the Annual Meeting opened there was a possibility that South Indian tea planters might prefer some scheme of their own to that of the Indian Tea Association for the pushing of sales of Tea in India. We are glad to note that the I. T. A. scheme has received cordial support, and that Messrs. ANDREW YULE & Co. of Calcutta, who are to work it, may rely upon the co-operation of planters in these parts. It would have been a thousand pities if there had been any rivalry between this firm and the planting community of the South. Now, the organising powers and the experience of the one will be brought to the aid of the other, and steady developments of demand should be witnessed during the next two or three years. As to foreign markets there is force in what was urged about the conquering of one market rather than a vague endeavour to reach every market in the world. What we have already said in this respect about Coffee applies also to Tea, but we must point out that too much concentration of effort is as much to be deprecated as too wide a dispersion of it. *Divide et impera* is an admirable motto, when forces are prepared to follow up victory with victory in fairly quick succession. It conveys anything but the fruits of wisdom when it is read as meaning that years can be spent on the capture of, say, the Russian market; and that other markets will patiently await their turn in the meantime, and graciously succumb to the conquering hero from Russia when he condescends to turn his attention their way. The principle we would advocate is this: give attention to the cultivation of demand for Indian Tea and Coffee in every market that appears to offer a likely opening, but let there be strong concentration of effort in regard to, say, a couple of markets in each case. For instance, let India and Russia be the main centres of Tea operations, and India and France the scenes of the Coffee war.

There was no discussion regarding New Products at this year's meeting. There were, however, interesting references to methods of cultivation, first, in Dr. LEHMANN'S instructive address, and then in the still more instructive replies to questions that resulted from the keenness with which he was examined and cross-examined at the close of his address. Then, too, there was a good deal said about steamer and rail freights. The ground to be covered by coffee-planters is wide. If they want to hold their own as "struggle-for-lifers" they must have land, and labour available when required; they must select the product best suited to their land and must raise it on the most economical terms; it must be taken to the best market at the lowest possible outlay for transport charges; and buyers' attention must be specially attracted to it by means of advertisement, etc., etc. At every stage there is need for the closest supervision with a view to reduction of cost or increase of proceeds. At every stage, too, it is combination that will best succeed. The individual, for instance, cannot hope to get land-taxations revise or freights reduced; the united body of planters can. We a glad to see that this is now generally realised, and that the is a fair chance of the principle that "union makes strengt being put into useful application before the time for anoth meeting of the U.P.A.S.I. comes round. The Associati can fairly claim to have more than justified the expectatio of those at whose suggestion it was established. It has be peculiarly fortunate in having a succession of very ab Chairmen and an unfailing supply of ready debators a sound speakers. It has achieved and deserved a lar measure of success; but there is still a great deal of wo before it.

"PRIVATE" TEA SALES IN LONDON.

Reports as to the early "private" tea sales in London a not encouraging enough to warrant the belief that the ne scheme is a success. Indeed there is almost ground for t fear that the experiment will be abandoned before it h received a fair trial. Dealers are inclined to boycott t new venture, but this only helps to prove how greatly i porters are in the hands of the great wholesale buyers. It unfortunate that at a time when there is the utmost need entire agreement between producers in India and Ceylo and in London between the importers from these two centre certain newspaper remarks should tend to stir up strife, o at the least, discord. In England, certainly, a scheme taking shape for the regulation of tea sales, by a gener syndicate of proprietors and companies who should feed t market in exact proportion to its requirements. A move this kind, if well carried out, would be very beneficial planters. But it must always be borne in mind that scheme of the kind can succeed when production is, a continues to be, largely in excess of demand. Whether sal are effected in London publicly or privately, only enoug taking one year with another, can be sold to meet deman Production must be regulated to meet the world's requir ments, or demand stimulated so as to equal production- approximately, of course. The conduct of "private" sal can have very little influence on prices so long as dema and supply are very far from being balanced. We great doubt, in fact, if these sales will not be found to exerci precisely the contrary influence to that which it was hop they would produce. What is wanted is not rival sales, b keen rivalry among buyers; and the quickest way to bri that about is to run supplies rather below than above curre market requirements.

NOTES.

Coffee in Coorg. Official estimates of the Coo coffee crop put the total down about 2,700 tons, as against an annual average export 3,358 tons per annum during the last ten years.

German Quinine. The exports of "quinine, quini preparations, etc.," from Germa during the four months ended April amounted to :—

	1901	1900	1899
Kilos.	69,800	77,600	88,500

Java Quinine. The exports from Java duri February amounted to 51 cases,

f which were shipped to New York and 1 to Japan. From January 1 to February 28 the shipments have been :—

	1901	1900	1899	1898
Cases ...	235	352	128	119

Tea Stocks in London. According to telegraphic advices the stock of Ceylon tea in London on the 1st instant was 28,900,000 lbs., month's landings being 0,500,000 lbs., and deliveries 8,800,000 lbs The stock of Indian tea on the same date was also 28,900,000 lbs. : month's landings being 4,700,000 lbs., and deliveries 8,300,000 lbs.

Colombo Tea Sales. At the public sale of tea at Colombo on the 31st ultimo 11,597 packages = 907,212 lbs. were offered, of which 8,532 packages = 672,609 lbs. were sold. The *Times of Ceylon* reports :—"Teas generally were in less demand, resulting in irregular, and in most cases easier, prices, with the exception of fine to finest sorts which were steady."

Kanan Devan P. A. In the Proceedings of the Kanan Devan Planters' Association recently published, there was an error. In para. 5 of the Minutes the amount expended on the Munaar-Mettu road was printed as Rs.291-6-0 ; it should read Rs.29-16-0 (chukrams). The point intended to be brought out is that only Rs.29 odd was paid out of a grant of Rs.378

Indian Tea Exports. The following figures of tea exports, taken from the Calcutta Customs daily entries, are issued by the Indian Tea Association :—Quantity of tea entered for export to the United Kingdom for the second half of July, 1901, 91,97,024 lbs. ; quantity entered during the corresponding period of last year, 11,139,593 lbs. ; total from the 1st April, 1901, to the 31st July, 1901, 25,111,630 lbs. ; total from the 1st April, 1900, to the 31st July, 1900, 30,615,467 lbs.

Calcutta Tea Sales. The tea sale at Calcutta on the 2nd instant comprised about 20,000 packages, all districts being represented. Good Assam Pekoe Souchongs were again in strong demand, but the higher grades were slightly easier than last week, quality not being quite as good. A few fine teas sold well, amongst which may be mentioned—Chamong Broken Orange Pekoe, Rs.1-4-0 ; Halmirah Broken Orange Pekoe, Rs.1-2-0 ; Maryoong Orange Pekoe, Rs.1-2-0 ; Rajabatta Broken Orange Pekoe, Rs.1-2-0 ; Chamong Orange Pekoe, Rs.1-1-0 ; and Tamulbari Flowery Orange Pekoe, Rs.1-0-6.

Ceylon Tea in Canada. A Canadian firm that deals in pure Ceylon Tea has lately made a speciality of Tea Demonstrations. It has given these in the leading stores of such cities and towns as Port Hope, Belleville, Lindsay, Peterboro', Kingston, Brockville and Ottawa, and has spared neither money nor pains. The young lady in charge is a graduate of the School of Domestic Science. The *Canadian Grocer* remarks :—Excellent results are being obtained from the demonstrations, and in Ottawa in one week one store in which the demonstrations were being carried on sold nearly $200 worth of tea.

The Indian Tea Crop. The following telegram, with reference to the tea crop in various districts, has been despatched by the General Committee of the Indian Tea Association at Colombo to the Committee of the Association in London, *viz.*—*Assam*—Immediate prospects fair. Outturn last month poor. *Cachar*—Immediate prospects fair. Outturn last month poor. *Sylhet*—Immediate prospects fair. Outturn last month poor ; remains deficiency. *Dooars*—Immediate prospects fair. Outturn last month poor. *Terai*—Outturn to the end of last month is stated to be 25 per cent. under last year. *Darjeeling*—Immediate prospects bad. The outturn to the end of the last month is stated to be 20 per cent. under last year.

Amsterdam Bark Market. The shipments from Java for the first half of July were 691,000 Amsterdam lbs., against 180,000 Amsterdam lbs. last year. Bark auctions were held in Amsterdam on the 18th ultimo, and resulted in a decline, the unit coming out at 9 cents (about $1\frac{3}{4}$d. per lb.), against 10·45 cents (about $1\frac{9}{10}$d. per lb.) at the last auctions. Altogether 4,974 packages were offered, containing 450,752 kilos. of bark, with a quinine equivalent of 24,508 kilos. The manufacturers' bark amounted to 387,286 kilos., containing the equivalent of 22,848 kilos. of quinine sulphate, and the druggists' bark to 63,466 kilos., with an equivalent of 1,660 kilos. of quinine. Of the manufacturers' bark an equivalent of 20,668 kilos. were sold, and of the druggists' bark an equivalent of 1,651 kilos. were sold, making a total of 22,319 kilos.

The London Tea Market. In a telegram dated 1st instant Reuter reported that the London market for Ceylon tea was generally steady, Broken Pekoes being in buyers' favour. Pekoe Souchongs were quoted at $4\frac{1}{2}$d., and the average for the week was $6\frac{1}{2}$d. (both the same as last week). 30,000 packages of Ceylon tea were offered for sale, and 22,000 were disposed of ; while of the 15,000 packages of Indian tea offered, 12,000 found purchasers, at an average $8\frac{1}{4}$d. per lb. ($\frac{1}{8}$d. up). In their weekly telegram dated 2nd instant to the Colombo paper, Messrs. Gow, Wilson and Stanton report that there is a dull tone generally among buyers, and that the market for medium liquoring Pekoes and Broken Pekoes is steady, while low priced Broken Pekoes are easier. The price of fair liquoring Ceylon Pekoe Souchong is $5\frac{1}{4}$d. and the average price of Ceylon tea sold on garden account this week was $6\frac{1}{2}$d. (both the same as last week).

Ceylon Tea Shipments. The following are the latest returns issued by the Colombo Chamber of Commerce :—

July shipments	...	9 millions.
August estimate	...	7 to $7\frac{1}{2}$ millions.

The *Times of Ceylon* remarks :—The July estimate was 10 to $10\frac{1}{2}$ millions. The figures for July last year were 11,993,600 lbs., and for August 7,568,667 lbs. Last month's shipments and this month's prospects should stiffen the home market considerably. Reports from almost all districts point to wet and cloudy weather, with scarcity of flush ; and, in some quarters, a still shorter estimate for the current month has been framed. The total shipments to the U. K. from January to July, 1901, amounted to 68,113,000 lbs., against 73,718,930 lbs. for the same period last year. We may add that the shipments to Australia for July were 2,500,000 lbs., against 1,316,957 lbs. last year ; and the total shipments to the Antipodes from January to July amounted to 12,780,000 lbs., against 9,355,690 lbs. for the same period last year.

Buenos Aires Coffee.

Says the *Brazilian Review* :—Anyone who has once drunk Buenos Aires Coffee will appreciate the unconscious "sarkusm" of the Porteno journalist who pretends that "there is no opening for Brazilian coffee in that country because its quality and flavour is not such as can be appreciated by the delicate palates of Argentine gourmets." In parenthesis, Buenos Aires coffee is made mostly of beans! If people want to know what real coffee is and how to make it they have to come to Rio. There are not many things we do better or even as well as anybody else, but in making coffee we are *hors ligne*. And when it is considered that most of it is made from *escolha*, the refuse that is absolutely unexportable, it is evident that the virtue of coffee resides mostly in the making of it. We heard of a well known local roaster who practically uses nothing but *escolha*, which he buys in lots of thousands of bags at a time and even brings from Santos; and yet his coffee is as good as any other and far better than any one is likely to get in Buenos Aires or anywhere else outside Brazil.

Brick "Tea."

A correspondent of the *Pioneer* describes "tea bricks" such as are in use among the Hunyas as made :—(1) the best, as made up with a flavouring of cardamums and catechu, and (2) both best and common, as mixed with bullock's blood, to make the leaf adhesive for compressing into bricks. As he could not, of course, either procure or use bullock's blood amongst Hindu surroundings and workmen, he substituted arrowroot for it. As to leaf, both qualities of brick were composed of very poor stuff, the ordinary one, of what planters would call prunings. This writer made 1,000 lbs. of these bricks, 500 lbs. of best quality, from Pekoe Souchong and Souchong; and the same weight of ordinary from Bohea and dust; some of which were taken into Hundes, on trial. The report on the venture was that both qualities met with approval in all respects and were considered good value, as compared with the China bricks, but no trade could be done in them, as the Hunya officials had to take and dispose of a certain quantity of the Chinese article, of which both these officials and the Chinese Government made very handsome profits; and that the tea thus forced on the country was sufficient for all demands The Hunya not only boils or stews his tea with *sattu*, barley meal, *ghi* and salt for its liquor, but eats the leaves too!

Mr. Renton's work on the Continent.

Messrs. Ch. & A. Bohringer, of Colombo, have addressed the *Times of Ceylon* as follows :—Enclosed we beg to hand you copy of a letter received from one of our constituents from home, and shall be glad if you would publish it in your daily issue, if room can be spared.

(*Enclosure.*)

As a supporter of Ceylon tea only, I was astonished to hear Mr. Heath complain about Mr. Renton going to the retail trade in Germany to the detriment of the large Hanseatic importers. The retail trade in Germany is quite a different thing from what it is in England. Our retailers do not only consist of shopkeepers but they are composed of a great number of private dealers who do the bulk of the retail business. It is only too natural that the large importers of tea in Germany should be dead against Ceylon tea since they are afraid to lose their monopoly they enjoyed so far, in direct China imports. Whoever believes that the large importers will introduce Ceylon tea of their own free will, is mistaken, and he does not know the ins and outs of the tea trade as it is done in Germany. I know perfectly well that a number of inland wholesale dealers are getting Ceylon tea direct or f London, simply because they cannot get what they want in Hamb or in Bremen. Mr. Renton is certainly on the right track visiting the various wholesale dealers in the inland towns Germany and to talk to them about Ceylon tea over and over a until they give orders for Ceylon tea to their London and H burg friends, thus compelling the large Hanseatic importer push Ceylon tea even if it goes against their principles. success will prove that Mr. Renton cannot follow any other cou

---

Cinchona Bark Prospects.

Messrs. C. M. & C. Woodhe reported on 9th July as follows "In spite of the temporary depression in the quinine mar the *present* statistical position, taken as a whole, canno considered unfavourable. On the one hand, the export Bark from Java for first six months show an increase of ab 1,100,000 Amst. lbs. compared with last year, and 130,000 compared with 1899, but this is probably more than balan by decrease in exports from British India. It will be not that during the last three years the exports from Java dur the last six months of the year have been nearly the sam a *total*, though they have differed very much month by mo They have averaged slightly over 1,000,000 lbs. per mo The stocks of Bark in London (which are now 11,107 pa ages, against 16,598 packages in 1900) were reduced 7,600 packages last year between 1st July and 31st Octo A similar reduction this year would not leave London v much stock. The Stock of Quinine is now slightly the lar of recent years, but as Importations since 1st January 200,000 ozs. less and deliveries 100,000 ozs. more, it is evid that it must compare more favourably with last year now t it did on 31st December. After all it only represents ab three months of world's consumption, and in the absenc stocks of Bark it forms the only reserve to meet any e demand that might arise. Consumption shows a mar increase this year, especially in United States, British In and Italy.

THE UNITED PLANTERS' ASSOCIATION OF SOUTHERN INDIA (Incorporated).

ANNUAL MEETING.

[Chiefly quoted from the *Madras Mail*.]

FIRST DAY, *July* 31.

The Annual General Meeting of the United Planters' A ciation of Southern India commenced at the Resident's Co Bangalore, on Wednesday, the 31st ultimo, at 11 A.M., Mr P. Hodgson presiding. The following delegates from affiliated District Associations were present :—

DELEGATES.

Central Travancore ...	Hon'ble Mr. G. L. Acworth. Mr. E. Latter.
Coorg	„ C. H. Murray-Aynsley. „ A. Lambert.
Kanan Devan ...	Baron J. von Rosenberg.
Nelliampathis ...	Mr. J. C. Abbott.
Nilgiris	„ H. P. Hodgson. „ J. Liebenrood.
North Mysore ...	„ O. Scot-Skirving. „ F. J. Parton.
South Mysore ...	„ J. G. H. Crawford. „ A. M. Elder.
Shevaroys ...	„ R. Gompertz.
Travancore Cardamom Hills ...	„ E. Latter.
Wynaad ...	„ D. Mackenzie.

In order to hold the meeting in July it was necessary to suspend Rule 2 of the Association, which provides for the meeting being held in August or September. This was done. The Annual Report and the statement of accounts which had been passed the previous day by the Council, were then formally adopted.

The Report reads as follows:—

SECRETARY'S REPORT FOR 1900-1901.

No change has occurred in the membership of the Association during the year. Mr. Brooke Mockett has succeeded Mr. Frank Mangles as one of its joint representatives in London, Mr. John C. Sanderson continuing to represent the Association as hitherto. The Hon'ble Mr. G L. Acworth retains his seat as "Planting Member" of the Legislative Council of Fort St. George.

The chief event of the year, one that overshadowed the whole Empire, was the *Death of Queen Victoria*. Planters shared the universal sorrow at the demise of Victoria the Good, and the Chairman voiced the feelings of the whole community in a telegram to the Viceroy, which read as follows:—

"This Association desires to convey, through Your Excellency, its heartfelt sorrow for irreparable loss sustained by the death of our beloved Queen, and respectfully to express deepest sympathy with the Royal Family in its bereavement."

As time passes the aims of the Association become more comprehensive, and the scope of its operations widens. It has to deal with old subjects as well as new, the former predominating, as it is usually found impossible to bring any important matter to the point where "Finis" can be written, except after long deliberation and discussion, and steadfast effort. No better evidence of this could be given than is to be found in the progress made in regard to the subject of local.

Labour Laws.—The year under review has witnessed marked progress, but the new law is still on the legislative anvil. During the year Government has submitted the amended Bill for an expression of opinion, and your Chairman has responded with a memorandum of points in regard to which he feels that the Association will consider the amended draft unsatisfactory. The subject is entered on the Agenda paper of the 1901 Meeting for further discussion.

Another very important matter discussed at last Meeting was the question of *Foreign Markets for Tea*, which is connected with the still wider question—How to stimulate the demand for this product. A definite decision as to a plan of action can certainly be arrived at, but work in accordance with any such plan should be regarded as unending, for while Tea continues to be cultivated and manufactured planters will obviously benefit by efforts to extend sales and command improved prices. Increased interest has been shown in this subject since the last Annual Meeting was held. This Association has not attempted to act independently of the Indian Tea Association, but has endeavoured to stimulate discussion in the hope that benefit may result. On the other hand, the Indian Tea Association has operated independently of the U. P. A. S. I., but it has expressed its readiness to consider representations from the planting community in Southern India, and has manifested no desire to exclude planters in the South from taking an active share in the carrying out of its schemes.

The development of Foreign Markets for Tea and the expansion of *Sales of Indian Teas in India*, cannot but be regarded as cognate subjects. The Indian Tea Association has hitherto maintained a separate fund in regard to the work of advertising, canvassing and distributing samples in America and other Foreign Markets, but it has lately given increased attention to the potentialities of the Indian Market, and has decided to intrust the working out of a scheme for the extension of sales of Tea in India to Messrs. Andrew Yule & Co., a well-known Calcutta Firm. This Firm is, of course, free to operate in Southern India as well as in other parts of the continent; but it should be mentioned that a suggestion has also been put forward with a view to the elaboration of a local scheme for the development of demand for Tea in the South. It appears probable that the District Associations concerned will consent to the exploitation of Southern India being left to Messrs. Andrew Yule & Co., provided that this firm intends to work in the South with the same energy as in other parts of India. The whole subject, in its widest form, is entered upon the Agenda paper of the present Meeting. It is one of vital interest, and connected with it, in the relation of "means" to "ways," is a suggestion that has been made that Tea planters in India should move for the imposition of a Tea Cess, similar to the Ceylon Cess, for the purpose of raising funds to defray the cost of pushing Indian Teas in Indian and other markets. This also is a point that will come up for discussion at the ensuing meeting.

It may be well to mention here that while the above subjects have received the attention of Tea planters throughout India, Coffee planters in the South have had under consideration the question of ways and means for the development of demand for the commodity that is their staple produce. In many respects the conditions affecting Indian Tea and Indian Coffee differ greatly, yet to Members of this Association the subjects of *Markets for Coffee* and a *Proposed Coffee Cess*, for the purpose of raising funds for the conduct of a campaign in behalf of increased consumption of the fragrant berry, are quite as important as the corresponding questions in respect to Tea.

In both instances a double line of preparation is desirable: the one to relate to consumption in India; the other to have for its object the capture of Foreign Markets, and the conversion of consumers therein into devotees, not merely of Tea and Coffee, but of *Indian* Tea and *Indian* Coffee.

The prevention or regulation of the *Adulteration of Coffee* has been frequently urged by this Association as one means of stimulating consumption of the pure infusion. At the 1900 Meeting a resolution was passed that a number of gentlemen in England be asked to form themselves into a Committee, to act and to communicate with the London Chamber of Commerce, and to take such other steps as they might deem advisable, for getting the subject of Adulteration of Coffee again brought before the Chancellor of the Exchequer and to the notice of the House of Commons. The gentlemen specially named were:—Sir H. Seymour King, and Messrs. J. C. Sanderson, Brooke Mockett, J. Lullin, P. Macfadyen, J. Clifford, and M. A. Ord-Mackenzie, "with power to add to their number." The thanks of the Association are due to these gentlemen, every one of whom complied with its request, and to Mr. J. Innes Rogers (of Messrs. J. Travers & Son, Ld.,) who kindly joined them. They arrived at the conclusion that it was desirable that Indian planters should make representations in regard to this matter to the Indian Chambers of Commerce and Local and Central Governments in India, and by them, or through them, to the India Office, the Board of Trade and the Chamber of Commerce of the United Kingdom. The Madras Chamber of Commerce, it may be remarked, has expressed entire approval of the agitation against Adulteration of Coffee, and its readiness to join this Association in any endeavours it may make to prevent it. The Malabar Chamber of Commerce has expressed itself to the same effect.

Connected, though less directly, with the subject of the development of demand for Indian planting products is that of Imperial Fiscal Federation, with a view to the levy of *Imperial Differential Duties* in favour of British, as distinct from Foreign, products.

A resolution was passed last year "That, considering the critical condition of the Tea and Coffee Industries this Association do communicate with the Indian Tea Association, the Ceylon Planters' Association, the Indian Chambers of Commerce, and with the leading firms of Merchants and Brokers interested in Tea and Coffee, etc., in this country and in England and the Colonies, with a view to ascertaining whether a movement in favour of a commercial combination of Great Britain and Her Colonies and India against the world which would, by a system of Differential Duties, afford some protection to British grown products and manufactures would receive support, and that a Committee of this Association be appointed to carry the above into effect." A special circular was prepared, and was despatched to numerous Chambers of Commerce, etc., in various parts of the Empire.

It would be difficult to summarise in brief space the very heavy correspondence that was received in reply. It may be broadly stated, however, that, though some few of the bodies addressed took an adverse view of the suggestion thrown out, generally speaking, the replies were favourable and encouraging.

The French Import Tariff.—Uncertainty has prevailed during the greater part of the year as to the action to be taken by the French Government in regard to the import Tariff in that country on Tea, Coffee, Pepper, etc. The latest news is to the effect that settlement of this matter has been postponed to early next year. The settlement affects the future of Indian Tea and Coffee in the French Market, which is one to which planters should certainly not give decreased attention.

Paris Exhibition.—In Circular No. 48, dated 25th July, 1901, the Indian Tea Association submits its statement of accounts in connection with the Paris Exhibition, showing that no further claim on this account will be made against the Association

A gold medal was awarded to the Association for its exhibit of Coffee.

Dr. Geo. Watt.—It was resolved last year to request the loan of this gentleman's services from the Government of India, so as to permit him to work in Southern India for six months and investigate plant diseases and insect pests in the planting districts. No reply has been received.

Roads and Communications.—The Governments of Madras and Mysore were addressed during the year regarding the repair of the Bhund Ghaut Road to Mangalore.

Postal Irregularities.—In accordance with a resolution passed last year the postal authorities were addressed on this subject

Proposed Harbour on the West Coast.—The Association has addressed the Madras Government with respect to the need of a good harbour on the West Coast, and has also been in correspondence with the West Coast Chamber of Commerce at Calicut, the Malabar Chamber of Commerce at Tellicherry, and the Madras and Bombay Chambers.

The Madras Chamber of Commerce is occupied with the question of the improvement of the Madras Harbour, but the Chambers that represent the mercantile community on the Malabar Coast are in full accord as to the need for a harbour. Government desires that a special port be named as the one at which such a harbour should be constructed. When this is done, it will no doubt arrange for the necessary survey and the drawing up of plans and estimates.

Freights.—The Madras Chamber of Commerce requested the support of the Association in an effort to bring about a reduction of the high rates of freight now charged by the B. I. S. N. Co. and the Clan Line; and the subject of a reduction of *Rail Freights on Coffee* was also mooted during the year. *Accounts* duly audited, are laid on the table, together with a Balance Sheet showing the financial position of the Association as on the 24th instant.

The Reserve Fund stands at Rs.7,039-12-0, of which Rs.7,000 is invested (fixed deposit bearing 5% interest per annum), the rest standing in current account with the Association's bankers. Of *The Paris Exhibition Fund*, Rs.986-6-2 has been invested in the purchase of 3½% Government Paper of the face value of Rs.1,000; the remainder, *viz.*, Rs.8,072-5-7, lies with bankers, in current account.

The Ladybird Fund stands unaltered at Rs.1,276-3-4, *The Transvaal War Cheroot Fund*—at Rs.20.

The General Fund shows cash in hand Rs.201-6-10, as against an opening balance of Rs.611-15-10. There are, however, sundry subscriptions still unpaid.

The actual financial position of the Association has improved, the Balance Sheet showing a surplus of Assets over Liabilities to the extent of Rs.19,292-11-11, as against Rs.16,604-10-11 on 31st July, 1900.

It should be specially noted that the accounts submitted relate to a broken period—31st July, 1900 to 24th July, 1901—not to a complete year. As far as possible, expenditure for the whole year has been provided for, and *per contra* the subscriptions paid and still unpaid relate to the year.

In conclusion, I have to express my sincere thanks to the Chairman, Planting Member of Council, and the Honorary Secretaries of the various District Associations for their unfailing courtesy during the year.

THE CHAIRMAN'S ADDRESS.

Mr. H. P. HODGSON then delivered the following address:—

GENTLEMEN,—Since we last met we have had to mourn the loss of our beloved Queen Victoria, a name which has been an honoured and revered one to each of us throughout our lives, and the memory of which must dwell with us to the end. In his Annual Report the Secretary has given you a detailed statement of the work of the year, which tells you what has been done in the direction of giving effect to the Resolutions passed on the various subjects that were before the Meeting last year. I now propose to touch upon the most important of these myself.

New Markets for Coffee.—I had great hopes when we parted last year that something would be done to establish a Fund for the purpose of pushing our coffee in the various consumi markets, but I regret to say that, so far, nothing definite h been achieved. Several District Associations have expresse themselves in favour of the proposal, but what is required definite undertakings from individual owners to subscribe such a Fund, and these, with very few exceptions, are st wanting. Considerable correspondence in this connection h been circulated, and more than one Association has writte asking me how much money is required, and how it would expended. I could only reply that the larger the sum guara teed the more extensive would be our operations, and th the nature of these operations must necessarily depend up the amount of money available. One proposal I was able make, *viz.*, that support should be given from the Coffee Fu to the Tea Shop, which was started in Paris after the Exh bition, for the sale of Indian tea in the cup and in packet, offering coffee in the same way. I showed by a letter fro Mr. W. S. Shaw, who kindly represented us at the Exhibitio that this could be done at a small cost, and that as our coff had been so much appreciated, as served in the Tea and Coff room at the Exhibition, there was every chance of a go business being established. I regret to say, however, th nothing could be done in the absence of definite support, a this opportunity has, I fear, been lost. The subject of t Coffee Fund will no doubt receive your further attention duri this meeting. Suggestions have been made that Governme be asked to introduce a compulsory cess on coffee, similar that levied on tea in Ceylon, but I fear it is very unlike Government will consent to such a measure, and I consider impolitic to ask for anything which has not a fair chance being granted. I would also point out that coffee is large produced by natives, who would not appreciate the possib advantages to be derived, and who would probably strong object to the proposal. It seems to me, therefore, that anything is to be done a commencement must be made voluntary subscriptions.

Adulteration of Coffee.—I think I may say that we have be the means of an influential meeting being held in London discuss this question, the proceedings of which have been c culated. You will know it was the opinion of that meeti that nothing could be done without the support of a larger bo than is represented by our Association, and it was suggest that a petition should be presented to the Chancellor of t Exchequer, through the Government of India from the Cha bers of Commerce in India, and also from all Associations i terested in coffee in the British Empire. It will be for you decide if we are to give effect to this proposal, and if so t best means of doing so.

The Coffee Market—Notwithstanding the optimistic hop expressed by some last year, I regret to have to record th since we last met the coffee market has fallen into st lower depths, and although the crop of 1900-1901 was most Districts considerably above the average, prices o tained were so poor as to constitute a record of low pri as paid to the producer. From a table recently issued the Director-General of Statistics, taking the price in 18 as the datum—100, prices dropped last year to 47, and as ov 7 million bags of stocks are being carried forward, and t reputed largest crop on record is about to be harvested Brazil, there can be little hope of improvement for so time to come, and coffee planters in South India have unenviably anxious time before them. The one ray of light the dark sky of the outlook is the rise in Brazilian exchang which is apparently steady at between 12*d.* and 13*d.* This tending to place our produce more on a level with Brazil th it has been since it was so heavily handicapped by the closi of the Indian Mints in 1893. There can be no doubt that t coffee production of Brazil was stimulated by the high curren

prices paid to the Brazilian planter from 1886 to 1897, and it remains to be seen how far production there will be affected by the lower currency prices now ruling. In any case, an effect cannot be felt for some time to come, as going concerns will continue to be financed in the hope of improvement.

Tea Fund.—The subject of pushing tea in foreign markets has caused very extensive correspondence during the year under review. Several schemes are afloat which have followed each other in rather bewildering succession, and it is not surprising therefore that tea planters in some Districts are holding back subscriptions until something definite is arrived at. In this connection I trust what I am about to say will be taken in good part, as it is said in what I believe to be the best interests of this Association and of planters themselves. It is, in my opinion, sapping the power of the U. P. A. S I and weakening the bond of union among planting interests that individual councillors representing District Associations should have taken independent action without submitting their schemes for the sanction of the U. P. A. S. I. In the interests of our head Association this should be avoided. The Indian Tea Association and other Associations should know that, in considering the wishes of Southern Indian planters, the U. P. A. S. I. is their spokesman, and that it would facilitate business if they dealt directly with that body, and no other. A campaign for pushing the sale of tea among the natives of India is being inaugurated by the Indian Tea Association, and the consideration of ways and means to carry it out in Southern India will be part of the business of this meeting. You will have to decide whether the funds required for the purpose are to be obtained through the I. T A. or by other means to be proposed. Great results are by some expected from sales of tea in India, but I would warn planters not to pin their faith too much on the belief that this will be a panacea for over-production; for, at the best, only a comparatively small amount of the best tea production of India can be thus absorbed, and even this must take years to accomplish, as the *taste* for tea has to be formed before the *market* for it can be found. It should, therefore, in my opinion, only march concurrently with the pushing of tea in other markets where the consumption is already large, but at present supplied by other than British-grown tea. It would be a dangerous and false policy to sink at a stroke all the great work that has been done, and is in contemplation in other countries, and this is a point that deserves the very careful thought of tea planters.

Restriction of Output.—The proposal, which came from Ceylon, to restrict output by a rateable reduction of the plucking area has, after a short but loud flourish of trumpets, been doomed to the failure which is certain to follow schemes, however attractive, that are unsound in principle, and Ceylon herself was the first to abandon it. We declined from the first to join in the proposal, as being impossible to work and quite uncommercial. Production is being reduced by finer plucking both in India and Ceylon, and as this means the raising of the standard of quality, may be regarded as a proper and business-like way of arriving at the same end. It should, however, be borne in mind that in the struggle for existence among producers, the country which can put the largest quantity of medium quality, of any product, into the markets of the world at the lowest price with a profit is the one which will survive.

Import Duty on Tea.—Considerable discussion has arisen about the import duty on Indian Tea into Ceylon, and the necessity for like protection in India. This subject will come before the meeting. My own view is that it is the interest of the tea planter to see as few duties as possible imposed on tea in any country as they tend to restrict consumption, even if such duties are for the protection of our own industry. I think, therefore, our effort should be directed only to the removal of the existing import duty in Ceylon, and that we should ask the assistance of the Government of India to this end.

French Import Duties.—The Association has taken an active interest in this very important matter. A Notification of the Finance Department informs us that the French Government has decided to prolong till the end of February, 1902, the minimum tariff; but this cannot be regarded as a final or satisfactory settlement. It will be very upsetting to business that the possibility of an alteration to the maximum tariff should be hanging over it at the time of year when the heaviest shipments of produce effected are being made.

Legislation Labour Bill.—This bill was referred lately by the Government of India to the Government of Madras with suggestions for alteration of certain clauses and for the omission of others. The Madras Government thoughtfully submitted the correspondence to our Association for remarks, asking for an early reply. I accordingly dealt with the matter myself, to avoid delay, and copy of my letter, with correspondence attached, has been circulated to District Associations, and will, I hope, meet with your approval. It is disappointing that this Bill, which is of importance to the planter and the labourer, is still in abeyance, though the Special Committee appointed at the instance of the Government of India sat as far back as 1896.

Coffee-Stealing Amendment Act.—The forms for estimates of crops, and the information as to the books necessary to be kept on estates for the purposes of the Act, as adopted at the meeting last year, were forwarded to the local authorities as asked for, but I have heard nothing as to whether they are approved.

Scale-pests and Plant Diseases.—As resolved last year, we applied for the loan of Dr. Watt's services to investigate and advise on this subject, but no reply has been vouchsafed to the suggestion. It seems unlikely, therefore, that we shall receive any help from Government in the direction of scientific investigation, which in every other country is done by State aid.

Harbour on the West Coast.—The correspondence on this subject rather shows that Government is not averse to consider the necessity for establishing a port on the West Coast which can be kept open in the South-West monsoon. We have been asked to give our opinion as to the best locality for such a Port, but are diffident in doing so, seeing so many questions surround an intelligent decision. The futility of suggesting localities without previously studying the subject is exemplified by the fact that several Associations have suggested Calicut as the desired port. Calicut is an open roadstead, and could not possibly be made into a safe port during S.W. gales. It is, we think, preferable that Government, with its information as to the practicable situations at which a safe port could be constructed at a reasonable cost, should suggest the place, and this we hope it will do, as any safe port on the West Coast would be better than none.

Differential Duties.—As arranged at last year's Meeting, the Sub-Committee drew up a circular letter, of which 500 copies signed by your Chairman were sent to Chambers of Commerce and other bodies interested throughout the British Colonies, and many replies favourable to the suggestion have been received. The proposal for a Commercial Union of the Empire is not without its supporters among statesmen in England. Mr. Chamberlain, speaking as Chairman of the Congress of Chambers of Commerce of the Empire held in London in June, 1896, expressed his view that if the terms of such a Union could be arranged on lines acceptable to England and her Colonies "it would be the strongest bond of Union between the British race throughout the world and that such a proposal might commend itself even to an orthodox free-trader." The Dominion of Canada is the champion of the cause, and with the new Federal Chamber of Commerce in Australia effective pressure may yet be brought to bear on the Free Trade Policy of the United Kingdom.

Exchange.—Before concluding, I feel that I ought to say a few words on the action taken by a certain planter during the past year to stir up an agitation in the country on account of the Exchange Policy of Government. Support has been sought to the formation of a so-called League to agitate among the people against the Government policy. I think you would all wish that we should avail ourselves of this opportunity to publicly disassociate ourselves from this movement, as being now both futile and unpatriotic. At the time when action could be legitimately taken everything possible was done by your then Chairman (Mr. Romilly) in this country, and by Mr. Acworth and myself in England, to see that the effect the Government exchange policy would have on producers was fully set forth. The question was submitted to the arbitration of a tribunal of mixed interests, and their recommendations, which are now in force, are considered by the Viceroy and the Government of India to be working well for the country's good. It behoves us to await in patience the final result, even though we may be to some extent sufferers.

I think I have now briefly touched upon the chief matters of interest with which we have dealt in the past year, or which are still pending your consideration. I must apologise if my address has been somewhat lengthy; the number and importance of the subjects for consideration will, I trust, be accepted as my excuse for taking up so much of your time. I must take this opportunity to place on record the good service rendered to the Association during the past year by your Secretary, and to thank him, myself, for the ever willing aid that I have found him always ready to give. The work of the Association increases yearly. During the past year 87 circulars have been sent out and 1,053 letters have been received in the office, which will speak to the amount of work done. I would ask councillors to remember that when certain matters are referred to them from the Secretary's office it would facilitate and expedite business if they would accept the personal responsibility attached to their position, and reply with as little delay as possible. It has occurred several times that by the delay caused in referring to their Associations, replies have come in too late to be of use. Thanking you for your support and consideration during my term of office, I now place my resignation in your hands.

The Hon'ble Mr. G. L ACWORTH (Central Travancore) said:—GENTLEMEN,—The Chairman has referred to the agitation that went on in the Press in regard to the Exchange question. I must say that I am glad he has taken the matter up and has noticed it, and that he said that we entirely disassociate ourselves from it. I daresay some of you saw in the Press a letter, the writer of which said:—"What is the Member of Council doing, why is he not moving in this matter; what is the use of our representative if he does not agitate about the Exchange question?" I think the Chairman has given a good reason why I held my peace. If the writer had known more about the subject, he would have known that Madras is not the place to begin an agitation. If you want the Exchange question taken up at all, it must be taken up in Calcutta. I believe, I hope and I think that the Exchange question is dead. I believe the present policy to be working exceedingly well, and I really do not think that we are as much sufferers as we supposed we would be. I wish to repeat what I said before, namely, that the Chairman was right to notice this matter and to say emphatically that we disassociate ourselves from it.

THE LABOUR LAW.

The first subject considered under the heading of Legislation was the Labour Law, in connection with which the Chairman called attention to the correspondence on the subject which had already been circulated, and asked the meeting to consider his reply to the Government of Madras and, if it approved, to adopt it.

Mr. D. MACKENZIE (Wynaad) made certain suggestions w reference to the remarks of Mr. Hodgson and the Governme of India.

The Hon'ble Mr. ACWORTH said that he thought t objections of the Wynaad Association were really all met Mr. Hodgson's letter What he desired to suggest himself w that if any Association or Associations had any objections suggestions to make with regard to any particular Clause of t Bill, they should refer the matter to the Planting Member, that when the Bill came up before the Council and was refer to a Select Committee, he could take action on the suggestio He did not think there was much use in discussing the Clau at the Meeting or in Committee.

The CHAIRMAN agreed with Mr. Acworth's suggestio stipulating only that all correspondence with the Planti Member should be carried on through the United Plante Association, so that a record might be kept for the informati of the Chairman and other members.

A Resolution, which ran as follows:—"That the Cha man's letter to the Government of Madras with reference the Madras Labour Bill be adopted," was accordingly adopt

The only other item under this head was the Coffee Steali Prevention Act. In the absence of information as to what h been done regarding the special forms drawn up last year submission to district officials, the subject was allowed to dr

DUTIES

Under the heading of "Duties" the subject of British Dut on Tea and Coffee was allowed to drop, the feeling of t meeting being that this was the proper course during the p sent period of strain on the finances of the British Governme

THE CEYLON IMPORT DUTY ON TEA.

The Hon'ble Mr. G. L. ACWORTH said that all must ha noticed the Resolution passed by the Central Travancore As ciation on this subject, but he feared it was almost now o of the subjects of the past, unless they could get the Gove ment of India to help in the matter of the Ceylon imp duties. What was originally suggested by his Association w that they should not endeavour to get a removal of the Cey duties, but that they should try and get countervailing dut on Ceylon imports into India levied. His Association w actuated by two reasons, one of which was that there wa large amount of rubbishy tea sent from Ceylon to India a blended on the West Coast This was denied by Ceylon, a the Indian Tea Association itself took the trouble to get samp from Bombay and sent them down to the Central Travanc Planters' Association saying that the samples were the low grade that could be got, but that there was nothing objecti able in them. That was true, there was nothing objectiona in them; but Bombay was not the right place to go to for su samples. He could assure them, from personal experience they went into the bazaars of the West Coast ports, such Calicut, Cochin, Alleppy, Tellicherry and Mangalore, they wo get for 8 As., 10 As., 12 As., or even a Rupee a pound, for that w hardly fit to be used as litter for horses. He felt rather stron on the subject because, in view of the endeavour to be made popularise tea in South India, if such stuff was allowed circulate in the bazaar, it would certainly be prejudicial to th interests. The second reason was that by threatening Cey with a countervailing duty it was felt that Ceylon might rem her own duty. But since then it had been felt that it would better that Ceylon should herself remove the impost on tea a let Indian tea in free rather than that there should be count vailing duties on the teas of each country. As the Chairm had said, free imports tended to freer consumption, and t was now all that they asked for. In South India they w peculiarly well situated for placing their teas on the Cey market, and he was quite certain that in this matter Ceylon planter would not suffer. A portion of the Cey

Press was against the planter in this matter. If they looked at a map of the world and examined the position of Colombo, and when they remembered that all the fleets trading to the East made it a port of call, they would see what a splendid despatching centre it made. From Colombo British grown teas could be sent West to Europe, and East to Australia and America. This would be to the advantage of Ceylon in every way. It would tend to the increased prosperity of the port, to the advantage of the Ceylon planter as well as the Indian planter, and it would result in the moving off of teas instead of slumping them down in the London market, where there was a glut of tea and to which it was sent only because it was the only place to send it. It was, of course, striking out a new line to establish a blending establishment, but they must now move on new lines if they did not wish to lose their trade. He thought therefore that this Association should approach the Indian Tea Association and urge on it that, instead of approaching the Government of India in a formal manner, it should give good and sufficient reasons why not merely Indian but all British grown teas should have free import into Colombo. He therefore proposed :—"That this Association urge on the Indian Tea Association the necessity of approaching the Government of India with a view to its urging on the Government of Ceylon the desirability of abolishing the Import Duty on Tea, and that the Association should point out to the Government of India the immense advantages that might thereby accrue both to the British grown tea and the port of Colombo."

Baron von Rosenberg seconded the Resolution but took exception to the statement that all the rubbishy teas blended on the West Coast came from Ceylon. He had experience of a very rubbishy tea indeed of Indian manufacture

Mr. Acworth having replied to Baron von Rosenberg, to the effect that he had not said that *all* the rubbishy teas came from Ceylon, the Resolution was put and carried. This Resolution was regarded as having included the next subject, Indian Import Duty on Tea, which accordingly was dropped.

THE FRENCH IMPORT DUTIES.

After some informal discussion it was decided that an immediate representation on this subject was necessary.

It was accordingly proposed by Mr. D. Mackenzie and seconded by Mr. J. Liebenrood :—"That, having regard to the temporary and uncertain nature of the present fiscal arrangements affecting the importation of tea, coffee and pepper into France, the Government of India be strongly urged to represent to the Secretary of State for India the serious effect that any enhancement of the tariff would have on our industries, and that immediate action be taken in the matter."

The Resolution was carried.

The Chairman said that this Resolution should be sent to the Chambers of Commerce in India. The Association acting independently could ask their support.

This was not a Resolution but an instruction to the Secretary.

THE PROPOSED TEA CESS.

The Hon'ble Mr. G. L. Acworth, in introducing this subject, said that there was very little to be said on this matter. South India had already signified its feelings in no uncertain manner on the proposed compulsory tea cess. With the exception of 150 acres, all had voted solidly for the cess, and all that remained for them to do was to emphasise this at the Annual Meeting they were now holding. He therefore proposed :—"That the Association cordially supports the movement for the imposition of a cess on tea."

The Resolution was seconded by Mr. Mackenzie.

Baron von Rosenbeg, in supporting the Resolution, thought that it was, as it stood, rather bald, and something should be added to it impressing upon the Indian Tea Association the necessity for ascertaining the views of the Government of India in the event of the majority of the planters being in favour of such a cess.

The Chairman agreed with Baron von Rosenberg, but Mr. Acworth said that he had intentionally drawn his Resolution in the form in which it stood, and he declined to add to it.

It was eventually decided to pass Mr. Acworth's Resolution, Baron von Rosenberg's Resolution, which ran as follows, being passed as a rider to it :—

Proposed by Mr. J. Rosenberg and seconded by Mr. E. Latter :—"That the Indian Tea Association be asked to regard the matter as urgent, so as to lose no time in ascertaining whether the Government of India will give effect to the wishes of the tea planters should a large majority be in favour of the measure."

Both resolutions were carried.

THE PROPOSED COFFEE CESS.

Mr. R. Gompertz (Shevaroys), in opening this subject, said :—

After what our Chairman said in his address I feel some diffidence in advocating the proposed compulsory cess. He stated that there are many small native proprietors who would be very much averse to the tax. With all due deference to his opinion, it seems to me that this is begging the question. So far as I know, we have had no means of arriving at what their views may be. But in a matter of this kind absolute unanimity is, of course, impossible, and even if a majority of the native proprietors were against it, their number —and the acreage they represent—is so small that it is possible they might not affect the issue. With these preliminary remarks I have only to say that the arguments in favour of a cess upon tea apply with equal force to one upon coffee. Both industries are now in a most precarious state, and unless we, coffee planters, do something to push the sale of our coffee as the tea planters are pushing the sale of their tea, we can only go from bad to worse. I know that some people argue that the differences between the two industries is so radical that it is quite impossible to compare them. They say that whereas India and Ceylon supply the greater part of the production of the world in tea, the quantity of coffee produced by us is wholly insignificant, being not $\frac{1}{60}$th part of the total production of the world They say also that whereas tea-planters have already done a good deal to help themselves, coffee planters have done almost nothing. With regard to the first of these arguments I submit that, though the object of the industries may differ in degree, in kind it is absolutely the same. Indian tea planters may aspire in time to produce all the tea that the world consumes, so that the shrub may no longer be grown in China. But such a consummation looms far in the distance. Their present object is *to educate the public taste to prefer their teas* to those raised in China. And this is not only *essentially but identically the same thing* that Indian coffee planters are aiming at. True, they cannot hope, and do not aspire, to supply the whole world with coffee ; but they wish to bring the superiority of Indian coffee prominently before the public, and to educate the taste of the better classes to prefer Indian to South American brands, and to be willing to pay a higher price for it than for any other kind of coffee. This used to be our position a few years back, and it is only because we have done nothing to preserve it, "our pride of place in the markets of the world" (as our worthy Chairman ably put it in this assembly two years ago), whilst our American rivals have been doing all they could to wrest it from us, that the public taste is becoming vitiated, and requires to be gently guided back again in the virtuous paths of orthodoxy and the firm conviction that it is a little vulgar to drink anything else but Indian coffee, no matter what they have to pay for it. And to do this Indian planters must strain every nerve to improve the quality of their staple, as I have frequently before insisted ; but all their efforts

will be vain without the assistance of a special agency for bringing their coffee prominently before the leaders of gastronomic fashion; and this cannot be done without money. It is said that the amount we could hope to raise is too small to be of any use. It is small, I admit, but it is quite enough to make a good beginning The statistics collected by the Labour Enquiry Committee showed that the area under coffee in Southern India was about 280,000 acres. I addressed my own Association on this subject last year, with the result that the Shevaroy planters *unanimously* resolved that it was desirable to approach Government and to request that a tax should be levied upon coffee of 4 annas per acre, to be collected by Government and used for advertising and pushing the sale of Indian coffee if a sufficient majority could be secured. This measure, if adopted, would bring in an income of Rs.70,000 per annum; and though the sum is small—comparatively—surely *something* might be done with it in the right direction. The Shevaroy Association was absolutely unanimous in voting for the above Resolution, and amongst the many others interested in coffee, but not belonging to the Association, who were asked to vote upon it, there was only one dissentient voice. If other Associations were equally unanimous, I submit that we should have a good case to lay before the Government

With regard to the second objection, that, whereas tea planters have done a good deal to help themselves and have raised large sums by voluntary subscriptions, coffee planters, have done little or nothing, I am bound to admit that the apathy they have displayed is truly deplorable. I think the reason of this is, to a large extent, the bugbear above disposed of *viz*, that whereas Indian tea planters aspire to supply the whole world, Indian coffee planters produce less than $\frac{1}{60}$th of the world's consumption; and that any benefits which might accrue from their efforts to increase consumption would be quite inappreciable to them, since they would be equally shared by the $\frac{59}{60}$ who did not subscribe. As I have said above, this view arises, in my opinion, from a misconception of the position Increase of consumption is a good thing no doubt, but that may be left to natural cause. The task of the Indian coffee planter, in European markets, is to educate the taste of present consumers, rather than to try and increase their number. As I said last year:—"When it is remembered that the world's production is close upon a million tons per annum, of which India and Ceylon *together* contribute less than 15,000, it will be readily conceded that we do not much want the drinkers of tea to take to coffee. What we do want is that the taste of the drinkers of the million tons of coffee annually produced, should be educated and prefer that raised by us; and that they should be willing to pay a much higher price per pound (as until very lately they were) for the 15,000 tons we can place upon the market, than for a pound of any of the 985,000 tons produced by other countries." As for our poorer kinds, for triage, broken and "native" coffee, there is ample sale for the whole of it—aye and for ten times that amount—in the vast continent of India. But we must not forget that India is, relatively, a poor country, and that few amongst its teeming millions could afford to purchase anything but inferior kinds which would be almost unsaleable in the markets of Europe; and which, in view of the education I have advocated above, it would be very unwise to send there. This might be sold by the same agency employed for pushing the sale of tea in India. And I maintain that this could be done without any rivalry at all. Just as a greengrocer exposes apples, pears, peaches, etc., for sale and lets his purchasers take their choice of what they prefer, so I would have tea and coffee sold side by side by the same agents. But that is a matter of detail which may well be left till we have obtained the necessary funds. If the tea agency be objected to for selling coffee—or should the tea planters themselves object—others might easily be found. In the Indian Coffee Growers Co. we have an organisation ready to our hands. They are doing go work in promoting the sale of Indian coffee in India; and t much higher prices obtained this year for black and refuse coff (in proportion to the price of parchment or cleaned coffee) sho that their influence is begining to tell. But, as I have sa the distributing agency fixed upon is a matter for future con deration. In conclusion, I beg to propose:—"That, in t opinion of this Meeting, it is very desirable that a tax of 4 ann per annum be levied on every acre, or part of an acre, und coffee above the age of three years, and the proceeds hand over to the U. P. A. S. I. for the purpose of advertising, a pushing the sale of India coffee; and also that Governme should be asked to collect the tax if it be decided to impose it

The Resolution was seconded in a general way by Mr. Lar bert, who remarked, however, that his Association felt al that if a tax was introduced it should be on a cwt. basis a not acreage basis. He seconded the Resolution merely in ord that the matter might be thoroughly threshed out.

The general feeling of the meeting was opposed to the pr posed cess, and Hon'ble Mr. G. Acworth made an eloque appeal to Mr. Gompertz to withdraw his resolution, as it wou militate against the success of the proposed compulsory tea ce with the Government of India. On the other hand, if the t cess was imposed, the coffee cess would have an increa chance of subsequently being passed, on the ground of the being a precedent in the cess on tea.

DIFFERENTIAL DUTIES.

On this subject the following formal Resolution was passed:-

Proposed by the Hon'ble Mr G. L ACWORTH and seconde by Baron VON ROSENBERG:—"That this Association wish to record its gratification at the many favourable answe received from the Chambers of Commerce in the variou Colonies. The Association is still unchanged in its opinio as to the desirability of a commercial union throughout th British Empire. and is prepared to support any further mov ment in this direction."

At this stage the meeting adjourned for luncheon.

On reassembling at 3 P.M. the subjects of Tea Markets i India and Green Tea were discussed in Committee an adjourned till next day. The subject of markets for the Sa of Coffee in India was relegated to a Sub-Committee consistin of the Chairman and Messrs Parton, Lambert and Baron vo Rosenberg to frame a scheme for pushing the sales of coffe In this subject was also included the proposal to establish shop in Paris. On the Adulteration of Coffee the followin Resolution was passed:—

Proposed by Baron VON ROSENBERG and seconded b CRAWFORD:—"That in accordance with the suggestion of th Special Committee in London the Association do address th various Trade Associations and Chambers of Commerce in th United Kingdom with a view to securing their support in th effort to take steps to again bring the subject of the adult ration of coffee before the notice of the House of Commons."

The meeting adjourned at 5 P.M., till 11 A.M. next day.

SECOND DAY, 1*st August*.

Agricultural matters were taken up first, in order to giv Dr. Lehmann, Agricultural Chemist to the Government Mysore, an opportunity of addressing the Meeting. After few preliminary remarks regarding his investigations into suga cane cultivation and manufacture of sugar in India, he read paper on the subject of leguminous shade for coffee, which wa as follows:—

GENTLEMEN,—Last year when speaking about the subject mulching I had intended to include green manuring, as it very closely related to mulching, but did not do so as I did no consider the subject of sufficient interest to you to make m already rather long talk on this subject unduly long. Howeve

a few weeks ago, I received an American bulletin on "Shade in Coffee Culture." Some of you may have received this bulletin or at least heard of it. In it the author appears to judge the different coffee-growing countries by the proportion of leguminous shade the planters grow on their estates. He apparently justifies this opinion by the assumption that the leguminous shade adds to the store of nitrogen in the soil by simply growing there, and that, therefore, those planters who make use of this nitrogen producing plant must be considered as the most progressive. With such a verdict before me I did not consider it out of place to touch on the subject of green manuring this year, especially as the subject of leguminous shade has been much discussed in South India and the advisability of green manuring is being considered by some planters. For one of the great advantages of green manuring is, that, under certain conditions, some of the leguminosæ increase the store of nitrogen in the soil. I therefore hope that I shall not be wasting your time by briefly considering the subject as a whole. The factors which I propose to touch upon are :—(1) The effect of green manuring on the store of available inorganic plant-food in the soil. (2) Its influence on the store of nitrogen in the soil. (3) Its mechanical influence on the soil. (4) The effect it has on the store of moisture in the soil. (5) Its practical application to the average coffee estate in Mysore.

THE EFFECT OF GREEN MANURING.

The effect of green manuring on the store of available inorganic plant-food in the soil.—The great bulk of plant-food in the soil is present in an insoluble condition. But in order that plants may assimilate their food it has to become soluble, for only substances in solution can pass through the cell-wall of the roots. Some experimenters, and among them some of the best known agricultural chemists, hold that the chief part the plant roots play in making plant-food available is to take up a portion of the very small quantity already held in solution by the soil water, and thus enable the latter to take up more plant-food in solution. But the fact that plant rootlets excrete an acid (as indicated by blue litmus paper brought into contact with them turning red) shows, I think, that it is only reasonable to suppose that they play a more important part than this. The fact that growing roots coming in contact with a polished marble slab etch the latter appears to point in the same direction. If this be the case, it is evident that when the plants have completely decomposed and they themselves have again become available plant-food, the soil will be richer in inorganic available plant-food than before; and it is very probable that this increase is greater than it would have been without the assistance of the plant used for green manuring.

Influence of green manuring on the store of nitrogen in the soil.—There are various ways in which the store of nitrogen in the soil may be affected. When we speak of nitrogen as plant-food we, of course, always imply *combined nitrogen*. Free nitrogen such as found in the atmosphere is of no direct use as plant-food. If, therefore, combined nitrogen is dissociated it is lost as plant-food. Some nitrogen is doubtlessly lost in this way, especially during fermentation processes, and this element of plant-food is, therefore, continually reduced. There are also other sources of loss, some of these even more important than the above. One of the latter is the letching out of nitrates from the soil. For the present purposes we may consider that nitrogen can only be assimilated by plants when in the form of nitrates. The normal processes of fermentation and decomposition of substances containing nitrogen, such as poonac, farm-yard manure, etc., when taking place in the presence of a free supply of air, tend to produce nitrates. But these nitrates, as you know, are not fixed in the soil like potash or phosphates. Every heavy shower of rain, therefore, tends to wash out a certain quantity of nitrogen from the soil. Any crop growing on a field will prevent this loss by assimilating the nitrates as they are formed in the soil, and storing up the nitrogen in a much more complex form in its tissues. By decomposition and fermentation, or rather oxidation, this nitrogen will again become gradually available as plant-food, and any crop grown for green manuring will, therefore, save nitrogen from loss by letching. But so far as we know at present none of the higher plants, such as we could use for green manuring, can, with the exception of the leguminosæ, increase the store of nitrogen in the soil. The rain water generally contains some combined nitrogen, and this can be made use of by the plants. But as probably most of this nitrogen came originally from the soil, it cannot materially increase the supply of combined nitrogen. The nitrogen found in poonac, bone, dried blood, farm-yard manure, and most other fertilisers, was originally obtained from the soil. And when we apply these fertilisers, we are simply taking the fertility of one piece of land and applying it to another piece. To increase the total quantity of combined nitrogen in the soil appears, therefore, a difficult task, and this no doubt accounts for the high price of nitrogen fertilisers It is self-evident that the larger the percentage of nitrogen in the soil, other things being equal, the greater the loss of combined nitrogen will be. Nevertheless, we have proof that the store of combined nitrogen has been gradually increasing, instead of diminishing. It would lead too far to give even a rudimentary outline of the work which has been done to try to find out how this loss of combined nitrogen is compensated for, and how this increase has taken place. It will be sufficient to know that Hellriegel and his co-workers discovered that certain leguminous plants appeared to be able, under then unknown conditions, to store up much more nitrogen than there was combined nitrogen in the soil and seed from which they had grown. Sometimes more than 1,000 times the combined nitrogen was reaped in the crop than was originally present in the seed and soil combined, and care was taken that no combined nitrogen other than was in the soil and seed could get access to the growing plants. The further investigations of these experimenters showed that this marvellous increase of nitrogen was due to certain bacteria, living on the roots of the plants, enabling them to make use of the free nitrogen of the atmosphere. These bacteria and the legumes experimented with had to work together. When the bacteria were absent the plant roots could not make use of this source of nitrogen. The experiments which lasted a term of years, and in which a number of experimenters were engaged, are most conclusive. But the leguminosæ, though they possess this power of working together with certain bacteria to assimilate free nitrogen, do not always make use of this power. In fact, they only do so when starving for nitrogen, and starving to such an extent as to make it easily noticeable even to the unpracticed eye that there is something radically wrong. The older leaves die prematurely because the protoplasm contained in them is withdrawn, as it is required to form new leaves. The leaves are not developed properly, being, for one thing, below the normal size and each successive pair (even when full grown) being smaller than the predecessors. This starving for nitrogen continues even for some time after the tubercles have formed and the bacteria have taken up their work. On soils which are as rich in combined nitrogen as the average coffee estate in Mysore, I doubt very much if any of the leguminosæ will make use of this wonderful power to assimilate (with the assistance of bacteria) free nitrogen to any large extent. If this be the case, leguminous shade cannot add much nitrogen to the store already in the soil. Of course, it is not beyond the range of possibility that even this very large store of nitrogen is not sufficient to supply the available nitrogen required for the growth of leguminous shade, as the small quantity of carbonate of lime undoubtedly retards nitrification. But until we have experimental proof to the contrary I think we are justified in assuming that

the leguminosæ are not likely to assimilate much free nitrogen when growing on these coffee soils which contain fully double the amount of nitrogen generally considered sufficient. But there is another factor which makes the use of leguminous shade to enrich the soil in nitrogen somewhat doubtful. It is self-evident that so long as the tree is growing, and its tissues remain alive, it does not matter how rich in nitrogen these tissues may be. For they cannot be made use of by the coffee growing underneath. In order to be of value as manure these tissues must not only be dead, but completely decomposed. The only portion of the tree which comes into consideration is, therefore, that portion which drops to the ground and is decomposed there. This is, of course, principally the leaves. But, as a rule, the protoplasm of leaves is withdrawn from them before they drop in the ordinary course of events, and as most of the nitrogen is contained in the protoplasm it is likely that little nitrogen will be left in the leaves when they drop. But before being able to say anything definite on this point chemical analyses will have to be made. But I should be surprised to find any very large percentage of nitrogen in these dead leaves. Two very large IF's and several smaller if's stand therefore in the way of assuming that leguminous shade adds materially to the store of nitrogen in the soil. One of these large IF's has also to be considered in the question of green manuring, namely, that whether the leguminosæ make any use of their power of assimilating nitrogen when growing on the average coffee estate. But I must not dwell on this subject longer now, and shall be very brief on the remaining three topics.

The influence of green manuring on the mechanical condition of the soil with legumes which completely cover the soil this is very similar to the effect of a mulch. It prevents puddling and increases the amount of humus in the soil with all the benefits of the latter. But as I have already spoken about this last year I need not repeat the influence of green manuring on the moisture of the soil. Here the effect is entirely contrary to that of mulching. The transpiration of moisture from the leaves is considerably greater than the loss in evaporation of water from the soil caused by the protection to the latter by the crop. A casual examination, however, will appear to indicate the contrary because the top inch or two of the soil under a heavy crop of clover, for example, will contain decidedly more moisture than a similar piece of bare fallow alongside of it. This is due to the fact that the wind has completely dried out the top inch or two of the fallow, but not being able to strike the soil under the clover the latter has remained moist. But when we examine the two soils at a greater depth it will be found that the one on which the clover is growing is very much drier. If you remember, last year, when speaking about mulching, I told you that Dr. Wolney had made very extensive experiments near Munich, proving that a mulch retains a considerable amount of moisture when compared with a bare fallow. In conjunction with most of these experiments were others to enquire into the loss of moisture on plots on which various crops were grown. These invariably showed, as stated above, that the soil having a crop was much drier than those not cropped and unprotected by a mulch.

PRACTICAL APPLICATION.

So far as I can judge at present, green manuring is not likely to be very succesful on an average Mysore coffee estate unless in exceptional cases. Some of these exceptional cases may be, a very sandy estate, one with very stiff soil on which organic matter cannot be added in a more economical way. It might also be of advantage in a new clearing where practically no shade has been left and where it is necessary to prevent puddling, washing, or protect the soil for some other reason. But in all of these cases mulching will probably give better results. The only place in which green manuring is likely to give bet results than simple mulching is on a new clearing decide deficient in nitrogen. But it is a doubtful question whet such jungles should be opened out at all for coffee. Moreov there are many practical difficulties in the way which wou make green manuring almost impossible in coffee. But wh I am of the opinion that green manuring is not likely to universally successful on coffee estates I look for very satisfa tory results from it on most of the cultivated lands of Myso and shall be greatly disappointed if it does not work marvels most of the light sandy raggi soils in Mysore.

At the conclusion of Dr. Lehmann's address an interesti discussion ensued on the subject of green and artificial man ing, Dr. Lehmann answering such questions as the delega put to him.

The Chairman moved a cordial vote of thanks to Dr. Lehma for attending and giving them such a useful address and su valuable information.

PERSONAL EXPLANATIONS.

The Hon'ble Mr. Acworth (Central Travancore) made a p sonal explanation regarding his speech yesterday on the cof cess and with the permission of the Chairman asked that should be considered as having been made in Committ Further personal explanations were made by Mr. Scot-Skirvi the Chairman, and Mr. Acworth regarding the references ma in yesterday's proceedings to the Exchange agitation.

REDUCTION IN CURING CHARGES.

This matter was brought up by Mr. Liebenrood, to ascerta whether any assistance would be given by the Association obtaining a reduction in the curing charges in the critical st of coffee prices. A desultory discussion in Committee elici the fact that it was not a matter in which the Association co properly move, and that if the planter was deserving of symp thy in the present crisis it did not cost the curer any less cure a ton of coffee now that prices were less than half wh they used to be. Under these circumstances no action w taken by the Meeting, and the subject was allowed to drop.

CULTIVATION.

Mr. Robert Gompertz (Shevaroys) introduced this subject the following speech :—

GENTLEMEN,—Most of you will remember that at our l Conference I brought to your notice a new system of cultiv ing coffee—new at least in Southern India—inaugurated Mr. Leeming, which I suggested should thenceforth be known "Leeming's System," and under this name it has since attra ed a good deal of attention. I showed that by this method t cost of production would be very much reduced, and wha then said was received with so much attention that two of t delegates who heard me shortly afterwards visited Mr. Lee ing's estates in order to see, with their own eyes, whether I h overstated its beneficial results. One of these gentlemen (M Buchanan) unluckily got an attack of fever on his return fr Scotforth, and I had no opportunity of seeing him before he l Yercaud; but the other (Mr. Parton) whom I see now pres (and who will, no doubt, correct me if I make any mistake) t me he had come up quite prepared to be disappointed af what I had said at the Conference; but, now that he had se for himself, he thought I had understated the success of t system rather than overstated it. About a month ago a plan of considerable experience was deputed by certain gentlem who took a great interest in the subject to visit and report Mr. Leeming's estates. A copy of this Report has been sent me, and I propose to read it presently. I said last year "Gentlemen, if Mr. Leeming's results do not fall off—and fr Brazil analogy we have no reason to suppose they will—I thi he deserves our warmest thanks, for he has solved for us t problem of cheap production. Think of the saving in labou no handling, no pruning, only 300 trees to manure inst

f 1,200; and little more than $\frac{1}{8}$th of the manure formerly re-uired to be purchased; and last, not least, better crops than ve have been able to obtain under the old and costly system. do not say that it is new—for there is nothing new under the un—but I do say that, as regards Indian planters, it ranks as discovery of the first importance which will probably revolu-ionise the culture of coffee in Southern India." Those who vish to see the whole of what I then said will find my speech *n extenso* in the Book of Proceedings of the Conference of 1900. The Report I am about to read will enable you to judge vhether, or not, I was over-sanguine. I wish I could claim hat my predictions about the rise in Brazilian Exchange, and s effect upon the price of coffee, had been equally well fulfilled The Brazilian Government confidently expected that their pro-ramme, if faithfully carried out, would raise their Exchange to 8d. by the 1st July, 1901. They *have* faithfully carried out he programme they laid down, but Exchange still hovers at bout a shilling, and in spite of the most elaborate proofs that was mathematically bound to rise to 18d. it obstinately efuses to do so. We must remember that "the best laid chemes of mice and men gang oft agley" and that it took the ndian Government a good many years to raise Indian Exchange o what they determined upon—*viz.*, 16d.—though strengthened y so drastic a measure as closing the Mints. But if Brazilian Ex-hange is unkind, and crops, which their newspapers assure us vill not pay the cost of picking, continue to be picked and cured nd to swell the too abundant stocks which already glut the narket, we must just patiently abide the issue, feeling sure that, hough long delayed, Brazilian Exchange is certain to rise even-ually, and that this *must* bring us better times. Meantime, as it s clear that, at present prices, the old method of production oes not pay, it behoves us to see whether "Leeming's System" vill afford us any relief. I take this opportunity of stating, with Mr. Leeming's permission, that he is at Yercaud in the second veek of each month; and that if any planter wishes to see his states he will then be happy to show them round; but he has sked me to add that, as he is a very busy man, he is unable to nswer letters enquiring about his system. I will now read the Report above alluded to. For some reason best known to him-elf, the gentleman who wrote it desires that his name shall be uppressed. This is, I think, a great pity, as if I might mention is name his Report would carry greater weight; but I think ou may infer from the fact that as he was deputed by others, e must be an experienced planter:—

REPORT OF A VISIT TO SCOTFORTH.

"I visited Scotforth, Shevaroy Hills, on the 12th June, and vas conducted by Mr. Leeming over the whole estate. I am avourably impressed with the system in force there, of cutting ut coffee trees by alternate lines wholesale or alternate trees n one line diagonally, preferably the latter in the earlier stages, he trees thus left in freedom, unhandled and unpruned, show-ng up to immense advantage by their unchecked height and igorous lateral growth. They are left entirely to themselves o carry all the wood they can make and are never touched vith a knife, the old wood after crop dying and breaking back o new wood, of which there is an unfailing active supply. Any one verging on this system by allowing trees their heads, y allowing suckers and yet be wanting in courage to 'cut out' s only courting disappointment or disaster. Without freedom he trees running up in close order will only cause the lower rame of the tree to perish. It is beginning at the wrong end ltogether and no measure of success can possibly be attained nless one is prepared to face cutting out and make room for ateral growth of the tree, which will quickly spread and shoot pwards at the same time. In Scotforth one stands in avenues f magnificent trees with any amount of room to walk about in omfortably, no roads being needed, no difference being made s regards shade, beyond keeping it clear of the coffee. Culti-vation consists of yearly application of artificials in large shallow pits, deep trenching and growing of leguminous plants and beans to the prospective expulsion of weeds, and digging in with quintanies. Although my visit is ill timed as regards best appearance, subsequent to heavy cropping and dry weather and prior to application of manures, the trees are particularly healthy, of good colour and evidencing truly striking vigour as compared with the old established dwarf cultivation. As regards crop, results are highly satisfactory. A field condemned by a V. A. and recommended to be abandoned is now in great heart, cropping freely. Another of 27,000 trees disappointing in 1898 cut down to 13,500, gave 1,500 bushels cherry 99·00 = about 11 cwt. per 100 trees; cut down to 13,500 gave 1,700 bushels cherry 00·01 = about 12½ cwt. per 100 trees; cut down to 10,000, promises well again this year. Another field of 6,500 trees cut down to 3,300 trees in 1899, gave 750 bushels of cherry last crop. I saw lines of 24 trees only in this field. It took three days for a cooly to get over. Mr. Leeming estimated that the field held 1,000 bushels cherry, but picking only 'ripe' some cherry dried up and was lost by the time pickers could come round; quality is in no wise affected, parchment running quite satisfactory and percentage of black being limited to a very small proportion. The estate is 80 acres mature coffee, now all brought under the new system, and 80 acres of young clearings planted 650 to the acre; the crop last year was 50 tons and promise for next year is very fair. Denuded of half of its trees, it has never given such a big crop or been worked so cheaply. On another estate, worked by Mr. Leeming, results are even more satisfactory. The owner left the Shevaroys in disgust and was Manager of an estate near mine for some time, as he was unable to make the place pay him; under the new system, he is at Home in receipt of an income, although prices have fallen 60 per cent.! The main factor in favour of Mr. Leeming's system is the very appreciable reduction in working expenses, yielding a maximum crop on a minimum outlay, and although it does not appear to find favour with every planter on the Shevaroys, I am quite converted to it, *provided* conditions are in harmony with Scotforth, namely, elevation 3,000 to 4,000 ft. with sheltered aspect and fertile soil, especially in the face of present depression and possible low prices for many years to come, it being apparently the only method by which coffee cultivation may be made remunerative at £40 per ton.

Addenda.

My somewhat incomplete jottings under date the 17th June on my visit to Mr. Leeming's estate being appreciated by others interested, I wish to record further, partly in response to enquiries, that the elevation of Scotforth averages 3,500 ft. and the rainfall in normal seasons 65 inches. Crop last season was practically ½ ton per acre, *i.e.*, 80 acres. Old coffee all brought under the new system yielded 40 tons. 18 acres young coffee planted 8′ × 8′ gave 10 tons. Total crop just picked = 50 tons, which on half the number of trees is almost double of any previous one.

The young coffee unfortunately suffered severely from borer last season, causing as much as 10 to 15 acres to be sacrificed. The acre carrying a minimum number of trees shows a maximum amount of damage, which, in planting wide, is a serious drawback in places liable to borer attacks. Personally, I do not favour wide planting in new extensions, and would much prefer planting 6′ × 6′ or even 5′ × 5′. Take 2 or 3 crops and then cut out freely and let the trees left in have their heads. Being asked whether young trees in young coffee planted close should be allowed to run up unchecked or be stumped for a time and then given their heads, Mr. Leeming seemed to think it made but little difference one way or the other as long as room was made for lateral growth by 'cutting out' as soon as the trees to be left in needed free space. As regards

quality of crop impugned by cavillers of the new system, I particularly enquired whether proportion of B. C. or triage, was larger than when the estate was pruned formerly or compared unfavourably with estates pruned and cultivated on the old dwarf system, to which Mr. Leeming replied that he did not like to say much, as it is difficult to compare estates unless quantity of crop, elevation, rainfall, shade, etc., are on much the same lines. But taking all into consideration, with present experience, he could say the quality of Scotforth coffee is improving under the new system.

Cultivation.—Besides applications of artificials in round shallow pits, Mr. Leeming lays particular stress on growing beans for digging in nitrogenous green manure and on digging drains 3' deep $\times 1\frac{1}{2}$' wide about 40' apart. I think I have now brought in all salient points."

Some discussion followed in Committee, Mr Gompertz affording such further detailed information as seemed necessary on Mr. Leeming's scheme.

In open Meeting the Chairman referred to the extreme importance and interest of the speech and statement read by Mr. Gompertz, and asked permission to have them printed in the proceedings for further information and guidance of planters. He mentioned his own experiments in this connection, and thought that all planters interested in coffee should give the scheme a fair trial over a limited acreage of about 5 acres, and carefully note the results.

THE LAND TAX ON THE NELLIAMPATHIS.

Mr. J. C. ABBOTT (Nelliampathis) sought the advice and assistance of the Association on the question of the land tax levied by the British Government in the British portion of the Nelliampathis He said the tax on all heads was heavy, and the planters complained that they got no adequate return for their money. It was generally felt that Mr. Abbott should exhaust all official channels of relief before coming to the Association. The subject was accordingly allowed to drop.

TEA.

The subject of tea markets (including sale in India), which was partially discussed yesterday, came up again to-day and practically was started *de novo*.

The Hon'ble Mr. ACWORTH said :—Mr. Chairman and Gentlemen,—I am very much obliged to you for allowing a discussion on this subject which is one of great and vast importance to tea planters in South India. I have not much to say, because on what I would speak is so patent an advantage that it is hardly worth using many words. All planters know that various schemes have been brought before the public for pushing the sale of tea in South India, and thus trying to relieve the London Market, till finally all the Associations were fully in accord as to the desirability of accepting the scheme of Messrs. Andrew Yule & Co., of Calcutta. If we were at first doubtful, it was because we did not know they were going so far. But since then I have received definite information to that effect. Now, gentlemen, I wish to urge your very hearty acceptance of this scheme and to ask you that, on going back to your Associations, you will say that all here were unanimously in favour of it. So strongly did my Association feel on this subject that when the Kanan Devan scheme was put before our Association it came forward with a most liberal subscription in cash, and it was perpared to go further and to add a percentage of its produce to the amount. The scheme now proposed it is prepared to support in exactly the same manner. At the present moment only donations of tea are asked for; these donations we are prepared to give and should the I. T. A. come to us later and say that money is required to put the coping stone to the scheme, though I have not the authority of my Association for saying so, I am perfectly convinced it would come forward as liberally as it did the other day with funds. So far so good, but whilst on the subject I should like to say a few words on another subject under the heading of cess, and that is that my Association is not altogether satis with the management of the Indian Tea Association in the wa disposes of the Foreign Market Fund. We think the Associat is a little slack, and it is perhaps natural that it should be because all the gentlemen on the Committee of the Associat although they represent the great tea firms, are also the repres tatives of many and various other products, such as indi jute and all the other products that pour out of Calcu Therefore, they cannot give the whole of their time and att tion to tea. I beg, therefore, in the event of a cess be imposed—which I hope it will be—that we in South India, v have now a considerable stake in the matter, should appro the Government in company with the local Associations of Ass Silchar, Cachar, the Dooars, Darjeeling, etc., and ask tha representative of each Association should be placed on Committee of the Indian Tea Association in order to assist present Committee to deliberate and also because they will able to devote their whole time to the question of pushing and nothing else. Of course, if we had a representative on Indian Tea Association, he would have to be paid, as he wo have to leave his estate and live in Calcutta, and we could expect him to do so at his own expense. But the amount t will fall in under the cess will be so large that we sho certainly be able to afford him a living wage. There is other thing that we object to in the I. T. A., and that is way in which it scatters its resources. We in Travancore that if it would only devote its attention to one country, s as Russia, and strain every nerve in pushing the tea of t country in a country that has already acquired the habit drinking tea, it would meet with very much more success th it does at present in dribbling away £100 here and £75 the to shops in Belgium and Paris, etc. Finally, I think the I. T is slack in the matter of green tea. The Committee of I. T. A. all represent great Companies and they can give order to their Managers to manufacture green tea. All factories, with the exception of Mr. Drummond Deane's, h machinery for the purpose of making green tea. We have s out printed extracts telling them how to manage it and if th want more information Mr. Drummond Deane is prepared give it them. As you have seen from *Indian Gardening*, mu correspondence has passed between the Editor and Mr. C. Larkin, of Canada. Mr. Larkin has urged over and o again the importance of pushing green tea in Canada wh there is a large market and where tea has become popular. think we must ask our Secretary to write to the Indian T Association and draw this subject to notice. I don't wish say that we are so dissatisfied that we wish to break av therefrom. Very much the contrary, I wish we could affili ourselves with every other producing industry in the coun and so form a great combine or trust, and make ourselves f times more powerful and certain of hearing when we appro Government.

Baron VON ROSENBERG (Kanan Devan) supported Acworth in asking for support to Messrs. Andrew Yule & who, he hoped, would commence operations in South In as soon as possible. With regard to Mr. Acworth's critici of the Indian Tea Association and the Foreign Market Fund, said that the inability to cope with the situation was largely to want of funds.

Mr. MACKENZIE (Wynaad) said a few words in support of scheme. He agreed with what fell from Baron von Rosenb about the Indian Association and the Foreign Market Fund. was felt by his Association that a long time must elapse bef the compulsory cess could be sanctioned and brought into wo ing order. In the meantime, a voluntary cess was necessa and to this end Wynaad was prepared to support the Fore Market Fund to the extent of a tax of 4 annas per acre un

ltivation and 6 pies per maund of made tea, and he hoped hers would do the same.

Further discussion then took place in Committee, when the llowing Resolution was adopted and was subsequently con-med in open Meeting :—Proposed by the Hon'ble Mr. Acworth id seconded by Mr. D. Mackenzie :—"That this Meeting rdially supports the movement to push the sale of teas in outh India through Messrs. Andrew Yule & Co., and trusts at every planter will assist by contributions, either of money tea, with a provision that South Indian teas only are used for stribution in South India."

A further Resolution was also passed, that contributions of a or money be forwarded by District Associations to the Indian ea Association of Messrs. Andrew Yule & Co. and that otifications of such donations should be passed on at once to the ecretary to the U. P. A. S. I.

The Meeting at this stage adjourned till 3 P.M.

COFFEE.

On reassembling, the subject of coffee markets, including sale India and the Paris shop, which was yesterday entrusted to Sub-Committee, was taken up.

Baron VON ROSENBERG presented the Report of the Committee the following speech :—

GENTLEMEN,—The Sub-Committee appointed by you to en-ire into No. 6 (*a* and *b*) markets including sale in India and e Paris shop, sat this morning and the results of its delibera-ons is embodied in the following Memorandum :—

"The Sub-Committee is of opinion that efforts should be first rected to capturing the Indian retail markets as being a large arket close at hand which can be attacked with a compara-vely small expenditure. It would draw attention to the exist-g machinery for distribution already established by the United offee Growers Co. at Coimbatore, which although only recently arted is already doing a considerable retail business. Assist-nce may well be afforded this Company in advertising. The bscriptions to the Coffee Fund would be put together and vested in shares of the Company by each District Association r its own benefit.

Proposed by Mr. R. Gompertz and seconded by Mr. J. G. H. awford. Carried unanimously.

Paris Shop.—The Committee is of opinion that support should given and that arrangements should be made to serve coffee well as tea and to sell coffee retail both raw and prepared. is hoped that support may be given to this last proposal rough the balance to credit at the Paris Exhibition Fund, nich, as the Paris shop is in direct continuation of the work ne at the Exhibition, would in the opinion of the Committee a legitimate use to make of a portion of this Fund. The pport now proposed could not be granted earlier as the counts of the Paris Exhibition have only just come in.

Proposed by Mr. R. Gompertz and seconded by Mr. J. G. H. awford. Carried unanimously.

You will remember that yesterday in Committee I advocated e course now recommended, and I should like now to say a few ords in open Meeting on the subject you have heard, that many anters, when asked to subscribe towards the Fund for ad-rtising and increasing the sales of Indian coffees, have ex-essed a wish to know in what shape these subscriptions are to employed. It is our opinion that an answer to this is rnished by the course we recommend, and the reasons are the llowing:—In the U. C. G. Co. we have ready to hand an gency for best employing our subscriptions and carrying out e object we have in view. Their object is to sell Indian ffees in India, and we have arrived at the opinion that for the esent this should be our object also, for by that means we can st arrive at the ultimate end we have in view, namely, the duction of supplies for the English market. You all know at at present our lowest grades of coffee do not pay when sent me, whereas here in India we have a ready market at our doors, which is at present to a large extent supplied with brands sent out from Home. It is the opinion of the U. C. G. Co., and we agree in that opinion, that this market can be captured by them and a considerable increase in their sales, after a comparatively short period of action, seems to warrant it. But we think we can look further than this. There is a *certain* demand for Indian coffees at Home, and their greater rarity would, as in the case of Ceylons, probably produce more competition and higher prices for the diminished supply. It is the belief of the Sub-Committee that eventually the whole of the coffee produced in South India will find a ready market in this country. That, however, is looking ahead. I am not a shareholder in the U. C. G. Co., but I know most of the Directors. They are prominent planters and they formed the Company with a view to exploiting the markets of this country. When we determined to try and raise a Fund for the purposes referred to, we did so under the impression that for our subscriptions we should receive no direct return, and that it would be solely an indirect one by increasing the demand for our Indian coffees. Now, if we adopt the recommendation of your Sub-Committee, we may in time—a short time, we hope—expect to have a direct return as well. A circular is being prepared and will be printed and given to the delegates, which will enable them to give an explanation to their Associations with regard to the coffee shop in Paris. I believe there is a consensus of opinion in favour of supporting it. We were asked to guarantee the sum of £200 per annum for two years. Sufficient funds for this are now, we know, at our disposal, and it only remains for you to vote their application.

Mr. GOMPERTZ said that he would be glad to support the scheme, but before doing so he would like to ask the Chairman whether the United Coffee Growers' Company would be prepared to put on their labels the proportion of chickory used in their mixtures. This was necessary before this Association could give any support to the Company, because this was a point they had been agitating for in their campaign against adulteration at Home, and if they supported the United Coffee Growers' Company, who did the same thing out here, they would be stultifying themselves.

The Hon'ble Mr. ACWORTH deprecated in some measure the qualms of conscience expressed by Mr. Gompertz, and gave his advice strongly in favour of adopting the scheme.

Mr. PARTON (North Mysore) supported Mr. Gompertz's contention.

The CHAIRMAN said that, as a Director, he could give no guarantee that the view of Mr. Gompertz would be agreed to, but he did not see why it should not be done, and promised to bring the matter before his Board. He then gave an account of the formation of the Company and its aims and objects, and explained that he had been loth to enter upon any discussion of the subject at the Meeting on account of his connection with the Company. He had invested Rs.3,000 in the Company more with the idea of pushing the sale of coffee than as an investment.

Before going into Committee the Chairman explained that the subject of the Paris shop would again come up under the subject of Finances.

In Committee the Report of the Sub-Committee was discussed, and the following Resolution adopted, which was confirmed in open Meeting :—"That the Report of the Sub-Committee regarding VI (*a*) Coffee Markets (including sale in India and VI (*b*) Paris Shop) be adopted.

THE DIFFERENTIAL DUTIES.

The Hon'ble Mr. ACWORTH (Central Travancore) said :—"Gentlemen, I do not think that we should merely record our opinion on the question of the Differential Duties in the form of a Resolution. It would be well if the views recorded in this Resolution should be published to the world. Of course none of us are hopeful of getting a Commercial Union with the British Empire in the near future; but, judging from the re-

marks of the Chancellor of the Exchequer when he was approached on behalf of the sugar planters of the West Indies, the Cobden School still seems to hold the reins of the fiscal system of Great Britain, and I regret it as much as you can. I am quite sure, however, that there is no use shutting our eyes to the fact that the trade of Great Britain is surely but slowly slipping away from her. I do not know whether you have seen the discussion in the *Times* on this subject. Viscount Masham read a paper on the subject; but Lord Farrar brought figures to prove that the trade of Great Britain is as great as it has ever been, and has been extending for the last year or so. To do this he took the figures of two successive years, one of which had been the most favourable in the last 15 years. In reply, Viscount Masham published figures for 6 or 7 consecutive years which proved that certain trades have departed for ever from England, which will never get them back. For instance, the glass-blowing trade, which was once of considerable importance in England; the trade in nails had almost departed, and the same may be said of the trade in chains and cables. The chemical trade has gone to Germany, and now it would seem that the trade of which we used to be more proud than of any other, I mean the great iron and steel trade, on which the welfare of Great Britain depends, is fast slipping away from us. Every steam-engine in our own dependencies and the Colonies is now ordered from the United States. Every bridge wanted in a hurry for military purposes, and many large contracts for such have gone to the States. Until we can combine in some sort of a way with the Colonies to have a most-favoured nation treatment among ourselves, I believe that the trade will go on slipping away. We admit everything into England free, with the exception of such taxation as is necessary for conducting the business of the Empire. We give no favour to anybody, and it does seem hard that the sons of Great Britain, who go out into the world to spend their lives in new countries, to add to the prosperity of the Empire, though they find every country shut against them, find no open door at Home. When I say no "open door at Home," I mean that no more favour is shown to him than is shown to other countries which turn their backs on him. We are helpless and can do nothing more than record our opinion that the action taken has done some good. If action is taken again in the matter, it must come from the Colonies. I honestly believe that if the great Colonies would move in this matter, we should have a Commercial Union very quickly. If only Australia and New Zealand would follow in the steps of Canada and bring pressure to bear on Great Britain, the Cobden School would be destroyed, and I hope I shall live to see the day.

LADYBIRDS AND SCALE PESTS.

Mr. J. LIEBENROOD (Nilgiris), in opening the subject, said that the Nilgiri Association had had a good deal of correspondence with the Collector of the Nilgiris, who had sent up specimens of black bug, with the fungus which attacked it, to Calcutta to the Government Entomologist. But the first lot of specimens sent had come to grief through the bottles smashing, and nothing could be done. Since then they had been unable to get specimens of the fungus, which only appeared at certain seasons of the year. As soon as he could get more fungus they would again forward specimens to the Government Entomologist. Mr. Stebbing, of the Madras Forest Department, was now also enquiring into the different scale pests and had also asked to have specimens sent him. It was apparent that the Government was willing to help planters to a certain extent in this matter, although it had refused to consider their request to have a specialist appointed to examine into these pests.

Baron VON ROSENBERG (Kanan Devan) described a beetle which had appeared in his District, a small brown insect covered with a white dust, which settled on the coffee and gave it a curious appearance. It did little or no harm to the coffee; but it was a coincidence that where this beetle appeared bug disappeared.

Mr. J. C. ABBOTT (Nelliampathis) described a beetle t appeared on the coffee in the Nelliampathis which had b identified by Mr. Greene, the Ceylon Entomologist, as be common there, though not in connection with coffee or tea.

The CHAIRMAN said that the proper thing to do was to s specimens to the Government Entomologist. An enlighte Government had appointed one Entomologist for the wh of India, and he was shut up in the Calcutta Museum and not of much use to them. He would very probably identify specimens if they were sent to him, and it might be usefu adopt such a course.

Mr. R. GOMPERTZ (Shevaroys) said that the Association asked last year for the services of Dr. Watt for six months, that no reply had been received. He suggested that a remin should be sent to the Government of India.

It was accordingly proposed by Mr. Gompertz and secon by Mr. Scot-Skirving:—"That a reminder be sent to Government of India inviting attention to the request to pl Dr. Watt's services at the disposal of the U. P. A. S. I. for months, and soliciting the favour of an early reply."

The Resolution was carried.

CROP ESTIMATES.

The Hon'ble Mr. ACWORTH (Central Travancore) said that several occasions the Government of India had asked that c estimates should be submitted with regularity and with accura but this was never done. The Central Travancore Associat was the only one that had sent in estimates. The matter really important, and they should, as far as possible, meet Government's views on this matter. They would not get Government to do anything for them if they did not com with such a small request. He thought that they should u on proprietors and managers the necessity for sending in returns asked for.

The CHAIRMAN said that under the new Coffee-steal Prevention Act they were asked to furnish a form for sendi in estimates. Last year they drew up such a form, which w issued to District Associations and various local authorities the form which the Association approved and suggested. He h been unable to ascertain if any answers had been received regard to that form. This form, if it had been sent in, wo be the proper way of obtaining estimates of the coffee crop.

Baron VON ROSENBERG thought that, from a commercial po of view in connection with the Home markets, it was desira that estimates should go forward as soon as possible every ye

Mr. A. M. ELDER (South Mysore) said that he was unable send in estimates till the end of June.

RAILWAY AND STEAMER FREIGHTS.

The CHAIRMAN said that correspondence had been forward to him by a certain firm of Agents relating to railway freig on coffee which showed that the railway freights on coffee w very high and bore very hardly on coffee planters at the pres time, when prices were low. This particular firm had addres the Madras and South Indian Railways on the subject wit view to getting a reduction of the rates, and, having failed, th wrote to the U. P. A. S. I., which was rather late. However, had addressed the Hon'ble Mr. Spring, the Consulting Engin for Railways to the Government of Madras, who addressed Railways concerned and managed to secure a reduction freights on coffee from the South Indian Railway. He thoug therefore, that they ought to express their thanks to Mr. Spri and the Agent of the South Indian Railway, and express a h that the Madras Railway would soon fall into line with South Indian Railway in this matter.

It was therefore proposed by the Hon'ble Mr. ACWORTH a seconded by Mr. Parton:—"That the thanks of the Associati be conveyed to the Agent and Manager of the South Ind Railway Company for the concession recently made with resp to rail freights on coffee and to the Hon'ble Mr. F. J. E. Spri C.I.E., Consulting Engineer for Railways to the Government

Madras, for the assistance he has given in regard to the matter, and also hope that the Madras Railway Company will see its way to make a similar reduction in coffee freights."

The discussion on steamer freights was carried on in Committee.

ROADS AND COMMUNICATIONS.

Mr. F. J. PARTON (North Mysore) seconded by Mr. Acworth, moved a Resolution expressing the thanks of the Association to the Madras Government and the Mysore Government for the prompt way in which the landships on the Bhum Ghaut Road were repaired and the Road made available for wheeled traffic.

Mr. CRAWFORD (South Mysore) asked for the advocacy of the Association, with regard to the construction to Hassan and the planting District there, of the proposed Mangalore-Arsikere Railway, but was referred, in the first instance, to the British Resident in Mysore.

Baron VON ROSENBERG said that he would have liked to have called attention to the state of the roads in his Districts, but he had not yet approached the Resident on the matter.

PROPOSED HARBOUR ON THE WEST COAST.

The Hon'ble Mr. ACWORTH, in opening this subject, said:—Mr. CHAIRMAN and GENTLEMEN,—You are aware that correspondence has been circulated by the Secretary on this question and some of the replies are altogether amusing. I have not seen all the replies, but the Associations were asked to give a vote in favour of the port they would select. Naturally, North Mysore voted for Mangalore, South Mysore and Coorg for Tellicherry. If there had been an Association midway, it would have voted for Cannanore; the Nilgiris and Wynaad plumped for Calicut. Putting it approximately, something like 4 to 5 different parties chose some port absolutely incapable of being made into a Harbour. It was, I think, rather a pity that the Government should have asked the question at all. As a matter of fact, the subject ought to be looked at on broad lines, and the broad lines are "What port has the greatest trade?" Though not an advocate of any particular port, I know which port does the biggest trade and I know also that the produce that an Association, or for that matter, two Associations, ships at that port is but a fleabite as compared with the trade of the port itself. I think, therefore, that it would be wiser for us in meeting here when addressing Government, to say "We leave it to you entirely. All that we ask is that you should give us some port on the West Coast. We leave it to your discretion to choose the best port; the port you choose we will acquiesce in."

The following Resolution proposed by Mr. Acworth and seconded by Mr. Mackenze was then passed:—

"That this Association, while thanking the Government of Fort St. George for consulting it in the matter, prefers to leave it to that Government to settle its port, but would emphasize once more the supreme necessity of a Harbour on the West Coast.

IMPROVEMENTS IN THE MADRAS HARBOUR.

The CHAIRMAN said that this subject was put down in the Agenda in consequence of a communication from the Madras Chamber of Commerce in connection with a grant for improving the Madras Harbour. It was resolved to ask the Secretary to write and inform the Madras Chamber of Commerce that the Association would be glad to support any action that did not clash with the construction of a Harbour on the West Coast, with which this Association was more intimately connected.

MONEY ORDERS.

Mr. D. MACKENZIE (Wynaad) called attention to the difficulty in cashing currency notes in the Wynaad, now that the Sub-Treasury had been prevented from doing so, and the excessive commission charged on money orders, resulting in planters having to pay a heavy premium in getting their own money up to the District. He mentioned by way of comparison that the commission in India on Rs.15 or £1 was the same as that charged in England on £10.

After some discussion it was decided that, as the question related to an Imperial matter, it was little use the Association tackling it single-handed, without the co-operation of the Chambers of Commerce and other public bodies.

WEIGHTS AND MEASURES.

Mr. LAMBERT (Coorg) on behalf of the Coorg Association, called attention to the diversity of weight and measures obtaining and after some discussion moved the following Resolution, which was seconded by Mr. O. Scot-Skirving and carried:—"That this Association draws the attention of the Chambers of Commerce in India to the wide diversity of weights and measures in use in the various parts of India including Native States and to the great inconvenience and dishonesty caused thereby with a view to action being taken thereon for the establishment of a uniform standard throughout the Indian Empire."

THIRD DAY.

THE ST. PETERSBURG EXHIBITION.

The first subject taken up for discussion to-day was the St. Petersburg Exhibition.

The Chairman in opening it said that the Ceylon Planters' Association had already taken action with a view to having its products properly represented at the Exhibition. He had a cutting from a Colombo paper which showed that they had already been considering the question, and among other things it was suggested that the Ceylon Planters' Association should be the sole retailers on that occasion, and if this was arranged, the Russian Consul would do his best to assist in getting the necessary permission and making arrangements with the Russian Customs authorities. It also said that the Russian public were used to things being done in the best possible style, and that, therefore, it would be a mistake to economise unduly in making any arrangements. If a tea room was to be opened there it was felt that it should be done well. A number of recommendations were made, but it was not necessary to read them. He merely made the remarks to show that Ceylon was already moving in the direction of having her products represented, and, therefore, it was time that steps were taken to see that Indian products were also represented.

The Hon'ble Mr. ACWORTH said that, as usual, Ceylon was ahead of India, in this matter, and it was most important that the latter should take action at once. He therefore moved the following Resolutions, which were seconded by Mr. Gompertz:—

(1) That this Association represent at once to the Indian Tea Association the supreme importance of Indian tea, coffee, and other products being adequately represented at the St. Petersburg Exhibition, and urges on that Association the necessity of at once approaching the Government of India on the subject and formulating a scheme worthy of such great industries.

(2) That this Association considers that it is absolutely necessary to be represented at the St. Petersburg Exhibition, and that the Governments of Fort St. Geogrge, Mysore, Travancore, and Cochin be addressed on the subject.

After some discussion in open meeting and Committee as to whether the statement of the Ceylon Association, that they should apply for a monopoly to sell packets of tea referred to Indian as well Ceylon teas, the Resolutions were passed.

FINANCES.

The allocation and investment of funds for the ensuing year were then decided in Committee.

A VOTE OF CONDOLENCE.
